# FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JULY 7, 1894.

VOL XLIII.—No. 1. No. 318 BROADWAY, NEW YORK.

*For Prospectus and Advertising Rates see Page 21*

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

**Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.**

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

**Forest and Stream** *one year and the set of four pictures*, **$5.**
**Forest and Stream** *6 months and any two of the pictures*, **$3.**

Remit by express money order, postal money order, or postal note. Make orders payable to

**FOREST AND STREAM PUB. CO., New York.**

## Forest and Stream Outdoor Scenes.

THEY stir the blood, these pictures which so faithfully portray scenes by sea and shore, on prairie and near woodland, in which many of us have had our part. To those who seek their recreation with rod or gun or sail or paddle, by flood and field, no memories are so dear as those of this free outdoor existence, when for the moment the daily bondage of life is cast off, when the business man ceases to think of sales, the mechanic of tools, the lawyer of cases, and the pastor of his church. This freedom is a blessed return to primitive life, a putting aside of the conventionalities, a stripping things of their seeming, a drawing near to nature. And as some sight or sound or perfume often calls up to the mind events long past, so to look at these pictures gives renewed life to some happening of one's outdoor past, and thrills him with the remembrance.

---

He who has snuffed into his nostrils the cool, damp breath of the open sea, or the scarcely less invigorating breezes of the great lakes, will look with especial interest on the picture which represents the struggle of last year between the great British yacht Valkyrie and her greater opponent Vigilant. The artist has chosen a critical moment when the white vessel is drawing away from her rival, and making safe to America the possession of the proud trophy, which it is the boast of our yachtsmen they have held uninterruptedly for more than thirty years. Many have been the attempts to regain it by sailors of Britain, but as yet in vain.

The yachts are tearing along against a stiff breeze under a sky gray with broken clouds, though here and there through a rift, a patch of sunshine brightens the waves. The water, green and heavy beneath the somber arch, is yet not tossed up in flying spray, but one can feel that the breeze is full of sharp salt moisture, and can behold in the signs of clouds and sea the promise of a freshening wind. One may imagine, too, the feelings which inspire the crews of the vessels, and may picture the rows of earnest faces ranged under the weather rail—the cheerful looks and satisfied comment of those on the white yacht, and the grim, determined countenances of the plucky sailors of the black one; and may see the careful watch which the master of each vessel keeps on his canvas, and the ready alacrity of either crew to spring at command to take a pull on the sheet, or to meet the call of the moment.

The whole picture is full of the breath and the spirit of old ocean, and to a true yachtsman its vivid truthfulness will say more than could pages of description.

---

Widely different, yet as true to nature, and appealing to a far larger circle, is the picture entitled "He's Got Them." The day's quail shooting is almost over, and the sun is setting in a bed of clouds of rose and gold. On the way home, while working down a little valley, the old dog has struck the trail of a bevy running to roost, and now he has pinned them. In the open, stands one of the sportsmen waiting for his comrade to push his way through the fringe of small trees before both step forward to flush the bird. The dog stands firm, in one of those curious attitudes which many people might pronounce unnatural and impossible, but which the shooter of upland game sees at a glance is both natural and probable. In this case the attitude was copied from one of FOREST AND STREAM'S amateur photographs, that of an actual dog in the field in the act of pointing birds. The trees are leafless, and the weeds and grass sere, yellow and broken down, and yet the scene is full of life and color, the stream glimmers brightly in the setting sun, and the far off hills are blue with distance and gray with the haze of late autumn.

Many a man, like him in this picture, has stood waiting for a comrade to join him, eager, hopeful, yet anxious, fearing lest the birds may rise too soon, but so full of enjoyment of the scene before him that he could wish to have the exciting moment prolonged.

---

The third scene takes us back again to the edge of the salt water, and we listen once more to the baffled roar of the onrushing waves and the gurgling hiss of their sullen retreat; the cold fresh air of the sea is in our faces, and its moisture clings in tiny drops on hair and beard.

On the rocky shore of a New England island an angler with short, stiff rod and long line is striving to bring to gaff that king of Northern salt-water fishes, a striped bass. The captive is a mighty one, yet it is seen that he is well nigh exhausted, and that if skill and tackle hold the issue of the struggle is not doubtful. The wind, blowing half a gale, sweeps the angler's waterproof coat out behind him and has forced him to jam his cap well down upon his head. From the crests of the waves the spray is flying, a distant fishing vessel lies over before the breeze, and the gulls which hover and scream along the shore are swept away before it, and then have to turn and labor back in its teeth. The air is full of a cold mist which half obscures distant objects and makes the bold headland beyond look pale and gray.

Such a scene the angler for striped bass may witness at many points along the bolder New England coast, though where the shore is less abrupt, the fishing is done from piers or from platforms built out over the water.

---

On some broad fresh meadow in April or October you may witness the sight presented in the fourth picture. It will be at close of day, perhaps, as you are plodding homeward after a long tramp, with gun on shoulder and dog at heel. The sun has set, and slowly from the east blue night is creeping, onward, onward. Overhead it is already more than half dark, though in the west the flush of sunset lingers yet. As you walk along, suddenly you may hear, far off, a note which you know well, and pausing, may see the "Jacksnipe Coming In." Far off against the clear sky, half a dozen tiny dots are tossing, moving with wonderful swiftness and with most erratic flight. Up and down, from side to side, here and there they dart and twist, ever advancing and growing larger, and ever uttering their well-known call. Perhaps when they have almost reached you, they may take a sudden whirl up in the air, and then with half-closed wings may pitch headlong into the grass all about you and at your very feet, and as they pass your quick eye takes in—though you have but the fraction of a second in which to observe it—all the details of shape and color of the dainty birds, and you rejoice that they have come again.

If you are wise, you will rise to-morrow before the sun and will try to surprise the little fellows at their breakfast; for you are never quite sure of a snipe until he is in your pocket.

---

Fish Commissioner W. P. Andrus, of Minneapolis, Minn., who has recently returned from an extended trip along Rainy Lake, Rainy River, and Lake of the Woods, has succeeded in attracting the attention of the United States officials at Washington to the threatened depletion of the fisheries in the international waters along the boundary between Minnesota and Canada, and as a result a joint committee will be formed, consisting of an United States fishery representative, a Minnesota fishery representative and a Canadian official, who will formulate a plan for the better protection of the fish along the international boundary.

### *BIG CATCHES.*

IF the fishing reports which come to us from various quarters are credible—and they would not be printed if considered otherwise—the count fisherman is abroad in the land, and is showing himself unusually industrious in working for a record of numbers or pounds. Mr. Blank, we are told, and perhaps Mrs. Blank and the little Blanks with him, succeeded in catching over sixty bass in less than sixty minutes, and was the envy of every one else who had taken only fifty-nine fish in an hour and a half. What becomes of all these gigantic strings of fish is not told; in some cases it would appear to be quite impossible that they could have been eaten. Let us trust that at the least they were given decent burial, or went to the compost heaps, where in due process of time they would fertilize the soil.

The purpose we have in printing these records of count fishermen is not to join in the acclamation of the crowd over their achievements. It is purely to indicate where good fishing may be found. A large catch, stated in concrete pounds, is more to the point than a column of generalization, to show that fishing is good. Whether or not the inordinate destruction related in any specific case may be approved, there can be no questioning that the fish were there. And in many cases it proves as well that the fish will not remain there, for no supply, however superabundant it may be, can long withstand the exterminating assiduity of the count fishermen. When a hotel proprietor heralds these fishing exploits of his guests, he proclaims not alone present abundance but future dearth as well.

### *SNAP SHOTS.*

WE commend to President Hughes and Secretary Banks, of the Pennsylvania State Sportsman's Association, the suggestions embodied in the letter from a Pennsylvania correspondent, published to-day, that the Association should adopt the plan of organization described in our issue of June 23 as having proved so successful in New York. The strongest argument for this change is found in such an experience of delegates as is told by our correspondent. Trap shooting and game protection are two distinct interests, and each should be given full scope by the provision of separate occasions for consideration. The Pennsylvania Association cannot take a more progressive step, when the members shall meet in Altoona next month, than to adopt a plan of organization similar to that of New York.

---

At a meeting of the Wisconsin Fish Commission last week action was taken toward promoting the formation of fish protective clubs throughout the State. Ultimately, it is hoped, a State league may be organized, to coöperate with the Commissioners in securing a better observance of the laws. There is abundant opportunity in Wisconsin for such a movement; in many districts the laws are dead-letters, and the State is stocking waters only to have them depleted by unlawful fishing. In Wisconsin, as almost everywhere else, public sentiment has not yet been awakened powerful enough to command enforcement of the protective laws by the duly appointed officials. Until such a sentiment shall have been aroused the work must be done by interested clubs and associations of individuals.

---

Texas has the name of being a country of abundant game resources; but nowhere in America is the game supply so generous that market-hunting may not in time exterminate it. The Houston markets are full of young prairie chickens, killed when hardly able to fly. The sportsmen of the city are organizing for suppression of the scandalous traffic. By and by Texas sentiment will come around to supporting the FOREST AND STREAM platform plank. Public opinion is trending in that direction.

---

For all part it fills in the game bird supply of to-day the wild pigeon is an extinct species. The story of how the work of extermination was wrought by professional market hunters is an instructive chapter in the history of bird life on this continent. We have in hand a description of the work of the pigeon netter, written by one who has had a practical part in it. The first chapter of the story will be printed next week.

---

This issue is put to press Monday, July 2. A number of reports of shooting meetings have of necessity been deferred to next week.

# "Forest and Stream's" Yellowstone Park Game Exploration.

No. 7.

### The Headquarters on Hayden Valley.

BILLY went straight through the thick woods to where his camera was *cached*, and taking it along we skirted the edge of the island of timber, out in the open where the keen wind was whirling the fine hard snow across the country in wisps and strings. We concluded to cut straight across through the timber toward Alum Creek, intending to intersect the trail of the rest of the party, and not go back the way we had come, following it in from the point where we had left them, as this latter would make a longer journey. We traveled for apparently three-quarters of a mile through heavy pine forest, whose boughs, heavily laden with mats and masses of snow, formed almost a continuous roof of white above us. It was very white and silent in the forest. We saw no signs of life except where the porcupines had gnawed off the bark of some of the young tree, and except one elk trail, old, but deep and wide, as though a steam plow had gone through.

We followed the gently falling hillside until we came nearly to the Alum Creek level, and still found no trail, nor could we hear the sound of an axe. We therefore turned back to the right, toward the point where the party had first entered this motte of timber, but though we went nearly half a mile in that direction, climbing a little again, we did not cut the trail. At length Billy smelt smoke, and finally we found the camp, away up near the center of the timber. We had gone half around it, as the party had not gone in so deep as we had expected.

We found that the others had dug a hole in the snow down to the ground, the level of the snow being about even with one's face as he stood on the ground. The hole was about 12 feet across. Around the edge of this, following Billy's general advice given earlier, they had stepped a number of poles, cut from young pines, about 18 or 20 ft. long, these meeting at the top lodge-pole fashion. On the inside of these poles was stretched in a semicircle the light lodge-lining which Billy had brought all this way for this express purpose. This lining was about 5ft. high. Above its height there was absolutely no covering at all, as the lodge poles were not numerous enough to make any covering or wind break. A fire was built in the center of this "tepee," if such we could call our extremely well ventilated winter house, and the boys had cut a plenty of wood. A stairway, made by treading short logs into the snow, enabled one to get downstairs into the hole in the snow, which constituted the salon, dining room and sleeping apartments of the edifice. Billy looked at it critically and said it would do as long as it didn't rain. Then we all went downstairs, melted some snow, made tea and coffee, and were happy. In the heavy timber the wind was not much felt, and down below the level of the snow it was hardly perceptible, though we could see the tops of the taller trees swaying, and could hear the talking of the pines where the axemen had jarred off the snow.

### The First Sight of Elk.

The advantage of experience now made itself felt. Billy knew right where to go to find the elk and buffalo, that is to say, the general direction and probable distance, subject of course to the limited movements of the game on its winter feeding grounds. He said he would not need to go far up Alum Creek, and as it was still early we hoped to do some work if the weather would only clear.

At noon the sun came out and at once we were off up the valley. Larsen and Holte, who complained of wet feet, were left at camp, all the others taking the trail.

At a half mile from camp we saw a band of thirty elk feeding below us, close along Alum Creek, but as we saw no antlers we passed this herd by without disturbing them. At two and a half miles out we saw three big bull elk lying down in the shallow snow close to the creek, where the ground seemed warmer. We left these to the right and kept on up the creek, hoping to strike the buffalo. We saw still other elk, but did not stop, as we wanted to use the light we were having on the rarer subjects, the buffalo.

### Buffalo.

At length Morrison, who was slightly ahead, pushed back from the summit of a ridge and motioned to us to get down. He had sighted five buffalo above us. We tried to get the attention of Billy and Burns, who were off to the right, and finally succeeding we all began the stalk, taking the benefit of a wind which happened to be in our favor. We made a long swift detour through the hills, taking one or two runs on the *skis*, and after about a mile of this we came out, breathless and eager, on the point of a hill directly above the buffalo and not more than 100yds. from them.

There were five of the huge creatures, looming up large enough against the white background. They were all lying down and did not see nor scent us. It was a magnificent opportunity, a great chance among those chances for which we had come. Billy and Mr. Haynes silently and swiftly got their cameras ready, and we all crept close to the edge of the hill, which brought us about 50ft. above the buffalo, which seemed then to be almost directly beneath us.

The buffalo seemed not to notice us. Not so, however, with a band of ten elk, which were lying down about 250yds. from us, beyond the buffalo. These trailed out on the run, leaving the creek and making into the deeper snow after a little. Then the buffalo rose, stupid and bewildered, and apparently uneasy but unable to locate the cause. As they stood, humped up and undecided, Billy and Haynes both got a fair shot. Then, as they located us and lumbered off down the creek in that odd, ungainly but speedy gait of theirs, Billy lay flat on his back on the brow of the hill, and with his camera between his knees industriously took shot after shot at them as they ran, using the sights which he had had mounted on his long box like peep and globe rifle sights. The buffalo followed the trail of the elk, and as the latter turned to leave the creek, Billy got a shot at the whole procession, thus accomplishing the rare and probably unduplicated feat of photographing wild elk and buffalo at the same time running.

The reader may now have a fair idea of the necessities in success at this work. One must get near the game, wait for a proper light, then locate the game, finally stalking it far more carefully than if one were hunting for a shot with a rifle, which could be taken at much greater distance. Lastly, at the critical moment he must not get nervous and forget the requirements of a camera, a much more complicated weapon than a rifle. He must act promptly, for the opportunity lasts but for a moment—a camera does not carry so far as a rifle. These being the conditions, it may be seen that success does not come as a mere matter of course. The successful man at this must be something of a photographer and very much of a hunter. All through the work of that and other days, Billy Hofer's great experience and rare skill as a stalker of big game came into valuable play.

### Various Ways of Crossing a Creek.

We were all very much pleased with our good fortune here, and concluded to push on further up, toward the "hot country," or Violet Creek, hoping to locate the main herd of buffalo, of which we had yet seen no sign, though the shallow snow along Alum Creek was all yarded and pawed up by elk. We took a long slide down an accommodating hill, and brought up alongside Alum Creek. The next question was, how were we to get across the creek? Billy said he knew where there was a little island in it, and at that place he thought we could get over.

We found the island, and extending out to it was a thin bridge of snow ice, the main channel, broad and shallow, being in too much of a hurry to freeze up. We went out to the verge of the island and made investigation. We threw our *skis* all across and prepared to jump, the distance being 10 or 12ft. Billy cleared it, using his *ski* staff as a vaulting pole. Morrison followed, and barely got over, leaving an ugly break in the fringe of ice which made the landing place. My turn was next, and as I stepped back to get a start, smash! I went through the thin ice bridge behind, which had been strained with too much weight. I landed ankle-deep in the ice water. The thermometer was well below zero, and camp was miles away. Under the circumstances it did not take long for a fellow to make up his mind what to do. I sprang forward over the island into the main channel, plunged through the shallow water and crawled up the icy bank beyond, considerably alarmed about my feet, which now had a first-class opportunity to freeze about as solid as those of the Chicago statue of Christopher Columbus or the Montana silver statue of Justice—though I do feel rather bashful, in a way, about comparing my feet with those of Miss Rehan, or even those of Columbus. However, thanks to the high-tongued overshoes and the tight leggins, I escaped without getting wet through—I was only in for a couple of steps—and though my feet and ankles were soon cased in solid ice, the excellent footgear prevented them from freezing. There was small chance left for Mr. Haynes and Burns to get a jump. Not daring to risk a slip into the water, they both had to strip off shoes and stockings, and wade across barefoot—a most cruel thing to look at or to think about. As quickly as they got over we fell upon them with their own rough stockings, and rubbed their feet and legs until they were red. Then they put on their shoes, and we all went on after more buffalo.

### A Shot at Elk.

We soon got into a region of tremendous hills and valleys, which gave us hard climbing and swift running on the *skis*, for a distance of perhaps two or three miles in all. We could not get trace of the buffalo, even on the steaming hot country beyond Violet Creek. Billy complained that he had never seen so little game on the Valley in all his life. He thought it was because recent haying operations by the transportation companies had cut down the feed on the limited strip of country where the game can get down through the snow in winter. We saw nothing for a long time but one lone bull elk, which, under Billy's guidance, we stalked until we were above it on a high steep hill. Arranging a signal, Billy and Mr. Haynes both let go and sped swiftly down the steep slope, sweeping around to the right at the foot of the hill. The bull turned back, and they saw not one but three bulls, grouped together. Mr. Haynes was ahead, but did not get a shot. Billy got a shot, and got a nice picture of Mr. Haynes and the three elk, one of the most interesting of our series.

FORDING ALUM CREEK, 10° BELOW ZERO.

Photo by Haynes.

### More Elk.

We now soon swung back toward camp and were gratified before long by the sight of a band of elk, which we knew to be the same we had started when we saw the buffalo because there was one cow and one calf, a little fellow among ten bulls. They had come back into the hills from Alum Creek, following the valley of the little hot stream, where the snow did not lie deep. With a swift *ski* run down hill we got right on to them before they could escape. They broke across the little creek and plunged single file into the heavy snow of the hillside beyond, not 50yds. from us at first, a magnificent, but somewhat pitiful sight, the great creatures were so helpless in the snow. I can say truly that one feels no disposition to kill under conditions such as these, the emotion being much rather one of pity. Yet the power of the great beauties was admirable. They plowed a trail 4ft. deep through the snow, and made a pretty decent gait of it, though rising and plunging and stumbling shoulder-deep in the treacherous snow. As we noted when we had started this band before, the old cow led and the baby elk came far to the rear, with an old bull behind it. After a time the cow got too tired and fell back, a bull leading the way in turn. The band at length turned down the hill toward the creek, plunged wearily through the deep snow till they got a footing on the "warm ground," and then rapidly made off down the creek, after having afforded fine chances indeed for photographing. Billy here got a very interesting picture of the band in full course of plowing single file through the snow. A better opportunity would be hard to get.

### The Buffalo Looked Pleasant.

Our good luck was not to end here, it seemed, for it was not long thereafter till we located a solitary buffalo bull, standing apparently wrapped in thought down on the bank of Alum Creek. He was over half a mile away, but the wind was right, and under Billy's skillful stalking

the cameras were soon on a steep knoll above him, about 250 yards distant. Here Billy sat down in the snow and deliberately took a few shots at the old fellow, who seemed entirely ignorant of what was going on. At the critical moment Mr. Haynes found that his plates were with Morrison and Burns, and they were not visible. He turned back to find them. Meanwhile I crawled up to Billy, and we sat watching the old bull for fully five minutes. He was standing broadside to us, with his head hanging down, quite motionless, and was probably asleep. When at length Mr. Haynes had found his assistants, he made an exposure or two on the bull, then Billy, he and Morrison got their *skis* ready and whisked down the hill to get a closer shot. They got actually right up to the bank of the creek beyond which he stood, not forty yards away, and got a close side view. Then Morrison tossed a bit of snow at him, and the bull, stupidly turning around, stood looking at them, directly head on, as if to ask what the mischief it was all about. Both the camera men improved this second chance for a view, and still another success was scored before the sleepy-headed old fellow deliberately turned and slowly rolled himself away out of sight around a point of timber. This buffalo was close to the creek, and no doubt the noise of the running water drowned the faint noise of the *skis* on the snow. The little contretemps made a singular and rather ludicrous incident. It was a most obliging buffalo, to stand and look pleasant while it was having its picture taken. Usually they will not do that.

### Barefooted, Below Zero.

We were now again at Alum Creek, but on the wrong side of the creek, and a long distance below the place where we had crossed it going up, even had we wished to undertake a second crossing there. There was no way of getting over without going five miles down stream, which would throw us far out of our road to camp. The stream was at that point 10 or 15yds. wide and about knee deep on the ripple near which we stood. It ran through a bare valley, and there was no way of getting a footbridge over it, even if we had had an axe. Nothing remained but to wade the creek, and to strip for it, for if we went in with our shoes on and got wet, our feet would freeze in a very few moments after coming out.

CAMP FOREST AND STREAM.

Where Messrs. Hough and Hofer spent the night, mercury 21° below.

Photo by Haynes on the following morning.

It was now well on toward evening, and the day had been steadily growing colder. Comparing the temperature with that observed at the Cañon that morning, we thought it to be about 9° below zero, probably a very moderate estimate. I noticed that Morrison had tied up his ears, and Billy had cautioned me to be very careful or I would freeze my ears. I noticed also that we chilled very quickly after we stopped traveling. On the whole, the idea of sitting down on the snow, taking off one's shoes and stockings, and deliberately stepping into that ice cold mountain stream, was something not altogether inviting at first flush. I remember I looked at that black, wintry, cold-looking stream for a moment, and wishing it were not quite so wide. I would rather have done almost anything else right then than wade that creek. Still, we had to wade, and a fellow can do a lot of things when he has to. Everything in life is relative.

We sat down on the icy bank, unbuckled our ice-stiffened foot-wear, stripped our feet bare to the skin, and then rolled our trousers up as high as they would go, as we knew it would be a near thing at that, for mountain streams are deeper than they look. We had to carry our *skis*, overshoes, etc., etc., balancing these on one shoulder and using the free hand with the *ski* pole to steady the footing in the rushing stream.

Any one who does not wish the trouble of an experience just like the above can tell how it goes, I imagine, by inserting his feet in an ice cream freezer and leaving them for an hour or so. The water was cold and swift, and the rocks were cold and slippery, and one had to go slow and carefully to avoid a disastrous mis-step—which under the circumstances might fairly have been fatal, for to get one's clothes wet meant to freeze stiff in spite of all. Yet one by one we emerged on the other side without mishap. Poor Billy, with his camera and all, could not get all over at one trip, and as I did not notice this till we were over, and so did not take part of his load. Billy had to go back after his *skis*. By that time Mr. Haynes had jerked on his stockings, and as Billy got about midstream on his way back, Mr. Haynes called to him to hold still while he got a picture of him. Billy posed patiently, out in the ice water, and Mr. Haynes made a careful shot. The result is a very interesting picture, showing Billy in the creek, with others just putting on their shoes.

When the wind struck our wet feet and legs we came out of the water, it cut like a knife, and we had to hurry in drying our feet, or they would have frozen. I know that while I was rubbing one foot, the toes on the other began to stick together. When I got so far along as the lacing of my leggings, my fingers stuck to the metal hooks, as they will to iron on a very cold morning. Yet not one of us got chilled, and not one of us felt the worse for it ten minutes afterward. Not one of us touched a drop of spirits, and indeed could not have done so had we needed to, for there was none along. Not the slightest ill effect ever followed for any of us. In fact, the system gets so tuned up on a hard outdoor trip like this that it will take almost any hardship without injury.

### More Buffalo Pictures.

Soon after we crossed the creek, we saw on the hills above us the same five buffalo we had started earlier in the afternoon. Morrison and Burns made a long detour, and as the buffalo saw them come up on the other side, they turned and made back down the trail they had trodden in going up, giving us a good chance for some more flying shots at them as they approached the lower level where we stood. Seeing us, the buffalo left the trail and began milling on the top of a little knoll, not over 35yds. from us. I believe neither camera got a picture of them at this point, or until they had again lined out on the trail. As they plunged up and down in the deep snow, with only half their bodies visible, they looked huge and formidable. It was noticeable that they seemed of a gray color, not black or brown, by reason of the snow matted in their hair. They live and feed and lie in the snow, and get snowed on so much that their hair is full of it.

The buffalo at length broke away from the knoll and started a new trail, off for the top of the ridge. They went slowly, laboriously, painfully, almost tired out and

WHAT BILLY DREAMED THE NIGHT IT WAS 21° BELOW ZERO.

Photo by E. Hough.

helpless, powerful as they were. It seems to me that only one emotion is possible at such a sight to-day. No man could have the thought of killing one of these great creatures under such circumstances. He could only first admire and then pity them from the bottom of his heart. It is a hard fight they are waging now for survival. Can not Congress, can not humanity, help them?

### Camp "Forest and Stream," 21 Below Zero.

We were now about four miles or so, perhaps, from our open-work tepee in the island of timber below, and as fast as we were able we made for that point, it being late evening when we got there, though the twilight is very long in that latitude in winter. Billy and I had all the packs of our party along, but the total of bedding was just one single blanket and the light sleeping bag. The thermometer was steadily falling, and it was already very cold. The majority of the party determined to return to the Cañon Hotel quarters, not risking a night of sitting up around a fire. We had had a hard day of it, traveling I suppose, at least eighteen miles up to that time, and it was about six miles more back to the Cañon. Billy and I concluded to chance it at the tepee, and we were the only ones who did. The rest bade us goodby, and went away jokingly telling us that they would come and thaw us out in the morning.

"We can't sleep in this place the way it's fixed now," said Billy, after the others had gone. "We've got to shorten those poles, so the lodge lining will lean over us a little more and throw some of the heat down." So saying, he went to work with the axe and proposed to make a more woodsmanlike tepee than our friends had done. He cut about 4ft. off the end of each pole and rearranged them all at the top. This left them closer together at the top and not so high above us, with a much less acute angle at the top. Then we cut pine boughs and filled in all around between the snow wall of the lodge poles and put chunks of snow back of that, so that the wind would not suck down the wall behind us. After that we tied the light lodge lining around inside, and the tepee now being smaller, the lining met at the door, so that we had a fair wall around us, though no roof to speak of. The lining pitched forward pretty well, making a circular "lean-to" wall, which would throw the heat of our fire in and down. We got in a lot of wood, and of course built our fire in the center of the tepee, of necessity not a very big fire. Under the lining we laid down the side logs of our beds, of which we made two. Between the logs we piled in pine boughs for bedding, as many as we could find out in the snow, for we had now been working an hour and a half, and it was about as dark as it ever would be that night.

Billy and I had some of the product of the lowly but useful hog for supper that night, with a little bread. Billy melted snow and made tea, and I melted snow and made coffee, being plenty scared about tea after my experience with it the first day out. It took more than a quart of coffee to scare me that night, however. We had had a hard day and were pretty well tired down.

We hung up the cameras on horizontal limbs and stood the *skis* up on end in the snow, so the porcupines could not get at the straps, and not long after supper we turned in, if one may call it so. We put on all the extra clothing we had and crawled into our scanty bedding, hugging the saving fire as closely as we dared. To-day Billy's sleeping-bag has a long scorch on the back, where I got too close to the fire at one stage of the game.

It was an odd night, and I shall not forget it. The forest was absolutely silent, not a creak of a limb or a whisper of a bough falling on the ear. The sky was blue and cloudless, and through the meager rafters of our house the great stars shone brilliantly down. Our little fire snapped and smoked, and flared and fell, and continually crived food to keep away the spirit of destruction. How shall I describe it—this feeling that there was a Spirit of Cold about on every hand, eager to destroy? One could feel it tapping, tapping, for weak places in one's covering and in one's vitality. There were silent, spirit fingers feeling all over one to find some point of stealthy assault. A veil of cold lay upon the face. One felt, vaguely, restlessly—and in sleep one dreamed it half fearingly—that above the bed of these violators of the wilderness secrecy there bent a white-winged, stony-faced Spirit of Cold, with fingers creeping, creeping. A tiny rent in the sleeping-bag felt like a hand of ice all night long Every thin place in the covering was tapped, tapped, incessantly, remorselessly, by those invisible and persistent fingers of the frost.

Of course, had we had proper bedding, we should hav had not so much of an experience of it, but we were very

I.—PLOWING A TRAIL.
Photo by Hofer.

poorly equipped, and had we not made proper use of the facilities at hand, we would have frozen to death. The cold of the mountains is not the same thing at all. Billy curled up under his single blanket, and hunched as close to the fire as he dared. Once in the night he got up and went out into the snow after more wood, some of which remained piled up outside. We put on a stick or two every once in a while, of course. We built the fire at right angles, so that each of us had a long, burning stick extending up and down parallel to his backbone. Again, I noticed that though I got cold, just as I was in wading the creek, there was no chilling through, no rigor, such as a tired man would very likely have in such circumstances in this climate. I am willing to aver, though, that pine boughs are about as warm to sleep on as so many icicles. Also, I would have given $4 an inch if Billy's sleeping bag had been about a foot or so longer. It caught me just below the shoulders, and do all I could, I couldn't keep my shoulders warm. We had to tie our silk handkerchiefs over our ears to keep our ears from freezing, but I didn't have anything to tie over my shoulders. At last I hit on a happy thought. I took my Lake Superior pack bag, spread the flap down under, and poked my head into the bag, pulling the whole thing down over my head and shoulders. It was dark in there, and a trifle close, but it was warm. Before this I had learned another trick, of which a fellow perhaps wouldn't think unless he were in a camp cold as this. The skin of a wildcat isn't very thick, and it let the icy coldness of those *frappé* pine feathers through until I thought my hips would turn to ice. I put my big mittens under me, but they wouldn't do. At last I put my broad-brimmed hat under me, and that kept out the cold, and I was all right after that; with my hat under me and my head in the bag. I don't want to hear anybody poke fun at the Western hat any more after this. Where would a fellow have been with a derby hat in a case like that, or a silk hat?

Thanks to Billy's skill in arranging the camp, and to his unselfishness and care all night through, we both finally got through the night and got some sleep, too. I can not say that I was really very cold. We kept just this side of that. Still I have been hotter and I shouldn't wonder if Billy has. We must have been two rather grimy and tough-looking characters when we turned out in the morning, with our eyes full of pine smoke and our faces black with cinders. Still we could cut a caper or two, and felt pretty good. With our knives we cut each a cake out of the hard snow, which gave out the crisp, ringing, crinkly sound it does of a very cold morning. These cakes of snow we rubbed over our faces and we let it go at that. We had no mirror, no soap, no towel and even the solitary comb was lost somewhere in the packs.

For breakfast we had beef and coffee. The beef was raw, so we blew the ashes off the coals and slapped it right down on the coals, where it broiled nicely, and without any smoky or woody taste. We had a very scanty breakfast, but we ate another one when the party came in from the Cañon with more supplies.

When the morning was well advanced, about 9 o'clock, perhaps, we heard the whisper of *skis* on the snow, and soon the face of Larsen peered curiously over the edge of our pit in the snow. He smiled gladly, as if surprised to see us alive. Larsen had frozen his ears coming over from the Cañon that morning. Every man was covered with a deep white rime of frost as he came up. We could hardly believe it when they told us that it was 21° below zero at the Cañon that morning. We had judged it to be about 6° below. From this we thought it must have been about 6° below when we crossed the creek the day before. When Billy and I learned that we had put in so cold a night, we looked at our late tenement with more respect, and called it Camp Forest and Stream. Mr. Haynes made a picture of it. Any one lost on Hayden Valley is welcome to the use of the poles, which will probably be standing for years, unless the elk rub them over.

The story of how we found more buffalo, and how we at length crossed the Continental Divide, will do for another day. E. HOUGH.

[A picture of the lone buffalo bull will be given next week.]

We have read Mr. Hough's papers on the snowshoe trip through the Park with much interest and shall welcome those forthcoming. I would trust Messrs. Hough and Hofer where I wouldn't trust myself on a trip like that.

That picture of "E. Hough in a Heap" is not a flattering likeness—indeed, but for the letter-press beneath, I doubt if I should have recognized it. I suppose the artist employed an unusual quantity of snow when the pose was determined on in order to save the necessity of foreshortening. KELPIE.

Tell Messrs. Hofer and Hough when they use *skis* again that horse hide or deer skin glued on the bottoms with the hair on will prevent the shoes from slipping backward when taking a hill or steep pitch. C. H.

# Natural History.

## NATIONAL ZOOLOGICAL PARK.

IN 1888, Congress provided for the establishment in the District of Columbia, of a park designed mainly, at the outset, for the preservation of certain American animals now on the point of extinction. Unfortunately the introduction of a subordinate feature, namely, the recreation of the people, brought about by levying upon the taxpayers of the District for one-half of the cost of purchase and maintenance, has chiefly converted into an ordinary pleasure ground what was originally intended as a reservation of a very different character and aim.

The Park is seriously handicapped also by the lack of funds for the purchase of animals. In his report upon the subject, the secretary of the Smithsonian Institution mentions the necessity of constant additions to the collection to compensate for the mortality inevitable to existence under unnatural conditions. These additions cannot be made by purchase, but depend upon gifts and loans, and accessions received from the Yellowstone National Park. Very little benefit has come from any source except the last, and this has been derived at a heavier charge for transportation than would equal the cost of purchase from hunters and dealers. It is, therefore, all the more important that funds be made available for the acquisition by purchase of species needed to place the National Zoological Park upon the basis contemplated at its inception.

We are indebted to the superintendent, Dr. Frank

II.—THE RECONNOISSANCE.
Photo by Hofer.

Baker, for the following account of the work of the establishment during the past year:

"As the collection has been added to considerably during the year, I inclose the list as it now stands. Some of

III.—BUNCHED FOR A (CAMERA) SHOT.
Photo by Hofer.

the most important accessions have come as loans. The Adam Forepaugh shows sent to the Park for the winter 76 animals, which included a number of considerable value. A hippopotamus, Sumatran rhinoceros, zebra, five camels, two tigers, five kangaroos and six African antelope were among the animals received. They came to the Park about Nov. 1, to remain until April; a few of the larger ones, however, will remain for a year longer.

"The Yellowstone National Park furnished 28 animals, including a black bear, grizzly bear, wolverine, two beavers and four very fine young elk.

"Among the animals born in the Park were two elk, one llama, one kangaroo, two black bears, six Russian wolfhounds and one rhesus monkey. I will give you, a little later, an account of the little bears.

"The Park is still without any funds whatever for the purchase of animals. Our appropriation is, however, available to meet transportation charges on animals presented, and I should like the readers of FOREST AND STREAM to know that we are not only willing, but anxious to take charge of their pet deer, bear, eagles, etc., when the latter become troublesome. Some of the commonest species are among our desiderata. For instance, we have only two woodchucks, and should be glad to obtain ten or a dozen more, in order to establish a colony of them. For the Canada porcupine, likewise, a vacancy exists to the same extent.

"Public interest in the Park has largely increased, and the number of visitors much exceeds our expectation. During fair weather the number on week days is usually from 500 to 2,000; on Sundays and holidays from 5,000 to 20,000. The largest number registered during any one day was 29,448.

"The appropriation for 1893–4 was the same as for the previous year—$50,000. Of this amount $30,000 is required for the maintenance of the Park. Although $20,000 is a small sum to cover the construction of buildings, roads and all other improvements over 167 acres of ground, yet the development of the Park has been considerably advanced, and the accommodations, both for animals and for the public, are much better than a year ago."

### Wildcat Kittens.

SANTA FE, N. M., June 20.—A few days since a party of soldiers from the 10th Infantry were out on a picnic near the "Crater," an extinct volcano, and while climbing around the rocky peaks found the home of a wildcat (*Lynx canadensis*) with three beautiful little kittens. They were there all day, but the old mother did not show up, although she was undoubtedly watching them from a safe distance. The boys brought the kittens home with them and are trying to raise them at the quarters.

As I have had several of them and succeeded in raising and taming them, I was anxious to get a couple of these but have not been able to induce the boys to part with them. I should judge that they were about three weeks old when found. I shall take a lively interest in the future of these pets. I believe "Podgers" don't like them, but I do.

Some months ago I read a letter in FOREST AND STREAM from some man who had captured or killed the rare curiosity of an albino weasel, that is, the weasel was white all except the tip of its tail, which was coal black, I think the writer stated. It occurred to me to ask what is the regulation color of the weasel in the winter time. My remembrance is that the description was about right for the weasel in full "winter plumage" without accusing him of being an albino. H. B. H.

### An Albino Robin.

MUCH has been said of late by local papers and people in general in the region of southern Connecticut concerning a white robin, which many fishermen and country folk along the well-known trout stream, Four-Mile River, claim to have seen.

On June 6 a companion and myself were tramping along the road which leads to the upper portion of the brook preparatory to "striking in," when suddenly from the roadside, and only a few feet away, flew a bird of pure white plumage. In size, shape and motions it resembled, identically, the ordinary robin, as did also its call as it flew about. Its mate, a robin of the ordinary color, followed it closely and we watched them for some time. Reaching the nest we found an egg of the common species. However much the idea has been scouted, it is a fact nevertheless, that a pure white robin has been inhabiting that vicinity. A late report says that the nest has been torn down, but I hope no harm has befallen the beautiful bird. JOSEPH A. CONE.

### A Trout-Eating Snake.

ON May 18, 1893, while trouting in Follywort Brook, Preston, Conn., I was witness to an incident worthy of record. Standing on the bank, I was in the act of making a cast in a shallow pool below, when the sun shone forth, disclosing the bottom of the pool and the various objects therein, and I saw a trout of perhaps ½lb. weight lying head up stream near the bank. Checking the cast, with my gaze on the fish, I suddenly saw a dark streak shoot out from the roots that fringed the banks, and the trout disappeared. Then a confused squirming something appeared through the roil and débris from the bottom. Moving to the bank directly over the combatants, I looked down and saw the trout held firmly in the mouth of a water snake, who lay with tail tightly coiled around a root. The snake, by a muscular movement of the body, would draw the trout nearly under the bank, when the trout, by a rapid use of head and tail, would recover his lost vantage, and stretch the snake to his full extent. And thus it was nip and tuck between them. Dropping my rod on the bank and wrapping a hook on the leader, by good luck and perseverance I managed to hook the trout by the under jaw and draw him to the surface. Even then, to my surprise, the snake would not release his prey, but, stretched taut, hung on like grim death. Reaching back, I secured a stick and gave him a sound rap across the head, whereupon he released his hold and disappeared beneath the bank. The trout apparently had received no injury, but seemed to be in a state of semi-insensibility or stupor, or what you will. I returned him to the stream, but in twenty minutes he was a dead fish. E. M. BROWN.

IV.—DOWN THEY GO.

### Black and Gray Woodchucks.

I SEE that one of your correspondents, under this caption, speaks of those of different colors having different habits. Here in Maine we have but few woodchucks, but those we have are about equally divided between black and gray. Those of both colors vary considerably in individual cases, some being coal black, some a reddish black, almost brown; some are light gray and some a reddish gray. Whatever their color or shade may be, they are all alike in their habits. One sees both gray and black living in or by edges of fields, and one finds both colors a long way in the woods. They differ just as much as a black cat does from a gray one, and no more. I have seen prairie dogs near Abilene, Tex., which were very large and very red, perhaps owing to color of soil. In other places I have seen them much smaller and gray, and I remember seeing a large colony at the lower end of South Park which were nearly white, but I never heard any one claim that they were on account of size or color of different races.

Regarding their tree-climbing habits, I once saw a large gray one sitting on the bent trunk of a large basswood tree some feet above the ground. This one had not been disturbed, and had climbed of his own accord, though the ascent was very easy. I was once where a dog drove another (a black one) up a small cedar. Till then I never believed that a woodchuck could climb, but I am convinced that when obliged to, they can climb quite a smooth tree.

It may be news to some of your readers that foxes catch woodchucks, but I once came suddenly on a fox which had a large woodchuck in her mouth, which she dropped on seeing me. Examination showed that she had just killed it. M. HARDY.

---

MUSKOKA, Canada.—Noticing several communications in recent issues under this head, I may mention that several years ago I was passing through a clearing surrounded by brush, and was attracted by the whistle of a ground hog. After looking about I at length discovered the source, about 15ft. up a maple sapling. The tree was about 7in. in diameter, and was without branches until it divided into a crotch, where the ground hog was perched. What puzzled me was the cause of its seeking so strange a refuge, as I had not disturbed it previously, neither had I a dog with me at the time. J. H. WILMOTT.

---

### Small Game in the National Park.

EASTON, Pa., June 13.—*Editor Forest and Stream:* It affords me gratification to note the interest you have taken in our Yellowstone National Park, and I trust it may be preserved to future generations in all its natural, rugged beauty, intact. I was in the Park not long since and I noticed an absence of small game. It became noticeable, because I expected to see much more. Undoubtedly this is due in a great measure to the scarcity of nuts and the natural food of our small game. I would suggest that hardy nut-bearing trees be planted throughout the Park. It can be left to the Agricultural Department of the Government to select such as would ripen in that high altitude and climate. It is merely a suggestion and may not be practicable. I would like to hear from somebody who has thought about it and if any observations have been made by others in the same direction. J. S. HUNT.

[There is no dearth of the small game peculiar to the high mountains in the National Park, and there is abundant food for the grouse, hares and squirrels. The seeds and nuts of pines and piñons, and other trees and shrubs probably furnish all the food required.]

---

### A Tame Partridge.

WEEDSPORT, N. Y., June 22.—About two years ago a partridge (male) came into the village of Weedsport and went to the home of a German family. The door was open and it walked in as if it owned the place, and never offered to fly away. It strolled around the room for some time, when it was caught and put in a good sized cage. It seemed happy and would eat wheat out of any one's hand. It has been taken out of the cage several times and will stand on the owner's fore-finger, but never offers to leave. This spring it was given three young chickens and it is raising them the same as young partridges. If any one goes near the cage it will make a terrible fuss; and if they get their hand inside they will lose a piece of skin. It is very cross since receiving the chickens. I believe the object in giving the chickens was to see if they could mate them another year. This bird seems to be just the same as all the other partridge in this State; and the old saying that a partridge can't be tamed will have to be one of the past. J. H. L.

### "A Man from Corpus Christi."

"A MAN FROM CORPUS CHRISTI," by Dr. A. C. Pierce; Forest and Stream Publishing Company, New York. This is the story of the adventures of two bird hunters and a dog in Texas bogs. It is simply the narrative of outdoor life in west Texas, but it is so well written that interest does not flag from beginning to end. Dr. Pierce writes delightfully, and had he labeled his book "An Admirable Character Sketch," he would have hit upon its proper title. Mr. Priour, his companion, is a professional hunter who is a constant source of amusement to the reader. He does nothing absolutely absurd or ridiculous, but his actions and his conversations as described by the Doctor are so true to life and so natural—that is, natural for that sort of person—that one absolutely smiles in anticipation when it becomes evident from the text that Mr. Priour is going to say or do something. The bird-hunting expeditions sink into insignificance when compared with the sayings and doings of the assistant bird hunter. One of the features of Mr. Priour's character is, that while he is one of the greatest prevaricators that ever walked, if so harsh a term may be applied to such innocent deception as he is guilty of, not from the moment of his appearance on the stage to his departure from it is he detected. He knows everything is going to turn out just as it does beforehand, and when it does go against him, he coolly changes sides and is still right. He can't be downed. Dr. Pierce has written a very pleasant story indeed, and proves himself to be not only a good judge of character, but what is much rarer, an able exponent of it. He has a keen sense of the humorous and ridiculous, and has caught every weak and salient point in Mr. Priour's makeup. The description of Texas scenery, etc., are true to life, and one has only to glance through the pages of "A Man from Corpus Christi" to see that it is an accurate and reliable record taken from actual experience.—*Galveston News.*

*The* FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

## Camp-Fire Flickerings.

"That reminds me."

### STORIES OF EZRA.—V.

WINSTON HARRIS was a friend of Ezra and myself, and his big stories afforded us much amusement. One may get some idea of his character from the following true story of his boyhood: When he was about twelve years old his father gave him permission to go squirrel shooting, but told him he must not go beyond the creek, but he did start to cross it on a log, and slipping off, got himself and the gun thoroughly wet. When he got home he was asked to explain. This he did by saying that he had shot at a crow that was directly over him, and shot a hole 2ft. across right through a cloud, letting the water run out of it so fast that he had a very narrow escape from drowning.

His mother said, "Winston, haven't you read about Ananias and his wife, who were struck dead for lying?" Looking his mother straight in the eye, he answered, "No, I never read about it, but I was there and saw them carried in after they fell."

One cold November day Winston came to town so hoarse, he could barely speak above a whisper. Asking how he caught such a cold, he said, "Night before last I heard a fuss among the chickens, so I got up and peeped out, and there, in the old locust tree, was the biggest owl I ever see. I just stepped back to the bedroom and got the old shotgun and cut loose at him. He fell, but picked himself up and flew away across the pasture, and I heard him fall way down toward the woods. Then I cut out after him with nothing on me but my shirt, and tramped round in the frosty grass till I was about froze, but I couldn't find him, though I know he's dead down there somewhere."

The next day I told the story to Ezra and he said: "I'll make Winston believe that he never shot at that owl." Hunting up an old brown hat Ezra fired a charge of shot through it and put it in his shooting coat. We went quail shooting that day, and about 11 o'clock came to Winston's place, finding him out in the field husking corn. He told us to go up to the house and tell Martha we would be there for dinner. Before going in the house Ezra laid the old hat under the locust tree. When Winston came in half an hour later he raked the coals and the remaining backlog to the front of the fireplace, got us to help him carry in a new backlog, and after carefully adjusting it piled smaller wood in front of it, drew up a chair, sat down and then told Ezra about the owl.

"Shouldn't a thought he'd light in the locust tree when that old hat was hanging in it," said Ezra.

"Ain't no old hat hanging in it," said Winston.

"Yes, there is," said Ezra, "I threw it up there a year ago and I saw it there not ten days ago."

"We can soon settle that," said Winston, going to the door and looking. "No hat there, that settles it."

"That's queer," said Ezra, and walking under the tree presently found the hat. "Here it is! and [looking at it closely] if it ain't full of shot holes, too. Here's the owl you shot at."

"Honestly, now, I did think I'd shot an owl, but I reckon it must 'a' been that hat," said Ezra, "but if you will bring up a pitcher of cider we will keep still about it," and the cider was brought. O. H. HAMPTON.

## Game Bag and Gun.

### IN TERRITORIAL DAYS.

WE were camped for the night, my eldest son and I, on the shore of a small lake which was but an enlargement of the outlet of Liberty Lake, a beautiful sheet of water tucked away under the shadow of the mountain bordering the plain through which flowed the charming Spokane River, and but a few miles east of the then thriving village of that name.

It was a great resort for waterfowl in the old days, and during the afternoon of our short stay we had enjoyed fine shooting at the passing ducks, and now as the darkness came on, and the light of the camp-fire illuminated a wide circle around the wagon containing the camp equipage, near which the hobbled horses grazed peacefully, a faint *honk* far to the northeast gave note of the coming of a flock of geese in search of a resting place for the night.

An occasional call coming on in the darkness notified us of their swift approach, and, finally, of the change of direction of their line of flight as the light of our camp-fire warned them of possible danger.

Swinging far around to the northwest their final notes told us that they had alighted at the further end of the lake on which we were camped, a quarter of a mile or more away. I wanted a goose or two to complete the bag of game we were to carry home in the morning, and the question of how to get a fair shot at the watchful creatures became for the moment an absorbing one.

Finally I concluded to try and steal a march upon them with the aid of the brown pony.

I had a 10-gauge Parker which had on many occasions given a good account of itself, and although I had nothing in the way of ammunition but a few shells loaded with No. 6 shot, I slipped a couple of them into the big barrels, and loosening the hobbles from the legs of the pony, and putting a bridle on him, I took him by the bit with my left hand, and stooping my head down behind his neck and keeping my arm extended so that he would be made to walk slightly in front and with my own legs kept alongside his forelegs I took my silent course around the east shore of the lake, along the sandy beach, and in the shadow of the low hills bordering it, which materially assisted in hiding me from the watchful eyes far in front. An occasional low muttered call warned me that our approach was carefully noted, but as my moccasined feet gave no sound and only the footfalls of the pony could be heard along the silent shore, I trusted that the darkness would shield me from their vigilant eyes, and that the innocent looking pony would be permitted to wander slowly along shore within easy range of the coveted feather bed grouped on the sandbar in front.

The light in the western sky had now faded to a faint glow near the horizon, and as the low occasional calls of the wary waterfowl grew fainter as we approached, and finally ceased altogether, it became a question whether we might not after all walk right past in the darkness without a glimpse of them.

How often in the hunter's life does some apparently trifling circumstance turn to failure the most cunning stratagem, or change apparent defeat into bright success!

The same faint, rosy glow above the western horizon now enabled me to note a hazy something clouding a dark point where the shore in front seemed to bend outward into the lake, and I paused and peered eagerly through the gloom to study the dark problem in front, where the after glow of the sunset on the water made just the faintest outline or frame for the sable picture.

For a minute or so I stood beside the silent pony looking from beneath his outstretched neck for any indication of life in the gloom in front. Neither sound nor movement gave the faintest token of life beyond. Still a something of irregularity of outline on the shadowy point in front finally decided me in the conviction that this was really the group of mystified geese, silent as statues, watching the motionless pony on the shore. Carefully cocking both barrels, and with my left hand slipped through the loop of the bridle rein, I sank gently upon one knee, and aiming under the neck of the sleepy pony at the center of the dark mass in front, pulled both triggers. As the 10drs. of powder blazed out into the darkness and roared its small earthquake under his nose, the snorting pony reared, and whether the terrific kick of the overloaded gun hurt worse than the sudden yank at the bridle rein, which threatened to dislocate a shoulder for me (and possibly saved the crazy pony from breaking his back on the sand behind him), I shall never know—nor did I at the time very much care—for a honking, fluttering commotion on the sandbar 40yds. in front, quickly followed by the echoes shouted back at us in quick succession from the hills across the lake; and these in their turn succeeded by the fainter echoing protests against this mighty slaughter of the innocents and the peace of the lonely lake shore, coming slowly back to us from the great mountain walls far to the southeast, absorbed all my attention just then, and proved the best of all liniments for this kind of hurt.

Hurriedly soothing the frightened animal at the other end of the taut bridle rein I towed the now reluctant brute across the sandbar and picked up four big Canada geese, and another was found next morning drifted up on the shore. Regaining camp with my backload of dead geese the pony was again hobbled, and through the remainder of the glorious October night we slept the sleep known only to the lover of the open air.

As the team was being hitched up next morning for the drive back to town, a flock of geese was observed sitting on the opposite shore of the outlet, a half-mile to the northwest of camp, and as it appeared that they would, if approached from the northwest, fly toward Liberty Lake to the southwest, I directed my son to drive the team as silently as possible around them and then to make them take wing, when I took the gun and following on close behind the wagon to a point where, a short distance in front, a small ravine furrowed out by the spring rains offered a hiding-place, I dropped from sight behind its banks.

The detour was skillfully made by the careful youth, and as the geese passed me some 60yds. distant I succeeded by the use of both barrels in wing-tipping a big gander, and as he fluttered down to the shore secured him after a short chase.

We now had a noble bag of geese and ducks, and with light hearts drove toward the road leading back to town, and just as we reached it and turned sharply toward the embryo metropolis of the Northwest a glance across the prairie detected an inquisitive coyote, which with elevated nose snuffled the southwest breeze, tainted with the load of waterfowl in our wagon. The scent was too enticing for resistance and he trotted briskly down the road after us.

A glance ahead showed that the road passed through a narrow gap a short distance in front between the low rocky bluff on the left and an isolated point of rocks 50 or 75ft. in height, separated from it by a narrow pass about 50ft. in width. Seeing that the coyote was coming eagerly on, I slipped in my last two shells, and handing the lines to my son hurriedly directed him to drive steadily on down the road at an easy jog trot, and without pausing for an instant, to swing the team a trifle to the right just after he had passed the isolated rock, so that for an instant we would be hidden from the sharp eyes of the watchful little coward behind.

The instant the rocks hid me from the coyote's view I leaped from the wagon and ran around the rocky point to the northward, while the wagon rattled on down the road. Carefully creeping around the bluff of rocks and waiting to give him time to come on, I had almost completed the circuit and regained the road when I came upon him, and as he turned to fly I gave him both barrels of No. 6 at 40yds. A more cunning brute than the red fox himself, that was the only coyote I ever fairly outwitted; a score or more of them I have killed while deer hunting.

As the last shell was emptied we took the road homeward, well pleased at having "got the scald" on the chicken thief. ORIN BELKNAP.

---

### Wanton Shooters in Florida.

TARPON SPRINGS, Fla., June 21.—*Editor Forest and Stream:* I heartily indorse your platform plank, "prohibition of game traffic." It is the right move in the right direction, but here in Florida there is something worse than market-hunting; I mean the wanton destruction of game by sportsmen. Very many of the men who come here for the winter seem to think they must kill everything that runs, flies or swims.

I said sportsmen; they call themselves sportsmen; they are well dressed, gentlemanly, have fine guns and fishing tackle and generally pay their bills, but woe to the unfortunate bird or beast that crosses their path. I have seen a few who would not shoot what they could not use, but I have seen more who would shoot anything. Seemingly their only desire is to kill. Fortunately we have some places yet left in Florida where the average tourist does not care to go, and there the game is still plenty. But it will not be so long. Soon the game will follow the plumed birds; and Florida's attraction gone, she will go back to her former wildness.

Yes, stop the sale of game, and also stop the murder of innocents by any one who can fire a gun and wield a rod.

TARPON.

## STOP THE SALE OF GAME.

A PLATFORM PLANK.—*The sale of game should be forbidden at all times.*—FOREST AND STREAM, *Feb. 10.*

VALLEY, Wash.—Having won a splendid fight for fair play and true sportsmanship in the case of the Yellowstone National Park (one which adds a big feather to its plume), and without waiting for victory to preen her ruffled plumage as she perches on the moosehead of the big birch sign, FOREST AND STREAM again enters the list with a new war cry—"Stop the sale of game entirely!"

Before we "jump at a collusion" (as my little boy once said) let us look at this thing twice. Has the editor thought this thing over carefully? Does he really wish to drive all the old hunters into Coxey's Army? Is he actually in league with Phil Armour to flood the country with chopped beef to the entire exclusion of dried venison? Shall there be no more cakes and ale?

I had inclined to confidence in his sense of justice, and before a final quarrel wish to know if, when one of us old fellows, having piloted some pompous tenderfoot "Colonel" into the hills after game, and listened for days to his awkward thrashing through the brush in quest of same, which he never approaches nearer than a quarter of a mile, is finally beckoned out behind a treetop and quite accidentally informed that the "Colonel" has a crisp $10 bill that he does not particularly need, and that if he had "a fine buck to take home, etc.," does the exacting editor really expect the hunter to rise in virtuous indignation to his full height and paralyze the culprit with the declaration that he is a reader of FOREST AND STREAM and consequently does not sell game?

Does he for a moment fancy the hunter willing to supply the "Colonel" with venison for no compensation whatever, save the fun of accompanying him back to town and seeing him exhibit his trophy to envious friends as "the buck I shot up in the mountains, sah?"

If, while I am standing peacably near the camp-fire with my hands behind my back, the "Colonel" saunters up to warm his fingers, and I happen to feel something round, smooth and heavy (about the size of a $10 gold piece) slip gently into my half shut palm; if, after a casual remark about the weather, I can't quietly slip my hands into my pockets and stroll back to the tent to lace my moccasin, without a fight with this argus-eyed editor of FOREST AND STREAM, I want to know it. See here, may we not compromise by simply stopping the other fellow from selling? Even Mr. Howell, the late game warden of the National Park buffalo, would agree to this.

ORIN BELKNAP.

[This recalls the point made against a proposed Pennsylvania law forbidding the sale of trout, that it would interfere with the long-established trout traffic between the small country boy with a letter in the post-office and the fancy fisherman from town.]

---

DENVER, Colorado.—I have read with decided approval "A Platform Plank," and have been much gratified on reading from time to time the hearty indorsements given to it in FOREST AND STREAM. No doubt "the campaign must be a long one," so much the stronger reason for beginning. It should have been taken up long ago. Who can successfully refute the position that "a grouse which gives a man a holiday afield is worth more to the community than a grouse snared or shot for the market stalls." The sentence above contains a whole volume, and should set every man thinking who reads it. The good sense, the integrity, the logic of the "platform plank," appeal to me irresistibly, as they should to every man who realizes that there is some one else on this beautiful earth of ours besides himself, and that there is a fair chance of its being inhabited some centuries after we are all dead and forgotten; and that those who come after us (if there is anything in heredity it should be so) may have a passion for the rod and gun as well as ourselves. It was never intended in the Divine economy that we should slaughter any live thing beyond our needs.

We are making an effort in Colorado to shut off the market-hunter and fisherman, as you are aware, and with some show of success. Our territory is large, however, to look after, but the benefit is beginning to show itself already in the fish supply, to my own knowledge, and I presume the game is not suffering as it did.

L. B. FRANCE.

## TEXAS AND THE SOUTHWEST.

### New Hunting Fields.

SAN ANTONIO, Tex.—About eighteen miles of the new Gulf Shore Railroad, from San Antonio to Velasco on the Gulf, is now ready for the ties, and it is estimated that trains will run in sixty days. This will open up a country famous for game of all kinds. The road will cross a dozen streams famous for black bass which have never been fished, and will place another famous game resort (Velasco) within easy reach of the winter tourists of San Antonio.

There is another road which is assured for southwest Texas. The Southern International is the name, and it will run from San Antonio to the City of Mexico via Brownsville. Mr. J. D. Whelply, a friend of the writer, who daily drives a facile and rattling good Faber on the *Express*, has just returned from the most southwesterly corner of the State. He says that it is the sportsman's paradise—that he saw huge quantities of turkey and deer. The country is well watered by streams and lagoons, and along the coast are numerous marshes, where he saw more jacksnipe than he ever saw in his life. This will be another fine region opened up for the tourist sportsman. It will also cross numerous streams famed for bass and other fish.

### Wild Camels.

In a recent issue of the San Francisco *Chronicle* there appeared an article claiming that a party had discovered a band of about 60 camels that roamed in a wild state. Upon mentioning the curious fact to a number of friends I was astonished to hear what made it certain in my mind that this band is undoubtedly the outgrowth of a lot of camels that were introduced in this section by the United States Government.

In 1860 the United States Government conceived the idea of using African camels for the transportation of supplies and ammunition to and from the forts on the border and across what was then called the Great American Desert, and accordingly a band of about 30 was sent to San Antonio. When Texas seceded all stores and the camels were confiscated by the Confederate Governmen' at San Antonio. The superintendent of that band was Mr. W. D. Marshall, now of San Antonio, who is employed in the I. & G. N. freight office, and whose statement can be thoroughly relied on. After the war these camels again fell into the possession of the United States troops, and were herded at Camp Verde, 60 miles northwest of San Antonio. They were not serviceable for the purpose originally intended owing to the rocky nature of the country, which was too severe on the feet of the animals.

Mr. Ed. Steves, Sr., one of San Antonio's most respected citizens and pioneers, who died three years ago, often spoke of these animals. The last he remembers of the camels is that after the failure to put them to practical use in the San Antonio country they were sent to Arizona, and not proving serviceable there, were set at liberty.

The band referred to as being lately seen in Arizona is undoubtedly the same family that is spoken of above. Quite a number of San Antonians remember the animals and there is no question as to the truth of the above.

O. C. G.

---

## RED CLOUD TAKEN IN.

CASPER, Wyo., June 21.—*Editor Forest and Stream:* I noticed in your last issue that the Sioux had started out on another game raid, and thinking perhaps your readers would like to hear how they are coming on I send this report.

Red Cloud and forty-three bucks with their families (about 150 in all) arrived here with twenty-seven wagons about the 11th, and propose to meet the Arapahoes a few miles from here and have a grand "swap," horse race, dance, hunt, etc., combined.

They had been up here two years ago and had killed between 2,500 and 3,000 antelope within fifteen miles of town; and they now proposed to exterminate all in the vicinity of Pine Mountain, about thirty miles from here.

I have been for two years trying to have this sort of thing stopped, but without avail. So on the 12th I wrote Capt. Chas. Penny, the agent at Pine Ridge, to see what he would do, telling him that if there was no other way I would have to have his Indians arrested and fined. I was agreeably surprised at the letter I got in reply; it was so unlike the usual way such complaints have been noticed:

UNITED STATES INDIAN SERVICE, OFFICE OF INDIAN AGENT, PINE RIDGE AGENCY, S. D., June 14.—*Mr. E. A. Lockwood, Casper, Wyo.:* SIR—Acknowledging the receipt of yours of the 12th inst., I desire to say that any Indians from this reservation, who are absent hunting in your vicinity, are doing so contrary to orders and warnings given them repeatedly. It is impossible to prevent Indians from sneaking off the reservation, and I have no doubt what you say is literally true. I am, however, powerless to prevent it, and I sincerely hope that you and the people of your vicinity will put in operation laws on the subject of the protection of game. Nothing will as effectually stop this as the vigorous prosecution, conviction and punishment of these Indians, and I sincerely hope that they may all be arrested and every guilty one convicted and punished to the full extent of the law. An example of this kind will effectually prevent any such infractions in the future. It is their immunity from punishment that encourages them to do this sort of thing, and not any lack of knowledge of the law or regulations. I am, sir, very respectfully, your obedient servant,

CHAS G. PENNEY,
Captain 6th Infantry, Acting U. S. Indian Agent.

We had Red Cloud, Jack Red Cloud and Dreaming Bear arrested where they were engaged in killing antelope, bucks, does, fawns and does heavy with young. They admitted their guilt and were let off with a fine of $20 each, and this was suspended upon Red Cloud's promise to allow no more Sioux to hunt in Wyoming.

I am afraid this "bluff" at enforcing the law will have no lasting effect. They should all have been fined and the fine collected. Then they would remember the lesson for years. The Arapahoes also would have have let our game alone. However, the Court told Red Cloud that if his promise was not kept, and if any more Sioux were brought in, he would fine them the limit, wich is $100 and ninety days.

We still have enough antelope left to furnish sport for any one who is not a "game hog." I suppose some of your readers will consider me one when I say I went out one day last fall and killed five in about three hours; but I was killing for others, and the meat was all used.

I dare say a tenderfoot would use up a beltful of cartridges in one day's shooting at antelope, scarce as game is compared to what it was four years ago.

In a couple of months my wife and I expect to start on a three or four weeks' trip for game and scenery. We expect to visit the Owl Creek Hot Springs before we return. Hope to get all the deer and antelope we want, and expect to shoot elk and mountain sheep. There are "silvertips" enough to make it interesting.

By the way, I have a team and complete camp outfit, and wish to take a gentleman and wife along for company. Their share of expense will be very light after getting here. But we want no dudes, as we have to rough it every day after leaving Casper. Of course, the law reads no non-resident shall hunt here, but it is not enforced except against "game hogs" and Indians who wish to exterminate our game. We are glad to see Eastern hunters.

A tame buffalo bull passed through here yesterday for the Big Horn Basin. There were several half and quarter-bloods with the bunch.

E. A. LOCKWOOD.

---

### The Gun That Sings of the Sea.

BOSTON, June 15.—*Editor Forest and Stream:* We find ourselves going to the wall where the old gun hangs, taking it from the peg and looking critically through the gleaming barrels, examining every part carefully and tenderly, and finally giving it an extra rub of an oiled rag, put it in the case and let it hang in peace for another little while. Our thoughts are ever going back to the delightful times we had last season with the plover and curlew, the mocking loon and the dull-witted coot. What a delicious sense of wisdom encompasses one who toils in the city from "early morn till dewy eve," when he finds himself surrounded by old ocean and free from conventionalities? And what soothing music the breakers fling to us as they come from their salty beds roaring and tumbling far up on the glistening sands, threatening to engulf us, but receding quietly again as though ashamed of such uproarious conduct. And how we do eat and sleep without dreaming. Sleep such as we never knew since childhood. We can tramp the marshes and beaches all day and never feel tired. What is the secret of this new vitality? My brothers who love the rod and gun know it well.

My friend Braun, of Revere, and I took a trip to the Cape recently, for the purpose of erecting a shooting box for next season's sport. We have some very good grounds and should be pleased to hear from some brothers who would like to join us in season. We can accommodate three beside ourselves. We do not want any exquisites. We want men who will do their portion of wood hauling and water carrying. We had a chap last year who spoiled our pleasure by his unwillingness even to pour his own tea.

The mighty hosts from the North will soon be with us, and we await their coming with schoolboy impatience. We do not ruthlessly slaugther the birds. Simply enough for our table and a few for our cabinets. We are not market-hunters nor pot-hunters, and are firm believers in your plank.

JAY PEE.

---

### Game Protection and Trap-Shooting.

TREMONT, Pa.—*Editor Forest and Stream:* In your issue of June 23, you fully expressed my sentiments in the editorial referring to the article, "Will Illinois Follow?" It is an article that contains food for reflection, and the shoe fits our own State Sportsmen's Association to perfection. The reason I say our own State Sportsmen's Association is, because we are exactly in the same rut as the Illinois State Sportsmen's Association, viz., that of holding our annual State meeting with a two-fold purpose, combining game protection and trap-shooting at one and the same time. While there is actually no crime or offense committed in holding this meeting jointly, there is, however, great danger of one or the other being neglected, and from my own personal observation, I fear that one would fall to the lot of game protection.

Your correspondent had the honor to represent the Tremont Game and Fish Protective Association at each of the State conventions held in 1892 and 1893, and, at both meetings composed of representatives from many counties of the State, there seemed to be no end of enthusiasm in the direction of trap-shooting, while the interests of game protection seemed far away in the background.

This is especially true of the meeting held at Reading, in 1892; in fact, it seemed altogether a trap-shooting convention, and I was sorely disappointed when that meeting was adjourned and having done little or nothing in the direction of game protection. Our annual meeting at Harrisburg, in 1893, seemed to improve somewhat over the one of 1892. The interests of game protection and propagation were discussed at some little length by less than a dozen of the large representation present. The fact that the interests are not identical and that game protection is not trap-shooting and *vice versa*, would suggest the wisdom of holding separate State meetings in the interest of each.

Now, brother sportsmen, I do not wish to convey the impression that I am opposed to trap-shooting, on the other hand, I enjoy it very much myself, for there is a fascination and pleasure connected with it, once we become interested. But one thing I strongly favor, and that is, to follow the example of the New York State Sportsmen's Association and have game protection divorced from trap-shooting by holding one State meeting in the interests of game protection and propagation and another in the interest of trap-shooting.

The establishing of such a policy would give us a separate and distinct meeting to discuss exclusively the interests of game protection, and at the same time the interests of trap-shooters would be similarly looked after at another meeting. The fact of holding one meeting annually, and that meeting too in the hottest season of the year (August), beginning at 8 P. M., to continue for an hour or two or as long as it can be made entertaining or interesting, in some closely confined room with the thermomter up in the nineties, is enough to discourage any representative (who may be there in the interest of game protection), and who has perchance traveled several hundred miles.

The question of game protection is a broad one, and cannot be hurried over in an hour or two. Our State meeting should, I believe, be separate and distinct from trap-shooting conventions, and held at a seasonable time of the year, devoted to one or two days' session, as occasion may require.

D. P. F.

---

### Spring Shooting.

MUSKOKA, Can.—*Editor Forest and Stream:* I was much interested in some letters from correspondents which appeared some time ago under this head. This to the sportsman is a question of the greatest importance. It appears to me that the present generation as a rule is thoroughly selfish, the majority not caring a snap whether their children or childrens' children ever see—let alone shoot—a duck. Does it ever occur to them that every duck that is lucky enough to run (or fly) the gauntlet in the spring is the representative of an average of six or seven at the best returning in the fall? Only think of the increased sport in the fall a close spring season would afford.

Who would think of going into their poultry yard in the spring and indiscriminately killing off the occupants? Spring shooting is on a par with this. It is certainly only a matter of a few years before a close spring season will perforce have to be established. Why not agitate this most important change at once, before the stock gets so low that it will take years to reach its present (I was going to say former) numbers? There may still be numbers of ducks in certain localities, but in our Northern districts, in spite of our not having the usual class of feed (wild rice, etc.), we could years ago make fair bags The wood duck then was very numerous; now it is seldom seen; and other varieties are almost as rare.

J. H. WILMOTT.

---

DENVER, Col.—*Editor Forest and Stream:* Stop the spring shooting.

L. B. FRANCE.

---

### A Nutmeg Quail Story.

*Editor Forest and Stream:*

The New York *Sun* reports that two Connecticut women have been fined for breaking up a quail's nest; and it explains that in a mowing lot on the edge of the forest a few days ago, they found a quail's nest "with eight birds in it that were two weeks old. They knew a bird fancier in town who desired to domesticate a brood of quail, so they pilfered the fledgelings and sold them to him for a good price." Who ever heard of a nest of quail fledgelings two weeks old? But if you see it in the *Sun* it's so.

BARKER.

### Not Patented.

LOS ANGELES, Cal., June 15.—A party of three, Dave, Catesby and myself, have been duck hunting; and having exhausted our supply of ammunition, were returning to the team, when, crossing a piece of marshy ground, we flushed a solitary jacksnipe. After a short circuitous flight it darted down again within a few yards of us.

Dave hurriedly asked for a shell, and after a search through all our pockets, a single shell was found which had missed fire, and in which the primer had become loosened by the successive blows of the firing pin.

The seeming impossibility of bagging the snipe under the conditions named aroused in us a great desire to possess it, and also (as it proved) sharpened Dave's wits. He asked for a parlor match, of which Catesby had a supply.

With the blade of his pen-knife he extracted the defective primer, cut the head off of one of the matches, and carefully seated it in the cavity intended for the primer. Fortunately the cavity was deep enough to contain the match head, or otherwise there would have been danger of a premature explosion upon closing the gun.

The whole operation occupied much less time than it takes to write it, and when completed it was decided by a vote of the majority that Dave should take the shot as a reward for his inventive genius and because he was the best shot in the party.

He flushed the snipe and quickly leveled his double-barrel at the twisting flyer. There was a noticeable hangfire, but when the gun cracked the snipe joined "the things that were." Of course it was purely a chance kill, and I doubt if it could be done again in a hundred shots, but Dave got his full share of praise, which he took as a matter of course.

The shell was loaded with black powder. For the benefit of the public I will say that we have not applied for a patent on our primer, and all sportsmen are free to use it, should necessity occurr. CULPEPPER.

### Sometimes They Draw the Long Bow.

DUNBARTON, N. H.—*Editor Forest and Stream:* The tendency to exaggerate is fully developed in the residents of the settlements on the borders of the Maine and New Hampshire forests. Once, with a companion (who for his years is one of the best still-hunters and woodsmen I know), I went to the headwaters of the Mad River, in Waterville, N. H. I had been told that deer were plenty there. It was toward the end of the open season and there was a foot or more of snow with a noisy crust, and we did not expect to do any hunting. Our plan was, if we saw many signs of game, to go there the following season and build a camp. The first day we traveled over some first-rate looking deer ground without seeing a sign, fresh or old. On the second day, after quite a tramp, we saw some old tracks where four or five deer had been several days before. We both decided at the end of the second day that there were not deer enough to make it worth while to go there again.

On our way out my companion called at a house near the woods and was told by an old man living there that the woods were full of deer. "Why," said he, "there are over 50,000 deer between my house and Mount Washington." Now, I think this old fellow had told this story so often that in a certain sense he believed it, although he knew it was not true.

The story of a night in the wilderness under the heading of "Campfire Flickerings," in FOREST AND STREAM of June 2, is fully equal to the 50,000 deer yarn. I should like very much to see the 8in. tracks of that catamount which chased the dog into the camp. He must have worn snowshoes. C. M. STARK.

### Wisconsin Export Law.

THE statement made in these columns last week, that the Wisconsin law did not forbid the export of game was correct enough with respect to the particular game then in question—wildfowl. The law does forbid export of venison.

### Concerning a Portrait.

"A LONG-FELT WANT"—well, I should say so. I have been wondering for lo! these many moons, what Mr. Hough had done or had not done that we shouldn't have the pleasure of seeing the face of one whose contributions everybody looks forward to and reads with such satisfaction. Why, do you know, he is one of the best things that ever happened to dear old FOREST AND STREAM? I say one of the best. The other is—well, I'd mention it, but I know the modesty of the editor—readers will know what I mean. These articles of Mr. Hough on the Park expedition are a perfect feast—witty, chatty, entertaining, instructive, thoroughly enjoyable and readable. He has a way of putting things that—well, they get next to a fellow, hit plumb center every time. I am very glad to see his phiz and sincerely hope he may long be permitted to delight the thousands of readers of the best sportsman's paper on earth—"the great and glorious sunshine shedder." O. O. S.

Allow me to commend your paper for the position you take in regard to the Park game and in "showing up" the several schemes to run railroads inside the Park boundaries. Keep the sharks out.—H. L. LAKE.

## Sea and River Fishing.

### THE SARDINIA CLUB'S OUTING.

BUFFALO, N. Y.—Three years ago a number of kindred spirits living in Buffalo and its vicinity conceived the idea of stocking with trout a spring brook in the southern part of Erie county, running from near Chaffee to Sardinia. To think in this case was to do, and 10,000 California trout and 20,000 brook trout, all in their infancy, were intrusted to the cold waters of the stream and its tributaries. From time to time some members of the club have wandered along the banks of the stream to see if any of the fry remained and if they had begun to grow. The reports were encouraging, as many fish were seen and some of them of considerable size.

This spring the stream was declared open to the members of the club, and some very pretty catches of fish have been taken, the number including two California trout, one of them 13½in. long.

The annual meeting of the club was planned this year for Decoration Day, at Sardinia. There should be a dinner with a speech and then the annual business meeting of the club. The long-talked of day arrived when the club members with their wives were to visit, some of them for the first time, the stream about which so much had been said. The morning was dark and cloudy, and this appearance after more than a week of almost constant heavy rain, made a discouraging outlook. But who ever saw really enthusiastic fishermen deterred by thought of rain, even when there were ladies in the case also? We assembled at the station, fourteen in number, some with one rod, and one with three, and one long-headed member carried in addition to his rod a rifle, with the idea that if the stream was too high to fish, a verdant woodchuck might be above ground long enough to afford some target practice.

An hour's ride, during which the scenery changed from the flat plain, largely submerged, that surrounds Buffalo, to low hills, green in all the verdure of spring, and then to steeper ones as the train wound along their sides above the banks of some swift-flowing stream or through a piece of woodland in full foliage and sweet with blossoms, brought us to the peaceful country village of Chaffee—and mud. Everywhere the roads and fields were full of it, the roads plowed by the heavy traffic of moving teams and the fields by the steel edge of the slow-going plow. The frogs were out in full force and peeps and croaks in crescendo chorus greeted the party as they alighted from the train 950ft. above Buffalo. The sky was still overcast, and as it threatened rain there was a rush to the stores for rubbers. One member even waited till an addition could be built to the only ones left in stock after the onslaught. Then the ladies were assisted into a long cloth-topped wagon that went by the name of "the stage." Here they sat with bowed heads to escape the too close acquaintance between their hats and the cloth top. Under the convoy of the most venerable and staid member of the club, adorned like an old bell wether with a botanist's case with a bait box inside, which all the way did service as a bell to tell the approach of the flock, they started.

Most of the male members started in wagons also, intending to strike the stream some distance down and fish to the village of Sardinia and dinner. But two bolder than the rest set out afoot to walk and find that woodchuck. Encouraged by the remark of one of the farmers who had gathered to see the "circus come to town," that "That old stump lot is full of chucks," these two wandered cheerfully away through the wet in search of game. Entering the field they soon saw one, but he was too near his hole and got away before the gun could be brought into action. Soon, away across the field, a black object was sighted by the member who acted as pointer. "See there, do you see him move? See him sit up and eat the clover, then get down to draw to himself a fresh bunch for his morning meal." "Yes, I see him," said the hunter, "I'll sneak up by that stump yonder. You stay here and watch him." So saying he made a wide detour so as to bring the stump between him and the game, and crept stealthily along, gun in hand. Now this was a pasture and the cows were in it, and seeing a man moving stealthily along and not in his accustomed manner, one bossie cow moved by feminine curiosity marched up behind to inquire "what was up." It would not do to scare the waiting game, so it would not do to scare the cow. The hunter was nonplussed for a moment, and then with a gentle wave of the hand behind him, he motioned the intruder away. Now, in all her quiet life bossie had never seen this action on the part of man, and with a toss of the head she stopped and looked. Again the hunter crept forward and his trailing inquisitor followed. The hunter reached the stump with the cow some distance in the rear. He looked around the corner toward the spot where he expected to see the game. He saw nothing, but the pointer still stood in the same old spot. The hunter crept stealthily around the stump and found—a knot lying in the grass.

This was enough. Game was not plenty in that locality, and the valiant two struck through the fields for that part of the stream where they expected to find the others fishing. On their way they found where some boys had started the bark of a slippery elm, and catching the frayed ends, though grave college professors, they swung at the ends of the long strips as they loosened from the trunk to and fro like the veriest boys on a summer holiday let loose from school. A piece of bark many feet long rewarded their efforts, and shouldering this they marched on in glee. Crossing another field they found where the bright red berries of the wintergreen hugged the ground just beneath the glossy green leaves. With these they filled their pockets, and loaded with woodland spoils trudged across the fields until they reached the stream. They found the water to the top of the bank but clear. The rod was soon rigged, but no answering tug from trout rewarded a faithful whipping of the troubled waters. The rest of the party had long gone on ahead. A farmer, however, told how one of them had "hooked a buster under that log and had lost all his tackle." Following down the stream these two reached a field in which was grazing a herd of cattle led by a lordly bull. This gentleman was disposed to dispute the passage, and came valiantly to the front. At this critical moment, as luck would have it, the fish line caught in an overhanging tree and the corpulent member with one eye on the bull and the other on the tangle struggled to free the line without assistance from the genus *Bos*. This was safely accomplished, though after a few rather exciting seconds during which the gunner stood with his Winchester .45 at "ready" in case anything should happen out of the common. As soon as the line was out of the tree, the corpulent member, catching a stick from the ground, rushed at his enemy and put him to ignominious flight, but as they climbed the fence into an adjoining field the hoarse bellowing of the defeated bovine acted as an accompaniment to their gymnastics.

The hotel was reached in a short time, where all the other members were found assembled, and one poor little trout of seven inches was the only trophy of the day. When the ladies came down the fishers were "not in it," as the bark and berries of the "overland route" made oral gymnastics in order that seemed thoroughly satisfactory. And then after long waiting came the dinner—such chicken pie, and coffee and pie, and ice cream and cake. We could appreciate it all. And then followed the speech-making, when at the command of the president the corpulent member waxed eloquent, and quoting Shakespeare and other wise men he told why we fish, you fish, they fish, and how the memory of it lingers many a day to lighten toil and the unrest and worry of a business or professional life.

Then came the business meeting and the election of officers. Benjamin Sawen was elected president; H. M. Hill, vice-president; John Hobbie, secretary-treasurer. The secretary reported that 60,000 trout had been planted and that there was still $50 in the treasury.

At the end of the meeting nearly all took wagons at once for the station, three miles away, but a valorous few, three ladies and three men, despite the rain which at the time was gently falling, took their tackle and repaired to a famous pool to prove to the doubting member that there were still trout in the stream. This pool lay at the bottom of a high dam where the rushing waters at time of flood had worn a deep hole below the apron, and into this hole the water was dashing in foam. The doubter and his wife both dropped lines into the midst of this favorable spot while the others looked to see the outcome. There was no response. A luscious bait was sent, spat into the foam and then below it. All at once a squeal from the doubter's wife and we saw her gently, alas too gently, lift from the water a trout of considerable size. Then again, even after zealous flogging, there was no response. The reputation of the stream was at stake and the enthusiast, seizing his bamboo rod, tried in many a royal battle with the Adirondack trout, walked boldly out along the dam and made a gentle cast beyond the foam spot in the pool. Twice the bait went with the current and swung in shore, but at the third cast there was a tug, a bending of the lithe rod as a 10in. trout was brought in out of the wet to repose in the basket of the lady fisherman—and the doubter was silenced.

It was time to go. Time and trains wait for no man, so disjointing our rods we made our moist way back to the hotel and getting on board the low roofed stage we were in process of time landed at the station, where we found the rest of the party waiting and recounting the various adventures of the day. Soon the expected train arrived and we fairly slid down the long incline to Buffalo, all voting the second annual meeting of the Sardinia Fishing Club a grand success. H. M. H.

### TROUT TICKLING.

READING the very interesting article by "O. O. S." under this heading, I stand up in the boat to say, that there was a doubt that trout could be taken in this very old manner was as surprising to me as if some one should wonder if they would take a bait or a fly.

I speak of it as an old manner or practice, for if you will open your volume of Shakespeare at "Twelfth Night," Act II., Scene 5, you will note that *Maria* says: "Here comes the trout that must be caught by tickling." This settles the antiquity of the practice, for this play was first acted in 1602, and two years after this was acted "Measure for Measure," although the exact date of the writing of these plays is not known. In the latter play, Act I., Scene 2, the clown says, in answer to a question concerning the offense of the prisoner: "Groping for trouts in a peculiar river." We know that the clown spoke in what Mrs. Partington might have called "an apochryphal tone," and that the offense for which the man was imprisoned would not, to-day, come within the jurisdiction of a game and fish protector, yet it shows that fish were "groped" for in Shakespeare's time, as is apparent in these two references to it by him.

Now to modern instances. When I began trout breeding at Honeoye Falls, N. Y., in 1868, my fishing and shooting chum, "Mort" Locke, told me that he had heard that trout could be tickled under the belly until they could be thrown out on land, and we tried it. Purely in the interest of knowledge we waded in the stream below my trout ponds, then owned by Alvira Parkhurst, and just above the cabin of old Thomas McMahon, and after carefully wading down and driving some trout under the banks, we put our hands under the fish and tickled their bellies with our finger tips until we got the chance to throw them out on the grass. We took three fine trout this way and then, having demonstrated that it could be done, went on with our fly-fishing, for "Mort" Locke was not the man to do that sort of thing for trout; he only wanted to know. He was the station agent of the N. Y. C. R.R. at that place for many years and a well known man in the Monroe County Sportsmen's Association. Old time Rochester sportsmen knew him well. He went to Illinois as station agent for some railroad and was crushed to death by one of its trains some years ago. We shot foxes together over the Mendon hills and ducks on the many lakes of western New York, and we fished together in too many waters to mention. I loved him "like a verra brither," as Burns put it, and if Charon keeps him waiting for lack of funds I hope to have the price for both when I reach the ferry.

To get back to hard, practical facts, things that I do not like as well as I like old friends, I feel compelled to cite business facts, and here we go. When in our business of hatching trout, we have to take the eggs or milt from a fish, we find that a grab ends in failure, but that a pair of hands gently lowered into the tub where we have fish from the spawning race, can be advanced slowly and the trout can be gently lifted and manipulated. A trout seems to like to have its belly gently tickled, and this has long been known, as has been shown above.

The publication of this fact does not seem to me to be dangerous to our fishing interests because most poachers have some of the instincts of sportsmen, or they would net a stream rather than follow the very slow process of "tickling." The game laws of New York instruct a poacher by naming certain fish poisons that are forbidden to be used, when he might otherwise be ignorant of the drug that would serve him, and this is my apology, or defense, for writing how trout may be tickled.

FRED MATHER.

COLD SPRING HARBOR, N. Y.

When a youngster I passed many a happy hour in trout tickling, as described by your correspondent "W. H. B." in your issue of June 16. The scene of my operations was in the Isle of Man. J. H. WILMOTT.

Commenting upon Mrs. Preston's note on the term, Judge L. B. France writes: "One with a woman is in the majority. It will now tax your gallantry to condemn the word. And our friend Starbuck! he will be tickled."

### Trout and Sucker Spawn.

CENTRAL LAKE, Mich., June 2.—It is stated that the suckers of Torch Lake began running up the brooks to spawn about June 10, and that the speckled trout follow them. Query—Are the trout after the spawn? In the Intermediate waters the suckers were running in April, probably because the water was warmer than in Torch Lake. KELPIE

## ANGLING NOTES.

### Salmon in the Delaware.

THE report that salmon have been taken with the fly in the Delaware River reminds me of something I intended to make a note of long ago. In these days, when claims are being made for successes in fishculture and in fish planting, some of the earlier attempts in the same direction are lost sight of, and the earnest effort of pioneers get little or no credit.

Last year Mr. Wm. E. Meehan, associate editor of the Philadelphia *Public Ledger*, compiled for the Pennsylvania Fish Commissioners a pamphlet on the fish, fishing and fisheries of the State. From this book I learn that the first attempt to stock the Delaware with salmon was made in 1871. In that year a number of gentlemen in Philadelphia and Easton purchased 10,000 salmon eggs in Canada and they were successfully hatched in Dutchess county, N. Y., by Mr. Christie, and the fry was taken by the late Henry A. King, a conductor on the Central Railroad of New Jersey, to Easton. The day was hot and most of the fry perished, but 2,500, in a weak condition, were planted in tributaries of the Delaware. The next year, 1872, 13,000 more eggs were purchased by the same gentlemen, and these were taken in charge by Uncle Thad. Norris, of glorious memory, and hatched under his personal supervision, and 11,000 fry planted in the Delaware. The next year Prof. Baird presented the State of Pennsylvania with 40,000 salmon eggs from the Penobscot, and a like number to the State of New Jersey. Of the former Mr. Norris hatched 27,000 and Dr. Slack 33,000 of the latter, and of the two lots of fry 45,000 were planted in tributaries of the Delaware River. As the result of these plants a number of adult salmon were taken, one weighing as much as 25lbs., but the parr and smolts were caught and killed as trout, and for this and other reasons the Commissioners of that time abandoned the experiment of stocking the Delaware with salmon.

It was not until 1889 that the present Board of Commissioners resumed the experiment, as they believed from the success obtained in the Hudson that the Delaware might also be made into a salmon stream, and in that year 100,000 eggs of the Penobscot salmon were obtained, hatched and planted. In 1891 300,000 more eggs were hatched and the fry planted, and the result has been most gratifying; and there is now every reason to think the Delaware will become stocked with this fish. It is reported that this year and last over fifty adult salmon have been taken in the Delaware with the fly.

### Black Bass in Pennsylvania.

About black bass in Pennsylvania Mr. Meehan says: "For the introduction of this magnificent game and table fish the people are indebted, primarily, to the genial and enthusiastic angler 'Thad.' Norris, and, secondly, a number of ardent Easton and Philadelphia fishermen. Early in 1870 Mr. Norris, who was thoroughly acquainted with the habits, game qualities and table merits of the black bass, feeling satisfied that this species would do well in the waters of Pennsylvania, broached the subject of introducing a number to Messrs. Howard J. Reeder and G. W. Stout. These gentlemen entered enthusiastically into the project, and a considerable sum of money was speedily raised, Mr. Norris collecting about $1,000 and Mr. Stout $313.

"With half the amount collected about 450 black bass were purchased at Harper's Ferry. These fish were native fish taken from the Potomac. * * * The bass thus purchased were taken to the Delaware River, where they were deposited Oct. 26, 1870, just below the Lehigh dam at Easton. * * * In 1873 fish of 4 and 5lbs. weight were caught."

### Salmon Reports from the Hudson.

It would seem as though friends knew that I was writing about salmon in my notes this week, for my mail this morning brings me two letters on the subject. Under date of June 15 a friend in Troy writes a letter from which I take this extract: "This summer they are catching salmon at the State dam here and selling them for from $1.25 to $1.50 each, with no game protector to interfere."

I was told, but not from a very reliable source, that thirteen were taken there yesterday; another party told me that he heard of a number being taken and one had spawn the size of your two hands. It is a shame. The State dam is what is generally called the Troy dam, and in it there was a fishway at one time, but it was carried away.

Some little time ago I heard of a 21lb. fish being taken at this dam and wrote to a gentleman to find out about it. He said: "The salmon spoken of was given to my son, and was undoubtedly caught in one of the ordinary small drop nets such as are used about here for catching suckers. This is the first that I have seen this year, but heard rumors of a number being caught during the past four weeks. The number I have no means of finding out."

The second letter received this morning is from Kennedy Brothers, of Hudson. State Game Protector Matthew Kennedy is a member of this firm. The letter says: "We caught five salmon this year, the largest about 60lbs. The others weighed from 20 to 40lbs. each. The law requires that they shall be returned to the water, which was done. Last year we caught eighteen salmon."

These salmon were caught in shad nets and the 60-pound fish is by far the largest salmon taken in the Hudson, and is a large salmon for any river.

Mr. Kennedy offers the opinion that the Hudson is not a salmon stream and the fish will not propagate; his reason for so thinking is that no small fish are caught.

There is good reason to believe that the Hudson will prove to be a first-class salmon stream when fishways are provided to let the fish up to natural spawning grounds in the headwaters. There is abundant evidence that salmon have spawned for years in the Hudson below Mechanicville, as parr and smolts have been seen in large quantities, but the fish have spawned where the fry have had most unfavorable conditions for their future growth, and it is for this very reason that fishways are desired. The fry planted in the trout brooks above the mills and factories have grown finely. The adult salmon are not affected by pollutions in the river which are almost fatal to the fry and parr, and there is good evidence for this statement. If Mr. Kennedy means grilse when he says no small fish are taken (and he cannot mean smolts, for it is only by chance that smolts would be caught, as they descend to the sea, but smolts even have been caught), he must remember that in some natural salmon streams in the United States grilse do not run, and in that respect they differ from the salmon streams of Canada and Europe. So far as I have been able to observe and learn from applying myself somewhat closely to the subject for a dozen years, there is no good reason to believe that there is any insurmountable objection to the Hudson as a salmon river.

### Salmon and Pork Bait.

Readers of FOREST AND STREAM will remember that last year a number of salmon were killed in the Hudson at and below Mechanicville, and that pork bait played an important part in the capture of quite a number of the fish. At the time I commented upon this style of fishing, as it was somewhat unusual for salmon to take bait of any kind, and pork bait did not seem to be a delicacy that would appeal to the fastidious salmon. Furthermore, after a visit to Mechanicville, and hearing from men who were well informed about the fishing, I was led to believe that the pork on the hook played an unimportant part in the actual capture of the salmon. In other words, some of the people declared openly that the salmon were really jigged by casting the hooks over the fish and hooking them in the body instead of the mouth.

Within a few days I have had a conversation with a gentleman from New York city who happened to be at Mechanicville last year when the salmon were killed there. He went out in the boat with the man who originated the pork bait scheme, and was witness to the capture of three salmon. He says that the fish took the bait regularly and were fairly hooked in the mouth, a result which surprised him, but he could not criticise the mode as being unsportsmanlike for anyone who may like to take salmon with bait. He used a fly himself and declined the pork bait. In explanation he said that the originator of this bait was fishing at the point where the salmon made their appearance and using live bait for salmon or anything which came along and desired this sort of bait. For lunch he had cold broiled bacon for one item, and once threw a piece of the bacon overboard, and a salmon rose to the surface and seemed to take the bacon in its mouth. With that he baited a hook with bacon with the result that while the salmon remained in the pool he killed more of the fish than all the other fishermen combined.

The bacon fisherman offered this explanation: The salmon got a taste of the salt in the bacon as it dissolved in the water, and was reminded of its food in the sea, and thus was moved to take the bait in its mouth. My informant said that the bait was moved slowly through the water until a slight, very slight, resistance was offered, and then the fisherman would strike and hook his fish. I am very glad to give this explanation of a mode of fishing which at the time I criticised. The gentleman who gave me this information said that he saw at least 150 salmon in the Mechanicville pool. He did not think any more of pork bait than I do, but he wished to do justice to the inventor of the bait.

### Florida Fishing.

I am writing where I cannot refer to my notes in previous issues of FOREST AND STREAM, and am not sure that I referred to an article on "Florida Fishing," which has been promised to me for FOREST AND STREAM by Mr. Alfred C. Harmsworth of London, but Mr. Harmsworth writes me by the last steamer that he will soon send the articles to me, he having been delayed in preparing them.

I know I did refer to the expedition known as the Jackson-Harmsworth expedition, which Mr. Harmsworth is fitting out entirely at his own expense.

The London *Graphic* of June 2 devotes considerable space to a description of the expedition by Arthur Montefiore, with portraits of Alfred C. Harmsworth, R.R.G.S., F. G. Jackson, F. R. G. S., and the steamer Windward. The *Graphic* says: "The expedition which sails from the Thames, is led by an Englishman, and the large sum of money which any well equipped Arctic Expedition absorbs, is being furnished by an Englishman. * * The founder of the expedition, Mr. Alfred C. Harmsworth, is a gentleman of large private means, which he is now devoting to what I regard as a quasi-national use. In his desire to contribute to that national prestige which arises from individual prowess, and has made England what she is, he is now giving not only large sums of money, but much careful and anxious thought to the welfare of the expedition."

This is the gentleman who writes so enthusiastically of our fishing in this country. He is not only a forceful and most agreeable writer about our fishing, but he is absolutely independent and notably fair.

A. N. CHENEY.

## A RODSTER MAY WIGWAZ.

*Editor Forest and Stream:*

You appeal to me to tell you "whether under any circumstances it would be permissible for a true rodster * * * to give over rodstering and indulge in wigwazzing for fish on a Sunday night when the law specifically forbids that practice?" You desire to be advised before the guddlers and ginnilers get by the ears. The inquiry involves grave propositions, and is, withal, a case of first impression, at the same time it presents no issue to be determined, and answers itself. You may consider the last sentence paradoxical, but to do so would be error.

"Under any circumstances" opens a broad field for the wigwazzer, the field may involve a necessity, and, as necessity knows no law, the Sunday night inhibition does not obtain. The conclusion is unavoidable that the wigwazzer may wigwaz in certain circumstances.

But the question is not directed specifically, you contend, to the possible conduct of the wigwazzer, and the conclusion in regard to him may be therefore treated as obiter, if you insist, and we will treat directly of the possible delinquent, the rodster. You qualify him as a "true rodster," this is tautological; there are sportsmen and rodsters, and the terms imply everything good and true. (See Noctes Amb., vol. III., p. 198.)

What may be true in regard to the wigwazzer may be true in regard to the rodster. If the wigwazzer may, why not the rodster? The law, as you state it, is directed against the wigwazzer, not the rodster: "*Expressio unius est exclusio alterius.*" (Broom, L. M., p. 583, *et seq.*)

It would appear, therefore, that the rodster may not only wigwaz in certain circumstances, but that the law in fact has no application to him as a wigwazzer. The question remaining is: Can a rodster wigwaz in any circumstances? It is "permissible," as we have shown, but is it possible? This is a question of fact rather than of law and should have been left to the jury under proper instructions. But in view of the probability of another trial in the court below it may not be out of place for us to intimate our impression upon the point of possibility Sunday night is, as a general rule, devoted to other duties and pastimes than wigwazzing. The girl becomes involved, admitting the rodster to be a bachelor. No self-respecting, properly constituted rodsteress would for a moment countenance any such innovation upon Sunday night duties or pleasures. It follows that the girl refusing to encourage or participate in such a questionable indulgence, the rodster would find it impossible to tear himself away were he either a bachelor or benedict in the wooden or golden honeymoon. The cause is therefore remanded without reversal or affirmation with leave to the guddlers and ginnilers to intervene as they may be advised.

L. B. FRANCE.

### The Honeoye Falls Banquet.

SATURDAY night, June 16, at 9:30 P. M., the anglemaniacs composing the Honeoye Falls (N. Y.) Anglers' Association were in convention at the Wilcox House to discuss the banquet provided at the expense of the unlucky Capt. Mather's side, in the annual June fishing contest. Of the forty-two who participated in the dampness of the day's contest, thirty-six fishermen seated themselves around the abundantly laid and tastefully arranged tables.

After the banquet President A. A. Mather made some very pleasing remarks. Mr. Post Leech of West Bloomfield recited a poem entitled "Elder Jones and his Chestnut Mare," which shows that even a clergyman is not proof against all kinds of sport.

Mr. Gates, called upon to explain the club's purpose and what it has done, stated that the illegal fishing upon Hemlock and Honeoye lakes had been greatly reduced, and that upon the Honeoye River it is virtually abolished. The next efforts of the club will be devoted to securing immunity for the Hundred Acre, Mud and Deep ponds of our town of Mendon from the inroads of dynamiters, spearers and shooters, who, during the early spawning period, make sad havoc. This properly seen to, we will have as fine muscalonge, black bass, carp and bullhead grounds as any interior town in the State.

Rev. J. H. Dennis gave us an amusing account of his experience on Irondoquoit Bay, and his trip home from the same, on that day in June. Elder Dennis was one of six in the class for the largest variety of fish caught, the second prize, which was a four-in-hand tie; and the other five had assigned their interests to him, so he won the six-in-hand tie "hands down." He tied up his speech by saying that he "would preach at the usual hour at the Episcopal Church in the morning, and would wear his new tie, and he would guarantee that there would not be one of us there to see it." My Lyman gave us some high compliments on the good work, and amount of it we had done, compared with other vicinity organizations of a like nature, and gave us substantial encouragement to continue.

Dr. Flick gave an account of his party's successful trip to Honeoye Lake. Squire Robson, a new member, gave a talk on the "Unsuccessful Fisherman," and pledged himself to render his services in the prosecution of illegal fishermen, in behalf of the club, gratis. I suppose this was not wholly an unselfish offer on his part, for, like myself, he had a zero score this time, and wants the fish thicker and more hungry next season. I am sure I do.

Dr. Otis responded to the toast, "Fisherman's Luck." He labored under the impression that luck, not science, won the suppers and badge thsi season, as the ones who are supposed to possess all the wiles and allurements of professionals, were credited with light creels this time. The Doctor had the best luck of all, however, as your paper, the FOREST AND STREAM, was the prize for the smallest score, and for a year he will have the benefit of reading it, and the edifying instruction of my communications.

I was on the programme for a poem. "Ye Gods and little fishes of the briny deep!" But who with the memory of the wetness of that day's fishing, fresh and undried, could write a poem dry enough to burn? I contented myself with a roll call in prose entitled "Scaly Scales," in which no little fish were not counted, nor large ones overestimated.

The entertainment closed with the transfer of the largest score badge by Champion Lay, of '93, to Champion Shellman of '94, from whom there will be a severe struggle to wrest it in '95 "by the whole troupe." May we all be in it, and live through it.

DR. B. ROWNE.

### Grayling of the Au Sable.

WEST BAY CITY, Mich., June 25.—Jack Zeder and I have just returned from a two weeks' trip down the Au Sable River, where we found the fishing good. We caught about 450 fish, mostly grayling. They have planted rainbow trout in the stream and I am afraid the grayling fishing will soon be played out. In fishing over the same water last season we only got one trout, where this year we got thirty. The largest trout we got was 14in. long, while we took quite a number of grayling 15in. long. We used nothing but the fly, the black and gray hackles being the best killers. As all of our fishing is done out of a boat it is easy work. We kept all of our fish alive, having a well in the boat, and transferring them to a crate when we got to camp. Double catches were quite frequent, but once Jack safely landed three. Any reader of FOREST AND STREAM wishing to try his luck with this gamy fish can get full particulars by writing to the undersigned. I have no axe to grind; this is for sport only.

PAUL ZAGELMEYER.

### Restigouche Notes.

JUNE 23.—Big scores here this week and last, from 40 to 60 boxes going by express every morning to friends. No *fontinalis* here; they don't count, you see. Salmon have averaged about 25lbs., or from 20 to 35lbs. Single rods have gone as high as 10 fish in one day, according to locality. I think there are only some 35 rods on the rivers, and the great majority have done well. Some are leaving or will soon leave.

I expect good fishing all next month if the water holds up. It has so far been very good. Will send scores by and by if I can get them.

JOHN MOWAT.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

*(Continued from Page 560.)*

AFTER dinner we concluded to go to a magnificent pool in the river by a detour which materially shortened the distance. We had heard last summer of some fine trout having been caught there, although the river never had been noted as a fishing resort, anglers seldom putting in here to court acquaintance with the beauties of the marvelous tints and rare shades.

On reaching the lonely basin we were in raptures over it, for if ever there were an ideal home for the trout this evidently was one. It was surrounded on all sides but at its gateway, with ragged cliffs and massive rocks that had been forced from the eminence above, while through a narrow cañon of some 20ft. in width raced a raging waterfall that leaped from parapet to ledge with a rush and roar that sent the wild waters in sheets of foam half way up its rocky sides and then surged over a plateau of solid rockery that somewhat tempered its savage swiftness ere it struck with a musical rumble the ever beautiful pool.

We were really spell-bound with the grandeur and wildness of the place, for on every side nature had been liberal in blending the seething waters, the shadowy abysses, the spectral rocks, the silent forest, in one grand *chef d'œuvre* that to an artist's eye would have proved unspeakably fascinating.

As we looked upon this picturesque pool with its savage gorge that had been channeled with torrents and gnawed with frosts for untold years, we almost forgot our mission.

At last the ardor of the angler cropped out and then the flies went whizzing until we had circled all we could of the pool without receiving a single rise. Ned finally gave Kenosh his rod and sent him to try an almost inaccessible part of the pool that required a steady nerve and more suppleness than either of us possessed to there keep a foothold.

Undaunted, the alert half-breed made the descent to the place desired, but wishing to drop his flies where some foam was floating around in an eddy, took hold of a convenient rock overhead with one hand and swinging around to the perpendicular wall, with one foot remaining unsecured o'er the pool, made his casts, hanging, as it were, between the sky above and the water below. Ned, who had been anxiously watching his movements, cried out:

"Look at the dare-devil."

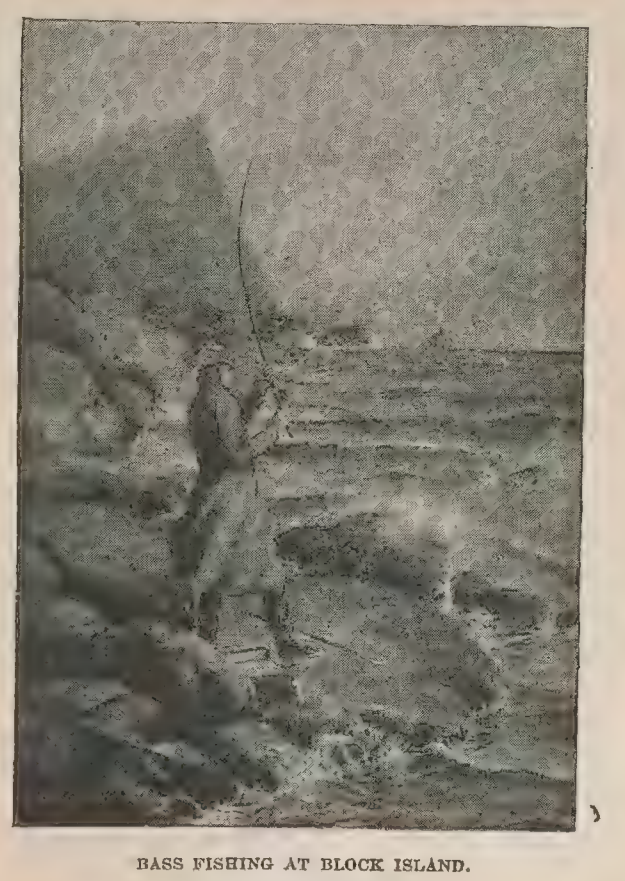
"Can he swim?" said I to Peter.

"Not a stroke," he replied; "if he drops that will be the last of him."

Ned, all of a tremor, shouted to the semi-barbarian: "For heaven's sake, Kenosh, get out of that."

But Kenosh simply smiled and continued sending his lures into the little snowy mounds. Time and again they fell into the creamy foam and by its dimpled edges, but not a trout sprang for the counterfeit presentment. The pool was a sad delusion as to its red-coated and spangled-spotted denizens. Some sweet siren, with hair in golden curl, might possibly arise and charm, with some weird melody, but no *Salvelinus fontinalis* would open his mouth for either morsel or music.

The foolhardy half-breed, much to our relief, soon gave up his perilous position and then went clambering over the creviced cliff to doubtless see if there were other places where he could again put himself in danger for the sake of a tinted trout.



Ned now sought consolation from our dismal failure at the pool by seeking a dosition on a rocky pedestal, older doubtless than the pyramids, where he could enjoy the grandeur of the leaping waters as they tore through the flinty gorge with its shaggy belts of pine and Arctic shrubbery that lined the bulwarks above and which gave additional wildness to the rushing waters of the savage-looking cañon:

"Here are towering rugged mountains,
Granite rocks scarred and gray;
Nature's altar, whence her incense
Floats in wreaths of mist away."

The trouting being a lamentable failure, we hurriedly made the return tramp over the blocks of mossy granite and through dark glades of pine and tangled thickets, perfectly satisfied that Montreal River is not an angler's paradise, though it is assuredly one for either artist or poet.

We had no sooner reached camp than we were all surprised to see a fish leap out of the water near the mouth of the river. It was but a moment before we had both our flies dancing on the surface of the stream as a temptation to the sportive fish. Again and again the flies rose and fell, but no response was received. Ned suggested a change of lures, which was accordingly accomplished, but till the waters remained unbroken. Not at all discouraged, we made another and still another change, and fished again until we covered nearly every foot of the water in our vicinity.

The boatmen stood by and watched our industrious and

BASS FISHING AT BLOCK ISLAND.
Forest and Stream Water Colors.

painstaking efforts with exceeding interest, hoping every minute to be called into service to land some handsome trout, but they were not brought into requisition. Still hopeful, still reliant on my lures, I go down once more into my portfolio for another change of flies, but they shared the same fate as the others. After I had about ranged from alpha to omega in my choicest assortment, I began to waver in my faith, and as I was about to discontinue the patient flogging of the stream, another fish broke the water near by, and with one accord the boatmen cried out:

"It's a sucker!"

"So are we," I replied, and then the flies dropped no more and we reeled up and dropped into our camp chairs satisfied that a leaping sucker is entirely out of his element when he attempts to emulate the trout in his vaulting ambition.

The day had been a gloomy one and bade fair to close without a single ray of hope for our advance in the morning. The sun had not an arrow in his quiver to send to the earth; the dull leaden clouds were quite vaporish and presaged a downpour at any moment, while the waves lashed the shore as if Neptune had reascended his throne in the deep with imperial intent of showing us poor mortals the sublime and snowy beauty of his heaving plains.

As we sat around a glowing camp-fire after supper, watching column after column of thin blue smoke ascending in waving spirals and losing itself in the deep gloom, a few drops of rain began to patter and the deepening shadows lost all semblance, and darkness, like Erebus, engulfed us, while cooling winds swept along the river and filled the deep forests with a melancholy moan. We were in the cave of despondency, and as oblivion would insure forgetfulness, we sought the panacea by taking to our beds with the hope that the approaching morn would present a picture framed in golden sunbeams, and that Neptune, satisfied with his gorgeous display of snowy plumes, would give us a sea o'er which favorable breezes would gently play and rosy waves dance in delight.

The dawn at last came, but no golden shafts beautified it, though the sea god had a propitious breeze for us, which was tossing the waters in anything but tender gentleness. Ned and I, after consulting, concluded to trust our little bark to the uncertain winds, and, therefore, ordered the immediate dismantling of camp after breakfast. The boatmen, who were eager for home, did not demur, but entered with a zealous spirit to hasten the departure. They were sure the wind would not turn on us, though they were positive we would have a lumpy sea and a rough time of it ere we reached our destination—Maimaise Point.

We ascertained, as soon as we had emerged from the mouth of the river, that it was to be swift sailing, for the north wind caught us with a dashing vigor that made the little craft fairly hum through the clouds of foam that rolled over from her shapely bow.

"She's a-spinning," says Peter, the helmsman.

"I should call it plunging," says Ned, as the boat rose upon the crest of a huge wave with a mass of white water rolling on the windward side.

Both sails were up without a reef and singing merrily, and as long as the breeze did not increase the Mackinac would hold her own. We made such good time with the racing greyhound that we thought of going ahead when we reached Maimaise Point, but the half-breeds said we would be glad enough to stop at the first harbor. They were right, for during the next hour we had an increased sea and a change of the wind to the northwest that was sending the boat's lee side within an inch of the foaming water. Reefing was talked of, but we were so delighted with the way she was leaping and driving through the turbulent waters that we ruled against it.

"All right," says Peter, who was more prudent than we, "she will stand it for a while yet, but she will need close watching, I tell you."

Ah, what a glorious time; overhead the gulls swiftly fly and mew their strange sea song; along the grim gray shore of frowning battlements the sea, with fury in its wake, breaks into oceans of foam, while the dark forests that line the adamantine walls bend and twist as if in great agony. Whirling flakes of snowy froth greet us on every crest, and when finally rounding a bold and jutting headland, we strike still heavier seas, and yet the fleeting craft like an arrow from a cross-bow gaily cleaves through them, throwing off swirling surges in wild glee.

"Oh, brave white horses, you gather and gallop,"
but in the hollow of your backs and on your high arched manes we proudly ride with our white wings as if Neptune were our helmsman. The waters are flashing, the spray dancing and the wind singing with the ever-changing sound of the rolling foam, while the masts are moaning under the heavy strain from the whistling sails.

"Let's take a reef," says the cautious pilot.

"Nary reef," says Ned, "let her slide."

"Slide it is."

And away she skims over the bounding billows with her cutwater fairly buried in a cascade of foam, while the waves beat hoarsely on the ragged shore. We are nearing Maimaise Point, and miles out we see a fishing boat tossing around as if she were in sportive play withthe arching waves.

"Look out there," says Ned, "at that little dandy of a boat; she fears not this fierce wind."

"That," said our helmsman, "is a big Collingwood fishing boat that can live in any sea, and would drown a fleet of such boats as this."

"That makes a little difference."

"Yes, a great deal."

And then a colossal comber smote us quivering, giving us our first ducking.

"You'll get plenty more like this," said Peter, as he shook the water from his coat.

His prediction was correct, for we were sailing in very shallow water, which could not well be avoided, as we had to make the harbor on this side between islands and through a narrow channel, but as it had been staked out for the tugboat it was all plain sailing, if it were a little wet.

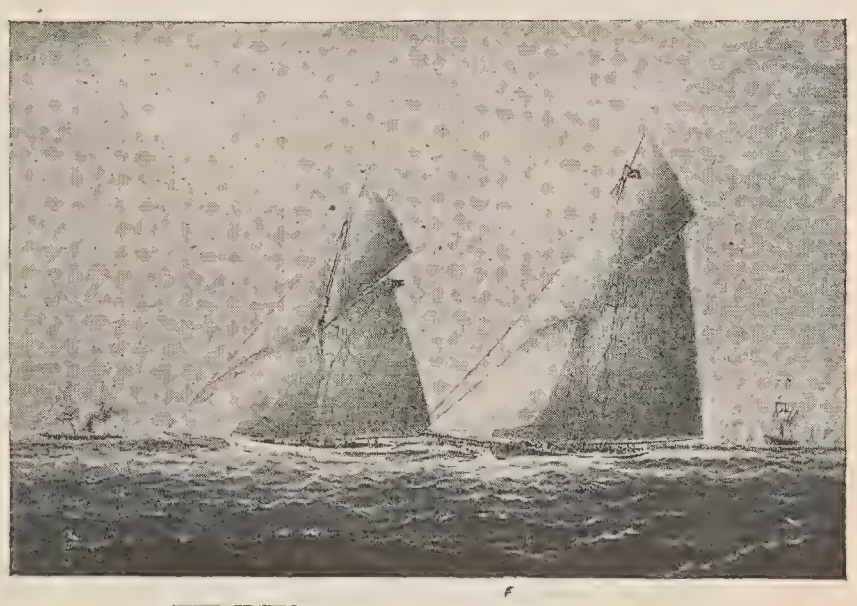
At last we dash into the channel, which was fairly flying in foam, and after an exciting ride of a few minutes through very lumpy seas, with a sprinkle or two of spray we are fairly in port, landing on the island, which is now used as a fishing station.

Now that we were snug in harbor Peter turned to us and said:

"It's a wonder we hadn't capsized, carrying such full sails in such a heavy wind."

"Nonsense," replied Ned, "that's nothing; a spanking little breeze, that's all."

Peter looked at Ned with surpising eyes and then responded:



"I'll not hazard any more such spanking breezes while I sail the boat."

"All right, Peter; take a 'cedar' breeze' if you want it, but give me the rolling sea with a wind that has a moan in its blast."

This settled the sailing discussion, with the odds in

HE'S GOT THEM.

Forest and Stream Water Colors.

[JACKSNIPE COMING IN.]
Forest and Stream Water Colors.

Ned's favor, as the boatmen were now too busy unloading the boat and preparing camp to further discuss the question. These half-breeds are exceedingly nervous when on the lake, and always ready, at the least indication of a storm, to break for a harbor. It is well it is so, for the great reservoir is full of startling and dangerous surprises. One moment a butterfly may soar o'er its silver surface, while the next it is lashed into tempestuous seas that fairly appall with their destructive force.

About an hour after we had landed the Hudson Bay agent from Aguawa, accompanied by two Indians, dashed through the breakers into the channel for the island in a sailboat much smaller than ours. They stated that they had a very hard time of it in weathering the rough seas and that it was about all the little boat could stand. I was really glad to see my patient and realize that my first case as an M. D. had been so eminently successful. He said that he was about well the next morning and would have taken sail with us if he had only have risen early enough. He came here especially to see his son, who was engaged in the fisheries at this point.

Ned here called Peter's attention to the arrival of his prospective father-in-law in the little sailboat and asked him how it was that such a little clipper as that could so safely come through a heavy sea.

"She had little or no load, is light and dances on the water like a cork," replied the astute Peter.

"That's it, is it? I thought size had something to do with safety in sailing."

"Sometimes, not always."

"This is one of the times?"

"It seems so."

"All right, Peter, I only wanted a little information on the subject and I have it in clear cut shape."

"You know, Ned," I here put in,

"The little boats keep near the shore,
The big ones venture more."

Peter made no answer to this, but he walked away with a sort of puzzled look upon his face and sought his future father-in-law for a Chippewa chat, as they all so conversed. He could not clearly see that we were sticking pins into him relative to his excessive timidity in sailing. Kenosh was more plucky and would hazard seas that would terrify Peter, but as he was not captain had to submit to the orders of his superior.

The island, since we were here last summer, had been completely despoiled of its picturesque beauty. Frame shanties, fish, ice and store houses, and all the paraphernalia that attaches to a fishing station, were scattered over the place, almost totally disfiguring it. Not only that, but in a rocky depression adjoining the pier, all the offal from the fish was there deposited, from which came an odor that was not wafted from the Vale of Cashmere.

During the afternoon the fishing boats, which had been out for their harvest from the sea, returned to the pier and unloaded their catches, which were immediately taken in hand, cleaned and packed in ice in large fish cars, to await the arrival of the tug, which puts in an appearance every third day.

I was particularly struck, while at the pier, with one of the fishermen, a red-headed Irishman they all called "the Devil," but whom I would call a Massaniello were it not for his fiery hair, as he had the air of a liberty-loving mortal which seemed to fully possess him. He was a very striking picture indeed, his features being exceedingly handsome and expressive, while his form was that of an accomplished athlete, with a grace of supple movement that was irresistibly attractive. He was one of the most daring sailors on the North Shore, and would venture in any tempestuous sea to make his "lifts" when other fishermen declined to go. Frequently he set his nets some fifteen or twenty miles from shore, and in summer time would seek a depth of water fully 500ft., where the whitefish were more abundant and in better condition. His ventures were always fraught with great success, his returns being nearly double those of others, and as a consequence his pay was in the lead by about fifty per cent.

He came in with his "lift" shortly after we had arrived, it weighing over 700lbs. and composed principally of whitefish and Mackinac trout. His boat, which he handled with the marvelous skill of the Norseman of old, was a first-class Collingwood and a rare model of beauty, having the swiftness of a racing yacht. The Indians and half-breeds seemed to venerate him for his matchless seamanship and daring recklessness and therefore gave him the Satanic name by which he is known from one end of Lake Superior to the other.

The great trouble he first encountered here was in getting his two "helpers" inspired with his dauntless courage. After his men had fully realized his complete mastery of the raging billows they then had implicit confidence in him, believing that he could safely ride his boat in any tempest the Sea God would introduce.

When a raging storm of fierce wind and wild wave confronted the fishermen in the morning, the time they go to make their "lifts," they would give an ominous shake of their heads and say, "The Devil can ride the storm, but we won't," and then they returned to other duties appertaining to their calling.

This dare-devil of a fisherman, with the fiery locks, may yet encounter, as the immortal bard says:

"The rough seas, that spare not any man."

After we had partaken of a very appetizing meal, Ned concluded to try the rocks on the outside, in hopes of securing a *Salvelinus fontinalis*, but he soon returned stating that the wind was blowing such a respectable gale and the waves so savagely battling the unshapen shore, that he found it impossible to deliver his flies more than a few feet from the edge of the flinty granite.

In the meantime I had crossed to the main shore with a view of securing some late papers from the ruling head of the little hamlet there established, but obtained only a small county paper about ten days old, which contained nothing of importance save a new method of making sauerkraut and instructions for killing the potato-bug, matters which interested me not, as I neither ate the former nor hankered for the gore of the latter.

The "northwester" which was raging so fiercely would doubtless continue for three days and so hold us to this now ill-favored place which afforded us not even the solace of solitude, the sight of a purling brook or a mountain in its azure hue. It was all fish, Indians and pale-faces, men, women and children, boiling caldrons of oil, mending of nets and the jargon of Chippewa and French with that "very ancient and fish-like smell," as Trinculo the jester describes it, invading every part of this once lovely island. Civilization makes sad havoc with the picturesque beauties of nature, and this is a faithful exemplification.

The course of nature is the art of God; "In it there are no grotesques, nothing framed to fill up empty cantons and unnecessary spaces. She never deceived you; the rocks, mountains, the streams, always speak the same language; a shower of snow may hide the verdant woods in spring, a thunderstorm may render the blue limpid streams foul and turbulent; but these effects are rare and transient; in a few hours, or, at most, a few days, all the sources of beauty are renovated. She knows no pause in progress and development, and attaches her curse on all inaction."

"To me, more dear, congenial to my heart,
One native charm, than all the gloss of art."

During the afternoon the bright sun came out and filled the deep woods with golden gleams, but the wild waves rolled on and battered the beetling cliffs and low shorelands, which are dominant here, with a violence and a roar like discharged ordnance. The noon wore on apace, the shadows lengthened, twilight came, the rose of the zenith glowed richer and warmer as the azure darkened, the stars twinkled, the fire-flies blazed in the shrubbery and night's silent reign began.

Around the camp-fire we gather and as its genial warmth diffuses we watch the odd flickers of light and shade, while the smoke curls upward through the branches overhead. Anon, we hear the "scraping of a fiddle" from the main shore, and then the shuffle of many feet.

"A dance," says one of the boatmen, and then hurriedly depart to take boat for the scene where merrilly whirled the wheels of the dizzying dances.

"They'll make a night of it," says Ned.

"All right," says I, "let us follow example and make a night of it in our blankets."

"Agreed."

And then two stalwart forms were quietly rolled within the heavy blankets and soon were oblivious to all things terpsichorean or terrestrial. ALEX. STARBUCK.

[TO BE CONCLUDED.]

## BASS AT HEIGHT OF LANDS.

AMENIA, N. D., June 7.—I have waited in vain for some one to write a few words in regard to fishing in the park regions of Minnesota. I have just returned from a three weeks' fishing trip, and while we have no large catches to tell about, we enjoyed every minute of our time and could have caught ten times as many fish as we did. We only fished for camp use and sending only one lot of 100lbs. away.

Never was a more congenial party picked—Carr, Woods, Reed and I who write. From Detroit, Minn., a hired conveyance took us and our baggage to our destination—Height of Land Lake, one of the prettiest sheets of water in the park regions. We had hardly put up our tents when Walter and the cook hurriedly got out their rods, reels, etc., set up their Acme boat and started out to catch some fish for supper. We soon had six or seven wall-eyed pike averaging 2lbs., and then rowing back to camp, their jackets of scales had soon come off and the cook had them getting a good brown on that made the fisherman wonder why they were so hungry.

The next day Jack and Henry went fishing, and at 6 o'clock that night came in with 82 big-mouth bass, besides several pike and pickerel, all caught with one rod. The next morning by 4 o'clock the cook was up and at 5 he grabbed a Winchester and sent three quick shots into an old oak tree, causing the lazy part of the camp to fall out of bed, only to find the cook hard at his own breakfast and Henry waiting for us to help run the boats from Height of Land up the creek to Mud Lake for a try for bass. This is a small lake not over 40 rods long by 30 wide, but no one knows how deep. It came off clear and hot, with not a breath of air—and not a fish. After an hour of steady casting, using all the different kinds of bait we possibly could think of, we quit casting, and the cook chased the rest out of a boat and commenced to troll. It seemed to suit their epicurean taste and in ten minutes he had four beauties carefully placed out of the sun, while his party eyed him with dispair from the shore.

The next morning two of us were afloat on Lower Twin Lake by the time the fog had raised, and good luck at once took us in hand and remained with us all the morning. We came in at noon with twelve good bass.

So the days rolled by one by one until two of the party had to leave, and the cook and the lone fisherman held undisputed sway. After a few days pleasant sport around Upper and Lower Twin Lakes, we decided to go up to Six Lake, and try for bass and pickerel. This is a small lake covering about 160 acres, without inlet or outlet. The cook and Jack had succeeded in getting forty bass there in thirty minutes last year. Our party was increased by Dave and Herman. By 10 o'clock we had our boats in the water. The lone fisherman was rowing and the cook was casting. Suddenly there was wild excitement, for Jack had a 12lbs. pickerel hooked, and there was a hard fight going on to see who should conquer. The fish finally came up and into the boat as though he had done that every day of his life. Henry rowed Jack away and the cook made a cast almost touching the shore, when there was a flash and the lone fisherman yelled "Give him line." The reel hummed and the line run out faster and faster, the cook afraid to check him too suddenly. When he suddenly felt the strain of the line he jumped almost out of the water and made a bee line for the boat; then he gently came up, and after a little coaxing allowed himself to be lifted into the boat. He was half an inch shorter than Jack's, but a little heavier. Both were caught within 50ft. of each other.

We spent a pleasant day here, and after a good night's rest found a clear morning with not a breath of air moving. We tried them early, and after catching a few bigmouths concluded to move further north and cast our lines into Island Lake, the prettiest sheet of water in Becker county, if not in the State. Becker county alone has 232 lakes within her borders. The water is clear as crystal, with a high rocky shore, the pine uncut and with only one house or clearing upon that thirty miles of shore line. Here we pitched our tent on a sandy shore, ran out our three boats and went over to a little bay and tried for a few big-mouths for dinner. We soon succeeded in getting half a dozen, and then dinner and a four-mile row to the bay. There we had the most pleasant two hours of our three weeks' stay with the bigmouths; and we struck several 10lbs. pickerel for a change.

The lakes along the Pine Point Reservation—Height of Land, Cotton, Upper and Lower Twin, Six Island, Big and Little Toad and a dozen more—are all good fishing. Only one other party was fishing on them last year, and there had been no one so far this year excepting ourselves. There are countless numbers of bass, more bigmouths than small-mouths. Pike, the next best fish in these waters, during June give a man good still-fishing and plenty of deep trolling. Boats can be secured of H. W. Paul or Jack Brown, Jarvis P. O., Minn. Either of them are well acquainted with all the lakes and only ask what would be in the East very small wages.

FLICKERTAIL.

## ON THE OLD FARM.

BUCK and I had come back to the old farm and were to spend a few days. There was an excellent trout stream near by, so naturally we were impatient to try our hand at the sport. We made an early start. Down past the old barn, the cows not yet up watched us wandering by as they slowly chewed their cuds, while one or two laboriously arose. Through the meadow we hastened, the cool fragrant air filling us with a new life. The dew on the clover made the waders delightfully cool.

We entered a belt of woods, and forcing our way through the tangled underbrush, were soon slipping, sliding and jumping down the steep side of a ravine to the stream. The winding alder-covered banks were strewn with huge moss-covered boulders, and myriads of delicately tinted wild flowers covered the ground.

The coarse, black, snaky roots of trees, near the banks, grew in to the water, and driftwood getting tangled in these, formed small dams around which the water swirled and bubbled.

The joyous notes of many birds, the lapping and gurgling of the foam-flecked water—as it glided past, mingled with the roar of the cascade, up stream, all produced a charm that fascinated us.

"Isn't this great?" exclaimed Buck enthusiastically.

"You bet," I replied, taking the cover off my rod to joint it. Everything ready, I pulled up the waders, and stepping in the water with as little noise as possible, waded slowly down stream, making several casts, but getting no rise.

"There, just beyond that half submerged rock where the water is quiet and deep. Fine place."

Swis-s-s! the silk went circling through the air, and the light blue-blow kissed the surface in a most natural manner. It proved tempting too, for with a rush that made the water boil it was seized. A quick turn of the wrist and whir-r-r went the reel. The line shot down and the silk cut the water at a furious rate, first one side, then the other, under the rock and out again. I did my best to keep him from tangling the line on a root or snag while the rod bent like a whip. I kept the line as taut as possible, and yet not enough for him to tear off.

Slowly his fighting became less vigorous, and as slowly I reeled in. Finally he rose to the surface almost exhausted, and summoning all his strength, leaped shining and dripping out of the water. This was the last desperate effort, and as soon as over I reeled slowly in and secured him.

He was a beauty as he lay open-mouthed in the creel, his wet, shining, speckled side outlined against the moss with which I had lined the basket.

I started in again, and reveled in the sport until noon, when I met Buck at an appointed place, and we lunched. After a short rest we went on, and at supper time we started across the fields for home. To make a hard task worse it began to rain. It was a long walk, especially after being on our feet all day, and the creel straps hung heavy on our shoulders, but we plodded slowly on, and at last reached the house, wet, tired and hungry. Buck usually chuckles and guys me some—when we come to count over our catches, but he did not so much as "crack a smile" this time. I had beaten by a good 13. But he vowed vengeance the next time out.

Soon after we climbed the old-fashioned stairs and turned in, two healthily tired and happy fellows. L.

BUFFALO, N. Y.

### With Nursing Bottles Under their Fins.

SPRINGFIELD, Vt., June 29.—*Editor Forest and Stream:* I read with interest "Von W.'s" letter in the June 23 issue. I am acquainted with this gifted writer by reputation, for of him it may truthfully be said "his fame spread abroad throughout all that country," but as he is a neighbor of mine I anticipate a closer acquaintance in the near future. The idea "Von W." gave of our fishing is painfully correct. The cause of this deplorable state of affairs is the non-observance of the six-inch law. A law is a dead letter unless it is backed by public opinion, and this law, though a good one, is without the requisite backing. Of course there are many exceptions, but our average anglers catch and keep trout so small it is a wonder they could get on the hook, and one almost expects to see each baby trout with a nursing bottle under his fin. "Von W." suggests that a close season of about three years would be a remedy; true, it would afford temporary relief, but when the open season came every man and boy would hie himself to the streams to enjoy the fruits of the long close season, and unless the six-inch law was strictly observed the second state of our fishing would be worse than the first. When our fishermen awake to a realization that they are killing the goose that lays the golden eggs, and appreciate and faithfully observe the above law, and "the powers that be" intelligently and generously restock our streams, then and then only, will the historic "good fishing" in southern Vermont waters be restored and perpetuated. W. W. B.

### A Self-Baited Hook.

MUSKOKA, Can.—Some time ago I was fishing with a friend, and grand sport we were having. Our bait was minnows. My friend had on a perch of about 4in. in length, and no sooner had he thrown in than the bait was grabbed. Making the strike, he missed his fish, but instead of the perch bait being on his hook, it was replaced by a small shiner, which was hooked as neatly through the lips as though placed there by human hand; the fish which had bitten had kept the perch, and the hook had come in contact with the shiner in the fish's mouth.

J. H. WILMOTT.

## NEWS FROM THE FISHING WATERS.

CLAYTON. Thousand Islands, N. Y., June 25.—Mr. and Mrs. Wm. Bunker, of New York, whose headquarters for two weeks of very successful black bass fishing have been the Hubbard House, have left for home. Although Mr. Bunker is an enthusiastic and experienced angler and spent twelve days fishing to Mrs. Bunker's eleven, to the credit of the fair sex the latter's record is the best, viz., 229 against 188. The following is the total daily record, which includes one 3½lbs., one 3lbs., four 2½lbs., twenty-five 2lbs., and 386 from 14oz. to 2lbs.: June 11, 36; June 12, 22; June 13, 39; June 14, 34; June 15, 45; June 16, 50; June 18, 38; June 19, 18; June 20, 42; June 21, 20; June 22, 51; June 23, 22; a total of 417 black bass. Steve Leyare, one of the most successful guides on the St. Lawrence River, rowed. J. G. F.

SANTA FE, N. M., June 20.—The trout fishing is very good in these parts nowadays, and many excellent catches are reported. A party of four went out on the Pecos above Glorietta, and in one day pulled out 350 of splendid size, the average weight I should judge to be but little, if any, under 6oz. H. B. H.

NEWPORT, Vt., June 23.—The fishing for lake trout still continues good. Parties from Nashua and Lowell have been at the Owl's Head Hotel for the past week and have had fine sport. The largest "laker" caught this week is credited to Mr. L. Wellcome; it weighed 24½lbs. Black bass fishing has not been quite up to our expectations yet, but we look for better results later. A few have been taken in the vicinity of Horseneck Island, and the small-boy-pole-and-string combination is credited with a "big one," caught while fishing for chub off the steamboat wharf. We look for more bass later. ROB.

FORKED RIVER, N. J., June 25.—Capt. Frank Penn on the 22d caught 17 bluefish and one large drum. Capt. Thomas Taylor caught 11 large bluefish averaging 4 to 5lbs. on June 24. Prospect looking good for bluefish and weakfish for the season. W. S. PARKER.

TUCKERTON, N. J., June 22.—G. O. Jones, of Tuckerton, caught 80 weakfish with hook and line. J. W. LEE.

Mr. C. C. Dorr, of Boston, Mass., a guest of the Hubbard House here, has a total of 295 black bass to his rod for the last eight days. Many other anglers have brought in good average catches. J. G. F.

BURKEHAVEN, N. H.—Mr. Jos. G. Chandler has a photograph of a string of trout caught May 17, 1894, during a couple of hours' fishing in Lake Sunapee, by Wm. Young, a summer resident of Burkehaven, which weigh 4¾, 3¼, 2¾ and 1¾lbs. respectively. This is not an extraordinary catch, but was photographed on account of the regular gradation of the string in size.

SAN ANTONIO, Texas.—The king of tarpon fishermen in San Antonio is Mr. T. H. Micheljohn, who says that July will be the time for tarpon, and that he will be on hand with his party. Perry Lewis, our State Senator, is also an expert after the silver king, who is sure to summer at Rockport. Speaking of the coast reminds me that a new hotel has been erected at Rockport, and will be conducted on a plan that will not fail to please visitors. The management keeps boats for the use of the guests free of charge, so that one can fish all day and put in the night in the delightful grove of live oaks undisturbed save by the gentle soothing voice of the spent surf. The Aransas Pass Railway, always accommodating to the traveling sportsmen, will make a splendid rate, which will insure a large aggregation of fishermen on the coast all summer. O. C. G.

### A Fishing Club That Struck Oil.

CINCINNATI, O.—Cincinnati posesses what is probably the only fishing club which ever made money. Ever since Father Noah threw out a line from the stern of the ark, fishing clubs have been productive of a few fishes and many fables, but that a dozen men, with fore and aft caps and fish poles, should go a fishing for pleasure and come back richer for it is astonishing enough to shock a drummer into modesty. It was twenty years ago that a number of Cincinnatians, among them the late Nicholas Longworth, organized the Mercer County Shooting and Fishing Club. They had previously ascertained by a profound study of the map of Ohio, that the largest body of water within the State limits was the Mercer county reservoir. The more water, the more fish, reasoned the projectors, and land bordering the huge pond was purchased. This purchase was added to until now the club owns a mile frontage on the reservoir, 160 acres of shooting land and a club house.

But this was all unproductive investment; the element of profit was an unexpected discovery. Oil was found on the club's land. The fishermen were business men, and profited by their good luck. They now own four oil wells and lease four others. As a consequence, the shares, which when first taken were only expected to return an equivalent in health and relaxation, have now a recognized and increasing value. Literally true of the club is the remark so often heard on the street: "We are not in this for our health only." WILL E. WICK.

### Thinks Rodster Lacks Dignity.

COLD SPRING HARBOR, N. Y., June 22.—*Editor Forest and Stream:* The discussion over the word "Rodster" is amusing. To follow out the plan of word architecture upon which it is built I might have been called, and at ten years of age when using a bent pin for a hook, ——. Later when sitting on the dock, using a hand line, ——. Then when I cut a pole, ——, etc. The names can easily be filled in; but, while I do not object to others using the word "rodster" there is a sound about it that I don't fancy, and therefore would not use it in speaking of an angling friend, but perhaps it may do service where they fish for count. It seems to lack dignity. FRED MATHER.

### A Unique Catch With a Fly.

EX-JUDGE F. J. FITCH returned from his two weeks' fishing trip on the Neversink, in Sullivan county, on Thursday evening last. In answer to our question, "What success in fishing?" he replied: "Poor, in consequence of the cold weather and excessive rains. I caught but 121 trout and one red squirrel." Other questions led to the statement by him that, while casting his flies at the end of about 40ft. of line, he saw a squirrel swimming across the stream, and, from the impulse of the moment, made a cast for it and drove the hook of the trail-fly through one of its forelegs. As it was impossible to reel in the game and take it from the hook without being bitten, he was compelled, much to his regret, to drown it. He has its tail in corroboration of a queer fish story and evidence of his accuracy in fly-casting. He also stated that this was the fiftieth consecutive year in which he had fished for trout, and that his scores of all those years, beginning with July, 1845, showed that he had caught in the aggregate 28,478 trout. He added that all, save in the first five years, had been caught with a fly.—*Prattsville (N. Y.) Advocate, June 14.*

### Give Your Friend a Chart.

SOMETIMES parties visit lakes, streams or game districts not posted as to points of vantage, good stands and without guides. Often even they may be given misleading or worthless advice by selfish natives or others. A few days since, wishing a friend to enjoy a duplicate of my sport last year at a bass-stocked lake I have become familiar with, and fearing his falling among thieves, I made a sketch of the lake, and designated by ranges, courses, prominent objects, depths, etc., the most promising places for sport. With this my friend was enabled to take a fine lot of small-mouths and without delays or useless efforts. Yows.

## PUBLISHER'S DEPARTMENT.

The Dietz ruby lamp for darkroom use is one of the simplest and at the same time most perfect lamps that has ever been offered photographers.

"Sporting Resorts on the Line of the Grand Trunk Railway," which will be sent on application to the passenger agent, Montreal, is a little book containing much interesting information for sportsmen. It covers the Muskoka, Victoria, Peterboro and Haliburton Lakes, the Georgian Bay, Androscoggin Lakes, etc., and contains a very good map of the Muskoka and Midland lake districts north to Lake Nipissing.

## *Fisheulture and Fish Protection.*

### Improved Method of Hatching Smelts.

[Read before the American Fisheries Society]

BY FRED MATHER.

OUTSIDE of my own articles on smelt hatching in the fourteenth, fifteenth and sixteenth Reports of this Society, I can find nothing on the subject except an item in the paper of the late Prof. H. J. Rice on "Salt as an Agent for the Destruction of the Fish Fungus" in the thirteenth Report. On page 19 Professor Rice records that in 1877 he was studying the embryology of the smelt and found the eggs in masses in the hatching jars and covered with fungus, but not until 1884 did he have a chance to try the effect of salt on killing this *saprolegnia*. The eggs were upon blades of sedge, or water grass, after the manner employed by Mr. Charles G. Atkins some years before, which "prevents to a great extent, if not entirely, the massing together of the eggs, since the rough surface of the blades allow only a single layer, at most, to adhere to the surface" Still there was much fungus present. The salt killed the fungus and "only about five per cent. of the whole number failed to hatch." This is a much better percentage than I can show to-day, and I do not know of any other fishculturist who has hatched this fish within the past five years. Professor Rice did not do the hatching but merely studied the development of the embryos and took the statements of others regarding the percentage, and the latter need salt, also.

In the fourteenth Report of this Society, for 1885, pages 17 to 32, will be found my first paper on this subject, with discussions following it by Hon. Theodore Lyman and Prof. Rice. My paper was entitled "Protecting and Hatching the Smelt," in which I advocated a protective law, which is now being asked for from the supervisors of Long Island towns. Skipping this part of the subject, we will take up that which relates to the hatching of smelts, omitting many details related in that article, and will quote: "Up to the thirteenth day after taking there was little change, and on the twentieth (of March, or seven days later) the eggs were put outside the hatchery in swift water, as they began to show fungus. March 26 about one-half were alive, and these were in bunches covered by dead eggs and fungus. All the outside eggs were dead and I had little hope of saving any." That year we allowed the eggs to adhere to grass, sticks and stones, as well as to the sides of glass hatching jars, and in that Report of 1885 I expressed the belief that smelt eggs seemed to require a coating of fungus and decayed eggs about them in order to be protected from too much oxygen and fresh water to hatch well, a statement that I do not believe to-day. We turned out 100,000 fry that year in spite of fungus, rotten eggs and accompanying foul odors in the water

Again, in the fifteenth Report of our Society, pages 10 to 16, will be found another article of mine, headed "Smelt Hatching," with discussions by Mr. Frank N. Clark, Mr. Bissell, Dr. R. O. Sweeny and myself. My paper merely recorded efforts to have the spawn adhere to different substances and to vary the flow of water and the amount of light. Some eggs were sent to Mr. Clark, cautioning him not to throw away any eggs, "no matter how badly they looked on the outside, how much fungus there might be there, nor how foul an odor might arise from them." Mr. Clark said, page 13, that he found the eggs as I had stated, and about 15 to 20 per cent. of them were good. I had said that we could hatch 40 to 50 per cent. in our jars. Mr. Bissell raised the question of light, and said: "If the light affects the eggs of the smelt, would not the light affect them in their natural condition in a small stream?" To-day I can only answer this very sensible question by saying that sunlight will kill our eggs in the jars, and in this year of our Lord, 1894, I have seen smelt eggs hatch on stones in a rapid streem with not over two inches of water over them, and in the brightest of sunshine. This is one of the problems that we have not solved.

In the Report of our Society for 1887, page 11, will be found my item on smelt hatching under the title of "Work at Cold Spring Harbor." In this it is stated that "out of 4,000,000 eggs we hatched and planted 2,000,000 fry, or about 50 per cent., which is as good as we have ever done." I added that "the little smelt carries a great many eggs for its size, from 30,000 to 60,000 or perhaps more, and from 100 ripe females of good size, probably 5,000,000 could be obtained." In the reports of the U. S. and N. Y. Fishery Commissions the foregoing statements have been embodied, the American Fisheries Society getting the first reports because their meetings were held earlier in the season than the other reports were called for.

Until last year we stripped the fish and impregnated the eggs by hand, but holding our fish in the hatching troughs until ripe we found that many females had spawned in the troughs and also that the percentage of impregnation was very high and that they hatched well. This year we gathered all our eggs from the troughs, passed them through wire screens to separate them and put them in the jars. At intervals of two or three days or whenever the eggs seemed inclined to gather in bunches we repeated the operation, gently forcing the eggs through the screens with the fingers, and after a few such screenings the "foot" seemed to be destroyed. This "foot" is a projection on the egg, which is shaped like the stem and bottom of a wine glass, and is the only point of adhesion which the egg of the smelt has; there is no glutinous coating around the egg of the smelt that will enable it to adhere at any point, and the frequent breaking of the hold of this foot makes it powerless to adhere to other eggs or to any object, and leaves the eggs as free and clean as those of whitefish or shad, and enables the attendant to remove all bad eggs from the top, as is done with other eggs hatched in jars.

Last year I was greatly interested in the paper read by Prof. Jacob Reighard of the University of Michigan, "On the Handling of Adhesive Eggs," and of his use of corn starch to overcome the adhesive tendency in the eggs of pike-perch, and had thought of testing that method with smelt eggs, but they worked so well with a few siftings, that it did not seem necessary to try any other method. The eggs remained free and clean, with the exception of those in one jar, which were taken from the brook, that retained sand on some of them that would not permit the dead ones to rise.

A resumè of my work in stocking a barren stream with smelts for the New York Fishery Commission will illustrate the value of such work in a manner that can only be shown when fry of any fish are placed in waters which did not contain them before. Adjoining the grounds of the Commission at Cold Spring Harbor, Long Island, is a short stream from the overflow of a mill pond. This stream is not over 600ft. long between the dam and salt water, at high tide, and is about 15ft. wide, with pools and shallows where the water ripples over pebbles and is not 2in. deep. This stream I stocked with smelts in a small way in 1885, and it is now a fine smelt stream.

In that year, and for several years afterward, we bought live smelts from the Connetquot River,* a small stream rising in the center of Long Island, north of Yaphank, and flowing into Great South Bay near Bellport. We paid ten cents each for the fish and would get two or three hundred smelts of different sizes and degrees of ripeness.

In 1890 we only bought 100 fish, as we had an offer of all we wanted without cost from Mr. H. Scudder, of Northport, only seven miles distant. Next year, or six years after the first small planting, we found that the smelts were running up our stream in numbers to make it worth while to try to get eggs from it, and we did. This was the first proof that the little brook had been made a self-sustaining smelt stream, although we knew that a few fish had run up it in years before. The habit of the smelt to run up streams at night, and return to salt water before day, enables it to escape observation to a very great extent, unless one is especially on the watch for its coming. The eggs are deposited on stones in the swift water, and never in the pools, where the flow is slower. They are hatched in bright sunshine, which will kill our eggs in the jars, and unless it may be a provision of nature to check the increase of this prolific fish by killing the eggs that chance to get the direct rays of the sun, and to have only those which lie on the shady side of stones come to life, I cannot understand why the sunlight is fatal in the jars. Perhaps we may solve this problem some day, but an inspection of the stones in the stream, where millions of eggs were laid this year, did not offer a solution to this question, which, by the way, never came up until the hatching season was about half over. Next year we may observe the effect of the sun on the eggs in the stream more carefully; we know what it is in the jars.

Our plantings in this little stream were:

| | |
|---|---|
| 1885 | 100,000 fry. |
| 1886 | 2,100,000 fry. |
| 1887 | 2,000,000 fry. |
| †1888 | 1,000,000 fry. |
| 1889 | 4,600,000 fry. |
| 1890 | 3,950,000 fry. |
| | 500,000 eggs sent away. |
| 1891 | 7,400,000 fry. |
| 1892 | 5,631,000 fry and eggs sent away. |
| 1893 | 5,722,000 fry. |
| 1894 | 22,603,000 fry. |
| Total planted | 55,606,000 eggs and fry. |

Until this year there was no demand for the fry, because it was not understood that the Commission could furnish smelts; but the demand increased with the supply, and outside of the 11,083,000 planted in Cold Spring Harbor there were two plants on the South Side, three in the tributaries of Peconic Bay, one in Westchester county, and seven plants at different points on Long Island Sound. These plants were all made on special applications to the Commissioners of Fisheries, and it pleased them to have them made, because it showed appreciation of their work in a field that was almost new.

The value of the smelt may be illustrated when we know that forty carloads were shipped to New York from New Brunswick this year, besides the supply from Maine, Rhode Island and other places. Long Island smelts do not now make a great figure in the market reports, but the plants of this year, which were of one million fry, in most cases, may work a change to the benefit of the fisherman and the consumer in a few years.

Our figures this year were:

| | |
|---|---|
| Eggs taken | 31,708,000 |
| Loss of eggs‡ | 9,105,000 |
| Fry planted | 22,603,000 |

The figures show that over 71 per cent. of the eggs taken produced fry, and the reports of a few years ago show that when we produced 50 per cent., and thought it good, Mr. Clark remarked that it was as good as might be done with adhesive eggs.

That we have made rapid strides in the work of smelt hatching is shown by the table giving our yearly plantings, where it will be found that of the 55,000,000 fry and eggs distributed in ten years almost half the number was sent out this spring. It should also be borne in mind that this great result was obtained from an insignificant stream that never contained smelts before—it was stocked by the New York State Fishery Commission.

COLD SPRING HARBOR, N. Y., May 10.

*In the reports the printers have usually made this the Connecticut River, and this note is to warn them that the above spelling is correct.

†The March blizzard this year, from 12th to 20th, prevented getting eggs.

‡This loss includes two million eggs lost by the clogging of a tube supplying two jars on the night of March 17.

### Russian Wolfhound Type.

MR. A. J. ROUSSEAU, of St. Petersburg, Russia, who has been identified more or less with importations of Russian wolfhounds to this country, in writing to a contemporary, has a good deal to say in regard to the type of some of the winning dogs in this country. Modjeska and champion Argoss are particularly scored. Modjeska is scored on account of her being more like a setter from the head back than a Russian wolfhound or borzoi. But judging from Mr. Rousseau's standpoint, it would appear as if the tail was the most distinctive feature in this conclusion. Incidentally he tells us that he has secured for American importers a few bitches capable of beating Svodka and Vinga and Modjeska. Argoss is spoken of in derogatory terms, chiefly on account of his black color. He says: "If Argoss, which you have in America, is a black dog, then I have many dogs able to beat him under a Russian borzoi judge. Personally, I would not own Argoss on any consideration, because he is a black dog, and good breeders of borzois in Russia would neither own nor breed from a black borzoi, as black in this breed is a positive proof of a cross. If I were unfortunate enough to have a dog or a bitch to throw puppies even with black patches about them, I would destroy them and all their progeny."

He further says that it is easy enough to get a dog to beat "what you Americans call the grandest specimen living * * * but who is to judge the quality?" There is the rub—and in the present unsettled condition as to what is the correct type, and the lack of familiarity with the breed among our judges, this question is very pertinent. "Americans make a dog a champion without much trouble; but by this letter they can see that dogs like Argoss are valuless here, because they are the positive result of a cross, and no Russian breeder of any standing would own him on any consideration." We do not know whether Mr. Rousseau is qualified to speak with authority on this breed or not, but he is in their native country, and has been considerably identified with the breed for some years; therefore the serious accusations he brings against the dog that has stood for more than two years at the head of our Russian wolfhounds certainly demands attention, and perhaps this outspoken protest will be the means of again drawing attention to the vexed subject of what really is the correct type or coloring of those beautiful dogs. Personally, from the study of various writings on the subject, we believe the whole breed is more or less mixed, and the following translation from the Russian journal *Ohota*—organ of the "Society for the Encouragement of Field Qualities of Hunting Dogs and of all kinds of Hunting; St. Petersburg, Russia," written by R. R., concerning the origin and type of the modern psovoy borzoy, would seem to sustain this opinion.

*Ohota, March 1, 1892, Page 3.*

The views given below about the origin of the modern psovoy borzoi are the results of the opinions and discussions of coursers and hunters of different times: All serious and well-posted hunters have come to the conclusion that the modern borzoy is a mixed race, and the difference between them is but in the naming of the original progenitors, and in the question whether the race has been kept pure for the last hundred years or whether any other blood has been infused within that time.

One party claims that the modern psovoy borzoy is the result of crossing of the Gustopsovoy borzoy with the Tchistopsovoy borzoy (this latter supposed to be a cross of the Gustopsovoy borzoy with the Crimean, Anatolian, or Polish borzoys).

Another party allows the psovoy borzoys to be a mixture of the above two breeds, but claims them to have been strictly Russian natives since very ancient times, their differences being a result of the climate in which each was living—the Gustopsovoy borzoy in the north of Russia, the Tchistopsovoy borzoy in the south.

A third opinion is that the modern psovoy borzoy was produced from Tchistopsovoy borzoy males and Courland borzoy bitches, and in this opinion the Tchistopsovoy borzoy are held to be the original pure Russian race; and any Gustopsovoy borzoys existing were not a special original breed at all, but mongrels from the mating of psovoys and Tchistopsovoy borzoys with sheepdogs (ovtcharkas).

A fourth opinion partly states: The ancient psovoy borzoy or Gustopsovoy borzoy, as we now are in the habit of calling it, was purposely produced or improved by the northern Russian hunters very long ago. The points of these dogs were very much like those of the modern psovoy borzoys, but they had a heavier coat, hence their name Gustopsovoy. Nearest to this type of dogs were the borzoys of I. I. Kareyev, also those of V. T. Lepatchev, but while they were nearly ideally good in front their rear was rather poor.

By their qualities the ancient psovoy (Gustopsovoy) borzoys were especially adapted to the dense woods of northern Russia, which are full of wolves; they were extremely fast on short distances and very fierce.

These ancient dogs were introduced into central Russia, south of Moscow, in the eighteenth and nineteenth centuries, at first but a few in number, and then they became mixed with local dogs or southern borzoys.

In this crossing of breeds some hunters were influenced by a desire to improve their staying qualities, while retaining their general type as far as possible; others were forced to cross them by necessity, since they did not want to inbreed them altogether, and other dogs of this breed were scarce, others again who owned several dogs kept breeding in rather than mix or cross the varieties.

In fact, at the beginning of the fifties most large kennels contained ten to twelve of the ancient psovoy (Gustopsovoy) borzoys, a breed especially kept up by in-breeding, which served to retain the blood and correct the defects in the other borzoy breeds.

About 1861, when the economical reconstruction of Russia took place, many landowners of the nobility lost heavily, or feared to lose, and then the hunts were abandoned as too expensive and needless. Fully two-thirds of the hunts disappeared altogether, only some in the rich southern country survived, although in considerably diminished force. Gradually, with the return of stability and confidence, the hunts were revived, and then it was found necessary in order to organize them at all, to import foreign dogs. Now, the interest in psovoy borzoys is again strong and the demand for these dogs at home and abroad sufficient to encourage their breeding, so that instead of quarreling about the origin and proper name of the breed, we had better try to form some ideal of what the breed ought to be, and breed to it. And as far as the name, we cannot do better than call the ancient breed Gustopsovoy borzoy and the modern one Psovoy borzoy.

R. R.

### The Dog's Devotion.

THE dog show was at the height of its success. The winning exhibitors were contented with the judges' awards and devoted their time more or less to an analysis of the happiness which owning a dog confers, for the edification of the listeners who had some symptoms of being purchasers.

As to the kind of dog which confers the most happiness and prosperity on a household it is remarkable to what an extent exhibitors differ. They agree that the dog is man's best friend, considered as a general proposition concerning all registered dogs or dogs with a pedigree. But there are dogs and dogs, and differences and differences. Each fancier of a breed seemed to think that that breed was possessed of some useful and ornamental qualities transcending those of all other breeds; and owners of dogs of the same breed thought that each one's own dogs respectively were the best. Perhaps they were. Let us hope so. It is the best that can be done at present.

The implicit confidence manifested now and then by some owners in regard to the absolute perfection of some yellow-eyed, lumpy-jointed dogs with a malevolent expression and stiff action which they own is too tender a phenomenon of human nature to be trifled with carelessly. And it is one of the most charming traits of human nature is this disinterested affection for the dog, even if the disinterested affection is enveloped by a large figure patterned thus $.

But dogs have to eat, and it is not always possible for an owner to have a tranquil affection for a dog with a big appetite. This will explain anything which may seem mercenary in man's affection. If the dog causes expense he should be willing to pay the debts incurred.

But the dog show was a success. The owners were standing or were in negligé repose close by their dogs, which were lazily and furtively gazing at the spectators. From the dog's standpoint, there were quite as much novelty and variety in the specimens which passed by, as there were in the stalls to the passers by. Once in a while a dog would see a face which he considered just cause for instant offense and resentment, whereupon he would spring furiously at it, only to be brought to a sudden check by his kennel chain. Dogs have feelings.

The owner of a bull-terrier was standing close by the stall wherein was chained his pride. A stranger, tall, slender and arrayed in a creation of the tailor's art, a harmonious blending of lines and color, approached near to him, and, in a diffident manner, accosted him in a mournful voice which accorded with the mournful look of his face.

"Are you the owner of this dog?" he said.

"Yes sir! Great dog, sir. Won nine thousand prizes, beating Teddy O'Rourke, Michael McGinty, Bucephalus III., Tommy Tiddler, Sixteen String Jack, and sixty other famous winners, each one considered invincible before they met my dog, Pie Face IV. He never was beaten but ten times, and each one of those beatings was under a judge who either didn't know bull-terriers, or had a grudge against me. The first time happened at——"

"Pardon me, sir," said the mournful man, "is your dog a strong dog, and has he a perfect constitution?"

"I hasten to remark that he has. You don't know Pie Face. Ask any one here about him. He's the powerfullest dog I ever saw. Why, I chained him to the outside of the barn the day before I left home for this show. A strange cat was passing by within sight of him. He gave a stern look, charged and tore a 15 foot board off the barn, chased the cat a half mile till the cat came to a tree which afforded means of escape. Two or three fences in the way had stopped Pie Face just as he was about to reduce the cat to his personal possessions. His consitution? He never has been sick a moment in his life. He keeps fat on bones, potato rinds and expectations. He is—"

"Is he persistent in an idea, if the idea is so presented that he will adopt it as his own?"

"The persistentest dog I ever saw, sir. He once watched a rate hole six weeks, his mouth corners crowding back further and further every day. The rat hole communicated from the outside of the barn with the barn floor, but the dog didn't know it. If he had, it would not have lessened his persistence. Another time he gnawed a tough bone three days before he got the best of it. He will sleep persistent and—"

"Yes, yes! But I suppose I might as well tell you just what I consider necessary in a dog. I have heard that a dog has a pure and unshaken devotion to his master; that he loves him through prosperity and adversity; that personal appearance is naught in a dog's affections; that a dog will guard his master, and if need he will fight to the death in his defense. Expensive suppers, diamonds or new hats never enter into the dog's estimates. Now, my own plain features, with a long thin nose projecting therefrom, render me unprepossessing, and it requires such a high degree of long effort on my part to win even a word of appreciation, that I have concluded to buy a dog, which will sit on the floor close by while I eat my meals, looking at me in earnest adoration without a moment's intermission. When I read, he must sit or lie close by, and gaze at me with one eye or both. He must make devotion his life work. To do the work required, the dog must have a good constitution and great physical strength. Every dog cannot hold the job down. To be pleasing to my eye, a dog must have a stump tail, bulgy shoulders and an open cast of countenance, with a good thick neck. He has then a picturesque ruggedness when sitting around. If you can guarantee Pie Face for a year and keep him in repair if he gets out of order, I'll take him at a reasonable figure. What do you ask for him?"

"He's cheap at $30,000, but I might be induced to sell him at $5,000 cash."

"I'll give you $200."

"He's yours."

B. WATERS.

### Another Champion.

*Editor Forest and Stream:*

When at Mr. Higginson's of Rochester, N. Y., and bull-terrier fame, I picked from a lot of good pups what I thought would make a winner, and friend Higginson made me a present of the pup. He is by Billy Bulger ex Nellie Harper, and I claim the name Harper Whiskey for the pup. Harper makes the best whiskey and I have the making of the best bull-terrier. He is full brother to the great Duke of Rochester—every one admits he is the best-headed bull-terrier ever seen in America. My dog is nearly as good in head, and perfect in legs, feet, body and stern. *They* say I don't know a good one until some one else says it is good, but if my dog does not win in open, puppy and novice classes at Toronto, then I will eat him.

J. OTIS FELLOWS.

[Not having seen the other man's dog this is rather a rash vow to take.]

### Answers to Correspondents.

BY some mystic process it has come to be believed in a quiet, limited way that I know a thing or two about dogs, although I have endeavored to conceal it in so far as a dislike to fame had the power. As a consequence of that belief I receive letters on all sorts of subjects, whereof many contain questions which show original thought and a desire for knowledge. I believe that by answering the most important of these questions publicly they will forever be set at rest. With this laudable purpose I humbly submit them:

*Ole Oleson, Milwaukee.*—I can not say positively whether the Prince of Wales prizes Vagueness, his Boston terrier, more than all his other dogs, nor indeed can I say whether he owns a large kennel of Boston terriers or not, though being a man of refined taste he probably does. You are correct in conjecturing that this breed is fed on baked beans. I regret that I cannot give you the pedigree of Vagueness.

*Scientist, Boston.*—Your theory that docking a dog's tail adds to his physical strength and nerve force is true. Undoubtedly the body generates just as much power without the tail as with it. It therefore gains just so much power, by docking the tail, as was wasted in the tail before it was docked. This will partially explain the reason why such breeds, as have their ears and tails docked, have such great bodily vigor and strength, as Great Danes, fox-terriers, etc.

*Constant Reader, Montreal.*—Your description of your dog's disease leads me to believe that he has either mumps or cholera infantum. I would advise you to consult a skilled veterinarian.

*Novice, San Francisco.*—You do me, as you assert, a great honor in asking me to write you the extended pedigree, in full, of Fido, Jack, Lady, Brag, Holdfast, and 52 other dogs. If not venturing too far, may I suggest that there is more than one Fido, Jack, etc. It will require a week of hard work to answer all these questions, which you can not have much use for even when answered, yet this consideration will not prevent me from answering them if I can only learn what you want. Write again.

*New Beginner, Cincinnati.*—You ask me the following question: "My friend, Jack Smith, who lives in my house, has a black, white and tan setter dog two years old, sired by the famous field trial performer, Biff, out of the no less celebrated Hanky Nancy. He weighs 53lbs. 1oz., and has a dew claw. His head is shaped lovely. What do you think of this dog as a field performer?" Ans. I think so. Do not for an instant think of such a rude step as to take your dog into the field and find out positively for yourself what he can do. If you will kindly clip off a lock of his hair and inclose it with his photograph to a clairvoyant, you will get a detailed history of his talents and future life.

*Gentleman Jim, Buffalo.*—Your suspicion that your friend puts his pug's tail in curl papers overnight is possibly unjust and unfounded. Some pugs have twisty tails naturally.

*Choke-Bore, Newport.*—You may assure your friend that he was misinformed concerning the terrible ferocity of dogmen. Their public writings are the outgrowth of serious thought and enthusiasm in the elevation of man's best friend, and not in a spirit of peevishness or belligerentness or advertisingness, as he seems to think. The dogman always roars loudest when furthest away.

*Motheaten Willie, England.*—Your idea that the A. K. C. should have 50 per cent. of the sales of all dogs sold in America by any resident or non-resident is the discovery of the season. In return you say the A. K. C. would give a certificate of sale. The times are ripe for progress. Come over and see us.

THE CYNIC.

### Controlling Shy Dogs.

*Editor Forest and Stream:*

"Subscriber," in a recent issue of FOREST AND STREAM, asks you for advice in handling his timid puppy. In hopes that it may benefit him and others similarly situated, I will give my treatment of a dog I trained the past season.

I got him in November, 1892, when he was four months old. He is an English setter. Although sire and grandsire were field trial winners, he was absolutely the most timid pup I ever saw. He would not willingly allow any one to touch him except my little girl, four years old, and would not eat anything, no matter how hungry he might be, if any one was in sight. I had him four months before I could put my hand on him when he was at liberty, though he seemed delighted to go with me for a run in the fields or woods.

I commenced training him by taking him out for a ramble at every opportunity, letting him have his own way, not attempting to control in any way first, but after a while teaching him to turn at the sound of the whistle. This he soon learned, but still would not allow me to put my hand on him. When he had come to enjoy these trips I put a cord about 20ft. long on him, and after he had got used to trailing it I would occasionally step on it, at the same time saying "Whoa," and raising my hand. At first he would crouch on the ground frightened, but I would walk up to him, pat him on the head and start him on. In this way I got him used to being handled without frightening him by making a grab at him and perhaps missing him, which would only make him more shy. It did not take long to get him so I could stop him with "Whoa" and walk up to him without using the cord, but it was two or three months before he would come up to me and frisk around as a pup usually does.

When I first got him I was breaking a gun-shy Irish setter and was using the gun at every feeding time, and he showed no signs of gun-shyness; but when he was about a year old I thoughtlessly fired a heavy charge close to him and immediately saw he was frightened (he had not heard a shot near him for a couple of months). At the next shot he came in to heel and refused to leave me.

I then began to use the pistol (commencing with a .22 and afterward a .32) at feeding time and when calling him to go for a walk. I prefer to use a pistol instead of the gun, as by so doing I avoid getting him afraid of the sight of the gun, and it is more convenient to taking along for a walk. This was in May, and by July 4, when our woodcock season comes in, I thought I had him pretty well cured. Before that I had often seen him point woodcock when I had him out for exercise and was very anxious to try him on them. I took him out on the 4th and he found and pointed the first bird in fine style, but when I shot it he came in to heel and refused to hunt for some time. After following at heel for a while he went to hunting again, but the next shot finished him. After that he would not hunt at all in the willows or alders where I found the woodcock, and if a woodcock rose anywhere near him he would drop on his belly as if shot.

I then quit hunting him, but used the pistol as before, and taking him out in the woods at every opportunity, always taking the pistol along, but going where I was not likely to find woodcock, and not firing the gun at all in the woods for a couple of months, and then only at first when he was at some distance from me. I would sometimes flush a ruffed grouse and would allow him his own way entirely. He would chase them and race around through the brush after they were gone, and it seemed to give him courage and to teach him to hunt for game. I worked with him in that way until October. I then took him out to hunt ruffed grouse. I had an idea if I could drop a ruffed grouse in front of him that it would clinch the cure. My first bird was an old drummer. When I had got pretty close to it and had it located, I worked the dog to one side to get him out of the way, and crept up and shot it off the log. As soon as I fired I whistled the dog over, and as he crossed in front of me he ran right on to the fluttering bird. I let him mouth it all he wanted to, and when I took it from him praised and petted

him. I killed another in the same way, and my dog was cured of his gunshyness. In two weeks from that time I had him working in first-class shape. He is a keen and fast hunter and perfectly staunch.

Now, if "Subscriber" has an exceptionally fine pup and has plenty of time and patience to expend on him, it will pay to train his timid pup; otherwise he had better dispose of him and get one with more "sand."

I am satisfied that a pup can be trained, no matter how timid, if properly handled, and the timid one generally proves staunch; but the wear and tear on a man's temper is something fearful. He must pet and coax the dog when his natural inclination would be to shoot his head off. MC.

EAGLE ROCK, Pa.

### A Dog Show in Texas.

*Editor Forest and Stream:*

It may be of interest to the many readers of your valuable journal in Texas and the South in general to hear that a dog show, in connection with a stock and poultry show, is going to be held in this city this fall. The Lone Star State claims to be at the head of the live stock line in the United States, and can almost claim the same in the doggy line, it only needs the support of the lovers of our canine friends to make a dog show a success and a permanent feature for the future. San Antonio boasts of harboring some of the finest and best dogs in the South, especially in the line of sporting dogs. The writer, who more or less fancies English setters, has seen a number of good ones, equal to any in the United States. Among them I noticed Fred B., owned by Dr. Berry, a very enthusiastic and true sportsman. Fred B. is a grandson of Roderigo, as fine a specimen of dogdom as can be seen anywhere. Mr. Yates's Rod Gladstone is a very nice little dog. Then there is Mr. G. A. Chabot's great Tobias Twinkle, and so on.

In pointers there are a number of descendants of champion Meteor, Graphic, King of Kent, etc., in the city; in Irish setters, sons and daughters of Dick Swiveler, Elcho Jr., Kildare, etc., can be found. In fox-terriers Mr. Tuttle owns a nice little kennel. Any number of greyhounds, foxhounds, pugs, and of the whole terrier family, are owned in the city. With an array of so much home talent alone, the show can be made a grand success and an attraction which will be eagerly looked for by the people in the future.

Field trials, which were held near this city on two or three occasions, died some time ago on account of there being too much "roundism" at the bottom of it. A number of gentlemen have been thinking this matter over, and it looks as if field trials this winter are going to be an established fact, which I hope will be true. Birds are reported to be plentiful this fall, and if this new organization will keep those fellows out who only attend on account of the "almighty dollar," their trials will be a success and receive the support of the true sportsmen in general. UNCLE DAD.

### U. S. Field Trials Club Derby A Entries.

INCLOSED herewith please find list of entries to this club's Derby A, Bicknell trials. This is an off year in field trials as well as other lines of business. However, I think we can come out about even. All were whelped in 1893 with exception of Tamarack, Jr. P. T. MADISON, Sec'y-Treas.

SETTERS.

WUN LUNG'S PRIDE—Geo. A. Reed's blue belton dog (Wun Lung—White Wings), February 16.

LADY MILDRED—Blue Ridge Kennels' black, white and tan bitch (Antonio—Ruby's Girl), March 28.

TOM BEGGS—Blue Ridge Kennels' black, white and tan dog (Antonio—Ruby's Girl), March 28.

NELLY FOX—Blue Ridge Kennels' blue belton and tan bitch (Antonio—Can Can), February 28.

GENNEVIVE—Blue Ridge Kennels' black, white and tan bitch (Antonio—Countess Rush), May 13.

TONEY BOY—Blue Ridge Kennels' black, white and tan dog Antonio—Laundress), January 16.

MONTANA MAID—Wm. New's black, white and tan bitch (Antonio—Florence Gladstone), April 25.

BLENDON DOT—Tway & Levering's black, white and tan bitch (Chula Light—Dot Noble), May 3.

YALE '93—H. K. Devereux's black, white and tan dog (Antonio—Nellie Hope), Jan. 16.

NORA BERWYN—H. K. Devereux's black and white bitch (Toledo Blade—Mattie Berwyn), Mareh.

TORY DOTLET—F. R. Hitchcock's black, white and tan bitch (Count Gladstone—Tory Della), March 22.

ANNIE OF ABBOTTSFORD—E. A. Burdett's black and white bitch (Gladstone's Boy—Bohemian Girl), Oct. 4.

HARVARD—H. R. Edwards's black and white dog (Dan Burgess—Gay), June 12.

NORA IV.—Minnesota Kennels' (Agt.) liver and white bitch (Roderigo—Norah III.), April.

MOLLIE—Minnesota Kennels' (Agt.) black, white and tan bitch (Roderigo—Norah III.), April.

DELORVUS—Minnesota Kennels' (Agt.) black and white bitch (Roderigo—Norah III.), April.

WILL—Minnesota Kennels' (Agt.) lemon and white dog (Roderigo—Nora III.), April.h

JOCK—Minnesota Kennels' black, white and tan dog (Paul Bo—Canadian Lill), February.

DIXIE'S FLAG—N. T. Harris's black, white and tan dog (Wun Lung—White Wings), Feb. 16.

SCOTTSWOOD DICK—Scottswood Kennels' chestnut, white and tan dog (Roderigo—Belle McLean), Jan 17.

GLENDALE—Fishback & Baughn's black, white and tan bitch (Cinch—Steven's Ruby), Jan. 2.

JEAN'S VAL—Fishback & Baughn's black, white and tan bitch (Voltaire—Lufra's Ruby), May 19.

IROQUOIS—Fox & Seilers's black, white and tan dog (Antonio—Can Can), March 2.

TONEY'S GIRL—Fox & Seilers's black, white and tan bitch (Antonio—Can Can), March 2.

CYNOSURE—Avent & Thayer Kennels' black, white and tan bitch (Roderigo—Norah), May 5

Clementina—Avent & Thayer Kennels' black, white and tan bitch (Roderigo—Norah).

COLUMBINE—Avent & Thayer Kennels' black, white and tan bitch (Roderigo—Norah), May 5.

ROMANEE—Avent & Thayer Kennels' black, white and tan bitch (Roderigo—Novelist), May 22.

——— —Avent & Thayer Kennels' black, white and tan dog (Jean Val Jean—Lucy Avent), May 29.

LUELLA FOREMAN—A. J. Gleason's black, white and tan bitch (Dan Foreman—Don's Nellie), Feb. 25.

DIXIE'S MARK—A. J. Gleason's blue belton dog (Dixie's Rod—Nancy Foreman), April 5.

DAN'S MARK—A. J. Gleason's black, white and tan dog (Dixie's Rod—Nancy Foreman), April 5.

BALDINGTON—A. J. Gleason's black, white and tan dog (Dixie's Rod—Nancy Foreman), April 5.

RHODANANCY—A. J. Gleason's black and white bitch (Dixie's Rod—Nancy Foreman), April 5.

BLADE'S DART—A. Smithmight's black, white and tan bitch (Toledo Blade—Mattie Berwyn), Feb. 25.

POINTERS.

FLOSS OF COVINGTON—Poindexter & Shelton's liver and white bitch (Don's Boy—Nellie), Jan. 5.

DANDY—Glen Rock Kennels' lemon and white dog (Duke of Kent II.—Bennett's Flirt), May 13.

DAN—N. L. Chaffin's lemon and white dog (Duke of Kent II.—Bennett's Flirt), May 13.

LAD'S LADY—L. W. Blankenbaker's liver and white bitch (Lad of Rush—Lady Margaret), May 11.

SHAWNEY GIRL—E. D. Garr's black and white bitch (Ben A.—Dot), March 10.

TAMARACK, JR.—H. K. Devereux's liver and wnite dog (Tamarack—Maud Graphic), March 17.

BELLE MINA—L. G. Howell's (agent) liver and white bitch (Keut Elgin— ———) March 17.

BLYTHE'S LAD—C. G. Stoddard's liver and white dog (Ightfield Upton—Ightfield Blythe), August.

DOUVAY—C. G. Stoddard's liver and white dog (Ightfield Upton—Ridgeview Duchess), June.

WAMDUSKA—C. G. Stoddard's liver and white bitch (Shotmaster—Divernon), July.

YOUNG LAD OF RUSH—H. J. Smith's liver and white dog (Lad of Rush—Kent's Clip), August 22.

JAMMIE O. G.—J. L. Adams's liver and white dog (Lad of Rush—Devonshire Jilt), March 8.

RODERIC T.—T. L. Tinsley's liver and white dog (Dash Ranger R., Jr.—Fanny Kumerl), Jan. 14.

JILT'S LAD—D. G. Rowland's liver and white dog (Lad of Rush—Devonshire Jilt), March.

BELLE—John T. Mayfield's (Agt.) bitch (King Don—Wanny's Triburotus), May 9.

LADY PEG II.—W. T. Hunter's liver and white bitch (Rip Rap—Lady Peg), March.

HAL BRADEN—C. B. Lockhart's liver and white dog (Ossian—Vic), April.

HEMPSTEAD DON—Hempstead Farm's liver and white dog (Sandford Druid—Merry Legs), June.

DAMSEL—J. T. Mayfield's liver and white bitch (Ossian—Hops II.), May 20

DAY DREAM—J.T. Mayfield's liver and white bitch (Ossian—Hops II.), May 20.

COURTESAN—J.T. Mayfield's lemon and white bitch (Ossian—Hops II.), May 20.

REX-FAST—W. B. Stafford's liver and white dog (Rex—Mosey), March 11.

DELL S.—W. B. Stafford's (Agt.) black and white bitch (Manitou—Pride), May 27.

## DOG CHAT.

### Mr. Howard and the Handlers' Prizes.

Mr. Howard, in answer to our article under the above heading in FOREST AND STREAM, June 16, writes us a long letter in which he says that our statements in regard to the handlers' prizes at Louisville are not true, but further than that advances no proof that such is the case, simply stating that all the evidence is before the A. K. C., to which body he has made an appeal. Mr. Ritchie, a vice-president of the Louisville Kennel Club, and one of the bench show committee, gave us the number of dogs each handler was entitled to and this was the official list by which the prizes were awarded. Mr. Howard then goes on to accuse Messrs. Howard and Mooney, of the Columbus Fanciers' Club, of malicious persecution, and further makes statements which it would not be wise on our part to publish, as Mr. Howard offers no proof in support of his statements. One of them, however, we may say was that Mr. Lawrence, president of the club, had paid Mr. Elliott's expenses as judge of great Danes at their show. On writing to Mr. Lawrence and Mr. Mooney, the secretary, we learn that when a deficit of $500 stared them in the face, Mr. Lawrence, for fear they would engage one judge for all breeds, offered to donate to the Board (in addition to his other donations) sufficient money to procure one who was competent to judge great Danes, and Mr. Elliott was engaged upon the recommendation of Mr. Howard, who had seen Mr. Elliott at the Chicago Kennel Club show and had talked to him about it, and Mr. Elliott's expenses were paid by the club's treasurer from the club's funds on the evening of the last day of the show. Accusing other people of various acts does not exonerate Mr. Howard of the charges against himself, the proof of which was contained in our issue of June 16, and about which he says nothing further than that it is a case of malicious persecution on the part of certain members of his club. The subject, however, will be brought up before the next A. K. C. meeting and then Mr. Howard will be afforded an opportunity to clear himself.

### Result.

The *Fox-Terrier Chronicle*, which is increasingly interesting with every issue, has in a late number a capital etching of champion Result and a long articie on the merits of this celebrated terrier. It will be interesting to lovers of this breed to read the following: "As a show terrier every one knows Result; but few know him as a game workman, equal in every way to his performances on the bench. 'Every dog has his day,' however, and alas, though still well and strong, the poor old chap has very nearly lost his sight and teeth, and his cup winning days are over; but to this moment he is as good as ever, and like the soldier who fought his battles over again, Result, when roused, can display his old form, and is still a model of a high-class terrier. He was not a large terrier, for when in hard show condition he weighed under 16lbs. As will be seen from his portrait, he had an evenly marked black and tan head and ears, white body, with a black spot on loin." This grand dog won the challenge cup eleven times, nearly in succession, being beaten on one occasion by his beautiful daughter Rachel, that is now in Mr. Belmont's kennel, and which led her sex a merry dance for the blue ribbons at American shows in years past. Result was first exhibited in 1884 and at his last appearance in public, in 1888, he beat Vesuvienne for the 50-guinea challenge cup, at the Fox-Terrier Club show, as well as winning a number of other prizes. An account of the Clarke Kennels is another feature of this number, and will prove "good meat" for its readers. Speaking of the Clarke type of terriers, this journal says: "We have heard it criticised as being too light and pretty, and wanting in the rough and ready wear and tear properties that one naturally associates with the fox-terrier proper. With this dictum we cannot altogether agree, and if we take Result as an example, where would we find a terrier built on better lines for work than the late champion, who was the right size and had make, shape, bone, substance and every other characteristic required in a workman, and the same may be said of Rachel. There were not a few that might have been improved with more substance; but, taken all round, there is much to admire in the type. They were very terrier-like and symmetrical, beautifully topped with good necks, well-laid shoulders and well-sprung ribs, and generally good in loins and quarters. In fore end, cleanness of shoulders and forelegs and parts they were not perhaps quite so strong as other kennels, but the other points weighed too heavily in their favor, and they were generally found among the first when the judging was over."

In the last issue of this journal is given a capital picture of Dominie from life; in fact it is about the best photo. of a fox-terrier we ever saw, and we commend it to all fox-terrier breeders as an object lesson in "front." The *Chronicle* also publishes FOREST AND STREAM'S report of fox-terriers at the Los Angeles and Specialty shows, in this issue.

Mr. W. H. Wells of Lockport, N. Y, has purchased the fox-terrier Tanner from the Beverwyck Kennels of Albany, N. Y.

Jerome K. Jerome says of everyday dogs: "He is very imprudent, a dog is. He never makes it his business to inquire whether you are in the right or the wrong, never bothers as to whether you are going up or down life's ladder; never asks whether you are rich or poor; silly or wise; sinner or saint. You are his pal. That is enough for him, and come luck or misfortune, good repute or bad, honor or shame, he is going to stick to you, to comfort you, guard you and give his life for you if need be—foolish, brainless, soulless dog."

We draw attention to the merits of Hillside Kennels' fox-terrier Starden's King as a stud dog. In the revised stud card in this issue we notice that two of his pups have won over $750 this season. This is surely something to be proud of.

### The U. S. Field Trials.

The U. S. Field Trials Club's Derby entry, though it seems a large falling off from last year, is certainly an encouraging one in these days of club collapses. In the setter division there are 35 entries and in pointers 23. It would seem that the divided stake and an Absolute is, after all, the most popular form in which to arrange the competitions. However, this club has not escaped the blighting influences which seem to be attacking field trial interests at present. Last year this club's Derby polled an entry of 51 English setters, 24 pointers and 4 Irish setters. It is a consolation, however, to know that the pointer men are keeping up the average. The falling off in the setter ranks is an argument in favor of Mr. Waters's contention that professionalism is in a great degree accountable for the present lack of interest among the purely amateur field men.

The purchase of Rufford Ormonde is now the subject of conversation among collie men on both sides of the water. The price seems to be the principal conjecture in connection with this notable sale. This dog's late owners, Messrs. Holme & Holliday, are said to have paid Mr. T. H. Stretch $3,750 for him, and we know that not many moons past the price to his present owner, Mr. Morgan, was quoted as $7,500. As Messrs. Holme and Holliday are well off for the material that makes the mare go it is safe to conclude that at least $5,000 must have changed hands on the deal. Mr. Panmure Gordon, the president of the Scottish Kennel Club, as in the case of Sefton Hero, was the medium through whom the sale was consummated. It may be of interest to note the fact that in a clearance sale of his collies Mr. Stretch is offering Princess Margaret, the dam of Rufford Ormonde.

The spaniel question will not down. Mr. Joe Kennedy, of Hamilton, Ont., has just recovered $200 from the express companies for the loss of some spaniels consigned to their care.

### ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.*

J. P. M.—I have a mastiff bitch, 19 months old, which I raised on a bottle, as the mother died in whelping, and as she is very cross have had to keep her on chain since she was four months old. She has, never been in season, and I am anxious to breed her. What is the cause? Ans. It may be due to some congenital malformation or absence of some part of the sexual organs. I have known bitches not to come in heat till they were two years old.

N. M. C., Lockport, N. Y.—Write to secretary of American Kennel Club for registration blank, which contains all the information in regard to registering your dog.

## Hunting and Coursing.

### FIXTURES.

Oct. 23.—New England Beagle Club, at Oxford, Mass. W. S. Clark, Linden, Mass., Sec'y. Nominations close Oct. 1.

Oct. 29.—National Beagle Club. Geo. Laick, Tarrytown, N.Y., Sec'y.

Nov. 7.—Northwestern Beagle Club. Louis Steffen, Milwaukee, Wis., Sec'y.

### A Novice's Experience Rabbit Hunting.

A FEW years ago I made up my mind that rabbit shooting was the proper kind of sport for a fellow who had but little time to spend gunning, and was not good enough shot to stop the few quail and partridge that might be found about Boston's hunting ground.

Says I to myself, the first thing is to secure a good dog. I found among the advertisements in the FOREST AND STREAM one from a gentleman who advertised beagles of pedigreed stock and good hunters. I corresponded with him, and received an invitation to come out to his place, a few miles out of town, and see his dogs work. Boarding a train one morning, I soon found myself at his house, and was shown as pretty a looking lot of beagles as one could wish to see; they were from imported Valentine stock, and it would take a man half a day to write out their pedigree.

The next thing was to see them hunt. I had not brought my gun, and my host found at the last moment that something was out of "kilter" with his, but he said it did not matter much, as the rabbits were hunted so much that it was almost impossible to obtain a shot at one.

The beagles were taken out, six in number, not one standing over 13in. high, and turned down in a promising looking bit of ground. Off they started, making lots of the music we read so much about, and rambled about in an animated manner, finally jumping a rabbit. Away went the pack, running the rabbit by sight most of the time, and in three minutes had him in a wall. "That's pretty good work, is it not?" said my companion. I said it was, because he told me so, but I wished I had a gun, as the cottontail offered a good shot.

The dogs started two others, the runs being a repetition of the first. I concluded I had seen a lot of good hunting, picked out a bitch that seemed to do the best work, paid the price and carried her—yea, verily, carried her (as she would not lead to halter) home.

I asked and obtained a vacation from my employer, loaded my new acquisition, my gun and myself into a train and proceeded into the State of Maine to show the natives how to hunt the white rabbits or hares. Arriving in due time, I soon was on my way to the woods, the little bitch glad to be loose after the long journey, capering ahead over the ground, which was covered with the first snow, giving vent to little short bays, but not showing any disposition to get into solid work. This will soon work off, I thought, and just then caught sight of a rabbit bounding unconcerned along, stopping every few yards to see what all the racket was. Bang! went my gun, and away went the rabbit, I whistled for the beagle to put on the trail, but no dog came. I called and whistled again, but it was as if the ground opened and swallowed her up. I went on with my hunting and bagged a partridge and a rabbit during the afternoon. Along about dusk I descried a small white object creeping along on my track about 50yds. behind, which proved to be my truant hound. After much coaxing I got her to come up to me, and a more terrorized animal I never saw. I was tempted to leave her in the woods, but did take her with me.

The man I boarded with told me of a farmer who owned a

dog he thought I could hire. The next morning found me bright and early in the farmer's dooryard.

"Good morning," I said, as he appeared, "I was told I could get a rabbit hound of you for a little while." "Yes," he replied. "There's old Snyder over thar, you kin have the use of, for a dollar," pointing to a large dog pulling on a chain, who seemed to be a cross between a foxhound and a collie, and appeared to be deeply grieved that he could not get away and chew somebody. "You jest show him a gun and he'll follow you all day, but look a-here," continued the owner, "if he kills eny sheep while you have him, you've got to settle for 'em."

I agreed to this condition, paid my dollar, and departed with Snyder, who, notwithstanding his fierce appearance, was soon my fast friend.

He was a dog after my own heart, who would drive rabbits all day for you, and all night if not called off. He had not a lazy bone about him, and soon ran himself so footsore that I had to leave him home every other day, where he howled so that people complained of him. He had but one fault; he would run a fox if he came to a warm trail. Twice I had to go to his owner's house in the morning and wait for him to come home after an all-night run

I had my fill of rabbit shooting over him for two weeks, and offered the farmer half my pile to let me take him home. "Yer couldn't buy old Snyder if yer made him a blanket out er dollar bills," was his last answer.

I brought my beagle bitch back to Boston and solemnly averred I had the best rabbit dog that ever followed a trail, and showed the rabbits I brought home as proof. I took a good deal of pains with her and got her over being gunshy, but to get her to hunt in a satisfactory way alone, I could not. A team ran over her the next summer and I did not cry a great deal.

I soon got another dog, an old foxhound with a tinge of beagle in him. Turk is a slow, pottering sort of an old chap, but hunts his ground over carefully and thoroughly, and if he once starts a rabbit does not lose him. I have got quite a number of cottontails in front of him, and there are a good many worse dogs than he is.

I had him out one day early last fall, and sent him into a piece of swampy ground that I thought he would make a start in. He soon gave tongue and I quickly placed myself in front of some holes in a side hill that I thought the rabbit would make for. It was soon evident another dog was driving that rabbit as well as mine.

"Bun" soon came out where I was looking for him and turned a neat somersault as my gun went off. I quickly found out who the stranger was as he came out of the bush first. He was a black and tan dog standing about 15in. high, of which his legs represented nine, one ear was not all there and his sides nearly touched together. I could not make friends with him and soon both dogs went to hunting for more game. They went up on to a side hill and I had a good chance to watch the little one work. He was fast but sure, and soon had another rabbit going which came round the hill right toward me. The little dog gave his rat tail a couple of wags, as much as to say "Well done," as this one was added to the other, and immediately went back to where Turk was at work on another trail.

At lunch time when Turk and I were emptying the lunch box, the stranger sat off from us about 20yds. and no amount of coaxing or grub offered could get him nearer. I tossed a couple of biscuit, for which he seemed grateful, and we went after more rabbits. In all I got three rabbits that day, not counting two that the dogs holed before I could get a shot.

Thinking these enough for a mess, and wishing to get another day's sport from the same ground, I called the dogs and started for the depot. "If the tan hound follows me I don't suppose I can help it," I thought, as he did not have on any collar. He followed readily enough till I got to the road, where I took down my gun and put it in the case; he then looked at me as much as to say. "Aren't you going to do any more hunting?" and started off across the fields, the only effect my whistle having on him was to quicken his speed.

I trailed him with some help from my old dog, who did not understand this last move, down to a farmhouse. Leaving my rabbits outside and carrying a partridge that was frightened to death by my coming on to her suddenly in the woods, I walked in to where an old man was watering his cows.

"Can I get a drink of milk?" I asked.

"Yes, if you want to wait till it's milked," was the reply.

While the farmer milked, I engaged him in conversation, in the midst of which in walked my late companion.

"Hello," I said, "what kind of a hound is that?"

"Huh! Not much of a hound. It's a dog some one gave my little girl downtown, and a meaner thing never walked. He's no good after a fox nor he won't tackle a woodchuck. I did see him once catch a rabbit, and my neighbor's boy sometimes gets him to go rabbit hunting with, but what good is a dog of that kind?"

"Well," said I as I drank my milk, "some people like them; I know a fellow that is looking for one, if you want to part with him for $5. I think I know where I can dispose of him."

"Show us your money," was the reply, and the exchange was quickly made, and I boarded the train hugging myself and my new possession at the same time.

I now have two dogs who will give a man all the sport he can ask for in the line of rabbit shooting. The old dog works faster with Ranger, as I call him, and while they work together, they do not cover their ground as only one dog, as I have seen other pairs do.

Ranger is made the butt of all the jokes of my friends, but when I go out for rabbits I do not lack company.

Dog men who have seen him call him half beagle and half foxhound, but just how he is bred will probably remain a mystery.

A good many fellows own rabbit dogs hereabouts, and we have quite a few field trials on a small scale. Ranger has been hunted with beagles of Forest, Bannerman and Valentine stock and some other well bred dogs, and the opinion of all, even the owners of the other dogs, is that he has yet to be beaten in trailing or speed, and while his voice is perhaps too guttural to be called bell-toned, it answers all purposes to let you know which way the game is going. Some of his competitors have taken prizes in the Boston bench shows; how is this for a five dollar dog?

A point I wish to bring out is that these highly bred, high-priced, small-sized beagles are not what a man wants who has but little time to devote to gunning; for instance, how much use is a 12in. dog in a foot of light snow?

I attended a field trial for beagles this fall and a large per cent. of the heats came off as follows: A rabbit was started by one of the spectators, handlers or judges, the brace that was down were called up, each handler grabs his dog by the back of the neck (if allowed to do so) and put him on the trail, the rabbit runs a few hundred yards and goes into a hole or wall, the dog that gets there first is awarded the heat.

Is this a true test? When I go out for rabbits I put my dogs into a piece of ground, take my stand in a favorable position for a shot and let my dogs do the starting; if they do not give tongue it is because there are no rabbits moving and we try another place. Half my pleasure is watching them work a cold trail; how many high bred cracks do this in a quick snappy manner?

A friend of mine who recently purchased a pair of Krueger bred beagles, has tried all the fall and winter to break them to hunt to his satisfaction. He has had them out frequently with my pair, but they do not profit by a good example. When first set down, they start off making noise enough for a full-sized pack, running on the first scent they come to, be it either fox, rabbit, squirrel or even the common house cat. We are never sure they are after the right game till we hear the voice of one of the old dogs. After they have worked off the wire edge they will do good work for perhaps a couple of hours, at the end of that time they come in to heel and rarely leave us for the rest of the day. Lately, when my friend goes out, he borrows one of my dogs and uses him alone; also there is a fine looking pair of beagles for sale in Boston.

I wish that in case this attempt at literature should meet the eye of a lover of rabbit shooting, he would reply with some of his own experiences, as I believe that reading of this sort is as entertaining to a great many as accounts of quail shoots, foxhound runs, etc., that now have a monopoly of the columns of our sporting papers. V. H. ELLIS.

BOSTON, Mass.

### Show Beagles as Practical Field Dogs.

RABBIT HUNTERS, and in fact any one who takes a pleasure in venatical sports, will, we are sure, read Mr. Ellis's account of his search for a rabbit dog with keen interest. There is also something more serious that the beagle breeder, who reads between the lines, must gravely think over both for his own sake and that of the lovely little hounds he is seeking to popularize and improve. While Mr. Ellis's experiences should not be taken as an indication that all our strains of purely bred and "high-toned" beagles are merely ornaments of the chase, it sounds a note of warning to their breeders. Those who admire the beagle would not like to see them descend to mere prize card winners and allow fancy to usurp the honors of utility, as we find is the case with cockers and field spaniels of the present day. That a few cross-bred dogs can and have beaten the beagle at its own game does not prove the rule that the beagles we are breeding for good show points are useless in the field. We are well aware of the fact that beagle field trials may tend to the production of a "flashy hunter," still is it not immeasurably better to have such field trials in order to draw greater attention to field work than have our breeders give their undivided attention to producing stock which can only do good work in a sawdusted show ring? The very fact that these show dogs are hunted and trained, and this the field trials have proved, will preserve their hunting instincts. That a "lurcher" can catch a hare is no reason why we should give up breeding good harriers and beagles, or that a "dropper" is often a good field dog is no reason that we should not strive to make good field dogs of our pure bred pointers and setters. Mr. Ellis's picture of a field trial is rather overdrawn. If he would, as we have done, follow some of the beagles which have run, and run well, too, at our field trials, he would find many pure bred beagles that can nose out a cold trail and work it to a find, and not a note will he hear until the careful work leads to a warm "form" or the real fun commences. Such dogs are Lee II., Forest Hunter, Snow, Clyde, June Rose, Millard, Base and Gypsey A., and many others one could mention. Dogs are tried for gunshyness at the trials and very few, if any, have been turned down on that account. Beagles are not naturally gun dogs, this being a condition they have found since their introduction to this country, and is simply a matter of education and use.

## Yachting.

### FIXTURES.

JULY.

3. Sea. Cor., Race, Oyster Bay to Larchmont.
3. Southern, Cruise.
4. Pine Lake, Club, Pine Lake, Wis.
4. Squantum, Cham., Squantum, Mass.
4. Larchmont, Ann., L. I. Sound.
4. City of Boston, Open, Boston Harbor.
4. Beverly, Club Cham., Monument Beach.
4. Cleveland, Ladies' Day, L. Erie.
4. Plymouth, Club, Plym. Harbor
4. Fox Lake, Club, Fox Lake, Ill.
4. Columbia, Ladies' Day, Chicago, Lake Michigan.
4. Plymouth, Club, Plym'th, Mass.
4. Piscataqua, An., Portsmo'th, Me
4-7. Lake Y. R. A., Race Meet, Sodus Bay.
6-20. Philadelphia, Annual Cruise.
7. Dorchester Bay Clubs, Union Race, Dorchester Bay.
7. St. Lawrence, A, 30, 25, 21ft. Classes, fourth series.
7. Riverside, Ann., L. I. Sound.
7. Cape Cod, Club, Nobscussett Pier.
7. Douglaston, Open, L. I. Sound.
7. Lynn, Expert Cup, Lynn, Mass.
7. Manchester, Open, Mass. Bay.
7. Eastern, An., Marblehead.
12. Schoodic, 1st Cup Race, Club.
12. Rochester, Squad. Sail and Review, Charlotte, Lake Ontario.
14. St. Lawrence, A, 30. 25, 21ft. Classes, fifth series.
14. Cor. Mus. Fleet, 21ft. and cabin cats, New Rochelle.
14. Knickerbocker, Club, L. I. S'd.
14. N. Y. Bay, Club, N. Y. Harbor.
14. New Bedford, Club Sail, Buz. B.
14. Phila., Squad. Sail, Del. River.
14. Sea. Cor., 25ft. Class, Bullock Cup, Oyster Bay.
14. Cor. Phila., Evans Cup, Delaware River.
14-15. San Francisco Cor., Cruise, Galinas Creek.
14-21. Larchmont, Cruise, Long Island Sound.
14-30. Columbia, Cruise, Chicago to Green Bay, Wis.
16. Riverside, Cruise, L. I. Sound.
16. Rhode Island, Ann. Cup, Narragansett Bay.
16-19. Hempstead Bay, Cruise, G't South Bay.
19. Miramichi, Race, Chatham.
19. Fall River, Ladies' Day.
19. Rochester, Ladies' Day, Charlotte, Lake Ontario.
20. Hempstead Bay, Club, Hempstead Bay.
20. Phila., Club Race, all Classes, Delaware River.
21. Squantum, Cham. Squantum Mass.
21. American, Seaver Cup, Newburyport.
21. Beverly, Sweeps, West Falmouth.
21. Fox Lake, Club, Fox Lake, Ill.
21. Plymouth, Club, Plym. Harbor
21. Lynn, Expert Cup, Lynn, Mass.
21. Manchester, Minot's Ledge Cup Massachusetts Bay.
21. Plymouth, Club, Plym'th, Mass
21. Douglaston, Open, L. I. Sound.
21. Douglaston, Open, L. I. Scund.
21. Indian Harbor, open cats and 21-footers, L. I. Sound.
26. Rochester, Club, Charlotte, Lake Ontario.
26 29. Indian Harbor, Cruise, L. I. Sound.
28. Cor. Phila., Jeanes Prize, Delaware River.
28. Hull, Open, Boston Harbor.
28. Great South Bay, An., Islip.
28. Larchmont, Flint Cup, cabin cats, Long Island Sound.
28. N. Y. Bay, Club, N. Y. Harbor.
28. South Boston, Club Cruise, Massachusetts Bay.
28. Squantum, Squantum, Mass.
28-29. San Francisco Cor., Cruise, Goat Island.
30. Schoodic, 2d Cup Race, Club.

FROM all appearances, the proposed grand steam yacht regatta of the American Y. C., set for June 16, has shared the fate of similar events in previous years. It is very evident that the owners of the larger class of steam yachts are quite as much averse to public and authenticated tests of their speed as are the owners of the alleged high-speed launches.

WHETHER because they do not understand square root, or for some other reason that is not apparent, the yachtsmen of Yale and Harvard have gone in with a vengeance for a "plain and simple rule, with no plus in it;" the measurement for the intercollegiate regatta last week being waterline alone, and that not measured, but "taken from 'Manning's List,' or that of any reputable yacht club." In spite of the care with which Manning's List is compiled, the measurements in it, mainly furnished by owners, and not intended for purposes of allowance, are in no way accurate enough for such a purpose; and the figures in the club books are even more unreliable. A still simpler and quite as accurate a plan would be to ask the cook how long he thought the yacht to be. This would avoid all such trouble to the owner as was complained of by the owner of Dacotah lately. If the two colleges propose to build up successful clubs with a regular race each year, the first thing to do is to adopt some fixed system, based on such accurate measurements as have been found indispensable in the older yacht clubs.

THE racing of the new 21ft. class has been disappointing thus far, up to July 4, but one, two or three boats having turned up in most races; and it is quite likely that, like the Cup defenders of last year, the season will be well over before the class is regularly racing as a whole. The reason is that the boats were ordered late and are not yet ready, or if in commission, many of them require alteration or tuning up. Under the circumstances attending the origin of the class, this delay is largely excusable; but it shows again the necessity for certain permanent racing classes in which building will begin in December or January rather than in April. There is always a natural reluctance on the part of owners to place their orders until the last moment, when they can know what others are doing, and can obtain the benefit of the latest ideas. This benefit is largely imaginary, and is more than offset by the inevitable delay on the part of designer, builder, sailmaker and all others concerned; and this delay is always less in the case of an established class, certain to go on from year to year, than when a class dies at the end of a season, and yachtsmen are in doubt until late in the winter as to what is to be *the* particular class which is to succeed it.

THE assumed success of the 21-footers has brought forth from some anonymous yachtsman, in a letter to the New York *Sun*, a suggestion for the formation of a similar restricted class of 30-footers, similar to the Herreshoff Handsel, of about 9ft. beam and draft, and 1,200sq. ft. of sail, the idea being to obtain a class of closely-matched racing boats of moderate cost and also fitted for cruising. Such a class no doubt would be a very good one, more generally useful than the 21-footers, which are too small for anything but local racing. The real end in view, however, would be only partly reached and the life of the class would be but one or two seasons. What would be much more to the purpose would be the concerted action of the principal clubs toward the definite and final settlement of several important questions, so as to give more permanency to racing and building.

In spite of the uncertainty as to what may come next in yacht designing, and of other obstacles, we believe that the time has come when further action is called for on the part of the clubs. The first step is obviously to decide what yachtsmen want, or in other words, what special qualities the measurement rule is to encourage—speed alone or an average of speed and accommodation within a reasonable limit of cost? This question is becoming more pressing each year and certainly some decision must be possible. The answer to it will in a measure decide the next question, whether to bar the finkeels entirely, to penalize them in favor of vessels of more conventional yacht form, or to leave the racing fleet perfectly free from all restrictions, as now, but to establish another class in which the displacement shall not go below such a limit as will give good accommodation and a strong construction. This latter class would meet the requirements of a great many yachtsmen, tending to produce a type similar to the first 40-footers, of good form, ample accommodation, and a construction that is durable and not over expensive, as yacht building goes. It would do more than anything else to recreate the 30 and 40ft., both good classes, and perhaps to encourage the establishment of one larger class, such as 61 or 70ft.

After the trial races last fall a great many yachtsmen settled down to the satisfactory conclusion that the fin-keel was a failure, and that nothing more would be heard from it save in the smaller classes. There never was a greater mistake, the fin-keel possesses the same elements of speed in the largest class as in the smallest, and for speed alone it is just as practicable. The causes which produced it not only exist, but are becoming more potent each year, and there is no question that as matters are the type must supersede the usual yacht forms wherever there is any keen racing and building. If yachtsmen are willing to accept the fin type as satisfactory, there is no need of any change of existing rules; but if the contrary is the case, and the fin is not desired, some positive legislation is necessary, as it is plain that the evil will not correct itself.

With no building and little racing, so very little that "vested interests" need hardly be considered at all, the present time is most favorable for a thorough overhauling of all rules, and the way to it is through the concerted action of the larger clubs in appointing representatives and holding a conference as early as possible in the fall for the thorough discussion of all questions connected with building and racing with a view to the material improvement of the present rules.

THE Boston *Herald*, the special champion of the unlimited 21ft. class of 1892, disapproves of the new Larchmont class, and in particular of the requirement that amateurs must steer. Commenting on this latter point, it writes as follows:

> The question of handling will play an important part in all the coming races, and any good amateur [from Boston?—Ed. F. AND S.] should win as against the field of helmsmen who are now racing these boats in New York. Waterhouse and Chesberough would have a good chance to win if Fred Brown and his crew were in the boat.
>
> The public, knowing the conditions which govern both design and helmsman, will not of course take the same interest in the racing of the New York boats that it did in those raced in these waters, and the New Yorkers are to blame for it. Dog in the manger rules succeed less in yachting than anywhere else. The Dyer boat later on may do better, but she can hardly beat the others if they are well handled.
>
> Considering that the Dyer boat is in the hands of Mr. A. B. Alley, who is now working her up to salt-water form, the above is very funny. If the Boston *Herald* will take the trouble to interview some of the crack sailors of City Point and Hull, it can easily find out whether the man who took the Cruiser to Boston in 1884 and won 8 out of 9 races from the Eastern fleet is a boatsailor or a duffer.

DACOTAH, the Herreshoff fin-keel, has thus far won 7 first prizes for as many starts on the Clyde.

### Greenville Y. C. Annual Regatta.

GREENVILLE—NEW YORK BAY.

*Saturday, June 30.*

THE annual open regatta of the Greenville Y. C. was sailed on June 30, over a triangular course on New York Bay, the wind being light and fluky. The times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| **CLASS A—CABIN CATBOATS.** | | | | |
| Oatka | 3 20 20 | 8 07 30 | 4 47 10 | 4 47 10 |
| Lottie M. | 3 22 00 | 8 09 33 | 4 47 33 | 4 46 42 |
| Hit or Miss | 3 21 25 | 8 06 35 | 4 45 10 | 4 41 13 |
| Alice | 3 19 45 | Did not finish. | | |
| **CLASS B—OPEN CATBOATS, 20 to 24FT.** | | | | |
| Rip | 3 18 15 | 7 56 15 | 4 38 00 | 4 38 00 |
| **CLASS C—OPEN CATBOATS, 18FT. AND UNDER 20FT.** | | | | |
| Frank | 3 21 45 | 7 22 50 | 4 01 05 | 4 01 05 |
| Maria | 3 19 00 | 7 25 59 | 4 06 50 | 4 03 41 |
| Dora D. | 3 20 00 | Did not Finish. | | |
| **CLASS D—OPEN CATBOATS, UNDER 18FT.** | | | | |
| Cinch | 3 22 18 | 7 48 05 | 4 27 32 | 4 24 28 |
| Millie | 3 22 10 | Did not finish. | | |
| Doctor | 3 21 31 | 7 40 40 | 4 19 09 | 4 19 09 |

Hit or Miss, the winner in class A, is a Crosby boat with a long bow, built last year, and is owned by A. C. Longyear, Newark Bay Boat Club. Maria protested Frank for fouling a buoy, but finally withdrew the protest and Frank takes the prize in Class C.

### New York Bay Y. C. Bouker Cup.

GREENVILLE—NEW YORK BAY.

*Saturday, June 30.*

THE third race of the New York Y. C. for the cup presented by Com. Bouker was sailed on Saturday, over a course of ten miles in a variable wind, very light at the start but freshening later. The times were:

| | Start. | Finish. | Elapsed. | Corrected |
|---|---|---|---|---|
| Diana | 3 45 35 | 7 00 35 | 3 15 00 | 3 14 05 |
| Tempest | 3 44 50 | 6 59 55 | 3 15 05 | 3 15 05 |
| Alida | 3 56 57 | Did not finish. | | |

## Seawanhaka Corinthian Y. C.

RACING CRUISE TO NEW LONDON AND RETURN.

*June 26—30.*

The center of attraction last week was at New London, what with the Yale-Harvard rowing race and the new inter-collegiate yacht race between the fleets of the two universities, and the Seawanhaka Corinthian Y. C. wisely appreciated the opportunity thus offered for a racing cruise that from its novelty promised a pleasing variation from the ordinary June events. The experiment was a success, both as a race and a cruise, the runs being exciting and interesting, while the three days in harbor at New London were particularly pleasant in their opportunities for social intercourse. The programme, as arranged by the regatta committee, Messrs. Gordon Wendell, Walter C. Kerr, Valentine Mott, R. A. Rutherford and E. C. Weeks, called for a start from Oyster Bay on June 26, anchoring over night at Morris Cove (New Haven) and sailing early next morning for New London, the return run to start on Saturday morning, continuing to Oyster Bay without a stop. The official instructions for the first two days were as follows:

1. Tuesday, June 29.—Leave anchorage at 8 A. M. and proceed to the line.
2. The rule requiring amateur helmsmen is waived.
3. Any sails may be carried except clubtopsails.
4. In absence of the committee each yacht shall finish at New Haven between the breakwaters, with the lighthouse bearing east, and at New London with the lighthouse bearing west, take her own time and report same, with comparisons of watches, to the committee.
5. Wednesday, June 27.—Unless otherwise ordered the start will be made at 6. A.M.
6. All yachts must pass to the southward of Bartlett's Reef Lightship.
7. The distance from Lloyd's Neck to New Haven Light is thirty-one nautical miles. The distance from New Haven Light to New London Light is thirty-nine nautical miles.

After the race of the 21-footers on Monday, a reception took place at the club house, a large number of yachtsmen and ladies being present. Tuesday morning broke with so little wind that yachts making for Jamaica Bay were unable to reach the start, and though it was delayed as long as possible for some that were in sight through the early morning, others were unable to join the fleet. The starters were:

SCHOONERS.

| Name. | Owner. | Length. |
|---|---|---|
| Ariel | Com. G. H. B. Hill | 83.53 |
| Elsiemarie | J. B. King | 75.60 |
| Varuna | Sturgis & Rives | |

CUTTERS AND SLOOPS.

| | | |
|---|---|---|
| Navahoe | R. P. Carroll | 96.86 |
| Gloriana | H. M. Gillig | 54.67 |
| Gossoon | L. Vaughan Clark | 47.83 |
| Katrina | George Work | 76.08 |
| Indolent | S. V. R. Cruger | 37.02 |
| Daffodil | James Whiting | 40.81 |
| Rajah | W. C. Hubbard | 34.00 |
| Madrine | F. M. Freeman | 26.97 |

All hands were alert for a one-gun start, and though the wind, from N.N.W., was very light, all got away quickly, with none of the lagging and delay that has been so marked in some of the races of this year. With balloonjibtopsails set, the fleet reached along the south shore of the Sound, where the breeze was strongest, until just before noon the wind went round to S.W., where it held for the rest of the day, breezing a little at times, but mostly light and fluky. The day was clear and pleasant, and though in no way exciting, the sail across was a most agreeable one. The fleet was timed at Morris Cove:

CLASS 1—SCHOONERS.

| | Start. | Finish. | Elapsed. |
|---|---|---|---|
| Ariel | 10 44 30 | 3 17 20 | 4 32 50 |
| Elsiemarie | 10 44 30 | 3 36 50 | 4 52 20 |

CLASS 2—SLOOPS AND CUTTERS.

| | | | |
|---|---|---|---|
| Navahoe | 10 44 40 | 3 12 52 | 4 28 22 |
| Katrina | 10 44 30 | 3 35 02 | 4 50 32 |
| Gloriana | 10 44 30 | 3 25 59 | 4 41 27 |
| Daffodil | 10 44 30 | 5 00 00 | 6 35 30 |
| Gossoon | 10 44 30 | 4 10 15 | 5 25 45 |
| Indolent | 10 44 30 | 5 02 15 | 6 17 45 |
| Rajah | 10 44 30 | 5 15 00 | 5 30 30 |
| Madrine | 10 44 30 | 5 45 00 | 6 00 30 |

Varuna, schooner, and Queen Mab sailed with the fleet, but the former continued down the Sound, and the latter was not racing.

Wednesday morning found a fresh S.W. breeze ready outside the harbor, while the fleet had been increased by Oneida, Vice-Com. Benedict; Œnone, Mrs. G. B. Thompson, and Nautilus, W. B Dickey. The start was called for 6 A. M., but some were not on time, and it was just 7 o'clock when the gun fired. With a good breeze on the quarter the fleet flew along. Ariel and Navahoe making an exciting race in the front, and in three hours they were off New London harbor, having logged over twelve knots. The official times of the two days' racing are as follows, the prizes being based to the added times for the two days. The allowances are based on the strength of the wind on each day, as measured by an anemometer by the committee, a 5-10 allowance for the first day and a 7-10 allowance for the stronger wind of the second. The smaller yachts were left astern in the light wind of Tuesday, but on Wednesday Madrine did some remarkable sailing, coming well inside of her allowance from Gloriana.

*Tuesday, June 26, Thirty-one miles.*

SCHOONERS.

Start, 10:44:30. New Haven.

| Wind factor five-tenths. | | Finish. | Elapsed. | Corrected. |

| Indolent | 0 58 25 | Not timed. | | |
| Rajah | 1 05 02 | Not timed. | | |
| Madrine | 1 24 30 | Not timed. | | |

*Wednesday, June 27, Thirty-nine miles.*

SCHOONERS.

Start 7 A. M. New Haven.

| Wind factor seven-tenths. | | Finish. | Elapsed. | Corrected |
|---|---|---|---|---|
| Ariel | Allows | 10 12 12 | 3 12 12 | 3 12 12 |
| Elsiemarie | 0 08 09 | 10 26 45 | 3 26 45 | 3 17 36 |

CUTTERS AND SLOOPS.

| | | | | |
|---|---|---|---|---|
| Navahoe | Allows | 10 09 14 | 3 09 14 | 3 09 14 |
| Katrina | 0 21 30 | 10 26 46 | 3 26 46 | 3 05 16 |
| Gloriana | 0 55 08 | 10 53 22 | 3 53 22 | 2 58 14 |
| Gossoon | 1 10 32 | 11 17 26 | 4 17 26 | 3 06 54 |
| Madrine | 2 28 50 | 12 03 40 | 5 03 40 | 2 34 50 |

Daffodil, Indolent and Royal not timed.

The starting time on Wednesday was 7 o'clock A. M.

The cumulative corrected time of the race is as follows:

SCHOONERS.

| | | | |
|---|---|---|---|
| Ariel | 7 45 02 | Elsiemarie | 8 04 45 |

CUTTERS.

| | | | |
|---|---|---|---|
| Navahoe | 7 37 36 | Gloriana | 7 08 23 |
| Katrina | 7 43 35 | Gossoon | 7 52 36 |

Ariel wins the flag officer's cup of $150 for schooners. Gloriana wins the flag officer's cup of $100 for cutters, and Navahoe the flag officer's cup of $50 for cutters, the second prize of the class.

The elapsed time of Œnone was 3h. 28m. 22s., and Queen Mab 3h. 40m. 26s.

*Saturday, June 30.*

The return race was started at 11:21:50 on Saturday morning, off New London Light by Mr. Bullock, of the house committee, who was present in the club steamer Dunderberg. The wind was light and a dense fog prevailed for a time. The starters were Ariel, Elsiemarie, Oenone, Wasp, Gloriana, Daffodil, Awa, Madrine and Katrina. After the fog cleared the wind held light and variable, spinakers being set for a time and then sheets being close hauled. The mouth of Cold Spring Harbor was reached about 11 M., and with an ebb tide and no wind the fleet was compelled to anchor and wait until a light breeze finally came to the aid of the yachts. The official times of the race were:

New London to Cold Spring Harbor Light, Friday and Saturday, June 29 and 30. Distance, seventy miles:

SCHOONERS.

| Wind factor five-tenths. | | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Ariel | Allows | 2 14 16 | 14 52 25 | 14 52 25 |
| Elsiemarie | 0 11 43 | 5 07 30 | 17 45 40 | 17 33 57 |
| Oenone | 0 04 24 | 5 49 00 | 18 27 10 | 18 27 10 |

SLOOPS.

| | | | | |
|---|---|---|---|---|
| Wasp | Allows | 2 09 35 | 14 47 45 | 14 47 45 |
| Gloriana | 0 00 50 | 2 09 30 | 14 47 40 | 14 46 50 |
| Daffodil | 0 45 30 | 5 20 00 | 17 58 10 | 17 12 31 |
| Awa | 1 00 00 | 5 59 00 | 18 37 10 | 17 37 10 |
| Madrine | 2 00 58 | not timed. | | |
| Katrina | Did not finish. | | | |

The schooner prize was won by Ariel and the cutter prize by Gloriana.

## New Rochelle Y. C. Annual Regatta.

NEW ROCHELLE—LONG ISLAND SOUND.

*Saturday, June 30.*

With a fine June day, a good southerly breeze, and a large fleet of starters, including five 21-footers, the New Rochelle Y. C. was particularly fortunate on Saturday, and the race may be set down as one of the best of the season. Nothing larger than the 40-footers was entered, but there were 45 starters, a very good field.

The club has this spring followed the Larchmont Y. C. in adopting the Seawanhaka rule for both measurement and classification, the class limits being as above. The courses were as follows:

No. 1—For all classes above the 30ft. class: From the starting line around horizontal striped buoy at west end of Execution Reef, leaving it on port hand; thence around buoy off Matinicock Point, leaving it port hand; thence around a turning mark anchored south of Captain's Island, leaving it on port hand; thence around horizontal striped buoy at west end of Executive Reef, leaving all buoys on said reef on starboard hand; thence across line 22 naut. miles.

No. 2—For 30ft. and all smaller classes: From starting line around horizontal striped buoy at west end of Execution Reef, leaving on port hand; thence around black buoy off Matinicock Point, leaving it on port hand; thence around easterly home stakeboat, leaving it on port hand; thence horizontal striped buoy at east end of Execution Reef, leaving it on starboard hand; thence around horizontal striped buoy at west end of Execution Reef, leaving all buoys on said reef on starboard hand; thence across line 17 naut. miles.

Yachts not to pass between the buoys and the lighthouse on Execution Reef, nor to the westward of Whortleberry Island, nor between the buoys on Hen and Chicken Reef for either course.

The conditions for the start were explicitly stated, but being different from the usual custom in regard to the preparatory flag they were misunderstood by several yachts. They read:

The signals for the start shall be as follows:

First—A blue peter flown from the club house as a signal for all yachts to prepare; this will fly for 10m.

Second—The blue peter shall be hauled down and the staff remain bare for exactly 5m., during which time all yachts above the 30ft. class may approach the line, and then a large white flag shall be raised in its place—the signal for all such yachts to start. The white flag will remain in place for 5m., during which time each yacht over 30ft. must cross the line and the time of its crossing will be taken. If any yacht is delayed after the fall of the flag its time will be recorded as at the moment of the fall.

Third—At the fall of the white flag the staff will remain bare for 5m., during which time each yacht of the 30ft. class and under must cross the line and the time of its crossing will be taken.

The club flag will fly from the club house staff as a signal that the time for crossing the line has elapsed. This will be left flying.

Attention shall be called to each of these signals by a gun from the club house.

In case any gun should miss fire the hoisting of the signal shall be sufficient notice.

The start was called for 11 A. M., but the club steamer, after coming up from the city, was unable to land at the wharf, a stone barge having sunk beside it, and much time was lost in ferrying the ladies and guests aboard the steamer.

The starting signal was given at 12:23 for the larger boats, but Vaquero was keen for a one-gun start and went over 5m. ahead of her proper signal, Adelaide and Flirt following her. The start was timed:

| | | | |
|---|---|---|---|
| Vaquero | 12 23 17 | Onaway | 12 29 52 |
| Mary C | 12 24 41 | Terrapin | 12 30 02 |
| Adelaide | 12 24 44 | Melita | 12 30 17 |
| Banshee | 12 25 06 | Typhoon | 12 30 28 |
| Kismet | 12 25 26 | Aura | 12 30 40 |
| Genevieve | 12 25 46 | Amazon | 12 30 42 |
| Eurybia | 12 25 48 | Brenda | 12 30 54 |
| Henry Ward Beecher | 12 26 16 | Archer | 12 31 00 |
| Sasqua | 12 26 20 | Ione | 12 31 24 |
| Flirt | 12 27 00 | Punch | 12 31 21 |
| Minnetonka | 12 27 58 | Edna | 12 31 26 |
| Minerva | 12 28 25 | Tabitha | 12 31 40 |
| Caper | 12 28 36 | Anglesea | 12 31 55 |
| Houri | 12 28 40 | Ami | 12 32 10 |
| Exile | 12 28 41 | Addie | 12 32 29 |
| Crescent | 12 28 54 | Almira | 12 32 30 |
| Wahneta | 12 29 00 | Water Lily | 12 32 32 |
| Kittie | 12 29 09 | Mary | 12 32 51 |
| Keora | 12 29 13 | Marguerite | 12 32 59 |
| Violet | 12 29 30 | Oconee | 12 33 11 |
| Eloise | 12 29 30 | Mollie Mac | 12 33 17 |
| Ada K | 12 29 40 | Twilight | 12 33 34 |
| Eleanor | 12 29 41 | | |

A calm in the morning had given place to a light southerly breeze just at noon, making a beat across the two miles to Execution Reef, where the leaders were timed:

| | | | |
|---|---|---|---|
| Vaquero | 12 56 00 | Kittie | 1 04 40 |
| Banshee | 12 57 20 | Almira | 1 04 12 |
| Sasqua | 12 59 45 | Mary | 1 04 45 |
| Minerva | 1 00 05 | Mary C | 1 05 10 |
| Adelaide | 1 00 45 | Houri | 1 06 30 |
| Eurybia | 1 01 00 | Eloise | 1 06 57 |
| Minnetonka | 1 03 30 | Flirt | 1 07 40 |
| H. W. Beecher | 1 04 00 | | |

The next leg, five miles, to Matinnicock Buoy, was a free reach, with a freshening breeze, the times being:

| | | | |
|---|---|---|---|
| Minerva | 1 46 28 | Punch | 2 05 24 |
| Banshee | 1 47 25 | Oconee | 2 05 49 |
| Sasqua | 1 48 58 | Aura | 2 05 55 |
| Eurybia | 1 49 55 | Amazon | 2 06 22 |
| Vanquero | 1 50 10 | Typhoon | 2 06 35 |
| Minnetonko | 1 54 32 | Water Lily | 2 07 00 |
| Adelaide | 1 56 05 | Ipa K | 2 07 35 |
| H. W. Beecher | 1 57 22 | Wahneta | 2 07 43 |
| Flirt | 2 00 23 | Archer | 2 08 00 |
| Onaway | 2 00 33 | Tarrapin | 2 08 01 |
| Mary | 2 00 43 | Anglesea | 2 08 30 |
| Kittie | 2 01 05 | Twilight | 2 09 52 |
| Mary C | 2 02 12 | Eleanor | 2 10 05 |
| Caper | 2 02 28 | Ione | 2 10 22 |
| Houri | 2 02 35 | Tabetha | 2 10 25 |
| Almira | 2 02 15 | Mollie Mac | 2 12 25 |
| Exile | 2 03 07 | Kismet | 2 12 28 |
| Eloise | 2 03 24 | Ami | 2 13 47 |
| Crercent | 2 02 45 | Melita | 2 16 30 |
| Marguerite | 2 04 13 | Brenda | 2 18 00 |
| Edna | 2 04 58 | Addie | 2 22 00 |

After jibing, Archer lost her mast and Mary C. her topmast, the steam yacht Jessie kindly passing a line and towing Archer home. The fleet divided here, the larger ones setting spinakers to starboard for the run to Captain's Island, while the smaller had a free reach back to the line. Minnetonka, after her first discouraging performance, has been worked up carefully by Mr. A. Bryan Alley, who is sailing her, and the result was now evident as she increased the gain on Vaquero and actually passed her in the middle of the Sound. The wind came harder and there was a promise of a squall that induced some of the smaller ones to reef, Minnetonka losing a good deal of time and dropping to last place while reefing. After crossing the line the yachts went out again around Execution Reef and returned for the finish, Vaquero going on the wrong side of a buoy and being disqualified. The larger craft had a good race around the Captain's Island mark, but were not timed short of the finish. The full times were:

CLASS 1—40 TO 46FT.

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Minerva | 12 28 25 | 4 06 25 | 3 38 00 | 3 38 00 |

Minnetonka was sailed by A. B. Alley, W. S. Alley and Arthur Gibb; Houri by W. Butler Duncan, Jr.; Flirt, a new Gardner centerboard boat, just built by Ayers for W. G. Brokaw, by J. F. Lovejoy; Adelaide, the Iselin finkeel, purchased by W. P. Douglas, was sailed by him and Dr. J. H. Woodbury, and Vaquero by her owner, H. B. Duryea. The regatta committee included F. T. Alder, J. W. Rough and William E. Moore.

## Columbia Y. C. 27th Annual Regatta.

NEW YORK—HUDSON RIVER.

*Thursday, June 22.*

The Columbia Y. C. of New York sailed its 27th annual regatta on June 21 over the usual courses on the Hudson River.

For all classes except special classes 1, 2 and 3, around a stakeboat anchored off Yonkers C. Y. C. house, leaving it in turning on the port hand, returning passing between the club house and stakeboat, keeping it on the starboard hand.

For special classes 1, 2 and 3 (naphtha launches), triangular course, sailed twice over, around a stakeboat anchored off the Jersey shore opposite Fort Washington Point, leaving it in turning on port hand, to a stakeboat anchored off the brewery at Guttenberg, keeping it on port hand to starting line, keeping stakeboat on port hand.

A light west wind made a reach each way. A special race for naphtha launches took place at the same time. The official times were:

CLASS C—SLOOPS 30 TO 35FT.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| H. W. Beecher, C. Bevers | 31.11 | 3 29 25 | 3 25 35 |
| Ramona, Hiller & Snyder | 33.05 | 3 52 40 | 3 51 50 |
| Cygnet, J. F. Hitchcock | 33.10 | 4 10 41 | 4 10 41 |
| Mint, W. F. Gorham | 31.04 | Not timed. | |

CLASS D—SLOOPS 30FT. AND UNDER

| | | | |
|---|---|---|---|
| Veta, Dr. Stedman | 28.09 | 2 04 45 | 4 02 45 |
| Lurline, B. Barnett | 24.00 | 4 13 25 | 4 03 55 |
| Camille, T. Miller | 28.00 | 3 34 07 | 4 32 57 |

CLASS E—CABIN CATBOATS.

| | | | |
|---|---|---|---|
| Surf, F. Stock | 24.11 | 4 58 34 | 4 58 34 |
| Frankie F., V. Schulz | 23.00 | 5 09 55 | 5 06 05 |

CLASS F—OPEN CATBOATS.

| | | | |
|---|---|---|---|
| Salomi, D. G. Robinson | 30.06 | 4 30 55 | 4 30 55 |
| Bonafide, J. J. Murphy | 24.00 | 5 30 50 | 5 17 50 |

SPECIAL CLASS—NAPHTHA LAUNCHES.

| | | | |
|---|---|---|---|
| Banshee, T. S. Caale | 35.10 | 2 19 23 | 1 49 23 |
| Georgette, C. F. Adae | 40.00 | 1 51 56 | 1 51 55 |
| Cleopatra, A. Stein | 40.00 | 1 56 02 | 1 56 02 |

The winners are: Class C, Henry Ward Beecher; class D, Veta; class E, Surf; class F, Salomi.

The regatta committee included Messrs George Parkhill, Charles N. Ironside, Bertram Barnett, J. A. Weaver and Charles F. Restorick.

## Minnetonka Y. C. Opening Race.

LAKE MINNETONKA.

*Saturday, June 23.*

The opening race of the season on Lake Minnetonka, postponed from June 16, was sailed on June 23 in a strong breeze. The new yacht Marie, of which so much is expected this year, proved unmanageable, and after fouling Alpha ran into Siren, throwing one of the latter's crew overboard and running her bowsprit through Siren's starboard quarter. She steered badly throughout the race, Kite won from Marie by a minute, but Alpha was a poor fourth. The times were:

FIRST CLASS—SLOOPS.

| | Elapsed. | Corrected. |
|---|---|---|
| Kite, E. W. Peet | 1 41 10 | 1 38 32 |
| Marie, Watson & Co | 1 44 14 | 1 39 29 |
| C. L. C., Long & Co | 1 44 27 | 1 39 35 |
| Alpha, E. J. Phelps | 1 46 07 | 1 43 03 |
| Omega, Bintliff | 2 07 24 | 2 01 12 |

SECOND CLASS—SLOOPS AND FIRST CLASS CATS.

| | | |
|---|---|---|
| Psyche, Walker | 1 48 22 | 1 39 11 |
| Pinafore, Brooks | 1 48 26 | 1 40 39 |
| Aurelia, Langdon | 1 53 32 | 1 45 45 |
| Hawk, Wilson | 1 57 35 | 1 48 24 |
| Aurora, Gaty | 2 02 10 | 2 02 10 |

SECOND CLASS—CATS AND SPECIALS.

| | | |
|---|---|---|
| Mouse, Newell | 1 57 48 | 1 45 20 |
| Diamond, Woodworth | 2 01 36 | 1 49 18 |
| Senorita, Ankeny | 2 02 16 | 1 49 58 |
| Kingbird, McMillen | 2 02 55 | 1 50 37 |
| Hermes, Ridgeway | 2 11 54 | 1 53 55 |
| Kid, Jenny | 2 11 38 | 1 56 05 |
| Iris, Woods | 2 11 21 | 1 51 |

## Yonkers Corinthian Y. C.

YONKERS—HUDSON RIVER.

*Saturday, June 23.*

The sixth annual regatta of the Yonkers Corinthian Y. C. was sailed on June 23 in a light N.E. wind, the times being:

CSASS D—CABIN SLOOPS UNDER 32FT.

| | Corrected. |
|---|---|
| Lurline, Bertram Barnett, Y. C. Y. C. | 3 00 36 |
| Bertha, A. L. Skinner, Y. C. Y. C. | 3 03 59 |

| Blanche, A. M. Pearsall, Y. C. Y. C. | 2 48 |

The judges were Com. A. J. Prime, Franklin A. Rigby and Adolph Dahm-Petersen. The regatta committee included F. A. Rigby, Harry Rawcliffe, John Dickson, Edwin Moore, Jr., and A. V. Youmans.

## Sewaren Land and Water Club.

SEWAREN—STATEN ISLAND SOUND.

*Saturday, June 23.*

The Sewaren Land and Water Club held its second regatta of the season on Saturday over a 10-mile course on Staten Island Sound, starting from the club station at Sewaren. The result was as follows:

| | Start. | Elapsed. | Corrected. |
|---|---|---|---|
| Henry Gray, T. F. Connor | 3 35 27 | 2 33 53 | . . . . |
| Marjie, F. W. Hawkins | 3 37 40 | 2 45 32 | 2 35 32 |
| Monsoon, D. G. Whitlock | 3 35 40 | 2 50 46 | 2 46 11 |
| Ripple, W. H. Smith | 3 37 50 | 2 49 00 | 2 43 0 |
| Clytie, Jas. F. Whitlock | 3 36 11 | Did not finish. | |
| Latona, G. R. Boynton | 3 36 07 | Did not finish. | |

The boats were sailed by their owners, and considerable interest was centered in the result, as Henry Gray appeared for the first time in the club's races, and soon proved that her record for speed will be kept up under the direction of her new owner. Marjie is a new model—Crosby cat—with the builder's peculiar overhanging bow and flat floor. She is 10ft. shorter than Henry Gray, but was barely beaten at the time allowance. Monsoon is a new cabin cat, built by Wm. Fortune, of Newark, and made a close race with the other two boats.

## Yale-Harvard Yacht Race.

NEW LONDON—JUNE 27.

THE recent efforts to establish yacht clubs at Harvard and Yale universities have been remarkably successful, resulting in a fine regatta off New London on the day preceding the great annual rowing race. The distance from Boston, the home port of the Harvard Y. C., is a serious obstacle to the presence of so large a fleet as that which Yale can send so easily from New Haven, but this year it has been successfully overcome, a number of the smaller Harvard yachts braving the passage round Cape Cod. The only untoward occurrence was the delay of Tomahawk, Helen and Daisy, of the Harvard fleet, at Newport, through foggy weather, this keeping them out of the race The principal prize for what is intended to be an annual event is a silver cup, presented by the citizens of New London, to be held for the year by the college winning the largest number of points, the first place counting five points, second two and third one point. All boats but one of one yacht club finishing after the last boat of the other yacht club in any class shall not count for points, and only yachts owned by the members of either yacht club are eligible for points. There will also be three prizes of cups offered in each class, a first prize in any case, a second prize when three boats start, and a third prize when five boats start. All yachts hired or owned by a member of either yacht club may compete. * * *

The classification is: First class, sloops or cutters, 40 to 30ft. w.l.; second class, sloops or cutters, 30 to 26ft. w.l.; third class, sloops or cutters, below 26ft. w.l.; fourth class, catboats, 26 to 20ft. w l.; fifth class, catboats, below 20ft. w. l. Schooners may enter the race, rating at 84 per cent. of their w.l. Yachts must be in cruising trim.

The general conditions were: All yachts must be sailed by a member of either yacht club. All besides regular crew must be members. Racing measurements shall be waterline only. Sailing rules of New York Y. C. shall govern. Allowances will be by Herreshoff's table. A yacht's measurement may be taken from Manning's List or that of any reputable yacht club. There will be no restriction of sails on cutters and sloops, but catboats shall carry one sail. The time limit shall be 9 o'clock P. M.

The courses were: For first and second classes—Start between judge's yacht and Pequot Pier, leaving Cormorant Rocks No. 5, Goshen Ledge No. 3, and Little Goshen Reef No. 1 on starboard, Bartlett's Reef Lightship on port, stakeboat 100yds. due east of South Dumpling's Bay No. 2 on port, Black Ledge red buoy No. 2 on starboard, judge's yacht on starboard. Cormorant Rocks, Goshen Ledge, and Little Goshen Reef on starboard, Bartlett's Reef Lightship on port, Little Goshen Reef, Goshen Ledge, and Cormorant Rocks to port, to finish, 21½ miles.

For third, fourth and fifth classes.—Same as for first and second classes, but finish after having left Black Ledge on starboard, 14 miles.

The starters were:

CLASS 1—CUTTERS AND SLOOPS—30 TO 40FT.

Awa, A. DeW. Cochrane, Y .....39.09
Nymph, H. W. Harris, Y.....39.10

CLASS 2—CUTTERS AND SLOOPS—26 TO 30FT.

Tomboy. T. K. Lathrop, H.....29.01½
Fancy, C. F. Lyman, H.....29.05
Kathleen, F. M. Hoyt, Y.....29.11
Louise, J. W. Hall, Y.....27.00

CLASS 3—CUTTERS AND SLOOPS—UNDER 26FT.

Christine. G. B. Miller, Y.....24.01
Bantam, H. G. Barbey, H.....26.00
Thelga, W. P. Hapgood, H.....22.00
Ione, G. F. Eaton, Y .....26.00
Veto, W. A. Delano, Y.....25.05
Toboggan, S. D. Babcock, Y.....24.00

CLASS 4—CATBOATS—20 TO 26FT.

Tigress, W. Ferguson, Y. .....24.00
Hector, W. S. Patton, H.....24.06
Volsung, J. DeForest, Y.....21.11
Arrow, J. D. Sawyer, Y.....24.10
Willie, W. A. Slater, Y.....20.00

CLASS 5—CATBOATS—UNDER 26FT.

Nobska, A. A. Beebe H.....19.06
Boodler, H. N. Emmons, Y.....19.11
Hermione, R. L. Barstow, H.....19.10
Betsey, R. G. Wadsworth, H.....19.10
Tycoon, J. L. Stackpole, Jr., H.....19.09

There was a strong S.W. wind and rough water outside for the smaller boats, the larger carrying lower sails and the others one and two reefs. The start was very poor, the boats getting away as best they could; the first leg was to windward, the times at Bartlett's Reef being:

| | | | |
|---|---|---|---|
| Awa | 1 01 00 | Nobska | 1 22 30 |
| Tomboy | 1 03 15 | Boodler | 1 24 15 |
| Nymph | 1 04 10 | Louise | 1 26 00 |
| Fancy | 1 06 50 | Ione | 1 28 00 |
| Bantam | 1 14 30 | Veto | 1 20 30 |
| Kathleen | 1 17 20 | Hermione | 1 32 00 |
| Christine | 1 17 30 | Arrow | 1 33 35 |
| Hector | 1 17 45 | Volsung | 1 33 48 |
| Tigress | 1 20 30 | Betsey | 1 37 40 |
| Thelga | 1 20 30 | Willie | 1 42 00 |

The second leg was a reach to the South Dumplings with sheets slacked, the times being:

| | | | |
|---|---|---|---|
| Awa | 1 37 00 | Bantam | 1 56 00 |
| Tomboy | 1 42 40 | Kathleen | 1 56 15 |
| Nymph | 1 46 30 | Christine | 1 56 20 |
| Fancy | 1 47 35 | | |

After jibing the boats had a broad reach into the line, where the leaders were timed:

| | | | |
|---|---|---|---|
| Awa | 2 10 56 | Tomboy | 2 20 45 |
| Nymph | 2 12 15 | Fancy | 2 21 30 |

The two larger classes now beat out to the first mark again, coming in straight under spinakers, the finish of the fleet being timed;

| | | | |
|---|---|---|---|
| Christine | 2 31 30 | Volsung | 2 52 00 |
| Bantam | 2 32 45 | Arrow | 2 54 15 |
| Nobska | 2 36 30 | Hermione | 2 56 00 |
| Tigress | 2 36 55 | Betsey | 3 00 00 |
| Hector | 2 38 30 | Awa | 3 39 30 |
| Thelga | 2 42 30 | Nymph | 3 44 00 |
| Ione | 2 43 30 | Tomboy | 3 51 30 |
| Boodler | 2 46 30 | Fancy | 3 52 20 |
| Veto | 2 46 45 | | |

The official times were:

CUTTERS AND SLOOPS UNDER 40FT.

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Awa | 12 00 00 | 3 39 15 | 3 39 15 | 3 39 03 |
| Nymph | 12 00 00 | 2 43 50 | 3 43 50 | 3 43 50 |

CUTTERS AND SLOOPS UNDER 30FT

| | | | | |
|---|---|---|---|---|
| Tomboy | 12 05 00 | 3 51 30 | 3 46 30 | 3 46 24 |
| Fancy | 12 05 00 | 3 52 20 | 3 47 20 | 3 47 20 |
| Kathleen | 12 05 00 | Disabled. | | |

CUTTERS AND SLOOPS UNDER 26FT.

| | | | | |
|---|---|---|---|---|
| Christine | 12 10 00 | 2 31 30 | 2 21 30 | 2 20 30 |
| Bantam | 12 10 00 | 2 32 45 | 2 20 35 | 2 22 45 |
| Thelga | 12 10 00 | 2 42 30 | 2 32 30 | 2 24 30 |
| Ione | 12 10 00 | 2 33 30 | 2 23 30 | Not meas. |
| Veto | 12 10 00 | 2 46 45 | 2 36 35 | 2 35 47 |

CATS OVER 20FT.

| | | | | |
|---|---|---|---|---|
| Tigress | 12 15 00 | 2 35 55 | 2 21 55 | 2 20 31 |
| Volsung | 12 15 00 | 2 52 00 | 2 37 00 | 2 33 13 |
| Arrow | 12 15 00 | 2 54 00 | 2 39 00 | 2 39 00 |
| Hector | 12 15 00 | 2 28 30 | 2 13 30 | 2 13 30 |

CATS UNDER 20FT.

| | | | | |
|---|---|---|---|---|
| Nobska | 12 20 00 | 2 36 30 | 2 16 30 | 2 15 36 |
| Boodler | 12 20 00 | 2 46 30 | 2 26 30 | 2 26 30 |
| Hermione | 12 20 00 | 2 56 00 | 2 36 00 | 2 36 00 |
| Betsey | 12 20 00 | 3 00 00 | 2 40 00 | Not meas. |
| Willie | 12 20 00 | Withdrew. | | |
| Tycoon | 12 20 00 | Disabled. | | |

The 40ft. class gave Yale 7 points; the 30ft. class gave Harvard 7 points; the 26ft. class gave Yale 5 points and Harvard 3; the 4th class gave Yale 7 points, and the 5th class gave Harvard 6 points and Yale 2, making a total of 21 to 16 points in favor of Yale, which won by 5 points. The judges and timekeepers for Yale were A. B. Hughes, F. W. Drury and W. S. Eakin, and for Harvard, George Cushing, Hunt Turner and L. B. Valentine.

## Vigilant.

THE racing of the Clyde fortnight began on Tuesday, with the Royal Largs Y. C., but Vigilant will not start until the first day of the Royal Clyde Y. C., Saturday, July 7. She went on the dock on Monday to clean bottom and it is reported that some lead from inside may be transferred to the keel, though there is little time for such work. Mr. George Gould has arrived at Glasgow in the Atalanta and Nat Herreshoff is also there, with Mr. Wilson. The yacht is in good condition throughout. Valkyrie is also ready and will sail this week against her old rivals Britannia and Satanita, but in her new form, her sail plan being larger by about 1,000sq. ft. It is also reported that while out at Henderson's yard some 5 tons of lead were added to her keel, making her draft about 19ft. instead of 17.

## Douglaston Y. C. Annual.

DOUGLASTON—LITTLE NECK BAY.

*Saturday, June 23.*

STAKEBOATS course from at mouth of Little Neck Bay to stakeboat west of Big Tom, to and around Gangway Buoy to stakeboat west of Big Tom, finishing at starting point, a distance of 15 miles. Weather, clear and hot; wind, light from north to northeast and east; tide, one quarter flood The course was to windward on first leg, a run on second, a close reach on third, with a short hitch for the mark and a run home. Summary:

| | Length. | Elapsed. | Corrected. |

## YACHT NEWS NOTES.

T. D. Vandeveer, one of the best known yacht joiners in the country, died at his residence at Meserole avenue and Guernsey street, Greenpoint, on June 20, in his sixty-ninth year. He was well known to yachtsmen and fitted out the schooner yachts Sappho, Vesta, Dreadnaught, Norseman, Montauk, Grayling and Intrepid; the steam yachts Norma, Reva, Theresa, Marietta, Rahda, as well as all the pilot boats.

Caiman, steam house-boat, Pierre Lorillard, anchored in Gravesend Bay last week and will lie there all summer. She has recently been altered at her builders, in Wilmington, Del.

Wadena, steam yacht, sailed from New York on June 17 for a long trip to China and Japan in charge of Capt. Collamore. The owner and his family will not go in the yacht, but will go by rail to San Francisco and thence by steamer to Yokohama. The yacht has just been rebuilt at the Erie Basin Drydocks, being lengthened 11ft. amidships in order to remedy as far as is possible the serious defects of the original design. The yacht, as first built, was too narrow, so she has been lengthened 11ft., making her 7½ beams to length, in place of 7 beams. The increased displacement, however, will allow her to carry more coal and make her a little less unsafe than in her first cruise.

Gen. Paine sailed from New York for England on June 30 and will spend the summer with his family abroad.

During the night of June 27 the steam yacht Marietta, H. B. Moore, sunk at Crane's dock, Erie Basin, from some unknown cause. She was just fitting out, and her linen, silver, etc., had been put on board a day or two before. She had not been raised up to July 2, lying in a bad berth, between a bulkhead and Crane's drydock

Yampa, schr., has been chartered by C. W. Chapin to J. Hood Wright.

The following official measurements of some of the leading British racing yachts are published in the *Field:*

| Rig. | Length. | Sail. | Rating. |
|---|---|---|---|
| Asphodel, cutter | 46.53 | 2575.6 | 19.97 |
| Britannia, cutter | 87.73 | 10395.1 | 151.99 |
| Carina, cutter | 60.75 | 3947.0 | 39.96 |
| Doushka, lug | 21.02 | 283.8 | 0.99 |
| Dragon, cutter | 46.04 | 2605.2 | 19.99 |
| Fleur-de-Lis, lug | 31.75 | 939.0 | 4.96 |
| Fay, lug | 20.11 | 294.7 | 0.98 |
| Gareth, lug | 28.86 | 538.3 | 2.58 |
| Javelin, lug | 20.00 | 289.0 | 0.96 |
| Kismet, lug | 25.22 | 581.1 | 2.44 |
| Luna, cutter | 45.90 | 2613.6 | 19.99 |
| Lady Bird, lug | 17.22 | 174.6 | 0.50 |
| Manx Cat, lug | 27.99 | 536.3 | 2.50 |
| Mystery, lug | 26.02 | 572.8 | 2.48 |
| Namara, yawl | 69.17 | 5386.4 | 62.09 |
| Pente, lug | 31.52 | 950.0 | 4.99 |
| Red Rover, lug | 19.90 | 299.5 | 0.99 |
| Satanita, cutter | 97.35 | 10516.2 | 170.62 |
| Thelma, cutter | 45.78 | 2570.5 | 19.61 |

Of the three Dyer boats now in the East, Minnetonka, Mr. Work's 21-footer, is about New York; Apukwa, owned by Erastus T. Tefft, another 21-footer, is stored at Lawley's yard, and a third smaller craft is at Buzzards Bay, where she will race this week.

Deacon Gamaliel Conklin, who died on June 20 in the village of Essex, Conn., aged 90 years, was the senior member of the firm of G. Conklin & Co. and the oldest spar maker in the State. In his quaint, old-time shop at the edge of the river in Essex he worked industriously until a few months before his death, turning out the trimmest and best spars made in this country. He also built a lot of fishing schooners years ago for down-Easters and the yacht Admiral for retired Essex sea captains; but lately the shipbuilding industry of Essex went down and the deacon did little else than whittle out his neat, taper spars. He was a wonder-working adept at his business, one of the conscientious old-time handiworkers.

The Sea Cliff Y. C. announces that the date of its first annual regatta has been changed from Aug. 4 to Aug. 11. Besides prizes for the usual classes there will be a special prize for the new 21ft. class. The situation of the club house at Sea Cliff, on Hempstead Harbor, is second to none on the Sound, and fine open courses have been laid out from the club anchorage. The club is in a flourishing condition and it is already an assured success. Its membership is rapidly increasing and fast approaching the hundred mark. A special race for cabin cats has been arranged for Saturday, July 14, when handsome silver cups will be offered as prizes in two classes for these popular boats, the class division being made at 22ft. l.w.l. The course for this special race will be from off the club house, around the East Buoy off Execution Light, thence around buoy off Matinnicock Point and return to starting line.

Yacht designers have apparently reached the limit of their ingenuity, as several of the more recent vessels—especially in the smaller classes—have failed to show any improvement in speed over boats a year or two old. It is to be feared that if further improvement is to be made, it must be done by lessening the weight of material used in the construction, and that consequently a less durable and less desirable article will be produced. Although perhaps the new 20-raters have hardly as yet been given a fair trial, it would seem that in certain weather, at any rate, Dragon and Deirdré can still hold their own, and assuredly in the 2½-rating class no English designer has, so far, produced a boat which is a worthy competitor with Gareth. Moreover, it was somewhat surprising to see Admiral the Hon. Victor Montagu's 40, Carina, beaten by his last year's Vendetta in a fairly sailed match. In some respects this state of affairs is not to be regretted, as undoubtedly the prospect of having to build a new boat every year, if prizes were to be won, deterred many yachtsmen from entering the racing lists.—*London Daily Telegraph.*

The Clyde has produced a curious nondescript, described as follows by the *Field.* Perhaps this new freak is, as Dilemma was three years ago, but the precursor of another wonderful development in yacht designing which shall throw even the fin-keel of to-day into the shade: "The maiden race of the Rorqual, however, was a novelty which put Dakotah in the shade. The Rorqual, designed by Mr. W. Bruce, of Kinleith, and built at Leith, is about 30ft. over all, and her design is alleged to be a replica of the fish she is named after. With 5ft 2in. beam, she tapers to each end, her bow terminating in a gun metal ferrule, and her stern in a tail, which forms the helm, attached by a ball and socket joint. Built of yellow pine, the back is brightly varnished, and the belly painted white; she is lug-rigged, with jib, but her new canvas is not in shape; reaching in light winds she does fairly well, but her fin-bulb keel does not take her to windward."

Sky Lark, steam yacht, built for Capt. M. J. Driscoll by Wood Bros., at East Boston, was launched on June 26. She is 60ft. over all, 13ft. beam, and 5ft. draft, with a Clark compound engine.

The death in New London recently of Richard L. White removes the last survivor of the regular crew of the famous schooner yacht America, which was victorious in the international contest for the Queen's Cup away back in 1851. Mr. White was born in Groton, Conn., 66 years ago. His memory of the great race was remarkably clear. He was on the vessel from the time she was launched till she was sold in England.—*American Shipbuilder.*

The cruising 30-footer designed last season by Waterhouse & Chesebrough and built by Lawley for a Philadelphia owner who declined to take her on account of the delay in finishing, has just been sold to Josiah M. Fiske, of New York. She is a nice little cruiser, with pole mast and cutter rig.

The new 20-rater designed by Lord Dunraven and building by Summers & Payne is about completed, and will be named Audrey on launching. She is of semi-composite construction, and planked with mahogany, the dimensions being: Over all, 64ft. 3in; lwl, 45ft.; beam 13ft. and draft 9ft. Lord Dunraven has spent a great deal of time over the design and construction. The model was made of paraffine wax, thus permitting changes to be made as desired, as the design was worked out.

Two new 21-footers are now under way at Herreshoff's, one just completed for Wm. C. Whitney, named Dorothy, and another recently ordered for H. A. Laughlin, the Pittsburgh mill owner, for whom the steam yacht Vesta was built last year.

With the view to attracting yachts to the regatta to be held at Pola in April, 1895, under the auspices of the Austro-Hungarian Imperial and Royal Yacht Squadron, the committee having the matter in charge has decided to present a silver medal to every yacht arriving to take part in the regatta and to arrange three special races for 40 raters, in each of which the first prize will be a plate valued at $1,000, and the second prize $400 in cash. There will also be a steam yacht race from Pola to Trieste for a silver bowl, presented by Archduke Carl Stephen, the commodore of the squadron, plus the cost of the coal used in steaming from Nice to Pola, presented by a member of the New York Y. C.

Norma, steam yacht, lately sold at auction, has been brought to New York, where J. W. Sullivan will put in new engines and boiler.

Dungeness, Mrs. Carnegie's new steam yacht, arrived at New York on June 24 for the first time, her designer, Mr. Geo. B. Mallory, making the trip from Fernandina in her.

The annual regatta of the Eastern Y. C., on June 25 was unavoidably postponed on account of fog and calm. It will be resailed on July 7.

We have received, through Lloyds agent in New York, Mr. Thomas Congdon, the "Yacht Register" for 1894-5, a large and handsome volume. There are regularly recorded in the Register a total of 5,774 yachts, of which 4,414 are sailing and 1,360 are steam craft, the relative tonnages being, 86,889 and 147,038, or a total of 233,927. There are also 1,294 American yachts, not measured by Lloyds, making a total of 7,068 pleasure vessels. Very complete lists of clubs officers and owners, with club and private flags are also included The idea, now followed by so many yacht lists, of grouping the private signals according to colors, originated with the "Yacht Register" a few years since. The rules for building and classification, published in a separate smaller volume, have been somewhat changed this year, the depth being measured to the top of the keel instead of the top of the floors, and the divisor for tonnage being made 100, in place of the old 94. The tables have been amended where necessary to meet these changes. The table of sizes of deck beams has been amended by the addition of an extra column of siding and moulding of beams in the ends fore and aft of three-quarters of the length amidship, to which beams the main columns apply. American yachtsmen are well represented in the long list of subscribers to the book.

We are indebted to the secretary of the Dorchester Y. C. for a copy of the club book for 1894, a neat little volume in white canvas embellished by the club seal in blue and red. The club has a membership of 155 and a fleet of 36 yachts, with a convenient club house at Dorchester. The measurement rule is waterline length.

Murray & Tregurtha, South Boston, Mass., have recently shipped a 32ft. launch to Mr. J. H. Alford of Port Antonio, Jamaica, West Indies; a 22ft launch fitted with 8 h. p. Tregurtha boiler and steeple compound engine to Mr. H. E Rogers of Lynn, Mass.; an 8 h. p. Tregurtha boiler and steeple compound engine to Mr. Edgar O. Bullock, Wolfboro, N. H., a 25 h. p. Tregurtha boiler to Mr. John E. Baily, Galveston, Tex. (the second order from this gentleman), and are building a 150 h. p. Tregurtha boiler for Mr. Henry W. Savage's yacht Gleam, of Boston.

## MODEL YACHTING.

IT is very probable that the sailing of small boats in Centennial Lake, Fairmount Park, is a thing of the past. During the past six years the Philadelphia Y C. have sailed races nearly every Saturday when the weather permitted. A suggestion was made some time ago to have the island removed from the lake, so that the space be larger for the use of the yachtsmen. The learned commissioners did not see it in this light, and contrary to expectations a wall has been built across the middle of the lake, and the yachtsmen have only the use of one side. The other portion is given for the use of gondolas.

Now, the races cannot be sailed with any satisfaction, and as the yachtsmen will have to look for another spot, hundreds of people who have enjoyed watching the races will be deprived of the interesting sight. Overtures have been received by the members from the Stockton Park, Camden, where there is a fine sheet of water, and it is quite probable that the offer will be accepted.

An exciting race was sailed on the Delaware River, on Saturday. The course was laid off Petty Island and the start was made at 10:30 A. M. The Mizpah crossed the finish line first, at 11:48:28; No Name was second, in 11:49:15, and the Addie was third in 11:52:49.—*Philadelphia Item.*

JULY.

7 21. W. C. A. Meet, Picnic Point, Lake Mendota, Wis. 13-28. A. C. A. Meet, Croton Point.

AUGUST.

4-11. Owanux Meet, Woodmont, Ct

SEPTEMBER.

3. Holyoke, Ann., Holyoke, Mass.
3-5. Passaic River Meet.
5. Ianthe, An., Passaic River.
15. Red Dragon, Fall Regatta, Delaware River.

THE proposed abandonment of the camp mess at the A. C. A. meet comes in for some strong criticism at the hands of an old A. C. A. man in another column. The experiment is a radical one, but the difficulty of obtaining reliable caterers and the ease of getting duffle to camp and of procuring good supplies from New York are both good reasons for trying it this year. So long as there is any promise of a general mess, men will go to camp relying on it, only to regret when too late that they have not made a bold effort to shift for themselves rather than to endure a service that only varies between bad and worse except on rare occasions, as in 1891. In spite of the plea of our correspondent for the general mess as a promoter of sociability and good fellowship, the pleasantest mess we have ever met with was one at which we officiated as carterer and chief cook, inviting one or two friends each day to join our party of four.

## Mr. Howard's Challenge.

*From the Field.*

THE international sailing race for the £50 challenge cup of the Royal C. C. was sailed at Bourne End-on-Thames on the 19th inst.; but the race was abruptly denuded of its international element by the unexpected action of the American club representative competitor in withdrawing at the last moment from the competition. The grounds given for his withdrawal by Mr. Howard showed no reasons other than might have been raised in April, when the conditions and the course were known to Mr. Howard and the New York C. C., and were in effect accepted by the club when, at the meeting in April, the club delegated to Mr. Howard authority to challenge on behalf of the club.

The race was set down to start at 1:30 P. M., and shortly before that

time Mr. W. Baden-Powell, the officer in charge of the race, received a letter from Mr. Howard, the American competitor, which stated that "I hereby withdraw the New York C. C.'s challenge for the Royal C. C. cup. My reason is that the Bourne End course is not suitable for an international contest."

The facts preceding this letter are, that the course and conditions were settled in February, and published shortly after in the *Field*, and in American papers. In April full details of conditions were sent at his request to Mr. Howard, and on April 16, a meeting of the New York C. C. was held, at which authority was vested in Mr. Howard to challenge and compete on behalf of the club for the cup; but the Royal C. C. received no notice nor any challenge until about May 28. Subsequently Mr. Howard asked for three races to be put instead of one, and that two of them should be in open water, but this request was only made within 14 days of the race, and a special general meeting could not, under the rules, be held in time; even then, had there been time, the meeting probably would not have power to alter the programme, and in any event the three race proposition was an afterthought following upon trial sailing on the Thames.

Canoe sailers, at the time this challenge was brought before the club, had gone into canoe yawls and larger craft, but steps were at once taken to invite the assistance of those who were known to own racing canoes, even though of old pattern, to come forward to defend the cup, and in the result five men responded, one of whom built a new canoe, and another was nominated to represent the Northern C. C., from the Tyne, a patriotic movement of our hardy Northern canoemen.

The result has been a complete defense of the cup, without a competition by the American for the cup, it is true, but in the other circumstances a successful defense. Mr. Howard was on the Bourne End course for three days prior to the cup race day, he competing in two of the R. C. C. races and he was beaten in each match. The course was the same as the cup course, but of five rounds instead of ten. In the first of these races he was 10m. 50s. astern of the leader when he gave up the competition, the winner and second being Battledore and Whizz. In the second race, on Monday, the 18th, Mr. Howard was beaten by 3m. by Battledore, and Dragon also came in ahead of him, Whizz, Stella and Curlew not competing. The entries for the challenge cup race were Battledore, Whizz, Stella, Dragon, Curlew and Yankee (Mr. Howard's canoe).

Whether the Bourne End course is or is not suitable for an international contest is a matter of opinion which may be differently viewed by individuals; but in regard to this particular contest a general meeting of the Royal Canoe Club had adopted that particular course, and the American club had three months before decided to challenge on those conditions, and (we assume), knowing the course, at least by map, if not by individual exyerience. The same course, it should be remembered, is used annually for the racing week of the whole of the "above lock" sailing clubs of the Thames for 1-rater and 75-rater racing, and on this course Her Majesty's cup and the Duke of Connaught's cup are to be competed for. These clubs have naturally of their experience chosen the best sailing reach "above lock" for such important races.

We have from time to time objected in these columns to the sailing races of the Royal Canoe Club being held on the upper Thames for several reasons—not because they cannot there be efficiently held, but that for a canoe so much depends on the direction of wind being up or down the reach and not across the banks. On the cup day all was well; the wind was right down, giving a trial to windward, and a run, and it only wanted strength to make a perfect day. Nobody with any notions above a sprinting track wants to see a race sailed on a soldier's wind, all reaching. The real objection to the upper reaches is that racing on the "above-lock" reaches of the Thames, or of any other river, tends to produce a bad type of boat—a flimsy, capsizeable craft, useless both in hull and fittings for any work other than such racing; indeed, not only useless, but absolutely dangerous. And, therefore, if the important races of a club are placed upon such confined waters, competitors must bow to the inevitable, and build boats suitably crank and flimsy to uphold the honor of the club.

## Royal C. C.

THE sailing races of the club at Bourne End were to have commenced on Saturday last with a race for canoe-yawls, but at the time set down for the start there was almost a flat calm, and the event was postponed until the following Tuesday.

On Monday the first event was for sailing canoes, and they were started at 11 A. M. The entries were: Battledore, Mr. R. A. Hinckley, R. C. C.; Whizz, Mr. Walter Stuart, R. C. C.; Dragon, Mr. B. de Q. Quincy, R. C. C.; Yankee, Mr. W. Willard Howard, New York C. C. Wind S.W., modern to light. Whizz and Battledore crossed the line together, the former to windward, while the American made a bad start. Whizz drew out a slight lead, while Dragon and Battledore were having a ding-dong race. In jibing around the lower buoy Dragon capsized. Battledore and Whizz continued to sail a very close and interesting race, while Yankee kept dropping further astern and gave up at the end of the fourth round. Whizz led until within 70yds. of the winning line, when Battledore coming down with a light catspaw, covered her and won cleverly by 11s. The times were:

| | 1st Round. | 2d Round. | 3d Round. | 4th Round. | Finish. |
|---|---|---|---|---|---|
| Battledore (1st prize) | 11 16 5 | 11 32 39 | 11 51 39 | 12 13 18 | 12 33 55 |
| Whizz (2d) | 11 15 51 | 11 32 2 | 11 50 55 | 12 12 1 | 12 34 6 |
| Dragon | 11 16 10 | Capsized. | | | |
| Yankee | 11 16 14 | 11 37 0 | 12 0 5 | 12 22 57 | Gave up |

The afternoon event was for canoes and canoe-yawls, the first prize to go to the first craft in, while the second went to next of a different class. The entries were: Bernice, canoe-yawl, Mr. D. H. Marrable, R. C. C.; Worry, canoe-yawl, Mr. F. G. Todhunter, O.U.S C.; Dragon, canoe, Mr. B. de Q. Quincey, R. C. C.; Battledore, canoe, Mr. R. A. Hinckley, R.C.C.; Yankee, canoe, Mr. W. Willard Howard, New York C. C.; Curlew, canoe, Mr. G. U. Laws, Northern C. C. Mr. Walter Stewart officered this race, and got them off at 3 o'clock, Battledore being over first, followed by Dragon, Bernice and Worry. Yankee and Curlew being nearly a minute late in crossing the line. The wind was light and variable, which did not seem to at all suit the American. Worry went well, but Bernice was under-canvassed. The times were:

| | 1st Round. | 2d Round. | 3d Round. | 4th Round. | Finish. |
|---|---|---|---|---|---|
| Worry (first prize) | 3 15 15 | 3 28 05 | 3 40 56 | 3 54 00 | 4 06 11 |
| Battledore (2d prize) | 3 17 56 | 3 29 30 | 3 44 00 | 3 58 45 | 4 15 28 |
| Dragon | 3 18 25 | 3 30 30 | 3 45 10 | 4 01 30 | 4 17 19 |
| Yankee | 3 18 50 | 3 30 50 | 3 45 20 | 4 03 15 | 4 18 26 |
| Curlew | 3 21 25 | 3 35 25 | 3 49 10 | 4 04 10 | 4 19 09 |

## A Pretty Mess.

WITH no intention of embarrassing our genial executive, with whom the writer has always sustained the pleasantest relations, I cannot but protest against the sweeping changes which have only been decided upon on the eve of the approaching meet; however, that meet is now so near at hand that we will soon be able to determine whether the proposed changes are such as are worthy of retention or should be relegated to the limbo of discarded experiments.

The most radical change we will encounter will be the abolition of the general mess, heretofore one of the finest features of the camp, as it was at once the casino and common meeting ground of all those elements that go to form a camp. It was there that one chose his messmates by natural affinity, while the grub settled the question of the survival of the fittest. There, too, the diffident formed those valued acquaintances, otherwise impossible to him; and if at times the table fell short of our ideal, the many offsetting advantages offered enabled us to disregard these minor discomforts.

The tone of the general mess has always been broadly democratic and the influence it has exerted in the past has been all powerful in breaking up unhealthy club rivalries, cliques and those petty international prejudices which are bound to crop out from time to time. After an absence of several years, a member under the old arrangement could drop into camp with the reasonable assurance of a warm welcome and the comforting knowledge that he might for a moderate sum procure his meals at the mess-shed without inconveniencing any one.

Will he do so in future when he learns that he must hang about camp until some compassionate individual bids him join his mess—a mess perhaps already overcrowded? I think not.

I can call to mind many members living in small places which cannot boast a canoe club, or where one exists, sends but one or two members to camp. Now, it seems to me that the loss of the mess means the loss of many of these members as well. Now, while I do not for a moment question a club's right to a private mess, I do question the wisdom of this innovation, which strikes directly at the smaller clubs and at the unattached members. The measure, while it doubtless lightens the labors and responsibilities of the executive to a minimum, seems to be a retrograde step, and one that will work more harm to the Association than anything of which I can conceive, with the possible exception of a permanent camp.

While all must admit that this question of a general mess is a difficult one to handle, they must also admit that it is a prime requisite to a successful camp, and that the present plan of boldly lopping it off is no solution of the difficulty, but rather a weak evasion of it, where a half-success or a well intended failure would have been infinitely better. This effort to secure a good balance sheet for next year's book reminds one of the policy of those hospitals which hurry the moribund off to Bellevue in order to keep their percentage of mortality down—better double or treble the camp fee—better hold the meet every two years, but when you do hold it, hold it right.

The private messes have little to recommend them aside from their privacy, and that feature will be largely curtailed this year, when all mess tents whose mess includes ladies will be bunched at headquarters. When you consider the unnecessary duplication of tents, help and utensils, the private mess must be pronounced wasteful, and it is no trifling matter to cater to one on account of the varying number to be fed, and that is why the private mess so often presents the condition of a feast or a famine. The percentage of variation never affects a large mess as it does a small one, for an unexpected half dozen will set the small *ménage* by the ears, while six times that number would not seriously embarrass a larger one.

Then there is the increased number of cooks and helpers to be considered, and the question arises whether their presence will promote the cause of order in camp. And last of all the work and worry of a general mess is now entirely borne by a single individual, while under the new arrangement there would be at least thirty people acting as unpaid caterers and needlessly undergoing the drudgery that that position entails, while in camp ostensibly for rest. In the above I have not intended to criticise the real camper who delights in cooking his own meals, and in roughing it, but from what I know of modern camps I cannot believe that they will prove congenial to him, because they have been all but improved out of existence. Oh, yes, we are rustic, sylvan and bucolic till you can't rest, but it is the rusticity of Watteau's shepherds and shepherdesses.

I should like to see some member attempt to run a public mess in camp, if for nothing more than to prove how indispensable a restaurant is when you pitch your camp in a wilderness and invite people to visit you—people unfortunately possessing unreasonable stomachs that will not be put off with a promise, or a written order.

Dost like the picture? R. H. PEEBLES.

## Mr. Howard's Canoe.

CLAYTON, June 29.—*Editor Forest and Stream:* In your issue of June 30, in an article on "International Canoe Racing," and Mr. W. W. Howard's challenge for the Royal C. C. challenge cup, you quote the *Model Yachtsman and Canoeist* as stating that "We further understand that a new canoe has been built for him (Mr. W. W. Howard) by the St. Lawrence Skiff Co., a sufficient recommendation without saying anything further, and that in addition to being, as we might expect it, quite up to date she will be fitted with a 7ft. slide."

While we much appreciate the *Model Yachtsman and Canoeist's* compliment, we wish to correct, through your columns, its unintentional error. We must plead "not guilty" to having had any part whatever in the production or building of Mr. Howard's canoe in question.

J. G. FRASER, Manager,
St. Lawrence River Skiff, Canoe and Steam Launch Co.

[The canoe in question was built by a former employee of the St. Lawrence Co. We understand that she resembles the Gardner designs, from which the St. Lawrence have built for several years, though, of course, much smaller and less powerful.]

# Rifle Range and Gallery.

## Greenville vs. Excelsior.

ON Thursday night of last week the Excelsior Rifle Club, of Jersey City, dedicated its new club house and gallery ranges at No. 54 Gregory street.

A ten men team match between the home club and the Greenville Rifle Club, was one of the interesting features of the programme. Among those present were the Mayor of Jersey City, P. F. Wanser, Chief of Police Murphy and Capt. Farrier. Among the other prominent local celebrities present were Robt. McDonald, Henry Albros, John Hill, Enoch Smith, John Brennan and others. From Newark there was George Wiegman and a number of Essex county riflemen. Chas. G. Zettler brought along a delegation from New York. The interior of the club house was elaborately decorated for the occasion. A generous lunch and liquid refreshments to suit all tastes was furnished in abundance. While the team match was in progress local artists entertained the assemblage with recitations, songs, etc.

A local tradesman with an eye to future returns sent an employe into the rooms during the hot period loaded with fans. His thoughtfulness was voted as being of the first order.

President Thos Hughes, George Varick, Capt. Hansen and other members of the Excelsior Club were active in looking after the comfort of their guests.

The contesting riflemen who were shooting and perspiring on the four ranges found that the extreme heat was not conducive to high scores. The members of neither team shot up to their average. The members of the Greenville team suffered the least in this respect and were thus in position to outshoot their opponents. Scores, 10 shots per man, German target, distance 75ft.:

| Greenville Team. | | Excelsior Team. | |
|---|---|---|---|
| Collins | 230 | Hennessey | 235 |
| Robidoux | 221 | J Hughes | 220 |
| C Boag | 239 | Weber | 228 |
| Charlock | 231 | Thomas | 213 |
| Plaisted | 235 | Pinney | 229 |
| Agneau | 224 | Channing | 234 |
| Purkess | 232 | McCarthy | 212 |
| J Boag | 237 | Hansen | 234 |
| Dorrler | 239 | Duff | 223 |
| Scheeline | 233—2321 | Ryer | 209—2237 |

## Testing a Revolver.

A YEAR ago Roundsman Petty had an attack of the measles, and as a result has trouble with his eyes. One day last week he visited the Eye and Ear Hospital at Forty-second street and Park avenue for treatment, and afterward, as was natural for a shooting man, dropped into Conlin's gallery.

While there two strangers, one of them a Frenchman, entered. They carried with them a new model .38cal. Colt's revolver and a box of factory cartridges, which they proceeded to test at 12yds. range. The target at which they shot had a 2in. bull, and was about 1½ft. in diameter, but the first man could not find it at all. After shooting a string he relinquished the pistol to the Frenchman, who, as the spectators already knew, was a dark horse, and none other than the "champion revolver shot of the French Army." The "champion" modestly took the pistol and, handling it with irreproachable style, fired, and missed the target. Not in the least disconcerted, he fired again, with a similar result. He repeated this performance a number of times, and at last, apparently by luck, got a shot on one corner of the target. Then he stopped, satisfied, sat down, and gracefully awaited the applause.

"Buff" Rosenbaum, who had been an amused spectator, asked permission to examine the revolver, and then if there was any objection to a friend of his trying a few shots. The Frenchman had none, and Rosenbaum handed the revolver to Petty.

After his first shot Petty found that the gun was not correctly sighted, but that it shot low and to the left. He accordingly aimed high and to the right, and had the satisfaction of seeing his shots group well up toward the bull. This excited the admiration of the Frenchman, but the holder of the Winans trophy had only just begun. Reloading the revolver he commenced a new string. The first shot ¾in. from the bull at 9 o'clock. The next he held a trifle further to the right and scored a dead center, and the remaining shots were all grouped together in the bullseye. Three of them were 10s.

The "champion of the French Army" was overwhelmed, and begged for the target as a souvenir. As he left Conlin remarked, sententiously, "A pistol shoots straight according to the man that shoots it."

J. B. B.

## The Time Element in Rifle Shooting.

TOO MUCH can not be said in favor of the very radical innovation suggested by Mr. Wm. Lyman in a recent issue of this paper, in the shape of adding a time element to rifle-shooting; it has been too long neglected, and I for one am glad to see so high an authority as Mr. Lyman advocating the measure, and hope to see as a result an awakening of interest in that line. The shotgun would not be as popular to-day as it is if it had not been for trap-shooting, and it will not be many years before a time element will be introduced in this kind of shooting; just as soon as those who are now shooting at the traps know what they are now missing by not using a repeating shotgun and breaking triplets where they now only attempt doubles, just so soon will the tide of popularity swing around toward the repeating shotgun, and if those who love the rifle could only be persuaded that in the repeating rifle they have an ever increasing source of pleasure, as well as a practical method of preparing themselves for field shooting, it may be possible to make rifle shooting what it should be, the sport of the century.

Inanimate target shooting has sett'ed several problems, notably the superiority of breechloader over the muzzleloader, and is at present doing yeoman service in showing the manufacturers of nitro powders where to make improvements; it is not saying too much to claim that rapid-firing with the rifle would also settle some questions of vital importance and among other things, perhaps, give us a perfect nitro powder for that weapon a decade or so before it will come under present conditions. The same element is a necessity in revolver shooting, and until adopted that sort of shooting will not attain the popularity it deserves.

S. J. FORT, M.D.

ELLICOTT CITY, Md.

## Greenville Defeats Portchester.

A TEAM of eight members of the Greenville (N. J.) Rifle Club visited Portchester, N. Y., last Saturday to shoot a friendly match with the Portchester Rifle Club. In the preliminary practice the Jersey marksmen found the situation a little odd. The two targets out there in the field looked to be awfully far away. As Robidoux remarked the whole universe was in front. Would he be able to hit the bullseye! His score showed 7 blacks in the 10 shots. The conditions called for 10 shots per man. Horn led off for the Portchesters and Plaisted for the Greenvilles, the members of the teams following in rotation. The first round showed that the visitors were in the best form. On the second round, however, Collins of the Greenvilles missed the target, scoring a goose egg. Hess of the Portchester team was the next unfortunate to miss the target, his turn came on the third round. On the sixth round Spahn of the Greenville team fired a shot into space, result, another goose egg. Then as a matter of courtesy to Spahn, Hess let drop another egg and then followed it with another, making 3 misses in 10 shots. Spahn, who is a sympathetic nature, could do no less than make another miss on his ninth shot, thus tieing Hess on the number of misses as well as on the total, each having 122. The best individual score was made by Smith of the Portchester team; the second best by Plaisted of the Greenville team. The shooting of both teams was considerably below what was expected before the match was opened. There are, however, many reasons for the poor marksmanship displayed. Torrid weather and Portchester hospitality fixed the Jerseymen. The Portchesters came through sympathy. The total of the Greenville score was 1,396 against 1,364 for Portchester.

A return match to be shot in Greenville was arranged and will be shot off in three weeks. The members of the Greenville team are highly pleased with the hospitalities extended to them by their Portchester brethren and have promised to give the New Yorkers, on their next visit to the Celery District, one of the regular Greenvile receptions, all wool and a yard wide. Scores, 10 shots. German target:

| Greenville Team. | | Portchester Team. | |
|---|---|---|---|
| Plaisted | 206 | Smith | 209 |
| C Boag | 180 | Hess | 122 |
| Kobidoux | 183 | Rudd | 158 |
| Purkess | 172 | Boeger | 171 |
| Collins | 181 | Horn | 191 |
| Chavant | 189 | Bachman | 173 |
| Scheeline | 163 | McNeil | 170 |
| Spahn | 122—1396 | McQuilkin | 170—1364 |

## Rifle at San Antonio.

THE regular weekly shoot of the San Antonio Rifle Club took place on the afternoon of June 24, with the following results. Two hundred yards, off-hand, 10 shots per man, American target:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Texas Field | 4 | 7 | 7 | 8 | 5 | 7 | 5 | 6 | 8 | 7—64 |
| G Giesecke | 7 | 5 | 4 | 10 | 7 | 5 | 6 | 0 | 0 | 6—50 |
| A Guenther | 8 | 10 | 6 | 4 | 6 | 7 | 6 | 9 | 8 | 8—72 |
| A Steves | 6 | 6 | 6 | 10 | 6 | 10 | 8 | 8 | 3 | 10—73 |
| E Dosch | 10 | 8 | 10 | 7 | 5 | 6 | 5 | 6 | 6 | 5—68 |
| A Altmann | 7 | 8 | 3 | 9 | 7 | 4 | 8 | 7 | 4 | 7—64 |
| E Steves | 5 | 5 | 8 | 10 | 4 | 6 | 7 | 8 | 5 | 5—63 |
| G Altmann | 7 | 8 | 5 | 5 | 7 | 4 | 8 | 6 | 8 | 6—64 |
| E Dreise | 5 | 7 | 7 | 6 | 4 | 5 | 10 | 3 | 6 | 5—58 |
| A Uhl | 6 | 7 | 5 | 0 | 7 | 5 | 8 | 3 | 5 | 9—50 |
| G Heye | 9 | 9 | 0 | 5 | 6 | 7 | 9 | 6 | 6 | 7—64 |

Two hundred yards, rest, 10 shots per men, American target:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Texas Field | 9 | 9 | 8 | 9 | 12 | 10 | 11 | 9 | 9 | 6—92 |

## Zettler Rifle Club.

THE bi-monthly shoot of the Zettler Club was held at Wissel's Cypress Hills Park on July 1. The weather was fine, but decidedly hot for comfort. Nine members entered the competition.

The extreme heat must have affected the markers at the butts, for the marking was the poorest and most erratic of any ever seen there before. Max Engel got so thoroughly vexed over the erratic marking that he surprised himself and his comrades by putting up the fine score of 226. B. Zettler dropped in with a score of 222. The man target brought out a lively competition for the five prizes. Ross dropped into first place with 59. Plaisted, Schmidt and Walther tied for second for second place with 55 each, Engel and Holges 54 each. Scores:

| | | | | | | |
|---|---|---|---|---|---|---|
| F C Ross | 233 | 225 | 224 | H Holges | 214 | 210 |
| Geo W Plaisted | 226 | 218 | 217 | R Hamann | 211 | 203 |
| B Zettler | 222 | 210 | 205 | Geb Krauss | 205 | |
| M B Engel | 226 | 207 | 202 | B Walther | 213 | |
| L P Hansen | 212 | 208 | 206 | | | |

Man target, 5 prizes, 3 shots, possible 60: Ross 57, Plaisted 55, Schmidt 55, Walther 55, Engel 54, Holges 54.

Bulleye 4in. center, 3 shots, possible 3: Holges 2, Krauss 1, Engel 1.

## Revolver Shooting in England.

THERE has not been much doing in the revolver-shooting world the last few weeks, as the gayeties of the London season are now in full swing and the weather has been so wet and windy that there has been no inducement to compete at the revolver clubs. The leading scores for the revolver championship of the North London Rifle Club now stand as below:

| | 20yds. | | | | | | 50yds. | |
|---|---|---|---|---|---|---|---|---|
| Walter Winans | 41 | 41 | 40 | 40 | 40 | 39 | 30 | 29—300 |
| Skilton | 40 | 39 | 39 | 39 | 38 | 38 | 27 | 27—287 |
| C F Lowe | 40 | 39 | 37 | 37 | 36 | 35 | 27 | 23—285 |
| Rand | 40 | 38 | 38 | 38 | 38 | 37 | 26 | 25—284 |
| Capt Cowan | 38 | 38 | 38 | 38 | 37 | 36 | 27 | 26—278 |
| Maj Munday | 39 | 37 | 36 | 36 | 35 | 34 | 26 | 25—268 |

## Paterson Rifle Association.

PATERSON, N. J., June 24.—Ten members of the Paterson Rifle Association met at Bunker Hill Range to-day for practice. The best scores are appended; 20 ring target, distance 100yds. Scores:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| August Dietrick | 15 | 19 | 16 | 18 | 17 | 20 | 20 | 17 | 18 | 19—179 |
| Wm Dutcher | 19 | 18 | 18 | 17 | 19 | 19 | 18 | 19 | 17 | 16—180 |
| Abe Newby | 19 | 16 | 18 | 18 | 16 | 18 | 14 | 18 | 19 | 18—174 |
| Thomas Kelley | 17 | 19 | 18 | 16 | 15 | 16 | 19 | 17 | 17 | 19—173 |
| Wm S Newby | 20 | 18 | 19 | 15 | 18 | 19 | 16 | 18 | 18 | 19—180 |
| James Welcher | 16 | 15 | 19 | 20 | 16 | 20 | 18 | 16 | 17 | 15—172 |
| John W Johnson | 17 | 17 | 19 | 18 | 17 | 18 | 18 | 16 | 19 | 15—174 |
| Ben Maskell | 19 | 13 | 16 | 20 | 17 | 17 | 20 | 18 | 17 | 17—174 |
| Edward McCarthy | 19 | 17 | 16 | 12 | 16 | 18 | 16 | 14 | 14 | 19—161 |
| Joe Vonan | 18 | 17 | 16 | 18 | 16 | 17 | 19 | 11 | 18 | 19—169 |

## Schlicht Rifle Club.

WEST NEW YORK, June 26.—At the weekly shoot held at headquarters last night, Jacob Diehl won the champion medal. Mr. Schlicht the first class, Aug. Meyer second class and Geo. Richert the third class. Scores: Geo. Schlicht 240, Jacob Diehl 233, Geo Richert 233, Geo. Dorr 231, Aug. Meyer 230, Chas. Meyer 230, M. Daw 229, William Schlicht 232, Jacob Schlicht 220, Gus Tribout 220, Fred Lambrey 219, Chas. Stein 216, C. Schlicht 215.

## Greenville Rifle Club.

GREENVILLE, N. J., June 29.—The winners in the weekly gallery shoot of the Greenville Club held this evening are as follows: First class, Geo. Purkess first, C. Boag second. Second class, Spahn first, Agneau second. Third class, E. Wuestner first, Daniels second. Scores: Purkess 239, C. Boag 238, Agneau 230, Spahn 229, Chase 221, Hill 221, E. Wuestner 220, F. Wuestner 203, Holzapiel 219, Daniels 220.

## RIFLE NOTES.

The location for the great festival in 1895 has not been decided upon as yet. Long Island seems to have the best show to secure the plum.

Armin Tenner was an interested spectator at the Zettler shoot, July

The Ind. New York Corps holds its practice shoot at Glendale Park on Friday of this week.

The Italian Shooting Society devoted the Fourth of July to target shooting and live bird sweeps on the Pelhamville grounds.

Team match, Hansen and Bryce vs. Collins and Plaisted, fifty shots per man will be shot on Greenville Park to-day (July 7).

# Trap-Shooting.

Nov. 28.—Central New York Trap-Shooters' League, eighth tournament, at Syracuse.

1895.

May.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

### Altoona and Johnstown.

THE Johnstown Rifle and Gun Club held an all-day shoot on June at Portage, a small station along the line of the Pennsylvania Railroad, half way between Altoona and Johnstown. The scene of the shoot was a small open space in the center of a patch of woodland, the patch having been cleared for the purpose of the shoot. The light was consequently not of the best, although the bright sun behind the shooter's back was a material aid in distinguishing the flying asphalts. The main featureof the day's fun was the race between teams of ten men from the gun clubs of Altoona and Johnstown, the race being won by the Altoona contingent by the narrow margin of 8 targets. The score between the two clubs now stands two to one in favor of Johnstown, the latter club having won both matches last year, the first on their own grounds at Johnstown by 7 targets, the second by taking the Altoonas into camp on their own stamping ground at Wopsononock by an ajority of 12 targets. On the latter occasion the teams consisted of 16 men on a side

A varied programme was arranged for the shoot on the 28th by the Johnstown Club, in addition to which several extra events were shot off before sundown put a stop to further shooting. The following are the scores made in the team race:

Altoona.

### New Utrecht Defeats Vernon.

AN interesting team match took place at Woodlawn Park, L. I., on June 30, between the New Utrecht and Vernon gun clubs. The conditions called for 10 per team, 50 targets per man, but as the Vernons could muster only 9 men, the match was decided with that number.

Previous to the match a 10-target contest place, in which Morfey broke 10; Money, Cropsy and Osterhout 9 each; Deacon 8 and Phelps 4

Then came the big event of the day, which resulted as follows:

| New Utrecht G. C. | | Vernon G. C. | |
|---|---|---|---|
| E Hegeman | 42 | Bishop | 36 |
| Money | 45 | Pfister | 45 |
| Deacon | 46 | Levens | 38 |
| Morfey | 42 | Little | 34 |
| W Townsend | 30 | Hyer | 35 |
| Cropsy | 41 | Floyd | 42 |
| Bennett | 28 | Spadone | 34 |
| Fessenden | 33 | Osterhout | 36 |
| P Hegeman | 25—232 | Lumadrid | 28—328 |

### Freehold Gun Club.

FREEHOLD, N. J., June 29.—Monthly shoot for three class medals at from 25 to 31 targets according to relative skill. The first fifteen targets on the score as well as the allowed targets are shot from known traps and angles and the next ten from known traps, unknown angles. Snyder had no trouble in scoring his third consecutive victory, Hall being second and Hance third:

| | | |
|---|---|---|
| C C Snyder | 11111111111111110111111 10 | —23 |
| H Hance | 01111111101111111110111 10 | —21 |

## ASSOCIATION OF THE NORTHWEST.

TACOMA, Wash., June 20.—The tenth annual tournament of the Sportsmen's Association of the Northwest has been a decided success and great credit is due the officials of the Association and the Tacoma Rifle, Rod and Gun Club, under whose auspices it has been held, for the entirely satisfactory way it has been conducted. Everything went off smoothly and with the regularity of clock work, without hitch or delay. Electric trap pulls were used and bluerock targets; both gave entire satisfaction.

The weather was perfet, but the sun was very hot and caused a bright glare, which reduced scores somewhat The background was bad, being a low hill, a viaduct and brush in the distance. All the events filled well.

At the annual meeting the committee offered some resolutions for changes in the game laws. The Association resolved to join the National Association, and decided to hold the next tournament for 1895 in June at Portland, Ore. The following officers were elected, viz.: President, T. A. Bringham; First Vice-President, T. H. Mason; Second Vice-President, J. N. Hardy; Third Vice-President, F. S. MacLine; Secretary-Treasurer, W. A. Strong. Directors: C. E. Hughes, Dell Cooper, C. W. Minow, F. Warren, T. B. Ward.

Shooters present from Spokane, Wash., were: F. Warren, T. B. Ware, Fred Mason, N. G. Sisson, H. Doolittle, Geo. Baldwin. From Victoria, B. C.: O. Weiler, C. W. Minor, F. S. MacLure, W. H. Adams, H. A. Munn J. Sweitzer, Mr. Grigg, B. H. Johns—members of the Union and Victoria clubs. New Whatcom shooters were: Dell Cooper, W. J. Pratt, S. B. Van Zandt. Portland, Oregon, was represented by W. A. Strong, C. E. Hughes, Mr. Moore, Seattle, Wash., sent A. K. Churchill, B. Hall, J. N. Hardy, H. Lewis, W. S. Moreton, C. F. Graffe, S. T. Kelsey, J. P. Ruppe, W. A. Hardy. J. M. Weatherwax and J. J. Law were on hand from Montesano, Wash.; J. Bussy from Black Diamond, Wash., and J. C. Nattrass as press representative from Whatcom, Wash. The rest of the shooters were Tacoma men mostly.

Tacoma sportsmen won the most prizes, with Spokane and Victoria close seconds.

The Victoria shooters used (2) Clabrough guns and (6) Greener guns and Schultze powders. The New Whatcom shooters used Parker guns and wood powder. Out of the six Spokane shooters three used Smith guns, two Parkers one Daley and wood powder.

So far as ascertained, of 15 Tacoma sportsmen, one, Ed. Barlow, used a Smith gun, ten used Parkers, two Scotts, one Lefever, one Greener. Seattle sportsmen shot seven Smith's, two Parker's.

T. B. Ward won first average with about 80%, Dell Cooper carried off second average, E. A. Kimball of Tacoma, third. All ties divided.

*First Day, Thursday, June 14.*

No. 1, 10 singles, known trap and angles, entrance $1.50, divided 40, 30, 20, 10 per cent, also three other prizes of merchandise: G. H. Garrison 5, E. A. Kimball 9, B. Hall 6, W. H. ## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

The following scores were made at the June medal shoot of the West Side Gun Club at Saginaw, Mich.: H. G Zschoerner won for the third consecutive time in the B class and carries off the first medal of the season. Scores: A class, L. Lee 22, A. H. Delonjay 20, C. D. Keller 20, O. Mosier 17, J. B Baum 15, L. Schafer 10, J. Willbite 4, J. Mason 21, Ed Carpenter 20, J. M. Brechtelsbauer 21, V. Kindler 15, F. Hunt 12, A Jones 7. B class, H. G. Zschoerner 22, C. F. Schoeneberg 19, J. O'Hare 19, F. Hagaman 16, C. L. Delonjay 14, E Bliss 14, William Brown 10, M. Berger 10. Van 9, F. Wiggins 8. C class, H. G. Krogman 16, Hohn 13, A. Freuchtel 12, H. Moiser 12. L H Herrig 8, W. Hart 7, C. H. Everett 4. Tie, L. Lee 11 out 12, H. G. Zschoerner 10 out of 12.

The Rochester Rod and Gun Club's new club house will compare favorably with any in the country. Its dimensions are 50×24, two stories in height, the upper floor for dining room, kitchen, etc., the lower floor being divided into assembly room, cashier's office and coat room. There is a large cobblestone fireplace on each floor; and the hearth is made of brass cartridge heads set in cement with the club monogram worked in the center. The traps and trap house which face the north, are entirely out of sight, being covered entirely by the gradual upward slope of the ground. Thus the targets to all appearances spring from the grass. The background is sky and water.

In a recent shoot between teams of six men each from the Forester, Highland and West End gun clubs, shot at Moline, Iowa, the Foresters broke 119, Highlands 105 and West Ends 100. Each theam shot at 150 targets.

At the June medal shoot of the Leavenworth (Kan.) Gun Club M. Przybylowicz, Jr., won on a clean score, including his handicap. Harper broke 23, McElroy 20, Porter 21, Gunn 20, Goff 15, Hawn 13, Schmelzer 12, Brown 17, Thomas 14 and Rollins 19.

In the first of a series of matches between the Wellington and Odessa gun clubs shot at Wellington, Wellington broke 185 to Odessa's 151. The teams comprised ten men each and each team shot at 251 targets.

At the June shoot of the Pueblo (Col.) Gun Club for the Otero meda at 10 known singles, 5 unknown singles and 5 pairs, D. Ramsey won with 22 breaks, J. M. Killen scored 17, L. G. Stone 10, G. W. Willeford 17, John Harmer 15 and C. F. Sherman 15.

Harvey McMurchy's score of 98 out of 100 made on the Syracuse Gun Club grounds on June 23 is the record for the grounds. His last 84 were broken straight.

At the fifth shoot of the Baltimore Gun Club on June 23 the scores were: Hall 25, Tabbatt 20. Malone 18, Cantler 24, 18, Jack 17, 16, Vance 17, 16, Coe 14, 16, Linthicum 11, 13, Fox 23, 16, Greener 20, 18, 21. Brown 14, 16, 17. A new handicap will be used this month and in August.

Next Thursday will be Newark Gun Club day at Erb's shooting grounds and it is hoped that there will be a good attendance.

Teams of six men each from the Sutton (Neb.) and Geneva (Neb.) gun clubs shot at 15 targets per man at Sutton recently, the scores being Sutton 62, Geneva 57. A high wind bothered the shooters.

The newly formed Galion (Ohio) Gun Club, is officered as follows: Pres., E. Flickinger; Vice-Pres., H. G. Hopkins; Sec'y, W. R. Cooley; Treas, Wm. Kopp.

At the June shoot of the Stock Yard Gun Club at Kansas City, a class medal was won by Carmean, on 9 kills; B class medal went to Mills, on 8 kills.

Have you procured a copy of our "Ready Reckoner?" If not send 25 cents for a copy.

The "Ready Reckoner" saves lots of time at club shoots, etc.

C. H. TOWNSEND.

## SIXTH INTERSTATE.

ELWOOD, Ind.—*Editor Forest and Stream:* The sixth tournament of the Interstate Manufacturers' and Dealers' Association, given under the auspices of the Elwood Gun Club, at Elwood, Ind., June 27 and 28, was quite a success. Many of the noted crack shots were present and took part in all the events.

Elwood is a city of some 10,000 inhabitants, situated 161 miles south of Chicago, and 137 miles north of Cincinnati It is the greatest natural gas city in the world, and enjoys the distinction of being the first city in the United States to manufacture tin plate. Numerous large glass plants have also been erected, prominent among them being Macbeth's pearl top lead glass factory, diamond plate glass factory and McCloy's chimney factory. Elwood is up to the times in having electric lights, electric street cars, paid fire department, uniformed police, paved streets and modern improvements.

The grounds of the Elwood Gun Club are located within the city limits and are within ten minutes' walk of the center of the city. The club house is erected on the edge of a shady grove facing a clearing of some 200 acres. The traps face northeast, and the background is among the best. During the tournament the Gun Club had a line of hacks running from the city, which carried all who wished to ride for the sum of five cents each way. The Gun Club has been in existence but one year and it is in a very flourishing condition. All details were carefully attended to, and the Elwood Gun Club, together with the Interstate Association, deserve great credit for giving a tournament in this section of the country, as it is bound to give trap-shooting quite a boom. Manager Elmer E. Shaner had quite a number of requests from shooters present to have the Interstate Association give tournaments in near-by cities, but of course these requests could not be complied with, as the Association's circuit is complete for the season of 1894.

The first day of the tournament Keystone targets were used, and the second day bluerocks were used. Both targets gave good satisfaction.

Following are the scores:

No. 1, 15 targets, $1 entry:

| | | | |
|---|---|---|---|
| Hicks | 111110111111001—12 | Slow | 111101001000110— 8 |

## Trap at San Antonio.

THE San Antonio Club's regular weekly shoot took place at Lake view on June 24 as follows:

No. 1, 10 singles and 2 pairs: McCormack 9, Rothwell 14, France 11, Smith 10, Thiele 9, Tendick 14, Frank 8.

No. 2, 8 pairs: Phillips 7, Rothwell 5, Thiele 12, Shields 5, Tendick 6, McCormack 10, Rahmstorf 8, Frank 11, Samuels 6, Vollbrecht 5, France 6, Cann 5, Grossmann 12.

No. 3, 15 singles. Tendick 12, Rothwell 13, McCormack 11, France 12, Cann 6, Rahmstorf 7

No. 4, trophy shoot, 20 singles and 5 pairs:

| | | |
|---|---|---|
| Thiele | 01011111101100111111 | 11 10 11 11 10—23 |
| Smith | 11001011001111111111 | 10 00 00 10 00—17 |
| McCormack | 11011111010011111111 | 10 10 10 11 11—23 |
| Tendick | 10111111101111111111 | 00 10 10 00 10—21 |
| Grossman | 01010000100110000010 | 10 11 00 10 10—11 |
| Phillips | 11111001010100111101 | 10 10 10 01 10—18 |
| Rothwell | 11101111011111111111 | 11 10 11 00 00—23 |
| Frank | 01000111001111110001 | 10 10 10 10 11—17 |
| Biesenbach | 11000100000010111011 | 00 10 10 10 11—14 |
| Vollbrecht | 11001001111011001111 | 00 00 00 11 10—16 |
| Wagenfuhr | 01111110111111011111 | 01 00 11 10 01—22 |
| France | 10101011110111011011 | 11 11 10 10 10—21 |
| Shields | 11101011011001111001 | 11 00 10 10 00—17 |
| Cann | 01100110111110000010 | 00 10 10 10 10—14 |
| Simpson | 11110101110100011111 | 11 00 00 00 00—16 |
| Samuels | 11110111111011110111 | 10 10 01 11 11—24 |
| Barr | 11111101011110110111 | 11 00 10 11 01—22 |

Samuels wins first place in class A and Wagenfuhr wins first place in class B.

No. 5, 15 singles, team shoot:

| | | | |
|---|---|---|---|
| McCormack (captain) | 9 | Thiele (captain) | 10 |
| Rothwell | 15 | Samuels | 14 |
| France | 9 | Barr | 10 |
| Tendick | 6 | Biesenbach | 11 |
| Phillips | 11 | Shields | 10 |
| Vollbrecht | 11 | Simpson | 9 |
| Smith | 10 | Frank | 8 |
| Grossmann | 10—80 | Cann | 11—83 |

O. C. G.

## Missoula Rod and Gun Club.

MISSOULA, Mont., June 24.—With interest decidedly lagging, seven of the brave members of the Missoula Rod and Gun Club managed to shake off their lethargy sufficiently to attend the medal shoot to-day. After a few "practice" shots, the following scores were made, with the conditions as usual—15 singles, known traps and angles, 16 and 18yds. rise:

Class A.

| | | | |
|---|---|---|---|
| Robt Rogers | 101101110111110—11 | H A Stephens | 101011111101010—10 |
| J P Menard | 111111111101110—13 | J T Sawhill | 111111101110111—13 |

Class B.

| | | | |
|---|---|---|---|
| F Cowee | 010010110010011— 7 | F P Kern | 001110111111110—11 |
| F H Woody | 100010101101110— 8 | | |

Class A shoot-off of ties for gold medal:

| | | | |
|---|---|---|---|
| J P Menard | 11111—5 | J T Sawhill | 11110—4 |

WILL. CAVE, Sec'y.

Weekly shoots at live birds or targets, are held at Charles Zwirlein roadhouse, at Yardville, N. J.

## Trap at Baltimore.

ELLICOTT CITY, Md., June 27.—One of the gamest and most interesting contests ever seen in Baltimore was shot to-day, June 27, between E. C. Hall, of the Baltimore Gun Club, and C. E. Bonday, of the Standard Gun Club, both of this city. The terms of the contest were 100 bluerocks per man, known traps and unknown angles, $50 a side. Notwithstanding the threatening aspect of the weather nearly 200 spectaters, many of them ladies, journeyed out to the new grounds of the Baltimore Gun Club, near Halstead's, where Field Marshal Malone had the traps in position, and not once during the match was there a hitch in their manipulation.

Some desultory shooting was done before the two principals got together, this took place at 4:30 P. M., Hall leading off; the first 25 showed some effects of nervousness on the part of both men, the score being a tie on 20. On the second quarter Hall braced up and smashed out 24, while Bonday fell off to 17, practically losing the match right then and there, though on the next 50 he shot a game up-hill race, pounding out 47. The great lead given Hall by the tremendous drop in the second round was too great to be overcome, even though Hall dropped 4 in his last 25, and the match went to him on the great score of 90 out of 100.

Mr. Bonday's score of 82 was considerably under his general average, and there is this much of an excuse for his defeat—that he was compelled to use a strange gun, his own Greener having a hammer broken just previous to the match. Under any circumstances his defeat was no discredit, for Hall has been shooting a 95 per cent. gait at this game as above given, and at the present writing he is without doubt the finest trap shot in the State.

Both men shot Greener guns, Hall's a Crown grade ejector, known among his friends as the "Pulverizer," Bonday's a "Facile Princeps."

Both men are quiet, unassuming gentlemen, and it was a pleasure to note the manner in which Mr. Bonday accepted his defeat, and the modest way in which Mr. Hall bore away the palm of victory. The whole affair was an object lesson as to the way a modern contest of this kind can be arranged. Score follows:

| | | |
|---|---|---|
| Hall | 111111110110011101010111111—20 | |
| | 111111111101111111111111—24 | |
| | 111111111111111111111111—25 | |
| | 110101111111111111010011—21—90 | |
| Bonday | 110111110111011111011110—20 | |
| | 101011101111101101011110—17 | |
| | 110111111111111111111110—23 | |
| | 111111111101110111111011—22—82 | |

SAMUEL J. FORT, M.D.

## Dexter Park Club Matches.

*Emerald Gun Club*, June 19, 10 live birds, class H, American Association rules:

## Shooting at Willard's Park.

THERE was disappointment meted out to those who visited Willard's Park, Paterson, N. J., on June 26, to see the shooting of the final match in the season between the Morristown and Paterson gun clubs, the Morristown contingent failing to materialize. There were several members on hand, however, and these indulged in a little live bird and target shooting in order to amuse the spectators. The first event was at 7 live birds, $5 entry, handicap rise, 50yds. boundary, two moneys. Morgan and George stood at 28yds., the others at 30yds. The scores:

| | | | |
|---|---|---|---|
| Brewer | 2222222—7 | Morgan | 1022012—5 |

| Metcalf | 1001110111101101101101101100110110001l1—25 |

The following scores out of a possible 25 each were made at the shoot of the Diamond Gun Club, of Greene, Me., on June 20: Herbert Ray 22, L. E. Wright 21, Charles Greenwood 21, H. Blaisdel 19, E. Richardson 22, C. Abbott 16, A. Greenwood 20, G. Parker 19, E. Furbush 15, N. Taylor 12, F. A. Mower 22.

## Live Birds at Manaplan.

EVERY once in a while, sometimes oftener, the trap-shooters of Monmouth county, N. J., get together at Manaplan, just below Freehold and spend a few hours shooting at live pigeons. One of these gatherings took place on June 27, when there were nearly a dozen shooters on the ground, including J. Van Brackle, of Mattawan, and Messrs. Laird, Davis and Atkinson of Freehold. The birds were a good lot, having been picked at random about the neighborhood and none of the contestants succeeded in keeping their records clear for the day. The first four events were "Jersey sweeps" at 4 birds each, $3 entry; No. 5 being a $2 miss-and-out. The results:

## AMONG SOUTHERN TRAP CLUBS.

### With the Greensboro Gun Club.

IT was an extremely hot day on which we reached Greensboro, N. C., to fulfill a long-standing promise to visit the Greensboro Gun Club. Some of the members were out of town and others were too busy to leave their business for a shoot, so that none but the "old reliables" were met on the ground. Among these was Captain Charles Berkeley, superintendent of the Greensboro to Charlotte Division of the R. & D. Road. The grounds of the club are situated in a picturesque spot about two miles from the town proper and are considered extremely hard grounds. To the right, left and rear are heavy woods and in the foreground are the inclosed grounds of the Charlotte Base Ball Club. The gun club has a house for the storage of its equipment, but has no shooting house. A loading table is built near the storehouse. The grounds with the woods immediately in rear are admirably adapted for a picnic shoot, and some of the members propose arranging such an affair, to be held some time before the dates for the Interstate shoot, to be held there Sept. 19 and 20. This will have a tendency to awaken a renewed interest in the club and its work and insure a big attendance of spectators at the September tournament.

The club does all its regular shooting from five known traps, unknown angles and the targets are thrown extremely hard. The traps are of the expert pattern with North's electric pull, and are protected by a heavy screen extending the entire length of the line. The first event was at 10 targets, known angles, Gilmer breaking 8, Jordan 7, Berkeley 4 and Garsed 2. No. 2 was at 15 bluerocks, unknown angles, in which the scores were Jordan 12, Gilmer 11, Gleem 8, Berkeley 7 and Garsed 4. The next was at 10 targets, unknown angles: Gilmer 8, Glenn 6, Jordan 6, Berkeley 5 and Garsed 2. The final result was at 5 pairs, the result being Berkeley 6, Gilmer 6 and Glenn 3. By the time this event was finished the light was fading, and all hands packed their kits and started for home and supper. In the evening we met quite a number of the club members, among them being W. F. Joyce, formerly proprietor of the Greensboro Kennels; C. W. Tate, whose duties as a revenue officer have caused him to lay aside his trap gun, and Garland Daniels, target champion of North Carolina. Pressure of business has compelled this trio to give up trap work and the club is still further weakened by the removal from town of J. Livingston Lee and the death of J. R. Tate.

### The Lynchburg Gun Club.

R. Stockton Terry, president of the Lynchburg Gun Club, has a war and civil history that would fill a large volume. In his day Mr. Terry has owned some of the finest of field dogs, has been and still is one of the best field and trap shots in the State; bears the distinction of having been Col. Mosby's commander during the Civil War; is the friend of every man, woman and child in Lynchburg, and at the trap has a position that is all grace and ease. At the depot we were met by James M. Cleland, whom we had the pleasure of meeting at Knoxville. Here we also met T. F. Nelson, one of the town's most prominent tobacco merchants, and Wm. W. Dornin, crack shot, hale fellow well met, and an all-around sportsman of the genuine Virginia type. Dornin is captain of the gun club and one of its most reliable members, as well as its prime hustler. Soon after we met B. G. Empie, another genial companion and a rattling good shot. C. W. Scott was another one to extend a cordial greeting to FOREST AND STREAM. Mr. Scott is a partner in one of the city's big dry goods houses, and shoots purely for the sport he derives from it.

About 3 o'clock we started for the shooting grounds in the family conveyance of Mr. Dornin, and half an hour later hurriedly sprang for the shelter of the club house verandah to escape a sudden downpour of rain. Other members had preceded us, and lolling about under the trees were the colored trappers.

The grounds, comprising three acres, are situated about three miles from the city, adjoining Rivermont Park, and are without exception the most attractive and best equipped of any we have ever visited. The house, with its 30×18 room, one story in height, is provided with a 12ft. wide verandah running its entire length, and is a handsome structure within and without. At one end is a dressing room, with members' lockers and toilet utensils. The main room is ceiled and sided with 3in spruce, and the walls are ornamented with mounted animals and birds, skins and other trophies of the chase.

To the shooter, however, the most attractive feature is the arrangement of the traps, etc The traps of the approved bluerock expert pattern are five in number, and the trappers are protected by a screen of ⅛in steel, 36in. high and extending across the line of traps. The traps are firmly and permanently secured to a heavy block of 4in. oak, this in turn being bolted (with two U bolts) to a flat stone 24in. square and 3in. thick, making the traps perfectly rigid. The shooters face toward the east-southeast, and at each firing point is a stone 2ft. square. The North electric pull is used, and by an ingenious system of piping the entire outfit, except the keyboard, is continuously in place. Steel box covers are provided for the traps and one for the battery bench and stand. The wires all run through piping and are so arranged that no moisture can affect them. Instead of stretching a rope to keep spectators from encroaching upon the shooters they have a chain fence extending entirely all score line and traps. The club also has a 30×15 fly which they pitch in rear of the score line when a large party is present, this tent being provided with three portable gun racks and tables.

The view from the grounds is a magnificent one, and would that we wielded the pen of an artist in order to do justice to the scenery, especially on this afternoon with its constant recurring from light to shadow, when the clouds would break and the sun peep forth for an instant a fleeting glimpse could be had of the famous Peaks of Otter, but no sooner did one succeed in getting their proper location than they would disappear in a haze.

Owing to the fact that the Hardware Association held its annual reunion at Richmond on this day the number of shooters was lessened by half a dozen, but still there were enough on the grounds to have an extremely pleasant time. Among them was W. L. Moorman, one of the city's leading business men, who with his 278lbs. weight is still as active and supple as a boy. There was also General J. Holmes Smith, a partner of Mr. Nelson, who shoots a winning gait despite the handicap of having to use a left arm that was badly shattered by a shell during the late war. T. F. Stearns, cashier of the Traders' Bank, was another of the shooters. Still another was State Senator R. L. Miller with a once-heard-never-to-be-forgotten 10-bore gun and 3½drs. of nitro powder, the recoil of which sadly shook the petite French fencing professor who was persuaded to try "just one shot."

The shooting was rather intermittent at first owing to a number of heavy dashes of rain, but about 4:30 it cleared up and business was begun in earnest. Within an hour after the sun appeared there were fully a hundred visitors on the grounds, at least one-fourth of them being ladies, who were deeply interested in the sport. On clear days, we were informed, there are frequently from 200 to 300 spectators on the grounds, and almost a majority of ladies can be counted upon. This club has an iron-clad rule prohibiting the shooting of sweepstakes on their grounds, and in consequence no element of gambling can be introduced.

The first event was at 25 targets, for practice, known and unknown angles. Unknown angles, Terry 21, Empie 20, Nelson 19, Dornin 18, Cleland 16, Moorman 14; known angles: Nelson 24, Stearns 18, Cleland 16, Scott 15, Smith 15, Miller 14.

Then came the contest for the "Silverthorne medal" at 9 singles and 3 pairs. A member who has won this medal more than once is thereafter obliged to stand in the center and shoot from 5 unknown traps at different angles. Those who have won it once shoot thereafter from 3 unknown traps and angles, and the non-winners shoot from known traps and angles, the above, of course, applying to the shooting at the 9 singles. At the 3 pairs all shoot from the 14yd. mark. The contest was close between Empie, Terry and Moorman, but the former finally pulled out what was a popular victory. The scores:

Class A.

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Terry | 111000111 | 10 10 11 | —10 | Nelson | 101010101 | 10 10 11 | — 9 |
| Dornin | 101000110 | 10 11 11 | — 9 | | | | |

Class B.

| | | | |
|---|---|---|---|
| Smith | 000100100 | 10 10 10 | — 5 |

Class C.

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Empie | 111011111 | 10 10 10 | —11 | Cleivand | 111110110 | 10 01 00 | — 9 |
| Scott | 111000100 | 01 00 00 | — 5 | Moorman | 011110111 | 10 10 10 | —10 |
| Stearns | 011110010 | 01 10 10 | — 8 | Hamner | 000000001 | 10 00 10 | — 3 |
| Miller | 001111110 | 10 00 10 | — 8 | | | | |

The next contest was to decide the winner of a medal awarded to the member making the highest aggregate number of breaks at four consecutive shoots, twenty-five targets each shoot. Terry and Nelson have had several nip and tuck contests for this medal and when today's shoot was called Terry was one target only ahead of Nelson. The latter put on an extra spurt and finally beat Terry out by one bird on the aggregate. The scores:

Unknown Angles.

| | |
|---|---|
| Nelson | 0010111011101111111111111 - 20 |
| Terry | 1101001111101101111110111—18 |
| Dornin | 1100101001111111111011111—19 |
| Moorman | 0111111000111010111111101—18 |
| Cleland | 0110110001111001101011110—15 |
| Empie | 1110011111000111110011111—18 |

Known Angles.

| | |
|---|---|
| Scott | 1010010011001010000111111—18 |
| Stearns | 0110100101010010101011110—14 |
| Smith | 1110001110001011110011110—15 |
| Miller | 1011010010110111111111101—18 |
| Hamner | 1101000001111000011000111—12 |

The winding-up shoot of the day was at 25 singles, unknown angles, in which the scores were: Terry 24, Empie 21, Nelson 20, Dornin 19, Moorman 19, Cleland 17.

During the afternoon a number of the visitors both of the gentle and stern sex tried their hands at smooth-bore work, and some clever breaks were made. Before adjournment a fencing bout took place between a professor of the art and an amateur, the honors resting about even. This closed the exercises and soon the party were on their way homeward. After supper FOREST AND STREAM received a call from a number of club members and several hours were pleasantly passed in "comparing notes." All the evening the rain kept falling, the following morning it kept up the trick, and not until we were midway to Washington did the sun appear. When we left Lynchburg it was with regret, and for many a day there will linger in our memory pleasant recollections of the hospitable treatment we received from the members of the Lynchburg Gun Club.

C. H. TOWNSEND.

### Crystal Lake's First Annual.

URBANA, Ill., June 20.—The first tournament of the Crystal Lake Gun Club is over and everybody had a good time. It was exceedingly gratifying to the management to hear such men as Budd, Grim and Powers say they had never enjoyed themselves better at any tournament. But why should they not enjoy themselves at every tournament they attend? Such thorough gentlemen are not hard to entertain. In addition to the above-named gentlemen Mayor Mosier of Gilman, McGruder of Kankakee, Surface Brothers of Decatur, "Partington," "Tucker" and Comstock of Indianapolis and Postmaster Ed. Vohries and W. W. Washburn of Crawfordsville were here and all "lugged" home a little money, and no home shooter begrudged them a dollar they took with them.

The extremely hot weather made the shooting difficult and not up to the standard, but nevertheless neither the hot weather nor the low scores made discouraged any of the participants, as the entries show.

We opened business with 17 entries in event No. 1 and ended the programme the last day in last event with 23 entries. Event No. 6 the first day had 50 entries and in several others the entries were in the forties.

We used the North handicap, and it worked to perfection; used the rapid-firing system from five expert bluerock traps and everything sailed along in good shape. The "ping" of S. S., wood and E. C., also the "boom" of the black powder—for the "rainmakers" with their cannons were there—made merry music. To the last mentioned gentlemen the whole community are grateful for their generous downpour of rain we enjoyed immediately following their departure.

Not a shooter present but promised to come to our tournament next year. There are a number of readers of FOREST AND STREAM in our locality and especially in our gun clubs, and if your office contains a peck of "0" we will be pleased to furnish you with our weekly scores.

Following are the events, added moneys and scores:

No. 1, 10 singles, entrance $1, $10 added: Partington 8, Foster 8, Peck 7, Magruder 8, Peake 6, Howe 5, Sheppard 7, Gere 8, Miller 7, Balmer 4, Conklin 7, Surface 8, Harris 6, Tucker 3, Bills 5, Cumstock 5, Washburn 8.

No. 2, 15 singles, entrance $1, $10 added: Peake 11, Faber 12, Talbot 9, Balmer 7, Allen 9, Magruder 14, Mosher 8, Fortier 11, Budd 12, W. Surface 14. Grimm 13, Peek 14, C. E. Surface 12, Percival 9, Powers 11, Ogden 12, Ludwick 13, Kirbye 5, Hoy 8, Partington 11, Howe 8, Bills 11, Gere 9, Washburn 12, Harris 12, Miller 11, Shepard 5, Percival 14, Dibble 3, Westhuff 9, Comstock 10, Conklin 13, Tucker 12.

No. 3, 20 singles, entrance $1, $15 added: Percival 13, Garrison 10, Code 12, Gere 12, H. Percival 15, Talbot 13, Hoy 15, Bills 13, Somers 12, Kirby 17, C Earl 15, Tucker 11, L. Earl 15, Prather 14, F. Code 18, Allelr 17, H. Earl 13, Powers 17, Ogden 14, Moshier 19, Fabert 10, Budd 19, Forter 16, C. E. Surface 17, Miller 12, Grimm 18, Balmer 10, Conklin 14, Partington 17, Ludwick 14, Comstock 14, Percival 15, Washburn 12, Magruder 18, Shepard 12, W. Surface 13, Harris 12, Peek 11, Howe 14, Westhuff 13.

No. 4, 15 singles, entrance $1, $10 added: Comstock 11, Westhuff 12, Wahl 11, Sheppard 9, H. Cade 8, Balmer 7, Ludwick 8, C. E. Surface 13, Ornbaum 12, O. Percival 11, Ogden 12, Bills 12, Allen 11, Partington 12, Fortier 9, Peck 13, Tucker 11, Reed 4, Talbot 5, Stenceal 9, W. Surface 10, N. E. Neal 5, Conklin 9, Gere 10, Washburn 13. J. H. Percival 13, Voris 11, Powers 13, Magruder 14, Grim 13, F. Cade 12, Moshier 14, Budd 12.

No. 5, 10 singles, 5 pairs, entrance $1, $15 added: Moshier 14, Magruder 13, Grim 17, Washburn 6, J. H. Percival 10, Powers 17, Peck 12, C. E. Surface 17, Gere 10, Sheppard 11, Clark 8, Allen 12, Prather 12, Voris 14, Tabert 13, Arms 9, Tucker 7, Parthington 17, Bills 11, Peake 9, Ornbaum 11, Balmer 8, W. Surface 16, Fortier 12, F. Cade 15, Conklin 15, Ogden 16, Westburg 12, Taggart 14, C. Irle 14, Budd 14, E. H. Kirby 14.

No. 6, 20 singles, entrance $1.50, $20 added: C. Surface 17, Grim 18, Budd 17, Powers 15, Partinger 12, Comstock 12, F. Cade 13, W. Surface 14, Aden 11, Rogers 14, Wahl 15, E. Kirby 15, Moshier 17, Magruder 19, O'Neil 12, Voris 16, Washburn 17, E. M. Kirby 14, Flatt 14, Ogden 17, Conklin 12, H. M. Clark 13, O. Percival 14, Peck 16, Bills 12, Fortier 14, Slamey 16, S. Somers 16, Gere 13, Tabert 11, Harris 13, Anderson 12, Sheppard 13, Allen 16, J. H. Percival 15, Tucker 12, H. Cade 9, Guy 17, Howe 10, West Luff 11, S Kirby 15, L. Irle 15, Ornbaum 17, C. Percival 15, Prather 13, Ludwick 16, Westburg 13, C. Cade 10, Framar 6, Irle 14.

*Second Day.*

No. 1, 10 singles, entrance $1, $10 added: E. Y. Kirby 7, Wahl 7, Somers 5, F. Cade 8, Mosher 9, Comstock 9, O. Perceival 8, Magruder 9, Clark 5, Sheetz 1, Partington 7, Grim 8, Voris 9. Gere 10, Bills 8, Sheppard 7, J. H. Percival 7, Powers 9, Conklin 5, Fortier 9, Peck 7, Fabert 3, Ombaum 6, Tucker 6, Ludwick 5, C. E. Surface 9, C. A. Percival 6, Budd 10, W. Surface 6.

No. 2, 15 singles, entrance $1, $15 added: Gere 6, Budd 13, Voris 8, C. E. Surface 13, Comstock 15, Magruder 13, Powers 11, Fortier 13, Mosher 14, Grinn 13, Bills 12, Sheppard 10, Prather 12. E. Somers 6, Wahl 10, Tucker 7. J. H. Percival 15, Thorpe 12, Clark 7, D. Smith 10, E. Cade 13, Partington 13, C. A. Percival 11, Conklin 11, H. Cade 11, Ludwick 11, E. M. Kirby 11, Overly 7, Flatt 6, O. Percival 8, C, Cade 9, W. Surface 12, Fabert 9, E. W. Kirby 14, Guy 9, Schultz 4, Ombaum 14, Rogers 14. Peck 12, Aden 15.

No. 3, 20 singles, entrance $1, $15 added: C. E. Surface 16, Comstock 13, Percival 14, Aden 17, Mosher 19, E V. Kirby 15, Ombaum 18, Rogers 16, Grinn 18, Budd 20, Magruder 19. Bills 14, Powers 12, F. Cade 18, Schultz 4, O. Percival 14, Kerr 11, Keefe 11, Shuck 12, Overly 10, Peck 6, Gere 14, Partington 18, Tucker 14, Fortier 15, Fabert 12. Sheppard 14, D. Smith 10, H. Cade 15. Conklin 12, Stamey 6, Miller 12, W. Surface 16, H. Earl 14, Pratton 10, Clark 16, Wahl 16, Thorpe 17, A. Percival 17, Guy 13, Emery 19, Lewis 17, Ludwick 14, Wright 15.

No. 4, 10 singles and 5 pairs, $1.50 entrance, $20 added: Grimm 18, Comstock 12, Magruder 15, Rogers 17, Bills 13, E. V. Kirby 18, Powers 16, Voris 15, Gere 14, H. Code 13, Partington 14, Conklin 14, Tucker 12, Aden 16, Fortier 17, F. Code 12, Peck 14, Keefe 6, Budd 16, Moshier 14, Emery 14, C. E. Surface 18, W. Surface 14, L Kirby 13, Lewis 13.

No. 5. 20 singles, $2 entrance. $20 added: Grimm 17, F. Code 10, Kirby 14, Clark 14, C. E. Surface 11, W. Surface 15, Rogers 10, Fortier 17, Voris 16, Comstock 15, Ombaum 16, Partington 17, Powers 14, Budd 20, Magruder 14. Bills 12, Gere 15, Moshier 17, Irle 14, Wahl 15, Conklin 14. Thorpe 13, H. Code 10, Aden 18, Guy 12, J. H. Percival 18, S. Somers 14, E. M. Kirby 16.

No. 6, 25 singles, $2 entrance, $40 added: Budd 23, Gere 16, F. Code 18, Moskins 22, C. E. Surface 23, E. V. ### New Jersey League at Springfield.

THE fifth monthly team contest of the New Jersey Trap-Shooters' League, held at Springfield, on June 26, in conjunction with an all-day tournament of the Union Gun Club, of that place, was a fairly successful affair, although the number of entries in the programme events was smaller than at any previous shoot this season. The early hours of the day were fairly cool and pleasant; at noon there was a heavy shower, and another one just before 2 o'clock, the rest of the day being hot and sultry. E. D. Miller, who is rapidly recovering from the injuries to his left hand, was in charge of the management, and Dr. Hedden officiated in the cashier's box, using FOREST AND STREAM's "Ready Reckoner" in squaring up his events. The doctor says the possession of a "Ready Reckoner" reduces the office of cashier to a sinecure. The working of the traps was far from satisfactory, No. 1 trap in particular taking a notion at times to throw the targets almost parallel with the screen. The fault was caused by the traps not being securely fastened.

Another thing that could have been improved upon was the scoring, the League secretary who is away from home, having failed to supply Mr. Miller with either score sheets or carbon paper, and the latter was trying to make use of cardboard score sheets and a lot of worn out carbon sheets which had been discarded by reporters at former shoots. Thanks to the FOREST AND STREAM's handy score pads, however, along with a couple of sheets of carbon found in our pockets, the representatives of the press succeeded in getting each a file of the events of the day.

The team shoot was called shortly before three o'clock, six teams entering, the only absentees being the Myrtle Parks of Irvington. The struggle for first honors was close between the Maplewood and Climax teams, the victory finally perching on the banners of the Maplewoods' "Big Five," who broke 105 to the Climax's 100. Not an individual succeeded in making a clean score, which proves that the shooting was by no means easy. In fact, 23 was the high mark, and this was reached only by Keller, Van Dyke and Sigler. In eleven sweepstakes events, with an aggregate of 156 entries, only six full scores were made; four at 10 targets and two at 15 targets each.

As both the team and individual prizes are to be awarded for the highest aggregate number of breaks in four out of seven contests, none of to-day's scores are at all likely to have any bearing on the results. The aggregate number of breaks to date by the several teams, as well as the leaders in the individual race, are here shown.

STANDING OF THE CLUBS.

| | Feb. | Mar. | Apr. | May. | June. | Total. | Best 4 Scores. |
|---|---|---|---|---|---|---|---|
| Maplewood | 113 | 118 | 101 | 118 | 105 | 555 | 454 |

| Sigler | 23 | 22 | 23 | 21 | 23 | 112 | 91 |

After the team race was ended the Brunswick and Myrtle Park clubs drew for the next shoot, the choice falling to the Brunswicks, who announced that the shoot would not be held until September. This was satisfactory to all at the time the announcement was made, but afterward one of the officers of the Myrtle Park appeared and he strongly objected, stating that his club wished to hold the League tournament on their grounds in August, but under the present arrangement they would be obliged to wait until October. They will endeavor, however, to secure the consent of the Brunswick Club to hold the sixth tournament at Irvington, this not interfering at all with the Brunswick Club arrangements.

Here will be found the scores of the team race and lower down the sweepstake events:

| F Southard | 1110111011101111011011111101 | —24 |

B. C. EVERINGHIM, Sec'y.

## Eureka Gun Club of Chicago.

OWING to the extreme bashfulness of most of our members, the absence of the writer, and the much regretted illness of that prince among men and sportsmen, Mr Waters, of FOREST AND STREAM, our doings have not been published for the past four weeks, so we make haste to let our friends hear from us. Looking over the scores made while I was away, I find nothing to be ashamed of; perhaps it was thought that we might be able to get a few matches, if our scores were not published; and by the way, why do we not, here in Cook county—with so many gun clubs? Why do we not visit each other more? and shoot a club races of 10 or 15 men now and then? Why do we not have a city or county league, with team and individual contests, regular meets and annual trophies? If this meets approval let us hear from you. The Eureka Gun Club will join in a call for a meeting with this object in view. Our shoot of June 23 was not as well attended as usual, owing to its being Derby day, but we managed on this dull afternoon to throw 1,500 clays, for what we lacked in numbers we made up in enthusiasm.

Though we have many visitors at our shoots, we still wish to repeat our invitation to shooters visiting or local to meet with us as much and as often as they may wish; our grounds are at Seventy-ninth streeth and Vincennes avenue, Auburn Park, Eastern Illinois or Rock Island railways, 1 P. M. train; buy a ride of some club member, most of whom have 10 ride tickets; or take State street cable cars, transferring at Sixty-first street to Auburn Park car, 5 cents for the whole ride. WM. F. DEWOLF, Cor. Sec'y.

Medal shoot, 25 birds, known traps, unknown angles:

## Spokane Rod and Gun Club.

SPOKANE, Wash., May 28.—The Spokane Rod and Gun Club held their last medal shoot of the season yesterday Tom Ware and H. Doolittle won the A and B medals respectively at yesterday's shoot. The whole season was twenty-six shoots, and the member winning it the most number of times becomes the winner. In the A class Tom Ware has won it 18 times, Carson 2, Eckhardt 2, McBroom 2 and Mason 2, in consequence Tom Ware is the A class winner. In the B class J. R. Burke has won it 9 times, Knight 5, Doolittle 5, Duffy 4, Morgan 2, A. Ware 1, and so the B class medal falls to the lot of Burke. Following are the scores of yesterday's shoot:

Medal shoot, 20 singles and 5 pairs:

Class A.

| | | |
|---|---|---|
| Wise | 11101100101100111101 | 00 11 11 11 10—20 |
| Mason | 11011011100100111101 | 01 11 11 00 10—19 |

No. 2, 10 singles: T. Ware 10, A. Ware 7, Doolittle 7, Mason 7, Carson 7, Morgan 4.

No. 3, 10 singles: A. Ware 9, Carson 9, Doolittle 7, Morgan 6, T. Ware 6, Mason 6.

No. 4, 10 singles: T. Ware 9, Doolittle 8, Morgan 7, Mason 7, A. Ware 7.

J. W. WITHERS, Sec'y.

## The New Dupont Nitro.

THE Messrs. Dupont describe their new smokeless powder as follows: "The powder in color is similar to sawdust—yellowish white. It gives as good pattern and penetration as the best grades of black powder, while the pressure in the gun is no greater than with black. In loading any good paper shell may be used, preferably those having the No. 3 primer. Priming with black powder is unnecessary. No more wads should be used over the powder than will allow of at least ¼in. for crimp. The wads should fit the shell tightly and should be set firmly on the powder; owing to the hardness of the grain no danger need be apprehended from ramming. For good close pattern at 40yds. the following loads are recommended: For 12-gauge guns 2½ to 3drs. by measure, for 10-gauge guns 3 to 3½drs by measure, for 16-gauge 2½drs.; use the same measure as for black powder.

## Princeton's Wind-Up.

PRINCETON, N. J.—Owing to the heat that cut down the attendance of the resident members and the close of college that accounted for the absence of our best shots, the university contingent, the attendance at the Princeton Gun Club grounds on June 18 was light and the shooting poor. The only contest was for a handsome game piece, the joint gift of Mr. J. L Haukins and Dr. E L Tiffany. Robert R. Schellinger captured the trophy in good style. Score, at 20 targets from unknown traps, and balance rapid-fire from known traps, follows: Schellinger shot at 32, broke 17; Wesley, 40—10; Skirm, 35—15; Hoff, 28—16; Johnson, 31—8; Rose, 39—16. This shoot will probably close the regular events of the club for the summer, the fall campaign opening about Sept 15. WADS.

## "Trap-Shooter's Ready Reckoner."

THERE has just come from the FOREST AND STREAM press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

## Powder Hill Gun Club.

SAN ANTONIO, Texas, June 16.—Match at 30 singles and 5 pairs targets:

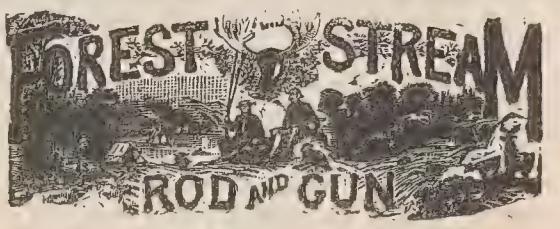
# Answers to Correspondents.

### No notice taken of anonymous communications

P. W., Yonkers, N. Y., is advised to consult out hotel advertising columns.



C. K. L., Upper Montclair, N. J.—1. The birds may have been mourning doves though they are much larger than a robin. 2. There are a few woodcock, but you will have to look them up yourself. 3. Coltons have published a number of excellent road maps of Essex and Union counties at fifty cents. We can furnish it.

N. L. L., Fulton, N. Y.—Will you kindly inform me if pickerel and pike are protected in the Oswego River, and the open season if protected? By pike I mean the wall-eyed pike, or pike-perch, and from the descriptions in your columns the "pickerel," as known here, is the "Northern pike." Ans. The law prescribes no close time for wall-eyed pike in the Oswego River, nor for pickerel.

J. H. S., Wyalusing, Pa.—What kind of fish would be most suitable to stock a pond of the following description: Size, about five acres; spring water, depth about 30ft., mud bottom; now contains minnows and small bullheads. Has some cranberry marsh and pond lilies. Should the fish now in it be destroyed? If so, how could they be killed? Ans. We should try black bass. The fish now there cannot be cleared out.

CULPEPPER, Los Angeles.—1. Is chilled shot lighter than soft shot, pellet for pellet of same size? 2. Would this difference in weight, if any, have any effect on the shooting qualities at long range? 3. Which do you consider the best for ducking at long range, chilled or soft? 4. Does the use of chilled shot injure the barrels or cut the choke out? 4. Which is best for use with nitro powders, chilled or soft? If you would answer the above you would greatly oblige. Ans. 1. There is no appreciable difference in weight. Chilled shot is theoretically a trifle the lightest. 2. No. 3. Chilled shot. 4. Possibly, but it has the advantage of not leading the barrel. 5. For most purposes, chilled shot.

A. G. B., Holland, Mich.—1. Would you kindly identify the following described birds for me? They are young, probably two days old. Length 5in., bill ¾in., tarsi 1in., middle toe 1¼in. Bill sharp, black, with a white band around both mandibles near tip and a white spot on upper mandible near base. Eye brown. Tarsi naked for ¼in. above knee. Color of chick entirely black and general form rail-like. Are they young king rails? Coues mentions the chicks of the clapper rail as being entirely black, but of course the clapper rail is not found here. 2. What is meant by "powder down tracts" on herons? Ans. 1. It is impossible to say exactly what the birds described are. That they are rails, or rail-like birds, is clear. The young of the genus *Rallus* are black, as are also said to be the young of the purple gallinule; the downy young of the Florida gallinule is black, but has a few silvery hairs on throat and cheeks. It is altogether probable that the birds described are young king rails. The bill should decide. 2. Powder down tracts are found in several families of birds, but are especially noticeable in the heron and their allies. They are described as thread-like down feathers which continue to grow indefinitely and which constantly break down at the ends of the barbs. This constant breaking down results in the tracts being dusted over with a dry scurfy exfoliation, whence the name powder down. By parting the feathers on either side of a bittern's breast, the powder down tracts will be seen. Different families of herons have these tracts in varying numbers, and they have been regarded by some ornithologists as of value in setting aside the families and sub families of this group. The purpose or uses of the powder down tracts are not well understood.

### CORRESPONDENCE.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

### SUBSCRIPTIONS.

Subscriptions may begin at any time. Terms: For single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter money-order or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain.

Foreign Subscription and Sales Agents—London Davies & Co.; Brentano's; Sampson Low & Co. Paris Brentano's. Foreign terms: $5 per year, $2.50 for six months.

### ADVERTISEMENTS.

Inside pages, 30 cents per nonpareil line. Special rates for three, six and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices $1.00 per line. Only advertisements of an approved character inserted.

Address all communications

**FOREST AND STREAM PUBLISHING CO.,**
318 Broadway, New York City

CHICAGO OFFICE, 909 Security Building.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS

Sand Worms 12 and 15c. per doz. White or Blood Worms, 25c. per doz.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at $1.19 until all are sold. These rods are all nickel mounted, solid reel seats, silk wound, extra tip, complete in wood form and will give satisfaction.

Length and weight of the Fly Rods are: 9ft., 6oz.; 9½ft. 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand.

Length and weight of the bass rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz., 10½ft., 14oz. Reel seats above hand.

No. H—A special lot of Hard Rubber and Nickel, Raised Pillar, Multiplying Reels with Balance Handle and Side Spring Click, 40yds., 63 cts.; 60yds., 78 cts.; 80yds., 88 cts.; 100yds., 98 cts.

Any of the above reels sent by mail for price and 10 cts. extra for postage.

No. E—Special lot Hard Rubber and Nickel Raised Pillar Click Reels, 40yds., 38cts., 60yds., 48cts. Sent by mail 5cts. extra for postage.

No. C—Nickel-Plated, Raised Pillar Multiplying Reels, with click and drag and screen oil cup, 40yds., 58c.; 60yds., 68c.; 80yds., 78c.; 100yds., 88c.; 150yds., 98c. 10c. extra for postage.

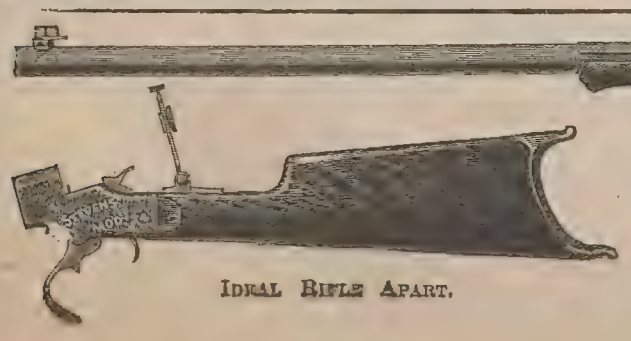
Single Gut Leaders, mist color, 1yd., 20c. per doz.; 2yds., 40c. per doz.; 3yds., 60c. doz. Double Gut Leaders, mist color, 2yds., 75c. doz. Hand Twisted Gut Leaders, 10c. each, 90c. doz.

A special lot of Trout Flies at 25 cents per dozen assorted, sent by mail 1 cent per dozen extra for postage.

A special lot of Bass and Pickerel Spoons at 5 cents each sent by mail, 1 cent extra for postage.

All kinds of Hollow Point best quality Hooks snelled to single gut 10 cts. doz.; double gut, 15cts. doz.; treble, 20 cts. doz.; four ply, 25 cts. doz. 1 cent extra per dozen for postage.

300ft. Braided Linen Reel Line on Block, 41 cts.; 300ft. of Hand-Made Linen Reel Lines on Block, 9 thread, 38 cts., sent by mail 3 cts. extra for postage.



Brass Box Swivels, all sizes No. 1 to No. 12., 15 cts. per dozen, sent by mail 1 cent per dozen extra for postage.

Special lot of best quality 100ft. Linen Reel Lines, 8 cts., 200ft., 15 cts.: 300ft., 22 cts.; 3 cts. extra for postage.

OUR LATEST MODEL 1894.

THE NEW IDEAL RIFLE.

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, $5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages Price, $3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, $3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, $1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, $1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, $1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oölogy of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7×9½in.), 147 illustrations. Price, $5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, $2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price $1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, $1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, $1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, $1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understanded of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, $2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidæ of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, $2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, $2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, $3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, $2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, $2.

### The Breech-Loader and How to Use It.

288 pages. Price, $1.00 A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, $1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, $1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, $1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., $1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, $1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, $2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, $3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, $1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, $2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, $6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, $3.00.

### The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, $2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14½×12½. Price, $10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, $3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, $2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, $1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, $16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, $10.

THE ILLUSTRATED CATALOGUE OF FOREST AND STREAM BOOKS WILL BE SENT FREE.

## Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

**Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.**

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

**Forest and Stream** *one year and the set of four pictures*, **$5.**
**Forest and Stream** *6 months and any two of the pictures*, **$3.**

Remit by express money order, postal money order, or postal note. Make orders payable to

**FOREST AND STREAM PUB. CO., New York.**

### *STRIKES AND FISHING WATERS.*

ONE of the minor inconveniences of living under the rule of a Dictator is the impossibility of knowing with any certainty whether one may go fishing or not when he wants to go and has planned to go. In ordinary circumstances, and under a form of government such as we have been accustomed to, whose affairs are administered by a simple President, the intending sportsman tourist is required to take into consideration only his own personal inclination and such factors as the restraints of his business or occupation, the health of his family, the resources of his purse, the dates designated in his copy of the *Game Laws in Brief*, the schedules of railroad and steamboat time-tables, and perhaps the responsibility and efficiency of his alarm clock. These permitting, and the "sign" being right, he packs his grip and goes. For the most part, all these customary conditions are determinable in advance, one may count upon them with reasonable assurance and may lay his plans accordingly.

But under the new order everything is changed, and one must take into account the whim, which no one on earth can predicate, of some crazy genius, who was never heard of before yesterday, and will never be heard of after to-morrow, but who for the brief moment is the mushroom autocrat of the hour. With the appearance of the Dictator, fishing plans are suddenly discovered to be all awry, and projected outings are thwarted by the will of the new ruler, who shuts down the railroads of the land, and who says to his subjects, stop, and they stop; and to his victims, stay, and they stay.

Strike statistics, which have to do with roads tied up, and men on strike, and troops called in, and traffic suspended, and property destroyed, and human lives sacrificed, do not concern themselves with any enumeration of the hosts of fishermen who have been compelled to forego their contemplated outings during the past fortnight by the interruption of railroad travel; but the multitude of them is to be reckoned by thousands; and the aggregate of disappointment and inconvenience and bitterness of spirit is something altogether incalculable.

There is a certain degree of comfort to be derived from what might be termed the philosophy of comparative misfortune, by the aid of which one may find alleviation of his personal sense of injury in contrasting his own hard lot with the harder lot of another. We commend this, for what it is worth, to those who have been robbed of expected holidays by the railroad strike. They may very well reflect that to be deprived of a fishing trip is after all but a trivial hardship when compared with the loss, discomfort and distress which have been inflicted upon other people. What the traveling public has suffered at the hands of these guilty leaders can never be told. The security and pleasure of traveling have been converted into peril and apprehension. Business engagements have been broken, family reunions deferred. Glad anticipations of home coming have given place to anxiety and suspense. Most cruel of all has been the delay of those who were speeding to the sick beds of loved ones, some hurrying for the everlasting farewells of the chamber of death. Surely if there be any lightening of our own troubles by weighing them in the balance against those of others, there is abundant opportunity for such comfort here. But the weak point of this philosophy is precisely like the weakness of much other philosophy ancient and modern, that it proves to be more satisfactory in speculative theory than in practical application; and the average man who has been cheated of his fishing will not be likely to find in it much compensation for his disappointment.

### *PASSPORTS.*

PASSPORTS are so essential in Russia that Russian lawyers define man as a being made up of three parts—a body, a soul and a passport. If non-resident shooting and fishing legislation goes on in this country the time will come when the Russian definition of a man will be the American definition of a sportsman.

---

We noted at the time of its adoption a foolish ordinance of the Livingston county, N. Y., supervisors, requiring non-residents to take out a fishing license with a $10 fee attachment. This un-American law was an outgrowth of spite. Certain citizens of that county had been prosecuted for violations of the fishing laws, and as they alleged the prosecution had been instigated by persons who lived in adjoining counties. They were irritated and devised the non-resident rule to "get even." As might have been anticipated, a regulation having no better justification than this could not be sustained by the second thought of the community and naturally enough it has proved a dead letter. Foreigners from Monroe and other neighboring counties are not required to have their passports viséed before fishing in Livingston. We congratulate the people of that county that the American spirit has thus triumphed over a reactionary sentiment worthy of Russia.

---

Virginia has modified the non-resident discrimination affecting non-residents shooting wildfowl in Accomac and Northampton counties. Under the old law non-residents were forbidden to shoot wildfowl any State tide-waters except in Accomac and Northampton, where an exception was made in behalf of those who shot for pleasure and not for profit and were under the guidance of a resident. The modified statute now in force retains the general provision forbidding non-resident shooting of wild geese and wild ducks in the State at large; but it permits non-residents to shoot in Accomac and Northampton without restriction other than they must be members of the Eastern Shore Game Protective Association, and must comply with its by-laws.

This Association, chartered by the Legislature of 1894, has been formed for the purposes, as set forth in its charter, of procuring and securing enforcement of a wise and judicious system of laws for the preservation of the game of the Eastern Shore, restocking such portions of the shore as are depleted of game, offering rewards for the killing of game-destroying animals and birds, the encouragement of an interest on the part of the people in preserving of the game laws and informing upon and securing the punishment of the violators of such laws. The initiation fee is one dollar and the annual dues are one dollar. If the Association shall in any measure accomplish the worthy purposes of its formation, no visitor, whatever opinion he may hold as to non-resident laws in the abstract, will begrudge it the dollar demanded of him. The secretary is Mr. Thomas W. Blackstone, Accomac C. H., Va.

### *AN AFRICAN GAME SCHEME.*

THEY are undertaking in South Africa what we are accomplishing in America with our National Park, to preserve from extinction representative species of indigenous game animals. Africa has commonly been regarded as the home of an innumerable and inexhaustible supply of wild animals, but the principle holds in Africa as everywhere else, that no native stock can withstand the encroachment of civilization and of indiscriminate pursuit. The immediate prospect is that without some measure to arrest the present rate of destruction, many species will follow the quagga into extinction.

Europeans have been mainly responsible for this condition, and it is altogether fitting that Great Britain should now be considering a remedy. A provisional committee of British sportsmen and naturalists, called to provide a plan of protection for African game, proposes that a society shall be formed which shall have for its object the preservation of small herds of each of the thirty-five to forty distinct game species which appear to require such intervention. The scheme provides for an inclosed tract of 100,000 acres, surrounded by a fence of wire, this to be strengthened by a hedge of live thorn on the outside. The eland, koodoo, roan and sable antelopes, hartebeest, zebra, blue wildebeest, reedbuck and other game still exist in the district where the preserve is to be built and could be driven into the inclosure, while the preserve could be stocked with the captured young of other species.

The progress of this African enterprise will be watched with keen interest the world over.

### *SNAP SHOTS.*

IN the Santa Barbara *Press* last month there appeared an account written by Dr. Lorenzo Yates of the killing of two female, or young, mountain sheep, on the Ferndale Rancho, near Santa Paula, in Ventura county, southern California. The last published account, so far as we recollect it, of the killing of a bighorn in this neighborhood, was in the FOREST AND STREAM in 1887, the animal having been killed by the late Israel Miller, a jeweler of Santa Barbara. The killing of these two animals shows that there are still a few mountain sheep in the coast range in southern California and, of course, it is well known that they occur in small numbers still further to the south, in the mountains of Lower California. It is greatly to be wished that steps might be taken to preserve these few remaining individuals of one of our finest game animals. The specimens told of by Dr. Yates appear to have been killed in May or June, and their destruction at such a time was a violation of the game laws of the State.

---

"And then the air about there was blue," usually and conventionally concludes the story teller when he has described how the tackle parted at the critical moment or the gun hung fire. The statement is a paraphrase intended to convey in a jocular manner an intimation that somebody swore vehemently. It is a variation of the common expression that one "swore a blue streak." Its use in field sketches might be traced, perhaps, to the days when Dr. Faustus went fishing with Mephistopheles, for between them they had a way of making the air blue. From that time to this, chroniclers of the adverse fortunes of the sportsman have not failed to envelop him in a halo of profanity in the moment of his chagrin. The supply of this blue air is to all appearances inexhaustible; but we have long suspected that the average reader of field literature would quite cheerfully get along without it.

---

The term of FOREST AND STREAM'S publication has been notable for the development of artistic and mechanical processes. It would have been impossible twenty years ago, by any method then in vogue, to produce such realistic pictures of wild life as are given in our game illustrations in current issues. The plates from which these pictures are printed are made directly from the photographic negative, without the intervention of the artist's pencil. They are faithful representations of nature; they show the real thing as the sunlight paints it; and for that reason, it need hardly be said, they are a thousand times more satisfactory and valuable than any drawing would be.

# "Forest and Stream's" Yellowstone Park Game Exploration.

No. 8.

### Still More Buffalo.

THURSDAY morning, March 22, we left our camp for further efforts at locating the buffalo, no large band of which had yet been seen. The parties separated. Billy and I intended to cross the Divide after finishing our work in Hayden Valley. The Haynes party returned to the Cañon, and we did not see them again until after our return to the Mammoth Hot Springs. Haynes took John Folsom along as a guide to find the buffalo. Billy said nothing much, but I think had an idea we would find the buffalo over on the Mary's Mountain hot country, which we would not reach until the following day. We intended to pass the night at the shack on Trout Creek, west of the valley proper.

Our party had been on the trail for an hour or two that morning, when we sighted buffalo away off to the northeast, on top of a ridge near Alum Creek. They were so far as to seem mere specks. We pushed on without leaving our course until we came to a little spit of timber running out into the open valley, and here made a temporary camp, taking off our packs and building a fire. Larsen and Holte had never seen a buffalo (they had not been with us the day before), and we concluded to let them go out with Billy while I kept camp and made tea against their return. It was decided that they should circle around the buffalo and turn them down toward the creek if possible, so that they would pass Billy, who was to make off to the left and go down one of the draws which ran down to the creek in that direction. The buffalo were about 2½ miles from us. Billy's experience taught him that when disturbed in that part of the valley they would usually run over to the Mary's Mountain country, which would accord well with our plans for the next day. Accordingly they three set out, going in divergent directions.

### Sign.

I found the young trees in the timber point almost worn bare by the elk, which had evidently made that a favorite scraping spot for the hardening of their horns after the season of velvet. Still larger game, too, it seemed, had found this a cool and shady spot in summer, for on digging away the snow for a place to make a fire, I found quantities of buffalo chips. Of these I made my fire, and I imagine this was the last camp-fire in America ever built of the old-time *bois des vaches*.

### The Surround.

From my place at the timber point I could see the buffalo feeding along the ridge where we first sighted them. There were eleven of them. At length I saw two tiny figures appear away off to the right, unseen by the buffalo, and these I knew to be Larsen and Holte. Billy I could not see. Larsen and Holte went clear beyond a ridge and I could see them no more, but knew they were making their stalk close up to the herd. Larsen afterward told me that they got to the top of the ridge, within 40ft. of the buffalo, which were feeding just below the crest on the other side. "They didn't like that deep snow," said Larsen, and they wouldn't run. They look at Pete and me, and shake their heads and say 'moo!' down deep. Pete and me thought they was going to run over us. That scared Pete and me. I think that was a good chance for one of them pictures."

### The Stampede.

That was what Larsen and Holte saw. What I saw was a whole eruption of buffalo come boiling over the top of the hill back of my eleven buffalo, and go tearing down the hill toward the creek. Their speed appeared to be very great, and there was a great idea of power conveyed by the way they plunged ahead through the deep snow. I counted them as well as I could, about thirty head, including the two bunches. The boys had found another bunch beyond the hill on which I could see the eleven head.

### The Shot.

What Billy saw was both these two bunches and also a third one of about forty head, which was invisible to all of us at first, but which was picked up by the stampede as it crossed their feeding ground lower down toward the creek. The whole outfit, about eighty-five head in all, passed close by Billy where he lay concealed with the big camera, and got several shots at them as they strung by.

All this took five or six miles of *ski* work and two or three hours of time. The men were all tired when they got in, and we freshened up with lunch and tea.

### How the Buffalo Feed in Winter.

Billy remarked on having seen a great many wolves while he had been gone, on a piece of country back of where he photographed the buffalo, and not far from our line of march, and said he came near getting a photograph of some of them. We saw one or two coyotes at a distance, over in that direction, soon after we took the trail after lunch. We now were on the natural winter feeding grounds of the buffalo. The snow here does not lie so deep as it does in the forests, because of the warmth of much of the ground, and because of the winds which in places strip the open ground nearly bare of snow. Moreover, there is good grass over this valley country—or would be if the thrifty haymakers of the transportation country would let it alone as they should—and once in a while we saw the tip of a shrub or two which may or may not afford the buffalo food. As we kept on our course, which now made a chord to the wide arc of Alum Creek, which bent off to our right, we met abundant proof that the buffalo and elk were using on this part of the valley. We crossed several "yards," where the snow was torn up as if by tremendous plows. The snow was only about 3 or 4ft. deep here, and for a space of 200yds. or more square it had been worked over carefully as the dirt of a placer mine. (The elk paws the snow away in feeding. The buffalo thrusts or roots with its head, throwing it from side to side in working down through the snow.) Deep trails connected the different yards. The sign appeared to be rather old, but we saw a big fresh lynx track, which seemed to be lining out just about the way we were going, and we also saw a mountain lion track, which seemed headed in much the same direction.

### The Find of Butchered Buffalo.

We pushed on in this direction for half a mile or so further, and as we topped a long ridge which bounded a wide valley making down into Alum Creek (I think it was near Trout Creek proper), we saw ahead of us about half a mile of country that was literally all tracked up with game.

It was all sign of flesh-eating animals. Our lynx and lion had been here, and so had a wolverine, and apparently thousands of wolves, coyotes and foxes. We saw a coyote or two and two foxes go skurrying away across the open for the timber as we came in sight. Further on we struck the trail of a very large bear, which surprised us, as it was very early in the season for bear to be out.

THE OLD BULL ASLEEP.

Photo by Haynes.

The trails seemed to converge toward certain little heaps of snow, and as we saw this we knew why the animals had gathered here in such numbers. We ran down to the nearest snow heap and found beside it a deep pit dug 4ft. or more in the snow. At the bottom bones and torn flesh were visible. On the snow lay wisps and curls of buffalo hair. In all we saw eight heaps, and supposed that eight buffalo had been killed.

This was where we made the discovery reported last April in FOREST AND STREAM, one of the items of the Park news which attracted wide attention over the country. As was stated in a later issue, Capt. Anderson sent Burgess down on the strength of our story, and from our description of the spot he was able to locate the killing, as he thought Burgess made out only four dead

LITTLE TROUT CREEK SHACK.

Photo by E. Hofer in 189

buffalo, and thought the other holes were to be accounted for by the fact that the wild animals had dragged off parts of the carcasses to a distance. The latter hardly tallies with my notion of the case, as the diggings seemed to be so far apart that it was hardly likely large portions of a carcass would be dragged so far. Burgess may or may not have hit upon our find, but in any event the matter was bad enough, for some time after that John Folsom discovered ten head more of dead buffalo in that same part of the country. That a killing of considerable extent had been made does not admit of doubt. The strange thing about it was that none of the heads or hides had been taken. Here is a bit of unwritten history of the Park in this, and no doubt after a while the facts will come out.

We had no means of digging in the hard, packed snow and so could not learn much about our discovery. Moreover, it was now 4 o'clock in the afternoon and we had still a long march ahead of us and a camp to fit up for the night. We left the place feeling a new indignation against the contemptible butchers who had been violating every law, civil and natural, in the destruction of these few remaining specimens of a nearly extinct race. Even Larsen and Holte were angry at it. Nothing would have pleased these sojer boys more than to arrest a poacher, but I am afraid the poacher would have been received at the Post in bad order had they run across him in the Hayden Valley that day.

### Headed for Camp.

The country we were now traversing must be in the summertime a very beautiful one, and even in winter it was not unpleasing. The open, rolling hills were crossed by occasional strips of timber which diversified a landscape which at that point could hardly be called mountainous, though the hills were long and often steep. Finally the "Valley," as this large extent of open hills is called, began to dwindle down and thin out into long arms of open country, running far up into the timber. We followed up one of these long, narrow glades, having some amusement at a puzzled red fox which was studying us from the other side of the glade. We kept climbing a little bit, always remembering the *ski*-traveler's maxim of getting elevation wherever possible, and never losing it unnecessarily, just as a civil engineer works when laying out a railway line. One arm of the valley dwindled out into fingers, and one of the fingers became a gorge. We turned to the left, under a sharp run down, and were in the lovely cañon known as "Trout Creek," wrongly so, as it is really Alum Creek, Billy says. Up this we traveled for half a mile, until finally we came to one of the littlest, tiniest, snow-coveredest and best hid little miniature log cabins in all the world—the "Trout Creek shack," built by the U. S. Army for the use of scouting parties and known only to a few of the patrol and to a guide or two like Billy. This small structure was set in against the rock wall of the cañon, of which it seemed a portion. The sweep of the continuous drift of snow that lined the mountain side took in and enveloped the cabin as it went, leaving nothing visible except the end and door. Inside was a fine white drift of snow, and the chimney was full of snow, and the windows were blocked with snow, and the roof was loaded with snow, and the woodpile was many feet deep under the snow. Still, we didn't mind that, and to our eyes the little cabin seemed a most acceptable abode.

### Winter Lumbering Operations.

A great trouble here was the getting of firewood, which we could only obtain at a distance of about 300yds., and far up the steep snow-covered hillside. Billy and I spotted a dead tree away up the cañon wall, and laboriously made our way up to it on the *skis*, but after we had it in lengths the worst of it was not over. The short logs sunk in the soft snow, and would not roll down hill. I wallowed shoulder deep in the snow in getting the logs down, riding a pine branch part of the time to keep from sinking too deep. Then Billy started my *skis* down to me, and at last tried to slide my *ski* pole down. The latter took a dive into the snow, and cost us a half hour's hard work. We found it 6ft. under the snow and 30yds. from where we thought it was, it having slid under the snow like a snake in the grass. After finding this we called out Larsen and Holte, who were busy at the cabin, and we all got on the *skis* and packed logs in on our shoulders. It took us an hour to get in our wood, and the sun had long since gone behind the further cañon wall. Water we got this time out of the creek, Billy locating an open hole by a deep dimple in the level expanse of snow which filled the little cañon. We dug down here and found a sweep of open water about 6ft. below, which we reached by buckling our belts together and letting down a tin.

### A Soldiers' Snug Harbor.

We fixed the chimney so it would not smoke by cutting a thick-foliaged young fir tree and standing it up alongside the chimney. This was a scheme of Billy's, who is a good deal of a schemer around a camp, and we found it worked all right. The little fireplace in the corner was not very big, but it was active, and it kept us warm all night. We had a good chance to dry out all our wet footwear and to put our *skis* in perfect order. Of course we had no bed clothing except the meager outfit earlier mentioned, but we passed a warm enough night, for the little cabin was so covered by the snow that it was nearly air-tight. We were all tired enough to sleep soundly, and we got a good night's rest.

### Off for the Divide.

The next morning, Friday, March 23, found us up and busy before the sun had begun to look over into our little cañon. In summer I should like to follow up that cañon, for I imagine it leads into roughish country, but it seemed we were to go in the other direction, to find an easier approach to the great divide, on whose edge we now were. The maps show the main Continental Divide as south of where we were, and the mountains there are rougher, yet from Two Ocean Pass, below the south line of the Park, it is practically all divide along the crooked range clear up to where we were and beyond. Alum Creek, on which we were camped, flows east into the Yellowstone, which empties into the Missouri. Nez Percé Creek, which flows west down the opposite side of the range, drains a watershed of great area into the Firehole and Madison, which in turn reaches the Missouri, it is true, though by way of a water system entirely different from that flowing to the east. The forks of the Snake, of course, lay to the south and west from us, across the Divide proper, whose further waters find their way to the Pacific. It was our intention to work up the east slope, across the hot country of Mary's Mountain, and then to make down the Nez Percé Creek and the Firehole to the Fountain or Lower Geyser Basin. This necessitated a journey of something over twenty miles, which had to be made all in one day. We burned our bridges behind us, taking only enough food for one meal, and storing away our single blanket and sleeping bag in the tin-covered box, which Uncle Sam leaves as a mess chest in every one of these patrol houses. This lightened up our loads considerably, and we were glad of it, for we knew we had hard enough work ahead. We intended, if we had any luck at meeting the buffalo on Mary's Mountain, not to return to the shack, but to keep right on. If we did not find the buffalo, we intended to hold a council, make medicine and form further plans later in the day.

Billy and Larsen started on ahead, Billy telling Holte and myself not to start for half an hour or so, in order that the approach to the buffalo might be made more

quietly and a better chance given than if the party were larger. Holte was complaining of his eyes, he having carelessly left off his glasses a part of the day before. and contracted a very good chance for snow blindness. We did everything we could for the eyes that morning, after we had put out the fire and put everything in military order about the shack.

### Again they Get the Buffalo.

We followed the trail left by Billy and Larsen until we had climbed up to the "hot country." Here there were numerous wide strips of bare ground, too hot for the snow to lie upon, where the buffalo evidently were in the habit of yarding. Abundance of sign was all about, and we saw deep fresh trails where there had been a stampede, so we knew that Billy had started the buffalo, whether he got a shot at them or not. I could see that part of the herd had plowed their way east back to Alum Creek, and part had gone straight ahead to the higher buttes into the dense forest and apparently in the direction of the heaviest snow, though we later saw that there was more hot country further up the mountain. As I learned from Billy later, he had had a splendid opportunity that morning. He surprised the whole herd on the lower hot strip of Mary's Mountain, and stalked them to within 40yds., as close as he cared to get. The light was good and he made several shots deliberately before the herd took fright. When they did start they went like a volcano, or an earthquake, or anything that is big and in a hurry.

### The Buffalo Estimated.

Billy thought that these were no doubt the same buffalo that we had photographed on Alum Creek the day before, and barring the six head we had seen lower down on Hayden Valley, we were quite sure that this constituted practically the entire Hayden Valley herd, from 80 to 100 in all—85 head as exactly as I could count it. We concluded it was not worth while to trouble these same buffalo any further, more especially as Billy had had fifty-eight shots at buffalo alone with his camera. The work on Hayden Valley seemed done. We took the Haynes report as to the game on the Pelican Valley, and decided not to make the long trip into that region in search of what we were practically certain not to find. The poacher Howell said there were only a few buffalo left on Pelican. We were now well settled in the conviction that the number of buffalo left alive in the Park was not one-half or one-third that generally supposed, and from what we had seen we feared that the killing had been heavier than any one had dreamed. I would state here that I think our view of the case was conservative and fairly accurate. One knowing the country less thoroughly than Billy might have supposed that the buffalo seen this day and the day before were two distinct herds. Believing this, his report would declare the number seen and actually counted to be just twice what it really was. Let us wait till some one has seen in one day and in one herd 200 buffalo in the Park before we ever again believe there are so many as that left. I do not believe there are 150. Of course I have not given all the little details of our investigations on Hayden Valley, but they were really thorough. We worked hard and crossed the valley from end to end and from side to side, and I do not think we missed a bunch of any size. Now we had seen the product of the hot country on Mary's Mountain, about the only other possibly wintering ground of consequence remaining to be visited. If our search had not been thorough, I think it will be long before one is made that is more so. As only a few portions of the Park are or can be inhabited by the large game in the winter season, we felt that now a great part of our work was done. It remained to take a look at the Nez Percé Valley, where occasionally a few head of buffalo drift in, and after that to return to the north and go over into the northeastern corner of the Park to see about the elk wintering there.

BUFFALO FEEDING.

Photo by E. Hofer.

### A Glorious Privilege.

The immediate thing to be done, after Holte and I had overtaken the others—at the end of five miles' hard shoeing through the heaviest timber on Mary's Mountain, where time and again Holte declared that Hofer was "sure lost and goin' clean wrong," though we stuck to the trail of the shoes ahead, or followed the arrow marks on the snow-covered rocks when the trail crossed the hot ground—the immediate and pressing thing to be done, however, was to get to the top of the divide as quickly as possible, and then get down again on the other side to the kitchen of the Fountain Hotel as fast as possible, or a little faster. So we pressed on up the grades of the east slope, only stopping for a moment for breath when we paused at all. In spite of the hard work and the hurry, I could not help pausing once in a while to look back at the majestic panorama which unfolded more and more as we climbed higher and higher up the mountain. It was a rare and noble picture that lay unfolded, and one that I shall cherish many a year in memory. The Hayden Valley and its setting-clasps of timber points lay like a jewel of the range before us. Beyond it the mountains faded into the sky, white peaks rising saliently between. Nearer at hand the summits and cañons were more distinct. Below us, in the immediate foreground, lay the black forest, with masses of shade and all the contrasted high lights of the incumbent snow, dazzling under the radiance of a brilliant winter morning. It was a glorious sight—a glorious, glorious privilege to see it!

### The View West from the Divide.

We crossed the last of the upper buttes of Mary's Mountain, with the many strips of hot country between, and at length came out upon Mary's Lake, directly on the summit. This body of water was now simply a level plain of snow. We found that by digging down a few feet in the snow we could get water, all the lower level of the snow seeming to be soaked full. We drank but sparingly, and pushed on hard as we could, for wherever the sun struck the snow now it was growing sticky, and we had many a weary mile before us yet. We did not follow the water trail which makes out for the west from Mary's Lake, but cut across a little ridge and finally worked out upon the west side of the Mary's Mountain summit or divide, from which we could look all over the Nez Percé Valley, down which we were to go. Here we paused and spent a long time in the view. Fifteen miles to the west and south we could see the two low, round-topped buttes which mark the Firehole Valley near the Fountain Hotel. The white course of the creek valley lay like a broad ribbon between, apparently running directly in under the foot of the mountain on which we stood. Between us and the foot of this summit there stretched a black forest of pines, through which no *ski* runner, no matter how daring, could run down direct, yet somewhere through that bristling wood, and somehow on that rugged mountain side, wound the single trail by which we could get down. What the run was to be, one can imagine. Five miles of it was to be very fast, then the gradual slope of the water grade down to the Firehole Basin, about 10 miles more.

### Some Civil Engineering.

The reader of this has perhaps traveled mountain trails, cut into the side of a declivity, and built on a grade so steep that a horse could barely go up or down. In that case it is only a question of the up and down angle, for the wheels sit flat or the horse goes on a level keel. But now suppose we blot out the entire trail with a fall of snow which fills up the cuts and buries all the fills, and makes the whole mountain side a slanting sheet of white. The *ski* runner, mounted on his glassy-bottomed snow skates, has before him two problems and two angles to be considered. He must take the down grade, but must cling to the side of the hill as he goes down. He must not slip or fall, and so get a broken back in course of the headlong roll which would ensue upon that. He must not steer too high up the side hill, and get into a box out of which he could only escape by a straight down grade too sharp for him to consider. None of these things must he do. He has in coming up gained elevation and held it jealously as long as he could. Now, a civil engineer in flight, with but the space of a wink to form and carry out his decision, he must throw away his acquired elevation just as rapidly as he can with safety. He must lay a course with as sharp a gradient as he dares. This was the problem before us, and as I looked at the sharp downward sweeps of the west side of the divide, I was willing to admit that mistakes in taking that run were likely to be costly. We had had some sharp spins in getting this far down, but now the trail to be taken made one bold sweep down, out on open ground, then doubled sharply back into the black forest, as steep as a set of cellar stairs. Beyond the forest line no deponent said anything.

BUFFALO IN "HOT COUNTRY."

Photo by John Folsom.

### A Leg or Two is Nothing.

All this writes pretty well, but we didn't talk about it very much. We cleared off the bottoms of the *skis*, and set the straps right and wondered how far we could slide before the snow got too sticky. Then Larsen, who was ahead on the trail at that time, quietly turned loose, setting on brakes with his pole as sharply as he could. With the indescribable, smooth, even motion peculiar to the *ski* run, he settled, shrank, condensed, shortened, seemed to grow smaller rather than go further. There was a light crust on part of the hill, and he flew over this and hardly broke it. Then he crunched through snow crust the sun had weakened, but tarried not at all. In the light snow we saw him throw up a long skit of white behind him. Then he leaned heavily over, got around the sharp bend and vanished like a flash into the forest, gathering a speed which showed what sort of a grade it was there.

Holte followed Larsen and Billy took their tracks. Holte and Billy both got slight falls, but made the bend. I got around the corner myself in their wake, and then nearly lost my breath at the jump downward the trail took as it turned into the wood. I could not by any means stop the speed. I sat astride the pole, but the momentum tore the end out of the snow and I got no brake of it. I jumped one hole in the snow where some fellow had had a tumble, and at length, taking one of the dozen corkscrew turns, I went bang! into a bank and came a great cropper right where Holte had done the same thing. On a run like that a fellow doesn't much care what he does or where he goes. My dignity suffers when I reflect how we all ran the last of the steepest grades, yelling like demons, and wishing, I do believe, that the snow was a little smoother and the gait a bit more keen. The first plunge of a sharp *ski* run is the only trouble. After that the impending loss of a spinal column or a leg or two doesn't seem to disturb one very much.

### Winter Home of the Beaver.

We made rapid time till we got into deep woods and soft snow, and then the shoes began to stick. The snow got worse and worse, and we had to waste over two hours in the middle of the day, waiting for it to mend. We built a fire, made a little meal, and gave our *skis* as thorough and scientific a roasting and waxing as they got any time on the trip. At this camp poor Holte forgot his revolver, and had to go back after it, a mile and a half and return, all of which made him swear very cordially of course.

When we came to crossing the Beaver Creek, we found it no easy matter, for the beavers have a dam here, and this had backed the water up into a dozen different channels, each so wide that it was next to impossible to jump on the *skis*. The water seemed to be from warmish springs, for it was mostly open and running, though often nearly covered by the deep drifts of snow. There is a Government postal shack here, but we found it half full of ice and water, as it sits in the willows on the level of the natural bank. After managing to get over the beaver waters, we built another fire, and again touched up our *skis*. It was here that we waited for Holte's return. That youth was in a bad fix, showing a little disposition to tire down, a tendency to snow blindness and a pronounced inclination to profanity. He was, as the saying among *ski* folk goes, "quarreling with his *skis*," which is natural, whether it does any good or not.

### Hard Plugging.

Across the Nez Percé lay mile after mile of nearly level snow. It was just straight ahead, hard "plugging" here, the sort of going the *ski* man dreads most of all. We kept up a pretty steady swing till we got along into the Firehole timber. Here Billy's sore heel began to pain him seriously, and his big camera was nearly killing him. I traded loads with him, as my pack was now getting lighter, and was below 20lbs. We left Billy on a snow-covered stump, calmly examining his sore foot, which he had bare in the cool evening breeze. He said he would soon overtake us, but we were quite a way down stream before he did. Then we found a log across the river, and knowing we were now only a couple of miles or so from our objective point, we strung out as fast as we could, finally crossing the open valley of the Firehole on a crusted snow and in a sharp wind, for it had turned cold. It was black night when we stumbled into the kitchen of the Fountain Hotel, with a good deal of the starch out of us, but still alive. Each man was made to dance a jig before supper, just to show that he was feeling good and lively. We had traveled over 20 miles that day, with all all sorts of shoeing, most of it pretty bad.

### Nez Perce Buffalo.

From the summit as we looked west we saw on the Nez Percé Valley what we thought to be three buffalo, but we could not confirm this when we got down to the level of the valley. The buffalo do sometimes cross the divide about where we did, and work between the hot country of Mary's Mountain and this sheltered little valley. They have not wintered on the west side of the divide in any numbers for a considerable time.

### Struck Some Charms.

At the Fountain Hotel we found John Schmidt in charge, and he took the best of care of us. I am disposed to believe that he felt a mild surprise at the appetites we showed.

At the Fountain Hotel we proposed to stop for a couple

of days, enjoying ourselves and seeing the geysers. We were at this point forty miles from the Mammoth Hot Springs, and we felt as if that were nothing, and as if the trip could not fail of being a success in its main purposes. Barring Holte, whose eyes were paining him intensely and who seemed to have gone a little stale, we were all in perfect health, with vitality keyed up to a pitch which made the mere breathing of the air of heaven a keen and subtle pleasure. Let those who will, loiter languidly through the Park in summer and comment on its beauty from a carriage seat. That is better than nothing, but the best is the trip on *skis*, if one really wants to see what wonderful things the Wonderland can do for one in winter. Certainly, it has spells, magic, charms for rest, for healing, for delight. E. HOUGH.

909 SECURITY BUILDING, Chicago.

## CAMP LIFE AT CLEAR LAKE.

QUEBEC, Canada.—We do not go to Clear Lake to get a lot of fish in a short time, we go for our health—or something. Anyway, we go and we keep on going. I go because—well, let us say because I have to go, which I do not. But that would be an awfully good reason for going, and I am inclined to adopt it. The Professor goes because it is good for him, and he likes it. Other people go because they are invited, and then are invited some more, and continue to be invited.

When that camp was built, iron door fastenings were rejected and a wooden latch put on, the string of which hangs outside the door from May 1 to Oct. 1.

So the Professor and his friends leave home at 8 P. M., and at 4 P. M. the next day are at the cabin. When it is known that some one is coming there are usually a few trout in the ice house; and by the time the guests have changed their clothes and got into knickerbockers if they are men, or into camping petticoats if they are women, and have speered about a little and the newcomers have been shown over the premises and the old ones have noted the changes made since last year, a blast on a tin horn tells that some of the trout have been cooked and supper is ready. All hands are hungry, for most of them preferred walking the four miles through the woods to riding. The walk was very lovely, but did not appease appetites in the least.

Our trout are never very big. We reckon on just one apiece and some extra ones for a meal for an average party. There are always baked beans on tap besides to meet emergencies.

After supper nobody cares to do much. The Professor looks over his fishing tackle and finds two or three broken tips and a reel out of order, that the other Professor must repair, for the other Professor is an expert in whatever requires delicate handling of tools or nicety in manipulation. So they two get out a great lot of things and pile them up on the table along with books, clothes, pipes, tobacco, photographic and astronomical instruments, and what not, where they will have a heap of trouble in finding them again. Having got so far along they leave them and go out of doors to see what is going on, for by this time Hypolite and Cyprien have decided that it is time to light up their welcoming bonfires, and most of the guests are sitting under the pavilion looking at them. When the fires are burned down it is bedtime. The gentlemen hang their clothes on the floor or wherever the Professors have left room for them, and turn in.

---

At 4 A. M. my Professor is out to try to get some trout for breakfast. There is always an extra rod on the pegs ready for him, for his own are almost certain to require some tinkering.

About 5 he comes back, declaring that the trout don't rise worth a cent, but always bringing some. The rest of us may just as well get up when he comes in. We have had all the sleep we are likely to get. The ladies will not appear before six, so we have ample time to take baths and get hungry before the horn sounds for breakfast. A cup of ready prepared coffee helps us to wait.

After that comes the question, "What are we going to do to-day?" It does not much matter whether the question is answered or not, for we may be sure that nothing that may be suggested for this first day will be done. Almost the only thing that will be done is the one that is not suggested, and that is—loaf. No one wants to go anywhere. To sit round and enjoy the air and scenery is about all the work anybody cares to do to-day—except eat. If we were astonished at the appetites last night we shall be equally so to-day, although nothing would seem to have been done to provoke them. Nobody appears to be altogether idle, but not much will be accomplished. The Professors will be busy whittling, making napkin rings, salad spoons, boxes and the like, anything that can be wrought out with jack-knives and sand paper and the help of the little kit of tools that the other Professor always carries with him. They will keep Cyprien busy rough-dressing the wood that they propose to work up. Possibly they may photograph a little, but as they have already taken all the possible subjects, they will now attempt the impossible. They will pass a delightful day together, and perhaps not have much to show for it at the end. But that is no matter. We shall have our supper a little early and then sort ourselves out into the various boats and canoes and go cruising and fishing. There will be several things proposed to be done when we get back, but before we realize it we shall find that about the only thing people want to do is to go to bed.

---

It will never answer to while away camping days in such a manner as that. Those in authority say that today we must "go down the Discharge!" We tell Hypolite we shall be back late to dinner and row or paddle across the lake. We cannot go anywhere without first crossing the lake, for the very simple reason that our camp is on the other side of it.

Once across we stroll along a footpath or over rocks at the side of a rough and picturesque outlet of the lake. It must needs be rough, for it has over 400ft. to fall and is less than half a mile long. Twice it gets down 100ft. at a jump. It is very interesting, but those of us who have seen it fifty times before shirk a part of the walk, build a fire, light our pipes, and wonder why the others are gone so long. There is no fishing of consequence unless we go a long way—and this is not our fishing day.

When we get back and have had our dinner it is voted to be too late to go anywhere else. The ladies say they have seen enough for one day. They want some excursions kept in reserve. The proposition not to go to Lake à Louise till to-morrow meets immediate favor. In fact, anything that is not to be done to-day is heartily approved. So nothing more is done, except that after supper again we go out on to the lake, see other views, wake other echoes and catch other trout, coming back only in time for a few songs and then go to sleep again. For although we seem to get up at almost disreputably early hours we get in an abundance of sound and refreshing sleep. When the ladies come from their room it is not necessary to ask them how they have slept. Their appearance speaks for them.

---

Now we only go to Lake à Louise for fishing, although the walk to it is charming. But it is only a short distance and we don't want to go till afternoon, so we do this morning very much what we did yesterday afternoon, that is, pretty much nothing at all. Nobody finds it in the least tiresome. We have with us, however, some vigorous young fellows whose muscles demand constant exercise. These we inveigle to go over to Lake à Chaltré and get us some larger trout than we have been having. Hypolite puts them up some lunch and we start them off, feeling that they are safely disposed of for the day. For Lake à Chaltré is a good three-quarters of an hour's walk—from the other side of our lake, of course—and there are two high hills to go both up and down, whether going or coming. People cannot expect to go far among the Laurentides without finding some hills to climb. When the boys reach the lake they will find only some rafts, which will doubtless require repairs before they can be used, so we feel quite sure they have their day's work laid out. But they will bring home about a dozen trout weighing over a pound each, and all hands will be satisfied.

In the afternoon the rest of us go to Lake à Louise. It is well understood that nobody need go except to fish, but somehow or other everybody goes. There are only one canoe and a raft over there, and we take turns in using them. The canoe gets over the water fifty times as fast, but I believe the rafters get the most fish. They do not seem to be frightened by it.

Those not fishing build a fire and sit on the shore and watch, applauding vigorously when the young lady who never handled a fly-rod before in her life hooks the largest fish of the day, and under the Professor's direction secures him handsomely.

---

The next day it is ordained that we must go down the Noire and have a picnic, just as if every day was not a picnic. Across the lake first of course. There is no going anywhere without that. Then down a steep and high cliff. It used to be a tough job to go down or up, but a surprisingly few days' work have made it almost a comfortable stairway. Ladies no longer abuse us when we propose to go down the Dalles.

At the foot is the river. Half a mile down is a dam, near to which we go in canoes. A few minutes' walk through the bushes and we reach the top of the falls. From here for a mile and a half is a succession of falls, rapids and pools. Trout all the way along.

This is a fishing day as well as a picnic. The water is not very high, and we can walk along the rocks easily; but those restless young athletes are not content with that, but cross and recross the river and scramble into places that we older chaps are quite willing they should monopolize. They fall into the water occasionally, which does not seem to trouble them in the slightest degree. A good many trout are taken, but we can well afford to spare the little ones, and they are put gently back into the water.

And so it goes on. Luncheon, lounging, fishing, more luncheon and then home again. It has been a delightful day. To-morrow it is going to rain. I believe those Professors will be secretly glad of it, for there will be nothing to divert them from their beloved carpentering, unless it be the numerous photographic plates that they have to develop. The ladies will take more tucks in their skirts and then lie in the hammock and read novels. The boys—it is rather difficult to say what they will do. If it rains very hard it is likely they will lounge about and read novels also.

---

After the rain my Professor and I want to go up to Camp Nicolas. We don't want to take the ladies. At least, we say we don't. We tell them we have talked the matter over, and, on the whole, they had better not go. It is far and the accommodations are rough. There is only one room, where all must eat and sleep. For Camp Nicolas was built mainly for winter use, to be nearer the haunts of the caribou.

The ladies are not disturbed at all. They make light altogether of my discouraging remarks. They say to me, "Now, Mr. de Montauban, please not try to humbug us. You know that if it wasn't all right you wouldn't have thought of taking us at all, and if it is all right we all want to go."

"But it will be a two or three days' trip."

"Won't that be jolly!"

"And we think of taking the tents and camping on the Pi-Oui."

"Oh my! what a lark!"

What can men do under such circumstances? Nothing but submit to fate, preparing for it as best they can.

That is what we do.

When the time comes we cross over and go down the "Dalles" again. There, in its usual place, is one big canoe, which this party has not yet used. It would carry us all, but having regard for the muscular activity of those boys (and our private plans as well), we put them into a smaller canoe by themselves, where they can expend their superabundant strength on the paddles to their hearts' content.

For a wonder the wind is fair to go up stream, so we set our sail and glide along swiftly and noiseless, for we are loaded just right, and there is only a bit of a ripple at the bow and a trifling wake at the stern. For an hour we run along under a cliff that rises 200 or 300ft. above our heads. Sometimes we might touch it with a paddle and again we are far from it. Then we pass out into the open lake, and by and by stop at the Isle à Laurent, where we stuff ourselves with blueberries. An Indian and his daughter lived here for many years, giving the island his name. In her youth the girl was timid and graceful as a fawn. She married and became a shapeless hag, like most women of her race. The man was found dead by a roadside.

Embarking again, we put two reliable paddlers at the bow, for in half an hour or so we shall run into a narrow and crooked channel where we must keep a sharp look-out for snags. We pass it safely, holding the sheet in our hand and trimming the sail constantly. We come suddenly out into the glorious expanse of another lake, keeping our passengers' attention attracted to something on our left until we make a quick turn to the right, and the whole bursts upon them at once. Then we have an air line course almost to our destination.

Camp Nicolas is all right. It is large enough, but there is not much furniture in it. We must sit on boxes and sleep on boughs.

How is it possible for people to get so hungry? Of bread and pork, the two necessities of camping, I always take about twice as much as folks think we shall need and rarely have a surplus. Fortunately we had sense enough to send out two men yesterday to catch some fish for us. They are those great, fork-tailed trout (*namaycush*), weighing from 2 to 20lbs., very good eating, but requiring a lot of labor and patience to catch, for the brutes will touch nothing but live minnows and give no sport. The immediate neighborhood of Camp Nicolas is not to be relied on for *fontinalis*.

We set up one tent for the workmen and cook and eat out of doors. The ladies enjoy it. It takes a lot of branches to make beds for so many people, but we get enough at last, and when the fires are burned out and the stories told all hands are impatient to try them. The beds are on the floor, the women in one row and the men in another. The old campers go to sleep promptly, but the young ones find the scene too novel and much chaff and banter is exchanged.

Next day we cruise about the lakes and explore strange waters, finding tracks of bear and caribou and strange birds. The Professors take no end of photographs. Appetites are as good and sleep as sound as ever, and when another morning comes we pack up and start for the Pi-Oui. Down the lake a couple of miles and off at one side we find the mouth of a river, which we go up as far as we can. Then we come to a fall, round which we portage the small canoe and baggage, and soon come to one of our old camping grounds, where we set up the tents, a short job, for we find our old tent poles and pickets just where we left them. Folks are hungry again by that time.

After dinner we leave the ladies to rest while we old men go up the river in the canoe to the first rapid—and fish in the pool at the bottom, letting the boys go up through the woods and climb to the inaccessible rocks, and drop flies into holes that we do not hanker after. Our age and infirmities move us to stick to the canoe and quieter waters.

But we have found the river scenery so lovely that we send the boat back to bring the ladies up. When they reach us they are so delighted that they want to go further, so another portage is made and another stretch of river visited, and then another and another, for the carries are neither long nor hard, and we know that a little further up are some more rapids, so that all who are disposed can have the pleasure of "running" one or more on the way back. We go far enough to give each of the ladies a chance, which not one fails to accept. The rest walk along by turns and soon get back to camp, for we have dawdled so long that we have not gone up much more than a couple of miles all told.

The boys bring in a few trout, and after supper there are camp-fires, round which the ladies dilate on their afternoon s experiences, and are loth to go to bed. For from the men's camp they hear every now and again some of those charming Canadian songs and the delicious refrain,

"Le beau jour de l'amour s'en va,"

sounds unusually *triste* this evening.

To-morrow morning we must get back to our cabin, and some of our guests will leave us. Others will come, and we shall make other excursions, for our list is not nearly exhausted yet. And when our friends get together afterward they will talk them over and perhaps lay plans for future visits to forests and streams.

G. DE MONTAUBAN.

## OUANANICHE NOTES.

OUANANICHE? Well, now! Didn't I? They are everywhere. They are in the Grande Décharge, they are in the lake, they are in the big tributaries of the lake, and some of them are in me. It has been my first experience with them. On the first day I tried to decide what their favorite flies were, and had an ouananiche of one size or another on my line all day long no matter what flies were on the leader. Under such circumstances it was hard to make a decision.

After I had enjoyed the change from the monotony of casting to the monotony of tiring out the fish, and *vice versa*, I stopped at noon and walked off on a rocky point to fish for doré for a rest. I took off the stretcher fly and put on a hook baited with an eye. Then a sinker and float were adjusted *à la* school boy and the bait dropped to the bottom in a quiet eddy. The first thing that took the bait was a big ouananiche. He was properly landed, and the hook was again sent "a seeking." The next that took hold was another ouananiche, and he took, not the bait, mind you, but the silver-doctor fly that I had been too lazy to remove, and that was absolutely still in the water midway between the float on one side and the hook and sinker on the other. When this fish was landed and I was getting actually impatient at not catching doré, a big piece of dace was put on the bait hook. As it sank toward the bottom it caused the float to slide along the surface, which sight made an ouananiche's mouth so water that he leaped at the very mirage of a living thing and almost cut the float from the line in his savage onslaught. They would have taken the sinker if I had waited longer. The ouananiche will strain at a gnat and swallow an American flag tied to a pair of ice tongs.

This idea of tying a fly to simulate the insects that ouananiche happen to be feeding upon at a certain time is very pretty, and it also works. So also does any other fly when the fish are in a biting mood. When they are not in a biting mood they will not take gold dollars. At this time of the year they are almost always ready to take the fly, but in the middle of a bright day they are inclined to play with the fly. They play about in the white foam and stick their fins through, and as ouananiche are always in sight, I could select the largest ones and go for any particularly big one that was rolling about and showing himself in the foam. They use the big foam flecks for cover.

Frequently, after my making a cast, on beginning to retrieve a wake would follow the stretcher fly as though a muskrat were swimming along under water, and when

it was absolutely necessary to stop because my arm was 2in. too short, the fish would make a splurge as though some one had turned a pail around just under the water, and off he would go. This is more likely to happen in the middle of the day. Then, too, is the time when they play with the flies, leaping over them or nipping at the feathers lightly as they follow up the cast. Usually the ouananiche is a savage biter, and his leaps from the water are astounding after he is hooked.

The scenery here is the scenery of virgin forest of fir, spruce, larch and white and yellow birch, disposed upon rocky islands in the midst of rapid waters or upon flat marsh land or rolling hills. There is no end of other fishing to be had. Doré and brochet are abundant. Lake trout are to be found in certain places, and brook trout swarm in almost all of the streams and small lakes.

The country is intensely French and few of the "habitans" speak any English. Yesterday I found one who could. I was fishing for trout on the Ouitchouaniche and asked one of the natives, who came down to look on, if there were large trout in that stream. He said, "Hyes, sir. Ze summer last, one Eenglishman name Meesty Thompson come up from New York and she cotch trout weigh two poun', prob'ly poun' an' a 'alf law baw."

In some of the large streams there are very large trout. It is a common thing to catch them weighing more than 4lbs. apiece with the fly in the spring fishing, or on particularly favorable days in summer. The ouananiche that we are catching weigh from ¾ to 5lbs. each. The smaller ones, ranging up to 2½lbs. in weight, are taken at almost any time, on any sort of day. The largest ones are caught when the conditions are best for catching big trout. I am told that the ouananiche do not remain continually at the surface a little later in the season, but since I have been here there has been hardly a moment when they were not somewhere visible in their haunts, either leaping or rolling like porpoises in the great circling beds of creamy foam at the foot of the roaring, spray-flying rapids.

ROBERT T. MORRIS.

LAKE ST. JOHN, June 24.

## A DRIVE ON THE "SAULKETCHE."

I SPELL the name as it is locally pronounced. On my chart the stream on which I have just passed a delightful day is spelled Salkahatchee, that is at a short distance from its source not far from Aiken, S. C., but after a winding, crooked course to the southward and eastward, transforming on its way thousands of acres of sand lands into fertile cotton and grain fields, and great forests of oak and pine, and furnishing backwater for the irrigation of square miles of rice fields, when it empties into the sea at St. Helena Sound, its name is the Cambahee.

As the only fresh-water river of any importance traversing this section of the country and emptying among the channels of the Sea Islands in this vicinity, it is naturally the favored resort of anadromous fishes of all kinds in their season. In early spring the shad seek it, and in turn sturgeon, striped bass, squeteague (called trout here), mullet, and at all times perch (red-breasted), bream, catfish and others, with a fair stock of fresh-water cooters and a few alligators. Thus all tastes are met, and the people in the vicinity have at least one unfailing source of food. There are undoubtedly many routes to the stream; one is per the Charleston & Savannah Railroad, stopping off at Salkahatchie station, and driving in a short distance; another reaching about the same part of the stream, by leaving the Port Royal & Augusta train at Yemassee, thence by a five-mile drive to Rum Bluff on the river. This is the route by which I reached it.

The C. & S. and P. R. & A. roads cross each other at Yemassee, and with their sidings and dependencies form a bewildering tangle from which the unwary traveler, landing for a short constitutional, is lucky to escape by the train he meant to take. Detention means a wearying wait of many hours. For to the stranger there is little of interest at Yemassee. He may tramp down to the big artesian well or through the piny woods and get all the fun he can out of the small darkies who peddle water lilies. But he will be mighty glad when train time comes. There is a trick in the trade of water-lily peddling. Evidently there is a lily trust, for not a bunch can be bought while the train is in at less than a nickel; they are too scarce and hard to get. But hardly is the train off before the boys are pelting each other with the left-over bunches, for which a cent each will be gladly taken, for in the ponds, unfortunately too close by, are millions of them. I say unfortunately, for it is these ponds and the rice marshes which have prevented in Yemassee the development usual to railroad influence. Malaria—and formerly country fever—keep it down to a few hamlets. The country fever of late years has diminished, undoubtedly on account of the substitution by the natives of artesian well water for surface wells—pure water versus microbes.

---

However, if one is hungry he need not hesitate to patronize the uninviting shanty over which a sign of "Restaurant" appears. My first adventure in getting left at Yemassee cost me seven hours' delay; and as a perfect stranger I had no resource but this shanty. I most thoroughly enjoyed the luncheon. To be sure, everything was fried—shad, eggs, ham, potatoes, rice, etc., but they were fried well. The night before I had come into Charleston on one of the Clyde steamers from New York, and after late hours in the smoking room, I had turned out at daybreak to see the captain take her over the bar and into port. So I was sleepy as well as hungry, and fell into a doze in the waiting room. I slept about fifteen minutes, just five too many, for my train came and went.

To pass the time I had endeavored to persuade a couple of negroes with carts to drive me over to the Salkahatchee, to see the stream, and if possible the hauling of the shad nets. But singularly, I thought, money as far as I could afford to go, wouldn't tempt them.

Several white men, with whom I attempted conversation, were very reserved, and even uncivil, and for some reason, I was apparently a very unpopular man. As I was new to the country, I attributed this to my Loyal Legion button, but I was mistaken; and for that matter, during the long period—nearly three years—that I have lived in South Carolina I have always worn it, and never have had cause to regret having done so.

While I was at luncheon several white men were seated at a table near me, and some of them were noisily angry with somebody. "If any spy comes nosing around my nets he'll get a hole in him sure." I began to take interest in the conversation. The looks, as well as the remarks, were very pointedly at me, and it dawned upon me that I was the spy they were discussing. Affairs were warming up, and I would willingly have been out of that, when there entered a gentleman, evidently a man of influence, and fortunately a man of sense. He came over to me and pleasantly opened conversation, and soon found out just who I was, and where I was going, namely, to visit the officer then commanding this station. Then he introduced me to the others, and in a short time the clouds cleared away.

It had so happened that but a few days before, another man, stranger as I was, and left by his train as I was, attempted as I did to hire a darky to drive him to the river, and succeeded. As a result of his visit several of the shad fishermen, who were illegally hauling their nets on a closed day, were caught in the act, arrested and fined some $50 each. As the day of my stopping over was also a closed day, the inference that I too was a spy and informer was but natural, and I think the chances were very favorable for my being a subject for lynching but for the action of my then new acquaintance, and now friend, Captain William Elliott. My late enemies became friends; and had I participated freely in their peace offerings I should, I fear, have violated one of the naval regulations, for I can't stand corn whisky.

---

"Come up by No. 6 on Wednesday, and we'll try the river," came over the wires, signed Elliott; and on Wednesday No. 6 carried me and my fishing traps, consisting of split-bamboo, bait rod, and large hooks, for we were to fish for striped bass, of which there were tales of large ones.

At 2 P. M. Elliott met me with his buggy, and a short drive into the woods landed us at his house, where his wife and family made me very welcome, and provisioned me for the trip with a very good dinner. The young ladies, who are expert anglers, did not admire my outfit as I thought they would. They preferred their own, which they showed me—simple cane rods, with short lines, on which "bobs" were used. I didn't exactly see how, but waited to learn. Asked if I had ever "bobbed," I said yes at random, connecting the process with old-time bobbing for eels with a bunch of worms. I learned something new on this trip.

As we drove to Elliott's house through the forest, it was pitiable to note the immense number of great oaks and pines lying prostrate in windrows, showing where the fiercer of the many little tornadoes, which accompanied the great storm of Aug. 27-28, 1893, had swept their way through. There was not one alone, but many such tracks, with wide spaces between where hardly a tree had suffered. About half way from the station to his house has been located a steam sawmill, which is making profitable business in cutting up the down thrown trees.

The house seemed to me delightfully situated, on a high clearing among the pines and oaks; but the young people, who miss the many fine trees they have known from their childhood, do not now so consider it. During the storm many trees crushed down their fences, filled their yard and ruined their garden; but fortunately spared the house, where they sat through that fearful night in constant expectation of death, until one of the young ladies thought to allay the anxiety of the youngsters by reading to them stories, and so quieted them.

After dinner we started for the river, a delightful drive of about three miles through the forest, passing quite a settlement of neat and well-kept farms, and further on places made memorable to the natives by the events attending the passage of Sherman's army, which bivouacked here.

The country we passed through was delightfully wild and, except the little village mentioned, uninhabited; yet on all sides of us were the sites of great plantations, which before the war were the homes of many of the wealthiest planters of the South, and here and there among the underbrush, could we have penetrated it, we would have found the remains as ruins of many noble mansions, whose brick had gone to build chimneys for cabins which the woodwork had built. Living on these plantations in winter, in Beaufort or in the mountains in summer, to enjoy the sea breezes of the former or the coolness of the latter, these planters lost more than can be imagined. Poverty has replaced wealth. Who can wonder that bitterness still exists toward those who they honestly thought were wrong in despoiling them?

---

About 4 P. M. we reached the banks of the river at Rum Bluff, where our boats, long flat-bottoms, awaited us. Rum Bluff is so named because in the olden days it was at this point that the white traders landed and sold rum and other necessaries to the Yemassee Indians, whose principal village was in the vicinity. In the choice they showed good taste, for the situation is both pleasant and picturesque—a grass-covered level plateau some eight or ten feet above the water, and at a bend in the stream into which it juts as a cape, completely encircled with large shade trees, which we appreciated at luncheon hour.

The road by which we approached Rum Bluff was at one part an ex valley of the river and at many places was bordered by dams with no apparent purpose. But the Saulketche has a way of changing its channel every now and then, and when these dams were built they were to make a reserve of back water to irrigate, as required, the ricefields.

At the Bluff we prepared for fishing. The stream was 30 or 40yds. wide and here, as in many places, ran over a high yellow sand bank, giving shoal water, and sloping abruptly into a deep channel. Over the sand bank more or less mullet were running, some of goodly proportions, such in fact as would have suited the Edisto bride, who, seated for the first time at a dinner of one of our best New York hotels, discontentedly sighed for "one of them good fat mullets like we had at home." Now and then, too, there slid along the shoal, but not on it, a good-sized striped bass.

I hurried my tackle together, but there came a disappointment. Elliott had arranged with a colored brother to be on hand with plenty of live bait and a box of worms. Neither materialized, and all we had to fish with was about a dozen worms, so thin that it was only by good care that they could be put on the hook. However, we started, he in the stern paddling, I in the bow casting, and as we dropped down the river the scenery was beautiful. One small strike, a 10in. catfish, finished the last of our bait. Then, being a believer in the good saying, "It is not all of fishing to fish," we drifted along down the river, then turned, Elliott having rigged his bob and taught me to use it. The bob was simply a Buel spinner No. 2 attached by swivel to a line 2ft. long, and this to the end of a cane pole. To use it the end of the pole was, by the man in the bow, swept to and fro across and ahead of the bow, skittering a series of curves as we advanced. On getting a strike the pole must be jerked backward, any upward movement forbidden.

Well, we bobbed until nearly back to the Bluff. Then when I had ceased to expect, a striped bass of perhaps 4 or 5lbs. accepted the challenge, threw himself half out of water as he struck, and entirely back again as he promptly let go; for, as was to be expected, my strike was the usual old-fashioned upward one, and utterly wrong. That finished the day's fishing. As a pleasant afternoon it was a success, as a fishing excursion rather a failure. Engaging from quite a number of reliable colored brethren a good supply of live bait for the morrow, we drove home.

Elliott, who had more experience and less faith than I in the prospect of live bait, and was determined that I should not go home empty-handed, did his best that evening to organize a "drive" for the next day.

---

Ordinarily a drive, which is a species of aquatic picnic, is arranged for some time in advance, that there may be a good strong working force on hand, for there is lots of work in it. Neighbors from near and far join in and share the results. But there was on this occasion too little time to reach many of them; and of those reached many had other business, so it was but a corporal's guard of us who met on the Bluff the next morning. There were no ladies, for reasons which soon became evident.

Placing the seine in one of the long batteaux, we paddled down the river to the mouth of Alligator Lake, four boats of us. This so-called lake is simply a long narrow bay, the remains of a former channel of the river, now blocked up at its further end. Here the seine was set, then all hands except a couple of seine tenders paddled up the river about an eighth of a mile, and having before leaving the Bluff assumed a uniform slightly more decolleté than that of the Georgia Major—for he wore spurs—our men wore only hats, with in some cases an undershirt to protect the shoulders from the sun; nearly all hands jumped overboard and sticking to the deep water channels which skirted the sand banks made all the row possible, striking the bottom with staves, the surface with paddles; and thus drove before them great schools of fish, while the batteaux paddled over the shoals to prevent running. It was exciting work. We could see no end of fine bass, some of great size; and the seine tenders as we closed up were sure of 200 at least. But alas, one of the two seines was defective, the bottom leading not heavy enough. It lifted, and most of our flock escaped. We saved only a couple of dozen of from 2 to 5lbs. weight, that had jammed themselves into the bag, or gilled themselves. Two more hauls were made, with but moderate success.

On many of the sand banks were seen the circular spawning places, like ant heap rings a yard wide, of red-breasted perch and bream; and going to and fro from them were a few of the fish. It is a practice of some of the men and boys in this locality, undeterred by any law, to take advantage of the habit which these fish have of removing all debris from their beds. Hiding in the brush near by they cast baited hooks into the beds, with a long line; the fish pick up the hooks at once, and are thus caught in thousands. The usual results of this system are beginning to appear; for some reason which they say is unknown to them the fishing "isn't half what it used to be."

Although I spent this day so pleasantly—the first day for years that I have spent on fresh water—I was still on tide water, and in the setting of the seines, and in bobbing, the state of the tide has to be considered. The tide raises the water, but at this neighborhood does not allay its freshness; the fresh water simply flows more slowly and banks up against the flood, its current increasing with the ebb.

On the whole I enjoyed my outing greatly, accentuated as it was by the hospitable welcome of the entire family, who made me almost feel as if I too was part owner of their cosy home in the woodland.

PISECO.

## STORIES OF EZRA.—VI.

THEY were fishing along Coon River. Ezra saw a screech owl stick its head out of a hole in a tree four or five feet from the ground. He told Mac there might be a wood duck's nest in that hole, and when Mac put his hand in the owl attacked it with bill and claws. Mac's first thought was of snakes, and with a yell that made the woods ring he jerked his hand out with the owl clinging to it. Mac got quite angry over it and to pacify him Ezra agreed to get Mac some wood duck eggs from a nest that was thirty feet from the ground in a gum tree. There were no limbs to climb up by but he cut a hickory wythe, and putting it round the tree and holding the ends of the wythe managed to climb to the nest. But Ezra's elbow joint was just a little too large to go into the hole. Holding to the tree with one arm and both legs, he unbuttoned his shirt wristband with his teeth, and pulled up the sleeves of shirt and undershirt, then managed to push the elbow through the hole. But getting it out was another matter. Owing to the shape of the elbow joint and the hole being smaller at its inner opening, the arm would not come out. He had no support except by clinging to the body of the tree, and this required so much exertion that his strength would not last long, and when it failed the arm in the hole would be broken and he be left hanging by it, till a ladder could be brought two miles. Mac as usual saw nothing but the funny side of the case and laughed, and asked Ezra if he ever read about some bad boys who robbed birds' nests. Ezra told me afterward that when his strength was almost gone he turned sick and was just about to faint when Mac's taunts made him so angry that he forgot about everything else except getting to Mac and wiping up the ground with him. With a desperate pull the arm came out, but the flesh was stripped from the protruding portions of the joint till the white bone was laid bare, and the ligaments so sprained that they never fully recovered. He held on to the body of the tree till half way to the ground, then fell, limp as a rag, fortunately landing on a pile of fine brush.

When he came to he had forgotten all about whipping Mac.

O. H. HAMPTON.

# Natural History.

## A STUDY OF DADDY-LONG-LEGS.

I HAD a job of work on hand a few mornings since, and as I stood by the wood pile considering—for I like to consider considerably before an undertaking—my attention was attracted to a little black something moving on the ground and something else just above it moving with the same velocity. On examination I saw that the uppermost object was one of those long-legged spiders (*Longens stridatus*), *vulgo*, daddy-long-legs, and the black object beneath was a big black patriarch of an ant (*Formicularis giganteus*), which had fallen into the clutches of the spider, either as a prisoner in some foray or as a means of subsistence. Curious to see what the result of this expedition would be, I postponed my labor, entomology having the call anyway—and was entertained for a few minutes quite pleasantly.

The spider's body was about the size and shape of the half of a small pea, convex side up, and attached to this were six of the longest and slimmest legs you ever saw fastened to a body of that size, I reckon. Regular skirmishers of legs they were, away out on the flanks in the enemy's country, ready, though, to close in on the columm on short notice. There were two antennæ several joints longer than the legs, and these were the advance guard, 'way up the road, always in motion to guard against surprise and to look out for ambuscades, rifle pits and things. With two short arms close up to his head, he had the ant by the neck, and thus loaded he stilted off across the country without caring much, apparently, which way he went.

There was a tree near-by, against which on one side leaned a short board, on the other a hoe handle, but before he got to the tree toward which he was headed, he came across two or three little tufts of grass, several inches apart, each tuft composed of not more than four or five fine blades, the ground clean all around. Now his advance guard touched these blades two or three times before the column came up, and if they were of any use to him, and if he had known as much about this thing as he appeared to know about some others, he would have known that the thing to do was to flank the obstacle, but he didn't. It was plain that he had not learned Sherman's tactics, so he just sprawled over the spears, some of his legs hitting them and some going between, and so got past, doing exactly the same thing at the next and the next, demonstrating that he was, on the marsh, anyway, a wooden-headed spider of the first order.

His body and the load he carried reminded me of those low-down swinging trucks which are used for carrying heavy stone and safes. His legs made a sort of derrick, and when all was plain sailing the truck skimmed pretty close to the ground, but when an obstacle appeared he just stiffened or straightened his derrick and the truck rose into the air to clear it, lowering again when he had passed. I admired that trick very much.

When he came to the board he halted, threw up his antennæ as far as they would go and was evidently debating whether the trail led that way, but eventually concluding it did he took a fresh grip on his plunder and started up, but went only a foot or so before doubts about the trail caused him to retrace his steps. When he reached the ground he made several excursions into the surrounding territory, but eventually took to the board again and ascended it until he reached the tree, round which he went until he struck the hoe handle. Here he stopped and reconnoitered, felt the handle with his antennæ up and down and around. It was something he hadn't dreamed of. I doubt if he ever encountered a hoe handle before. His antennæ waved uncertainly with a lost motion (first time that I ever knew that a spider's machinery was subject to it) and evidently that spider was indulging in slang, as he said, "Well, if I ain't up a tree I hope to never." But there seemed to be something about the handle that attracted him, so he boarded it and began the descent. It was pretty slippery, for I work hard with that hoe, and he had to put in his drags pretty stiff. Once or twice I thought he'd have to run for it, like Hough with his *skis*, but he got down all right; and evidently hunger overcame him then and there, for he stopped, dropped his rations and proceeded to business.

Now, I thought, the mystery of how you'll ever get into that ant's iron-clad anatomy will be solved, or not, one of the two. And where do you suppose the hungry fellow began? Why at the eye, of course—nowhere else could he effect an entrance, and if that ant didn't see stars it's strange, for he wasn't dead yet. Oh! No, but just paralyzed, either by fear or some of the spider's embalming injection, for the movement of a leg occasionally told of his condition. Ant brains for breakfast! Wasn't that a tidbit? With two little lances, or knives or saws, the spider worked away until one eye cavity was empty, when I touched him with a stick, at which he stepped off to one side, licking his chops and snuffing danger with those long antennæ. I examined the ant, which had begun to evince signs of more activity, and laid it down near the spider which apparently took no notice of it, but after a moment or two stretched out one long leg and touched the quarry, which kicked vigorously. Up went the spider's leg. Pretty soon it descended and again touched the ant, and again the movements were repeated, when after a pause the spider approached, seized the ant and began the surgery on the other eye, and while I was watching, it suddenly scented danger somehow and scuttled off up the tree out of reach of my vision, and when I left, it had settled down to its meal again.

Now it never before occurred to me that the ant was the prey of the spider. It may have been in this case that the ant had been disabled in some way and so had fallen an easy victim, for ants and specially these big black fellows are fighters with their strong mandibles, and would, I suppose, prove formidable antagonists to spiders or other insects. There are several kinds of ants here from the tiny ones of $\frac{1}{128}$in. long which infest the blackberries (ripe now), to the big-headed black fellows which roam the earth with the don't-care-a-continental-touch-me-if-you-dare air of a fighting bull pup, and when these gentry (ants I mean) fasten their jaws in a tooth and nail conflict, decomposition alone unfastens them.

OZARKS, Missouri, June. O. O. S.

### Serpent Suicide.

*Editor Forest and Stream:*

The disclosures made recently by Capt. Dan. C. Kingman, of the U. S. Engineer Corps, and Dr. M. G. Ellzey in FOREST AND STREAM, on the subject of snake suicides, have somewhat shaken me up. I had learned from the snake specialists that snake venom was innocuous to snake organisms, and had pinned my faith to that belief from a feeling of loyalty to science; and have combatted the statements of the unlearned, that snakes do bite and kill themselves, as belonging to the rich and prolific realm of snake myths.

But the statements of those gentlemen have knocked me out of my perpendicular, as it were.

I had the pleasure of a personal acquaintance with Capt. Kingman for several years when he was stationed on the lower Mississippi River, and feel implicit confidence in any statement of fact made by him. I have no doubt that Dr. Ellzey is equally entitled to credence. But how does this comport with one's respect for the accuracy of scientific investigation, when science is so much at fault upon such a commonplace and patent question as this? Verily, those who assume to teach us in this field must have been exceedingly careless in their observations upon a very important phenomenon of natural science. I feel hurt.

COAHOMA.

### A Pipefish Specimen.

VENTURA, Cal., June 22.—By to-day's mail, under another cover, I send you what I believe to be a dried specimen of the pipefish (*Lophobranchia*). Being an old subscriber of FOREST AND STREAM, and thereby feeling interested in its welfare, it occurs to me that this specimen may be of some interest to you. The fish was picked up from our beach near town in the condition you see it. It is the first I have seen, and did not know it inhabited the waters of the Pacific at this latitude. A. J. C.

### Sea Gulls in Trees.

MUSKOKA, Canada.—In the early spring of this year I was watching four sea gulls floating about on the wing, and to my astonishment three of the four finally settled on the topmost limbs of a dead pine tree, where they remained for some time. The pine was situated close to a lake. I should like to know from correspondents whether similar instances have come under their notice.

# Game Bag and Gun.

## NETTING WILD PIGEONS.

WILD pigeons are growing more scarce each season. The business of snaring and handling them for the trap and table has been closely followed for a generation by a number of netters, and a few of the details which are most interesting will be given by one of them who has had a rare experience.

As swift on level flight as any bird that flies, in the habits and mental capacity of the pigeon there is something lacking, which makes it the frequent victim of its enemies, and of which the netter avails himself.

The birds migrate in a large body or a number of large bodies. You have heard of the wonderful flight of pigeons which your father or grandfather saw. Some have seen a flight of them in their semi-annual migration to the north It is the only way these birds ever leave winter quarters for summer. When their scouts return with the old story of "corn in Egypt," the birds quickly leave in regular flocks, stringing into line, and having reached the proper height, fly in a solid sheet to their destination.

In the fall, after they have got their winter plumage and are bound for the South, they are scarce and shy, for they are well fed and the young are fully grown. They have gleaned the stubbles of the Northwest and are on their way to a land where rice and acorns and corn will be their food during cold weather. A few may be caught on bait, but it is only by the greatest care and skill, aided by fortune.

From 100 to 200 men have been engaged in the business of netting these birds all the time, and this number is increased by a great many local netters wherever the birds happen to nest. These regular netters are located in almost every State in the Union. each new nesting seeming to develop a few new catchers, who make frantic efforts to get into the ring and find out the news away from home and in return give the boys any local points they may discover.

In this very large country there would seem to be every chance of losing a body of birds and not finding out where they are. But a very good system has been established for keeping track of them, which is specially looked after by the different express companies and the shippers and handlers of live and dead birds, who form another section of those interested in the history of the wild pigeon, before the epicure meets him at the table. When the body of birds leaves the South the local superintendents of the express companies are instructed to keep their eyes out for indications of a nesting, and the messengers generally are to report on their route. A correspondence of an inquisitive nature is carried on by every regular netter in order that he or his chums may strike the birds first. One may judge of the importance of the receipts to the express companies from the fact that a total of four to five thousand barrels of birds are shipped from each nesting, averaging thirty dozen to the barrel, on which the charges are from $6 to $12 per barrel, which sometimes include re-icing on the trip. This does not include the stall-fed birds for later market, nor the live birds for trap-shooting, and on which charges are 75 cents per crate of seventy-two birds to $300 per carload, nor the squabs, so that it is of considerable importance that no nesting be overlooked.

The same flocks of birds will be reported from ten or twenty different points, sometimes two or three hundred miles apart on their first appearance in the State. Then the plot thickens and it becomes a question, "Where is there feed enough to hold a nesting?" All probable points are then closely watched and daylight finds each netter out, set and ready to try and hail any passing flock of scouts and see how well the eggs are developed, and by the contents of the craw to tell whether the birds wintered in Missouri on acorns or in Alabama on rice. In this way the small flocks are watched and if they form a roost they are not disturbed. Generally the birds pick the best feed possible in Michigan or Pennsylvania; beech nuts are their nesting diet, followed as the nuts sprout by budding on the young elm buds. In Wisconsin and Minnesota acorns are their main food.

The first parties of birds generally form a roost in some swampy piece of land where tamarack or alder grow thickly, and the others join in, their cries filling the woods with noise. For two or three days the noise is terrific and the colony increases rapidly, each flock coming in calling as it flies, which is a sure sign of a nesting. The birds now select their mates and for two days sticks are carried, each doing a fair share in the work of building the nest, which is all sticks, with no moss nor lining. Here two eggs are laid and on the third morning the tom birds leave the nesting for their first drink and feed, and generally drink first. They start in large sheets, gradually splitting into flocks a short distance from the nesting, and feeding and returning at 10 o'clock to relieve the hens, who take their outing until 3 o'clock and return to let their partners take a second trip out in the afternoon. This goes on daily, rain or shine, until the young are hatched. They are fed first on a substance called curd, which the parent birds secrete in their craws, and which must be removed from all birds killed, as it soon spoils them. After the young get a little larger both parents have to hustle for food and sometimes they go out together. All young hatched will be fed even if their own parents are killed.

We will take a trip out with a good netter the first morning a regular fly commences from a nesting. A grain sack, in which are a net and stool and a canvas covered cheese box of which he is very careful, besides the pipe and lunch, comprise his visible outfit. I say visible because it is not yet daylight, and we are none too early. It is a clear cold morning with prospects of a bright sun, and one man knows that the birds will leave at dawn if they come out to-day at all. He has been waiting two or three days, hearing each day from men who have been through the nesting how they were building, so he is on nettles. All his preparations are made. A brisk walk of a mile brings us to the slope of a large hill where the oak timber skirts two sides of a coulee, on which was corn last season. I note a few stakes stuck up and a small house well thatched as to its top, front and sides and open behind; and then I must watch him. Quickly his net is shaken out of the sack, out come the hooks and hubs, fly-sticks, stool and fly-lines and a hatchet, and he is full of business. The net is made ready.

Now he arranges his flyer's boots by attaching them to lines 20ft. long, tied to a small stake behind the house. His flyer is next produced from one corner of the box and quickly a silk thread and fine needle (a pigeoner's trade mark) is run through the callous membrane of the lower eyelid, then carried over the crown of the head to the other ditto, then brought together on top of the head and neatly tucked under. His mate is treated likewise, and the flyers are ready and set at the rear of the house in easy reach. Now the netter reaches into his box at the other end for his right bower. "Hullo, Tom," he says, and a gentle peck on the finger is his morning salute as he produces a finely-feathered, erect, slick-looking male bird which two seasons have rendered reliable. A gentle hover! Ah, there! Just watch him shut his wings. That is all there is of it, and it is beyond counterfeit. He is put out on the stool pad, which is a wire shank and rim and riveted center, a pair of boots is passed through the pad and over his feet, drawn taut and attached to the handle. A few dead birds shot yesterday for the occasion are produced and nicely arranged on the bed.

Just then the first flock of about a dozen stragglers went through the valley to our right. I am told to keep down in the left corner under cover of the side and look out behind and see if the birds notice the flyers. The netter now buttons his coat, and taking a flyer on his hand, strokes it so as to calm it, while his eye travels every foot of the valley behind us. Suddenly I hear "Hist!" and the sound of wings as the first flyer leaves his hand, and the second follows a moment later. I at once forget the birds and look at the two flyers. Right up to the end of their lines they go, strongly and well, then round in graceful circles until they light suddenly on the ground. Then I notice that he has taken hold of the stool line, and I can hear the hover of his bird, while the flock, having seen the flyers light, evidently desire company, for after circling once they set their wings and come broadside to the bed. He holds the stool up until they are about fifty feet from the bed, when he gives the lighting hover with the stool bird and releases the stool line. His eyes tell him when the bulk of the flock strike the bed, and as their wings close, a quick, strong pull on the spring line and a tumble out through the back speedily follow.

I note a small bunch of birds making their way to the woods, but he is at the net, pincers in hand, and wherever a head shows through it they are applied and the neck is broken. Out of breath from nervousness he says, "Eight out of fourteen; pretty good!" A pat to the stool bird, a hurried setting of the net, and with flyers gathered in we are ready once more. A flock passes out of range, but no effort is made to halt them, as he says the flocks will follow their leaders and more will come to our point. I am interested now, and only anxious to throw a flyer or do something to help. He says, "Take it easy now and we won't be disappointed to-day. The birds you see dead and those you see flying are all toms, and the nesting is ready to commence a regular flight. We will need help before evening and won't tire a flyer for nothing. As he spoke he made a quick jump into the house and I lie flat on my face. I don't know that a large flock is directly upon us. No time to throw a flyer, so under his coat it goes, and the stool birds and the bedders which were increased by the ones just killed, were used for all they were worth. I could hear him breathing hard, when suddenly he sprung the net and yelled, "Now hustle, we have something worth going out for."

As we rolled out of the house I heard the swish of wings, and there was a flock piling on the net, under which appeared to me to be a thousand pigeons. I was rattled. He told me to bring the bag, into which I dropped the birds as he killed them, counting until 69 had been put in—a pretty good haul. All the while, though, flocks of every size were passing over, so after saving one spry fellow for a flyer we set again, and had not a minute to spare before another bunch netted us 27. My hat was gone now and I was wild with excitement, but bent on seeing it to the end. For two and a half

hours we worked without a minute's rest until he told me the tom flight was over, and I who was going to "keep tab" if I could not play, told him I had counted sixteen dozen dead birds besides those on the bed. Well, we had a rest, broken only by a visit from the burden of a netter's life, "a hen hawk." The stool bird had his eye on the hawk and would not move his wings, so for sport a green bird was put on and I doubled the hawk up with a charge of 6s.

About 9:30 the birds began to return to the nesting, and we had a chance to see their way of feeding. In the ravine was a creek and small pond lined with birch and alder. After the birds had scoured through the woods, rolling over one another and the leaves like waves, until they were thirsty, they would swing out into the valley and strike the creek, going down two or three at a time, and then pitching away for their nesting. As they are satisfied on the back fly, we attempted nothing until they were all in. He told me the hens would break out to-day in full force, as they had been in two days laying. I could not describe the sight when they did come out about 10:30. From every point there came flocks, and the air was never clear. We could do nothing but set the net and straighten up in time to spring again. Our house was almost filled with dead birds. I was allowed to try my hand and succeeded in catching the bed. The old stool bird had no use for me. Through good and bad luck we had added 29 dozen hens, and as the outfly was finished he advised our carrying the dead birds to a cool place, where he husked them with the hatchet and laid them out to set for packing. After covering them with brush I left for the house for ice and an empty barrel, as he did not wish to let his luck be known. Meantime the stool bird and flyers were fed, and when I got back were ready for the evening fly of the toms, who go out twice to the hens' once.

At 3 P. M, the hens began getting back, so we cleaned up the bed and were soon ready for the toms once more. Almost the first flock we saw came directly for the creek to water, and in a moment were leisurely starting over our clearing, when our flyers attracted their attention and a beautiful scene followed. On they came, their crimson breast toward the sun as handsome as nature—I could hear my friend say "Too many! Too many!" At last he ripped into them and the net only got about half way over. When we got out the birds were pouring out of the net, so many there were that they held up the front line. Dropping flat on it we had the satisfaction of saving 159 birds, which was our best haul of the day. Now followed a repetition of the early morning programme, lasting until sundown, and when we got through we found sixty-one dozen and three birds to the good. To me it was a revelation; I think it was a surprise to the old man whose locks were sprinkled with gray. These birds were laid with the others as they were, and at 10 o'clock that night were packed and on their road to Boston, where the first arrivals sold at $2.50 a dozen.

With unvarying success for the two weeks necessary to hatch the eggs we continued our sport. I was given a net and had lots of praise showered on me by as kind a man and as true a friend as I ever met in that business. In every clearing within a radius of fifteen miles was a bough house, and each train was loaded with birds. Evenings there would be a grand reunion at some corner "grocery," and they would vie with one another in the pigeon tales galore, which may account for the author's lore. F. E. S.

EAU CLAIRE, Wis.

[TO BE CONCLUDED.]

## DEER IN NEW HAMPSHIRE.

A LARGE portion of northern New Hampshire is to-day an unbroken wilderness. Deer are quite plenty, and almost everything favors their increase. I have cruised about to some extent in the region lying about the East Branch of the Pemmigewassett River in the towns of Lincoln and Livermore, seeing numerous signs of deer and bears. This place is quite easily reached, the terminus of the Pemmigewassett Valley Railroad being at the mouth of the Branch.

In years past, when there was practically no protection for deer, a great many were killed in this region every winter. At a certain house near the Branch, some two miles from the railroad station, I have been told, there would be seventy-five deer hanging in the barn at a time. These deer were killed by different parties. The route up the East Branch was the easiest to the woods, and the house the last one passed. Parties coming out would drag their deer there and leave them until they could come after them with teams. This hunting was done in the winter in deep snow, where the deer were yarded. An old resident of that region said to me, "We were about sure of getting every deer in each yard we found. At one time we had thirty-two hanging about our camp."

Such slaughter is now a thing of the past. The game laws are pretty well enforced, and very few deer are killed out of season. As one of the former crust-hunters said, "It ain't safe to kill 'em now. Last winter I wanted some fresh meat and started out one morning before daylight. I killed a deer that day and did not bring it out of the woods until after dark, and I was careful about leaving signs where I left the woods. Two days after a warden came here saying he must look around, as he heard I had been killing deer."

For quite a number of years but few deer have been killed each season in this region, and they should have increased. My hunting there was not a success. I went late in November to try still-hunting, but did not get a chance. Every snow storm ended in rain, making very noisy traveling during my stay. I jumped a good many deer, but could not get sight of one on account of the noise. Some six or seven miles back in the woods is a small pond, and parties who have been there trout fishing report deer signs very numerous, and it is also quite a place for bears. A party camping near this pond for a week or so in the early part of September, would be likely to get a number of shots by watching the ponds at daybreak and toward sunset. A trip there would cost much less than one to Maine or the Adirondacks. It would necessitate packing in provisions, camp outfit and making your own camp and roughing it to some extent. It might not suit some sportsmen who are accustomed to some of the well appointed camps of Maine or northern New York, where everything (except possibly the game) is provided. C. M. STARK.

DUNBARTON, N. H.

## WISCONSIN DUCKS AND DEER.

ASHLAND, Wis.—*Editor Forest and Stream:* I have long wanted to drive a spike in that platform of yours—"Stop the sale of game at all seasons of the year." That is the only way to save it. Some say, tax the gun. What would be the use of that? The market-hunter would pay his tax and shoot enough more, if possible, to make up for it. I have been a market-hunter, and I know that is what I would try and do. But take the poor man that has only an old musket or some other cheap old gun, and who would like a mess of partridges or ducks for his family once in a while—it would come hard on him. I know plenty of such in this section of the country, that nearly all the fresh meat they have is what they can kill with their old guns, and I should hate to see them have to pay a tax on them, for it is enough for them to buy their ammunition, and all they can afford. But I am "dead sore" against the market-hunter, and I am in hopes the law will be passed that will put an end to the wholesale slaughter of game for the market.

We are not troubled very much with the market-hunter here, only on deer; the other game is so scarce that it would not be profitable for them to hunt it. Ten years ago a good shot could go two miles from town and in one forenoon, on a good day, could bag 25 or 30 ducks, but he could not do it in a week now.

Last October my partner and I went to the Kankagon marshes, ten miles from here, and hunted three days, and only got 17 ducks. These marshes are the best feeding grounds for ducks in the country. They cover about 2,000 acres, and are well seeded with wild rice, which the Indians of Odanah Reservation gather every fall. But the ducks are nearly gone. Where? Shot and sold to the Eastern markets by market-hunters. As I said before, there are no market-hunters here, only for deer. They have been killed off by the hunters in other localities.

"No spring shooting of ducks" would have been another good plank in your platform. That is another cause for the scarcity of ducks. I have not hunted ducks in the spring for the last two or three years. When I came to dress the last I killed they pricked my conscience, for the females were full of eggs. I figured like this, that every female duck I killed would have hatched ten or a dozen young ducks, to be ready for shooting in the fall, so virtually I was killing ten or twelve ducks every time I killed a female. I stopped short.

The game law for this State, as it is now, on deer is the poorest we have ever had. The open season commences Oct. 1 and closes Nov. 1. The leaves are then about half off the trees and it is still warm; the deer are hard to see and when shot are hard to find unless knocked down cold on the spot; and that is hard to do in snap-shooting, for it is catch-as-catch-can. I went a week last fall, shot three and got one. I shot him high and first broke his back. One of the others, a small doe, I found two days after, but the meat was spoiled so I would not even skin it. The other I never found but trailed her by the blood for nearly half a mile, and it took me nearly all day, but I did not find her. My partner shot two and lost them both. We also trailed one of his a long way by the blood but finally lost it on account of loose leaves and green undergrowth. The other he shot was a large buck, just as it was getting dark. We soon lost the trail. This deer was found three or four days after by an old man living on a homestead near by, but of course it was only good for the wolves to feast on.

The wolves lived high here last October, for there were lots of dead deer scattered through the woods that could not be found; many were found after they had spoiled, by land lookers and other parties. The deer I killed and got was a large buck, I shot him at about four o'clock in the afternoon. We dragged him to the N. P. R. R. track, about forty rods; then we found a push car and loaded him on and took him to the depot which was about one and one-half miles. We broke camp and brought him to Ashland that night, and left him in the freight depot. The next morning we skinned and cut him up, and in that short time, about seventeen hours, the meat had begun to smell, especially where it was bloody. Now what is the use of having a law to kill deer if you can not save the meat? if the open season were from Nov. 1 to Dec. 1, the leaves would be off the trees, so if you shot a deer and did not kill him on the spot you would have a chance to get another shot or two and save the deer, and not let him run off and die and be no good to no one only the wolves and crows.

The open season in Minnesota is from Dec. 1 to Nov. 1. So the market-hunter kills what he can here in October; then crosses the line and shoots during the month of November in Minnesota, giving him two months. They have got a nice law here in this State for exterminating all the deer in Wisconsin and Minnesota. The professional can take his choice, after he hunts here during the month of October, he can hunt the next month in Minnesota or Michigan. The law was all right as it was before they changed it. A man could have only one month on deer, and take it in either State; but now the market-hunter has a picnic. If what they are trying to do is to protect the deer, why do they not have the law the same in all three States and then stop the sale of venison? That would fix the market-hunters. If that was not enough, only give us the last two weeks in November so we could save what we killed and have a show to get what we cripple.

I met four market-hunters last fall on the train that said they had been hunting up on the Brule River, but could not make it pay, for they lost more than they got, and had to take them to market nearly as soon as killed; but they were going up in Minnesota as soon as the law opened to hunt there during the whole month of November. They wanted to know if I was going. I told them I did not hunt for the market, was just going out to try and kill one to eat and divide up with my friends.

We have organized a gun club here with sixteen members, the name of it is the Ashland Gun, Rod and Game Protective Club, J. W. Close, Pres.; Dr. Otto Braun, Sec'y; Sebe Malmberg, Treas.; Leo Braun, Captain. The club will have shooting contests and try and protect the game and fish out of season. SPIKE HORN.

### Quail in West Virginia.

CENTRAL CITY, W. Va.—A commendable lack of interest was shown last year in the pursuit of game, especially quail, on account of their scarcity, caused by the hard winter, and this fact, coupled with the mildness of the past winter, doubtless insures a good supply of quail for the fall shooting in this section. Our hunters cannot pursue their sport, so far as quail shooting is concerned, in Ohio for three years to come, as I understand the Legislature has put down its foot again. As I have said before, I am opposed to prohibition for even one year. What we want is a short season every year for shooting, and the law enforced, no one daring to pull a trigger or cast a hook except when the law allows. N. D. E.

[The Ohio law does not provide for a three-years' close season.]

### The Prospect for Quail in Tennessee.

MEMPHIS, July 2.—Those of us who look to Bob White (quail) to furnish us sport afield with dog and gun, when the frosts of the fall kiss the vegetation, watch with interest the weather for the month of June; for it is during this month that the quail nest, lay, and the weather permitting do most of their hatching. If it is dry and pleasant, we see large bevies of early birds and plenty of them. If wet and disagreeable, the nests are often washed away, or the young are destroyed by the excessive rain, compelling the old birds to nest again. When the weather is warm many eggs addle from the heat before hatching, or—if hatched—the young are overtaken by the cold weather before fully feathered and are apt to die from the effects of the cold.

Small bevies and few of them follow a wet June. The weather this season could not be more propitious for the rearing of young quail. Throughout the fields in this section we now hear the *Bob White* of the quail, as he sits on some stump or in some brush and does guard duty for his mate, who is doing duty on some nest near by, causing the sportsman to look forward with pleasure to the ides of November, when all nature is clothed in her russet hue and the keen November wind sings a funeral dirge to the departed heat and dust of summer as it soughs mournfully through the pines. The whir of the quail unnerves the shooter as they disappear like rockets to the right or left. The shooter's lungs expand with the ozone of the crisp air like a pair of double compound expansion engines, causing the old to think they are boys again and the invalid to feel for the time they have found the elixir of life, as they climbed hill after hill in pursuit of the quail, or followed the old dog, who is seeking in yonder covert another bevy of the brown beauties, or tenderly retrieves a couple that was cut down by a neat double just a moment ago.

We are apt to forget as we swelter in the heat of just such weather as we are having, that it makes good quail shooting next November a reality, not a dream. We now sit and mop the great beads of perspiration away, or sniff the heated air, or fight the flies that tickle our noses or ears, or hurl anathemas at the mosquitoes and wonder what such weather was made for. Then in a somnambulistic state, if we look down the vista of time, as we step into the field next November with dog and gun and the whir of the many quail and bang! bang! of the deadly breechloader, it makes one think that every cloud has its silver lining. P. H. BRYSON.

### Non-Resident Sportsmen in Arkansas.

LITTLE ROCK, July 2.—*Editor Forest and Stream:* An inquiry in the last number of FOREST AND STREAM whether it is necessary for non-resident sportsmen to procure a license to hunt in Arkanses, recalls to mind a promise I made you, at the World's Fair last September, to cite you to a provision in the digest of the statutes of Arkansas relating to game protection which has been omitted from the *Book of the Game Laws.*

You will find it in Mansfield's Digest, Chapter 149, Sections 6456-8. Section 6456 provides that "a tax of ten dollars is hereby levied upon all non-resident trappers, hunters, seiners or netters of fish who may follow trapping, hunting, seining or netting of fish in this State." Section 6457, that "before any non-resident may be permitted to follow trapping, hunting, seining or netting of fish in this State, he shall procure a license from the county clerk, countersigned by the collector of the county in which he proposes to trap, hunt, seine or net fish." Section 6458 provides a penalty for violation of the two preceding sections.

These sections have never been construed by the courts. I have understood that the county officials in some of the eastern counties have construed these sections to require all non-resident hunters or fishermen to procure a county license to hunt or fish in this State. It would seem to be clear that the law was aimed only at those who follow trapping, hunting, etc., as a livelihood.

T. D. CRAWFORD.

[This law was omitted from the *Game Laws in Brief*, because it was considered to apply only to trappers and hunters who followed the pursuit as an occupation; and not to apply to sportsmen shooting for pleasure. This view has been sustained by the opinion of Hon. J. M. Rose, of Little Rock, and appears also to be indorsed by Mr. Crawford. The man who goes on a quail shooting or deer hunting excursion can hardly be classed among "those who may follow trapping or hunting." The law was enacted in 1875, nearly twenty years ago; and the game legislation now recognized as actually in force in Arkansas is of later date. The non-export law was adopted in 1889, and is contained in the *Brief* as amended in 1891.]

### Indians and Game in Wyoming.

*Editor Forest and Stream:*

I am glad to hear through the medium of your columns of the abatement of the Indian nuisance in western and northwestern Wyoming. That particular section of the country mentioned by Ira Dodge seems to have been their paradise for the simple reason of the big game being so plentiful and requiring very little work on the part of the marauders to get "heap lot" buckskins. I remember while herding through that country, and particularly Jackson's Hole, running on to carcasses of elk, deer, etc., which were stripped clean of their hides. Bucks, squaws and papooses would arrive in the early fall with strings of ponies for the chase, and if every hoof wasn't well loaded when they went out the game must have been very much on the lookout.

Not satisfied with hunting "on the square" in the fall of '92 they camped right in the very cañon through which the antelope were in the habit of going south; and had it not been for the prompt action of the Hole's oldest settlers in driving the redskins from the field and out into Idaho, there would certainly have been a great slaughter of game. However, some of the whites had better let up on their illicit way of hunting and the game would then be safe. GROS VENTRE.

# Sea and River Fishing.

## ANGLING NOTES.

### Results of Marking Salmon.

MANY readers of FOREST AND STREAM will doubtless remember something about the experiments of Mr. Chas. G. Atkins, Superintendent of the U. S. Commission salmon breeding works in Maine, in tagging salmon to determine their habits, etc. The experiments were not as complete as Mr. Atkins would have liked to make them, but so far as they went they showed that salmon after going to sea returned to the rivers in which they were born or planted as fry; showed increase in weight and growth from their stay in salt water, and pointed very strongly to the theory that they spawned but once in two years. The habits of the same species of fish may and probably do differ in the waters of different countries, as witness what is known of the conduct of smolts, grilse and salmon in the Hudson and Penobscot rivers in the United States, and in the rivers of Canada and Great Britain. Be this as it may, it is a commonly accepted belief that salmon spawn but once in two years, no matter where they are found. Mr. Atkins's experiments in this direction seemed to be conclusive in regard to the salmon of Maine.

Last year Dr. Landmark, Inspector of Fresh-Water Fisheries in Norway, delivered a lecture at Gothenburg, in which were recorded certain facts which were learned from marking salmon in the rivers of Norway.

Briefly, of fifty-three salmon that were recaptured after they were tagged and released, all but twelve were taken in the streams in which they were released. One was captured in another river and eleven were taken at sea. Of these wanderers all but one were taken north of the rivers in which they were marked and released. One was captured 264 miles away from the river in which it was released, and another 497 miles away from its river.

Perhaps one of the most interesting features of the experiment of marking the salmon was the discovery that "a considerable number of salmon spawn yearly." No fewer than ten of the salmon recaptured were marked the one year, either when ready to spawn or having just completed that operation, and were retaken the next year in rivers in a similar condition, and four females that were released one year just after spawning, were captured at sea the next year at a time when they seemed to have just spawned.

From the experiments, Landmark draws the conclusions that salmon which go directly to sea after spawning, recuperate at once and are ready to, and do, spawn the following year, while those which remain in fresh water all winter after spawning are not in condition to spawn until the second year.

I have mentioned Landmark's experiments at this time chiefly to introduce the eleventh annual Report of the Fishery Board for Scotland. In this report I find a paper by Mr. W. E. Archer, F.R.S.E., Inspector of Salmon Fisheries of Scotland, with the title "Natural History Notes on Salmon in Norway."

Mr. Archer applied himself to the study of salmon in Norway for eight years, from 1884 to 1892, and during that period marked 954 salmon for the purpose of studying their habits, migrations, etc. Besides the salmon marked by Mr. Archer some 3,000 salmon were marked on other rivers in Norway, and details of the capture of some of them are given, but as these details were probably furnished him by Landmark they doubtless concern fish already referred to.

Mr. Archer leased Sand's River and it was in this stream that 954 marked salmon were released, and of this number 38 were recaptured. They were recaptured chiefly in the river, but a few were recaptured in fjords leading to the river, and six not included in the list were recaptured at sea. The greatest wanderers were, first, a salmon taken 500 miles from the river in which it was marked, and 2 years 208 days had elapsed between marking and recapture. Marked as a kelp this fish was caught fresh-run and had gained 15½lbs. Another had wandered 230 miles, and 1 year 247 days had elapsed. Still another was taken 200 miles away and had been gone from the home stream 1 year 204 days.

Mr. Archer says: "The first important point that seems to be established by these experiments is that some salmon spawn annually; seven salmon marked on Sand's River and five salmon in Aaensira River were recaught the season following their being marked, either about to spawn or having spawned."

I give the record of one fish. It was caught and marked on Oct. 11, 1887, just before spawning. It was recaptured fresh-run on July 23, 1888, and had gained just 1lb. in weight. Another caught as a kelt on Feb. 3, 1888 and marked, was caught again as a kelt on Jan. 16, 1889, and had gained just 1lb. in weight.

The details of the capture, marking and recapture of the various fish are interesting in the extreme, but they are too long to give here. Mr. Archer also produces evidence to show that all salmon do not spawn annually. With the paper there is a map of southern Norway showing the rivers, fjords and sea coast, and by a series of figures in colors the place of capture of each salmon is shown, the color of the figures in each case indicating the river in which the fish was marked and released.

### Salmon at Sea.

Mr. Archer refers only briefly to the marked salmon recaptured in the sea, but the reference is of a surprising nature. He says the marked fish of Sand's River, recaught at sea, were caught along the northern coast within a distance of ninety miles, the marked fish from Aaensira River showed very much wider wanderings, and intimated that this may have been caused by or is the result of artificial propagation carried on in latter river, but he says that further investigation will be required to determine if it is the rule for such fish (*i. e.*, fish propagated artificially) to wander far from the streams in which they were planted.

The U. S. Fish Commission has recently issued as part of the Bulletin a paper by Dr. Hugh M. Smith, assistant in charge Division of Statistics and Methods of the Fisheries, with the title "Notes on the Capture of Atlantic Salmon at Sea." In this paper Dr. Smith has gathered together the records of all that was known at the time of writing of salmon captured at sea off the Atlantic coast. Dr. Smith writes me from California that since his paper was issued the Commission has come into possession of additional data regarding the occurrence of salmon at sea which may be made use of in a supplementary paper.

In his letter Dr. Smith gives some interesting information about Pacific Coast fisheries, as follows: "You may be interested to learn that the salmon fishery of the Sacramento River seems to be undergoing regeneration. Last year the catch was larger than for several preceding years, and this season the run is over 50 per cent. greater than last year. To the Eastern man visiting the Pacific Coast for the first time, the sight of shad and striped bass in the market is novel. Both fish have come to stay, and already constitute important factors in the fisheries and fish trade. The shad seen are usually fine ones; a dozen exposed for sale on June 1 at a stand in San Francisco had an aggregate weight of 95lbs. The supply of shad is far in excess of the demand, and is increasing yearly."

It will be remembered that both shad and striped bass were taken overland from the Atlantic and planted in Pacific Coast waters. Shad averaging about 8lbs. each is something not seen in the ordinary Eastern markets, but it is not unusual for fish to grow larger in waters where they have been planted than in the waters of their original habitat.

A. N. CHENEY.

## BOSTON ANGLERS.

MR. RODNEY P. WOODMAN has returned from his spring trout fishing trip to Aroostook waters. He, with a friend, went up to Norcross on the new Bangor & Aroostook Railroad. They then went some sixteen miles into the woods to the section of Rainbow Lake and Duck Lake. Here they found that they were too early, the weather being cold and uncomfortable. In the lakes they caught some very fine lake trout or togue, the flesh almost as pink as the finest brook trout. For brook trout they were obliged to fish the streams. Spencer stream afforded them great sport in some sections. They also visited the Upper and Lower Twin Lakes. These lakes they found, much to their surprise, full of pickerel, suckers and perch, as so many of the ponds in Maine are where the trout have been exhausted. The theory of the guides is that the pickerel were never put into those waters, but that they have worked their way up from the Penobscot River. The gentlemen pronounce the country they went over a good one for fishing, when one is acquainted with it and strikes it at the right season. The forests are almost primeval, and the distance is great enough from the beaten tracks of other sportsmen to suit even the most recluse of trout sportsmen. For a big game country they say that it is wonderful. They heard moose and tracked them. One big fellow they came near as he was wallowing in the "logan." He gave an ear-splitting snort and was away. Deer they found remarkably plenty. They saw scores of them, while the woods are full of tracks.

The salmon fishermen to the celebrated salmon rivers in Canada and New Brunswick are fitting out and starting off in good numbers. Indeed, the waters of the Provinces seem to be drawing more fishermen than usual this year, both for salmon and trout. Saturday's Halifax steamer, sailing from Boston, is reported to have had more than a dozen trout and salmon sportsmen on board. There was quite a large party from New London, with some from Hartford, New Haven and Worcester. Mr. von L. Meyer, speaker of the Massachusetts House of Representatives, was off for the Restigouche as soon as the House adjourned. He is accompanied by Mr. T. Jefferson Coolidge, Jr. They expect to be absent for three or four weeks.

Mr. Mark Hollingsworth, the artist, has returned from his spring fishing trip to King and Bartlett lakes; he had excellent fishing. The scenery he describes as something magnificent. Big Spencer Lake is some six miles long, and is made up of narrows and islands. It is the ideal home of trout and big game; big togue are taken in the lake. Mr. Hollingsworth caught one weighing some 10lbs. Brook trout are also abundant. Fly-fishing in the Spencer Stream is all that could be wished for. Two or three trout at a cast are not at all uncommon. Deer are remarkably plenty. One only has to be on the shores of the lakes and ponds to see them almost any hour in the day.

In a day's fishing Mr. Hollingsworth, with his friend Mr. J. A. Littleton, of Boston, took 14 togue from Big Spencer Lake, the united weight of which was 53lbs. The largest weighed 10½lbs. Mr. Hollingsworth says that the sport of taking these big lakers is fully equal to that of taking brook trout, especially where they are fat and well fed. Mr. Myron W. Whitney, the celebrated basso of Boston, with a party of friends, has recently returned from a fishing trip to King and Bartlett lakes. In the party were H. F. Mores, Leon each, S. G. Brooks and H. G. Brooks.

Mr. John Bartleman tells a Boston friend that he is greatly pleased with his new camps at Loon Lake, formerly Long Pond, at Rangeley. His mother is with him at camp, and they have everything fixed up in ideal order.

Reports from Maine bass fishermen have never been more pleasing than this season. All the bass ponds in Kennebec county are "panning out" good fishing. The only question is what to do with the bass after they are caught. In some cases they are immediately returned to the water to furnish sport for some other fishermen. In this way it is possible for a single black bass to afford good sport to several fishermen in the run of a season. Fishing in the Chestnut Hill Reservoir will be indulged in to some extent this season.

SPECIAL.

### Bass Fishing in Muskoka.

LAKE JOSEPH, Muskoka, Canada.—The region in the vicinity of Port Cockburn is studded with lakes teeming with bass. A party of Americans, Drs. Hollister and Bennett of Newark and Leo S. Herzig of New York, have had exceedingly good luck in these small lakes, and have returned each evening with large strings of black bass averaging 2lbs. Quite a number of bass were caught last evening by the hotel dock. Pickerel (wall-eyed pike) averaging from 3 to 5lbs. are caught in the lake about three-quarters of a mile from the hotel. Blackstone Lake, situated about ten miles from here, has the reputation of having the best fishing in Canada. Mascallonge weighing 20lbs. and bass of 5lbs. are caught in abundance. I would recommend anglers using 6ft. leaders for fishing in this region, as the water is very clear. It is also advisable to purchase a large supply of worms in Toronto, as bait is scarce here. Minnows and small chubs are also good bait. I prefer chub, as then the small fry do not steal the bait, although a large, fat worm seems to be the best bait. Hotel accommodations are good, and boats are low-priced.

For any one who desires excellent fishing and good accommodations this is the place. On the smaller lakes guides can be procured for $1, although if one wants to row himself, a guide would be a superfluity, as the good spots are easily found; anchor near a hemlock stump and you are on good grounds. It is quite cool here, thermometer registering 62°. I am going to Blackstone Lake next week and will let you know my luck.

THE CAPTAIN.

## SALMON FEEDING IN FRESH WATER.

PORTLAND, Ore., June 29.—*Editor Forest and Stream:* Apropos of the subject of salmon feeding in fresh water and the oft-repeated declaration of the U. S. Fish Commission, Livingston Stone, Dr. David Starr Jordan, and other eminent authorities, that the salmon do never feed in fresh waters, I desire to say that, in my opinion, my friend Judge Greene's view is about the correct diagnosis of the mooted question. It will be remembered that he has frequently suggested in the columns of FOREST AND STREAM that the salmon may feed while in fresh waters upon food quite as nutritious and strengthening, although not of so substantial an appearance as that of their fattening yards in the ocean; that the first run of salmon undertake their pilgrimages at a season of the year when they are likely to find a good supply of larvæ and other soft or gelatinous substances that would be very nutritious without leaving much substance in the salmon's stomach, and that those following would have the advantage of the spawn of their predecessors which they would not be slow in appropriating. Dr. Jordan admitted that this view might be true, and Charles Hallock declared that such had always been his opinion. That the salmon are very fond of their own spawn no one well informed about their habits will for a moment question. I have fished for salmon a great deal at the Falls of the Willamette, and aside from my own experience have closely observed the experiences of others. One day recently I hooked ten Chinooks at the falls with salmon spawn for bait. A gentleman with me hooked five. Another, more lucky, took twenty-one. Another, sixteen; and numerous other fishermen at the same place and time took from three to a dozen. They took the spawn greedily, not only on this particular day but on many other days. In fact I presume that several thousand salmon have been taken at the falls this month and last with salmon roe for bait. It seems to me that these facts indicate a disposition on the part of the salmon to feed in fresh water. At least I desire to add my proofs to the great mass of evidence in support of Judge Greene's theory. J. ROBERTS MEAD.

## FISHING IN CANADA.

*Editor Forest and Stream:*

In my last letter I mentioned the visit to Lake Edward and Lake St. John of a distinguished party of Michigan railway men, but was then unable to report what success they had met with in the land of the ouananiche. Messrs. L'Hommedieu, assistant general superintendent of the Michigan Central Railway, and J. D. Hawks, manager of the Detroit, Bay City & Alpina Railway returned here on the 20th of June from the Grande Discharge in their special car, delighted with their sport and with the game qualities of the ouananiche. Among the fish taken by members of this party were a number of three-pounders, some of the anglers having hooked three and killed two ouananiche at a single cast. Messrs. Plumb of Detroit and Lyon of Oswego, who formed part of the same group of fishermen at Lake St. John, are now fishing the waters of the St. Marguerite Salmon Club.

Mr. Plumb writes me from the club house under date of June 28, and speaking of some specimens of my favorite summer fly for ouananiche, usually known here as the B.-A.-Scott, but, as pointed out some time ago by Mr. A. N. Cheney, almost exactly identical with the General-Hooker as found in Mrs. Mary Orvis Marburg's "Favorite Flies," says: "I divided the flies you sent me among our friends, and all of us took fish with them. Indeed, we did on everything we used. One fly seemed to do the work about as well as another. We had a delightful time at the Grand Discharge and lots of fish." For some week or two this fishing is likely to continue good. Then the ouananiche that rise to the fly here will diminish in size, and anglers in search of the best sport and the largest fish will have to descend the Discharge to Isle Maligne or thereabouts, or else ascend the Mistassini, Ashuapmouchouan, Peribonca or other tributaries of Lake St. John. Mr. Chamberlain, of Rochester, and a party of friends are fishing their splendid ouananiche waters above the Vache Caille Rapids and near the foot of Alma Island, in the Grand Discharge. This is one of the most picturesque portions of the waters of the upper Saguenay country.

In a few days more ouananiche fishing will be at its best in the splendid pools at the Fifth Falls of the Mistassini. Mr. W. J. Hazlewood, of New York, has already this season had fair sport there, but was too early for the best of the fishing. He did exceedingly well, however, at the Grand Discharge. Mr. Archibald Stuart, of Scotland, who recently had a delightful time at the Fifth Falls, started out in the early part of last week on a trip to great Lake Mistassini, and it was with great reluctance that I felt compelled to decline his invitation to accompany him. The expedition will be a most interesting one, if only from the fact that it has been made by so few white men. Mr. Stuart is accompanied by four Indian guides and two canoes, containing his tent, supplies, etc., and expects to be absent from civilization some two months, which will afford him ample time for fishing and for taking views of the scenery *en route*.

The well-known anglers Kit Clarke and E. J. Meyers, of New York, and Eugene McCarthy, of Syracuse, are expected up this way during the present month, and Mr. Chester S. Lord, of the New York *Sun*, is looked for in about a fortnight.

Mr. Blanchard, who did so much last year in the columns of FOREST AND STREAM to bring to a successful issue the agitation against the constant netting of Canadian salmon streams, went down to the St. Marguerite last week, accompanied by Mr. Brown, of Boston.

Messrs. Edson Fitch, and John D. Gilmour, of this city, have so far killed twenty-three fish on the Trinity this season, and Messrs. Amos Little, E. P. Borden and party, of Philadelphia, have lately returned from a very suc-

cessful salmon fishing season upon the Moisie. The king of game fishes has run very freely during the last month up the North Shore streams and an unusual quantity of salmon has been taken in nets. The fish has sold in this city by the pound down to 12½ cents, though the opening price was 40 cents.

Sea trout are reported plentiful at Tadoussac.

E. T. D. CHAMBERS.

QUEBEC CITY, July 6.

## NEWS FROM THE FISHING WATERS.

FORKED RIVER, N. J., July 3.—Capt. Geo. D. Harring, yacht Clara, with Mr. H. C. McDougall, editor of the Newark *Sunday Call*, made a catch yesterday of 19 very fine weakfish, tide runners, largest weighing 4½lbs.

*July 4.*—Capt. Geo. Wooley, J. M. Howard, of Brooklyn, and J. S. Campbell, of New York, made a catch to-day of 18 very fine weakfish, 2 striped bass and 3 bluefish in one hour. Capt. Geo. D. Harring and party—Thos. P. King and Geo. C. Wright, of Brooklyn—made a catch to-day of 21 large weakfish in one hour. Both parties from Riverside House. B. E. ENO.

NEW YORK.—Striped bass fishing has been good in the Hudson River in upper New York city, Riverdale, Yonkers and beyond. M.

OSWEGO, N. Y., July 4.—Fishing for black bass and pike-perch good. Two of the latter caught last week, one weighing 9lbs., the other 11½lbs. W. L. HOSKINS.

NEW LONDON, N. H., July 4.—A. N. Cheney took a 3½lbs. Sunapee saibling last week—the largest fish of the species so far heard from. F. H. DAVIS.

CAMP LAKE, Wis., July 2.—Mr. J. W. Millar, of Chicago, fishing one day, morning and evening, caught eleven black bass, gross weight 27½lbs., and two pickerel 32in. long, weight 10lbs. each to an ounce. J. H. MCVEY.

VENTURA, California, June 22.—Trout fishing is poorer in this locality than at any time in the past fifteen years. Last winter was a drouth throughout southern California, and our streams are now dried up and full of moss.

A. J. C.

WOODBOURNE, Sullivan County, N. Y., July 8.—I thought I would inform you of a catch of brook trout a friend of mine, Mr. Ely Garret, and myself took from the Neversink River in Sullivan county, on July 5. We started about 4:30 A. M. and left the stream at about 3 in the afternoon, between which hours we strung 296, weighing from ¼ to 4½lbs.; of the latter we caught five. All were mainly caught on the professor, coachman and royal-coachman flies. RICHARD C. CAHILL.

### Fishing on the Muskoka Lakes.

PORT COCKBURN, Lake Joseph, Muskoka, Can.—Fishing for black bass is not legal until June 30. I have had good luck with wall-eyed pike, called here pickerel, and with salmon trout. Two gentlemen from Chicago have made good scores. They use a curious tackle for salmon trout in this lake. A stout trolling line with a No. 2 spoon weighted with about 2 to 3lbs. of lead does the trick. The salmon trout are now in very deep water and this is the only way they can be caught. There are several lakes in the near vicinity which have an excellent reputation for big bass, and as soon as the legal season is in I will report to you. Evening from 6 to 9 P. M. is the best time for fishing. Bait seems to be very scarce and I would recommend sportsmen to bring with them a large box of worms, which are the best bait for bass and pike. I have been very successful with a No. 4 Clayton spoon.

Port Cockburn (pronounced Coburn) is situated on the head of Lake Joseph and is reached by steamer from Muskoka Wharf. I would recommend that round trip tickets be purchased from Niagara Falls. By leaving on the 6:15 P.M. on the Lehigh Valley R.R. prompt connections are made and New Yorkers can reach here the following day. The trip on the steamer from Muskoka Wharf is a most delightful one of six hours' duration. Dinner and supper is served *en route.* Weather here is cool, about 70° during the day, and there are no mosquitoes nor black flies. L. S. H.

### Fish in the Ohio.

CENTRAL CITY, W. Va.—There does not seem to be any concern along the Ohio about the violation of the fish laws, as nets and other unlawful devices are used without the shadow of protest. Dynamiting is done in the tributaries, and while the voice of law-abiding people is against it the hand of the law is quite unclosed. Perhaps the offenders are hard to indict, for they are sly.

I don't think the Ohio is nearly as good as the Hudson for the pleasures of the angler. Huge catfish are often taken weighing 100lbs. or more. I have tasted once of this mammoth *Pimelodus*, but did't like it. There is a fish caught with hook and line in the Ohio which affords capital fun, if not the most dignified sport. I allude to the skip-jack. To what family it belongs I cannot tell. It is altogether an attractive fish, not on account of its variety of color, for it is not variegated at all, but it is beautifully silvered and is well formed. The flesh is good, but—well, too Napoleonic to suit the best, as in it are many bony parts. It is often caught the size of the Hudson River herring and sometimes much larger, but generally not larger than a white perch. Some call it the freshwater herring. It resembles that fish and also yields its life about as quickly when out of its natural element.

N. D. ELTING.

[The skip-jack is the *Clupea chrysochloris* or golden shad.]

### The Greenbrier.

STAUNTON, Va., June 30.—I have just returned from my two weeks' annual trip with the Greenbrier Fishing Club to the headwaters of Greenbrier River, W. Va. Found water very low, and streams dwindled to mere rivulets—fishing not up to average in consequence. Still we had very fine sport for the first three or four days, as following score for trip will show: Bumgardner 157, Webb 127, Beall 123, Bell 67, Cooke 56, Elder 32; total 562. Trout were of good size, very game and rose readily to the fly. F. R. W.

### A Five Pound Thud.

A NUMBER of big pickerel have been taken from Turtle Lake the past few days. T. H. Goodhue caught one that weighed about 14lbs. Ollie Worm took in three 6-pounders in one day, and a day or two before he landed one with Henry Clark's help, which is called a 20-pounder. Of course, no one but a very narrow-minded man would want to know the exact figures. The scales on which it was weighed had a capacity of only 15lbs., and the fish brought them down with a thud which Ollie thought signified 5lbs. Henry Clark was willing to be as generous as the scales and add fifteen to the fifteen which they weighed. Geo. Sperbeck said the fish weighed 18lbs. and 17oz. But that is neither here nor there, he was a big one and as good as he was big; to this fact the writer is pleased to be one of many to testify, and that moves him to remark that it is all superstition to suppose that a big fish is not as good to eat as a small one of the same species; the reverse is the case—a big fish is mature, while the small one is only vealy. A pickerel in waters where food is abundant, can grow to a weight of 30 or more pounds, and be a better table fish at 25lbs. than at two or three. On Monday, T. H. Goodhue took out a string of eight weighing in total 56lbs.—*Whitewater (Wis.) Register, July 5.*

### Along the Jersey Shore.

ASBURY PARK, N. J., July 6.—During the week last past I have canvassed pretty thoroughly all the fishing points of note between Perth Amboy and Absecom, N. J., and I am much pleased to find a marked improvement all along the line. Weakfish are fairly plentifnl in Barnegat Bay, and are beginning to take the hook. Of course so early as this, few if any but school fish of small size are taken; the large channel runners come in later. Dr. George B. Herbert took nine striped bass at Manasquan Inlet last Saturday, weight 2¾ to 9½lbs. each. While at Morgan Station Mr. P. A. Schanck of Brooklyn, made an enormous catch on the previous Saturday of the same species. I will not give the number; it would not look well in print, but I have the account from his own lips, and verified by another gentleman. Altogether the indications are all right for good sport during August and September along the entire coast that this is due to the fact that the pounds were set much later in the season than formerly is unquestionable; regarding which and how the views of a great many pound owners are changing I shall have somethin ; to say later on. LEONARD HULIT.

## Fishculture and Fish Protection.

### Warden Moyer's Good Record.

AWAY up on the West Branch of the Susquehanna River, in Clinton county, amid the mountains of Pennsylvania, lies the little railroad town of Renovo, built, fostered and controlled by railroad monopoly; and for this reason it contains a floating and mixed population. Here may be found Irish, Swede, English, Scotch, Dutch, Jew, negro, Chinese, Pole, Hun, Italian. This conglomeration of humanity may be classified as the law-abiding Christian element; those who believe in doing as I say, not as I do; the outlaw, who cares nothing for his word, regarding neither god, law nor the devil, and who is living in portions of this country where they have neither laws nor officers elected to fill positions required by the law. Among this mixed and diversified set law and order would naturally be at a discount, and up to the time of the appointment of a police force for the town,

WARDEN ENOS MOYER.

detectives for the railroad service, and fish and game wardens for the community at large, people could not consider themselves safe, or in other words, could not be off their guard for any length of time.

The appointment by the State Commissioners, in the year 1890, of Enos Moyer as fish and game warden for this section, was a move in the right direction.

For the first three years Mr. Moyer worked comparatively alone, from the fact that the people in general and sheriffs and constables in particular believed him to be employed by "monopoly," and that everything he did was detrimental to their interests. Even the courts of justice and officers connected therewith thought him to be a humbug, something to be rid of as soon as possible; and in consequence so construed the laws as to compel him to withdraw many cases which otherwise might have been decided in his favor.

There are exceptions to all rules, however, and special mention should be made of Sheriff Fullmer, of Lycoming county, and Sheriff Ishler, of Centre county, as well as Officer Westbrook of Lock Haven, who were the most faithful assistants Mr. Moyer met in all his travels.

The sheriffs of many counties appeared to forget that by neglecting to lend their aid to Warden Moyer in enforcing the Act of Assembly regarding illegal fishing contrivances, they laid themselves liable to arrest for misdemeanor of office.

Notwithstanding all this opposition, Mr. Moyer has made more arrests, brought more violators to justice, destroyed more illegal fishing contrivances, such as traps, walls, nets, wires, fish-baskets and outlines, than all other fish wardens in the State combined, for the same length of time; and in so doing has waded more snow, traveled more miles on foot and alone at all hours of the day and night, and along more different streams in Clinton, Cameron, Centre, Clearfield, Dauphin, Lebanon, Lycoming, Northumberland, Perry, Potter, Snyder and Union counties, than any other warden would have done under the same circumstances.

Mr. Moyer has planted in the streams embraced in the counties mentioned millions of fish, consisting of pike, one season alone to the number of 1,150,000, and thousands of trout each successive year, besides replenishing the mountains with game.

A warden, it may be said, carries his life in his hands, especially so when he has a suspect and is compelled to follow him at once, without a warrant or assistance, to his home or place of concealment for his illegal game, which is likely to lead him a long chase over the mountains, through dark ravines, into a new section of country, traversed by him for the first time perhaps, where night overtakes him, leaving him without shelter and very often without food. A sly bullet may also be looked for from an unexpected quarter; for who but the guilty one knows where the warden is just at such a time?

The writer remembers several instances of this kind, the particulars of which it is not policy to mention, as the parties are desperate characters, having followed Mr. Moyer for miles, threatening to kill him if they were brought to trial; and who, after being by the courts of justice allowed to go free of punishment, have openly boasted of their conduct.

At one time he has had as many as eleven men under arrest before an alderman for illegal fishing, who, promising vengeance hereafter, pleaded guilty and settled, though most of them became his staunch friends afterward.

At annother time in company with officer Westbrook he left Lock Haven, following the waters of Fishing Creek, in Nittany Valley, in pursuit of a gang of Italian desperadoes who for months had been making it a business to dynamite the streams, thereby capturing the fish in most of those waters. These men belonged to a gang of railroad laborers who were employed in the grading of a new road in that valley. The gang numbered at least 100, all of whom for months had bid defiance to the neighborhood. These parties, after being held in jail for a time, were allowed to go free, inasmuch as those who were to testify to their guilt had been paid to leave the country.

Mr. Moyer has, at the present writing, under arrest a would-be English Lord who, having several hundred acres of land in Lycoming county, seeks to enact and enforce the laws of Old England by placing screens both above and below upon a stream which flows for a distance of about two miles through his land, neither rising nor emptying upon the same. The screens being five in number, the first screen is placed upon the upper boundary of his land, directly upon the line. The second screen is placed at a suitable distance below the first screen, the third and fourth in like manner, while the fifth or last screen is placed a few yards above the lower line or boundary of his land.

Now, mark you, here is just where the rub comes in; the screener wishes all to know and believe he catches these fish on his own land, and of course considers himself not amenable to our laws. As you see, he leaves just space sufficient on the stream below the screen and above his line for himself or his hirelings to stand upon comfortably and fish or scoop all trout coming thus far up the stream. They are then made his by catching and transferring into captivity above the screen, and this is done both in and out of season, and for this reason has Warden Moyer placed him under arrest for the second time to stand trial at the next term of court. This same man charges all natives two cents per quart for all berries picked within the limits of his unseated lands. A negro with a shotgun is also standing guard to prevent fishing on streams in this neighborhood, and in order to test the legality of the above action of would-be fish monopolies the warden, after investigating the case, received instructions from Commissioner Fred W. Ebel, of Harrisburg, authorizing him to have several persons go immediately and fish this stream. All of them were promptly arrested by the owner of the land. The case is coming up for trial at our next term of court and if gained by the warden and State Commissioners it will more than likely be a death blow to the fish and game monopolies now striving to form throughout this Commonwealth.

Warden Moyer was born in Chester county at a small place called Sheeter Town, was reared in Lebanon, followed the towpath from the age of nine years until 19, when he began the trade of machinist. He came to this valley in the spring of 1875 and is still working for the P. & E. Company here in Renovo. Yet he is ready and willing to give his presence and assistance at all times in the service to which the Fish and Game Commissioners of the State have again appointed him.

A suggestion or two may not come amiss, and may bear fruit at an early day. For instance, as so much money, time and labor is spent in propagating or hatching fish, would it not be policy to adopt plans leading to the better protection of them after they are hatched or sent into the hands or possession of others to dispose of?

My plan in the case of the small fish is to establish a home for each and every warden and compel him to do nothing but care for everything within the limits of his appointment pertaining to his business. This in my opinion could easily be done by either buying or leasing a piece of ground containing living pure water sufficient to fill at least three dams or reservoirs, No. 1 dam, or reservoir, above to contain the fish when first distributed; No. 2 for those having gained the dimensions of two inches or more; No. 3, or final dam, those of larger growth, soon ready to be allowed larger waters. This last dam could be opened directly into the main stream, and then when these fish meet larger ones they would be able to take care of themselves.

Time and again I have watched cans of small fish placed in waters new to them all destroyed by native fish within forty-eight hours after they were deposited.

Will not Mr. Fred W. Ebel, who by the way is one of the most active and go-ahead Commissioners the State has ever had, profit by this suggestion and try to induce the other Commissioners to establish the first of these homes at Renovo? Who knows? MCKEE.

## NETTERS BROUGHT TO TERMS.

### Cooks in New York.

For many years Harvey Cook, Sr., who resides at Saratoga Lake, and his three sons, Harvey, Jr., or Jack, Ransom and Andrew, ranging in age from 23 to 35 years, have made a living for themselves and families by fishing illegally with fyke nets and set lines, thereby violating the game laws of this State. They have repeatedly been arrested, but by some hook or crook managed to escape punishment. It is claimed that their shipment of fish exceeded fifteen tons per year, all caught in Lake Saratoga, Lake Lonely and Lake Champlain.

In September last, State Game Protector Barber caught Harvey, Jr., and Ransom raising a set line in Lake Lonely. The line was a mammoth affair, being over three miles in length and containing over eighteen hundred hooks. The protector seized the line and destroyed it, whereupon Harvey Cook, Sr., their father, immediately commenced a civil action against Mr. Barber for the value of the line before Justice Sullivan of this village. The justice decided against the protector, but the case was at once appealed. In February it was argued before County Judge James W. Houghton, of Saratoga, who reversed Justice Sullivan's decision with costs amounting to nearly $50, thereby sustaining the protector.

Cook did not appeal the case, and an execution was issued against him for the amount and costs, but it was returned unsatisfied. Since last fall Protector Barber has pressed the Cooks so hard that they discontinued illegal fishing in Lake Saratoga and Lake Lonely, and two of the boys, Harvey, Jr., or Jack, and Ransom, removed from Lake Saratoga to Lake

Champlain, and took up their abode at Wright's Station, town of Putnam, Washington county, where they were using more than a score of fyke nets. Since Nov. 1 last the protector has destroyed in the vicinity of Wright's Station over 15 fyke nets believed to belong to them.

On May 31 Harvey, Jr., was arrested and brought to Greenwich for trial. He demanded and had a jury trial, but was found guilty, and Justice Wandell imposed a fine of $50 or 50 days in jail. He has been confined in jail since May 31. June 7 Ransom was arrested at Wright's Station and brought to Greenwich for trial. The jury pronounced him guilty and the judge fined him $50 or 50 days in jail. Protector Barber had five other indictments against them, and could have had them fined $450 each or 450 days in jail. The Cooks knew this, and were, therefore, more than anxious for a settlement. On the 20th inst. three fines of $100 were paid, and they were liberated from jail. The other indictments for the present are withdrawn with the understanding that they remove from Lake Champlain at once and in the future refrain from violating the game laws of this State. If they fail to do this the other indictments will hold good. Harvey Cook, Sr., pays Protector Barber the amount of the judgment.—*Whitehall Times, June 21.*

### Raffman and Rubenstein in New Jersey.

The office of Justice Samuel R. Donald, at Bloomingdale, was crowded yesterday afternoon by interested neighbors, the attraction being the trial of Louis Raffman and Harris Rubinstein on a charge of having drawn a net in Mud Pond. This is a sheet of some 40 acres back of Bloomingdale, and was a resort for Paterson anglers for many years, until it passed into the possession of the East Jersey Water Company. This corporation sold the fishing rights to Raffman and Rubinstein, and since then no person has been permitted to angle in the water unless a tribute was first paid to the lessees. Fish Warden Shriner claimed that the lessees had been using both dynamite and nets whenever they could find any market for the fish, and in December of last year he succeeded in obtaining the conviction of Rubinstein on a charge of netting for the defendants.

The State proved by two witnesses that on the fifth of this month the two defendants were netting. One of these witnesses, Sylvester Casson, of this city, called out the accused and they at once hurried away. Another witness testified to an admission made to him by Raffman that he had used a net. The defense endeavored to establish an alibi. The defense also insisted that the pond is private property, and as such the lessees had a right to take fish in any manner they saw fit. The State proved that the pond had an oulet which is a runway for migratory fish, and that it was always used by all the anglers of the neighborhood without hindrance until it came into possession of the defendants.

The trial resulted in the conviction of the accused. Justice Donald imposed a fine of $25 and the costs on each. Raffman at once gave notice of appeal and filed a bond. His case will come up at the next September term of the Common Pleas. Rubinstine declined to pay the fine, and so the justice sent him to the county jail, where he will continue to reside for the next ten days.—*Paterson Press, June 23.*

### In Iowa.

Long before morning yesterday, the authorities, accompanied by a party of Dubuque's sportsmen, boarded the yacht Laura and struck off down the river for Harris's slough, where it was reported fishermen were operating, and where seines and nets were understood to be set in sloughs. The party arrived at the mouth of the slough shortly after daylight. A reconnoissance found three men at work. Boats were manned, and before the fellows recognized the officers they were in custody. The surrounding country was explored, but the fishermen had taken the alarm, hid their paraphernalia not in use, and escaped. The nets by the Illinois laws are declared contraband and are liable to destruction when found. Several who had not taken the alarm were caught unawares and deprived of all their unlawful belongings. In this manner a new net that had never been used and which was worth perhaps $200, was seized and burned. With grab hooks the party traversed the stream and destroyed all the set nets they discovered. In the afternoon the yacht returned to East Dubuque, where the prisoners plead guilty and were fined the minimum amount, $10. While as a rule the men arrested here and at other points along the river are poor and but illy able to pay the fine imposed, still they are entitled to but little sympathy. Their vocation is a most despicable and heartless one. Just now the fish are spawning, and as they seek out the overflowed places are easily of capture. Were it only their capture alone it would not be so serious, but every female fish captured now destroys hundreds that would breed. The pursuit of this practice, which now most all States are severely legislating against, is what has caused the scarcity of fish and destroyed the great sport. Messrs. Blow and Lenk are to be congratulated on the good work they are doing, and it is to be hoped they will continue it.—*Dubuque Herald.*

## PUBLISHER'S DEPARTMENT.

### The Southern Railway.

The official name of the Richmond & Danville R. R. (Piedmont Air Line) has been changed to the "Southern Railway." The service of this line has been very much improved and extended during the past year, and it now offers unexcelled facilities for Southern travel. This is the only line operating solid Pullman vestibuled train between New York and New Orleans, Atlanta, Jacksonville and Tampa, with through Pullman service, both dining and sleeping cars.

Cushman & Denison, makers of the "Perfect" pocket oiler, report their sales as being far in excess of any previous season.

Charles K. Reed, the Worcester taxidermist, has joined Dr. F. A. Cook's Arctic excursion in an official capacity and will be absent for about three months.

# The Kennel.

All those who love a dog because it is a dog and not merely a medium for the accumulation of dollars and cents, are invited by the editor to consider this department as one in which they can discuss amicably any subject that is of interest to the canine fancy, without fear of their communications being subjected to personal comment or ridicule.

## FIXTURES.

### DOG SHOWS.

Sept. 4 to 7.—Des Moines Kennel Club, at Des Moines, Iowa. M Bruce, Sec'y.

Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.

Sept. 18 to 21.—Rhode Island State Fair Association, at Cranston, R. W. W. Dexter, Sec'y.

### FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.

Nov. 5.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells Sec'y.

Nov. 23.—Eastern Field Trials Club, at Newton, N. C. W. A. Coster, Saratoga, N. Y., Sec'y.

## POINTS AND FLUSHES.

*[By a Staff Correspondent.]*

I NOTE with regret that the Philadelphia Kennel Club has abandoned its field trials for this year. Its reason—and a very good one, too—is that it did not feel justified in holding its trials when its Derby was so meagerly supported that the club had to face a deficit if the trials were held. No fair-minded person will hold that the club did other than wisely under the circumstances.

Mr. Taylor attributes the falling off in entries to the hard times. In that I think he is in error. Undoubtedly they were a factor in the matter, but were far from being the cause. The decadence of field trials is not so recent as the beginning of the hard times. The true causes have been in action many years. The readers who have perused FOREST AND STREAM can remember many months back that the disintegrating factors in field trials were pointed out quite minutely.

Along in the early 80s there were only two great field trial clubs, one having an Eastern support, the other a Western and Southern. The list of entries were almost distinct. Each had its own rules, peculiarities in conducting its trials and distinct following. Occasionally a trainer or two would take a string of dogs to the East, and less frequently an Eastern trainer would come West to compete. The accommodations of the towns were hardly equal to the needs of the visiting sportsmen. They came in large numbers and were representative in character. They generally remained till the trials were ended. Good fellowship prevailed. Sport was the predominant incentive with the greater number.

As the years passed by, a gradual evolution set in toward professionalism. As the professional became better equipped with competitive material and more skillful from the experience of many contests, the sportsman who owned one or two dogs learned from experience, which was paid for, that he had no chance to win against the professional. With each passing year the sportsmen in attendance at the trials were fewer. The happy goodfellowship largely disappeared.

The handlers were becoming more enterprising and energetic, and the best equipped developed into campaigners.

The entries began to lose their sectional character. Many of the entries in the Eastern States could be found entered in those of the West. The clubs endeavored to raise their purses to the largest possible sum to the end that the largest possible number of entries would be secured. It meant revenue. The big kennel entries were particularly sought. In short, the clubs themselves were helping professionalism along to the exclusion of the amateur and the sportsman who owned one or two dogs.

The professional who broke dogs for sportsmen and of whose string each dog was owned by a different owner, was no harm to field trials. His kennel was scattered at the end of each season. But the handler who owned his own kennel and could keep the same string of campaigners year after year, with an unlimited amount of material to select from either for a Derby or All-Age Stake, and who devoted all his energies to making field trials a source of revenue, was the one who began damage to field trials.

So perfectly organized and equipped was he that his winning was almost a foregone conclusion.

In the meantime field trials multiplied. Each new club stupidly imagined that it must give so much or more money in prizes than those already in existence. And each one strove to secure the entries of the big kennels for the sake of the revenue. Thus it was brought about that each club's entries read very much alike, a few local dogs and the rest the regular campaigners, just as the Eastern Club's Derby entries of this year and the Philadelphia Club's read precisely alike with a very few local exceptions. Had those stakes been run it would have been practically running the same stake twice.

One kennel I have in mind which from the beseechings for entries naturally became fully convinced of its own importance and refused entries if judges were appointed of which it disapproved. The Southern Club in 1892 had invited a gentleman to act as judge and he had accepted. He for personal reasons was disapproved by the kennel aforementioned and the club was informed by that kennel that if he was retained the kennel would make no entries.

Thereupon the club wrote to the judge and in substance invited him to withdraw—an act too pitifully cowardly and unmanly to expect from any white man or men. This incident is merely mentioned to show to what power a big kennel had arrived in arranging a competition for itself as well as the power it had in the competition.

All the clubs were offering more money in prizes than they could afford. That they "paid out" and had a balance in the treasury besides one or two years was no just criterion. The support was largely artificial, made up of compaigners who went around the entire circuit. It was not a healthy local support. As the weaker campaigners found they could not cope with the stronger they dropped out of the competition. This, of course, cut off a corresponding revenue from the clubs.

The Central Club gave very large prizes. From any business standpoint there was nothing to justify it. There was a certainty of a heavy deficit after every trial. The payment of the prizes of its last trial lingered a long while. Deficits will kill any field trial club sooner or later.

The Eastern Club had a large balance in its treasury at one time. It has been giving larger prizes than its support warranted and if it does not manage very carefully it will be in memory only.

The United States Club is giving liberal prizes, but it can not do so year after year; if it does it will split on the same rock on which the others have split—the deficit.

I remember well, when the purses for this year were being arranged by the U. S. Club, the remark made by a prominent handler concerning them. He said that if he won, the purse was not of sufficient value to pay his expenses. The value of a win in enhancing the value of the winning dog and the market afforded in making sales for puppies, etc., were not considered for a moment. The measure of all values was the dollar. It was pure business. No amateur could hope to succeed in exercising his sport against an organized business. Sport is out of place in business.

Clubs will have to make a radical departure if they desire to succeed. They will have to cut down their purses. They will have to encourage and cater to a local support.

The sweepstake plan with a little added money is the safest and best. The big kennel will write and say it will make no entries and will not participate. Let the big kennel go. If it comes, the trial is dead. It is better to bar the big kennel, or limit it to one entry. If a club cannot succeed on such lines, it cannot succeed at all. It hasn't the necessary material.

The professional campaigner has driven out the amateur. The professional campaigner cannot supplant field trials alone. I have heard the remark made in connection with the dog world, that "a sucker is born every minute." Nothing could be wider from the truth. It is not a complimentary theory to a believer in it nor a very honest business tenet. Neither is it true.

If the prizes are made less, there will not be sufficient inducement to support a monster kennel as a money-making machine. Such a kennel is entirely outside the realm of sport. But the amateur will come in. To aggressive professionalism can be ascribed the decadence of field trials.

I trust that no handler will be so stupid as to misunderstand my writings, and infer that I write against professionals as professionals. So far as they are concerned, I intend to be wholly impersonal. It is only of the effects of professionalism in connection with field trials that I treat. I know the handlers are broad enough to concede that if professionalism is ruining field trials, it should be corrected. Field trials are of great value to them if they never won a cent. There are many handlers to-day who are making a living out of training who could not do so long if field trials ceased.

B. WATERS.

909 SECURITY BUILDING, Chicago.

### The New Bloodhound Club.

WE have received a copy of the constitution and bye-laws of the recently organized "English Bloodhound Club of America." The object of the club is to improve and to encourage the bloodhound breed of dogs in America and to assist in establishing their more general use in connection with the detective service of the country. Annual meetings are to be held prior to July 1, in each year. The initiation fee is $10, and annual dues $5, payable on July 1. Five members constitute a quorum at all meetings of the club, and two for the executive committee meetings. The standard adopted by the club is as follows:

*The Head and Wrinkle* (value 20) is the peculiar feature of this breed, and it is accordingly estimated at a very high rate. In the male it is large in all its dimensions but width, in which there is a remarkable deficiency. The upper surface is domed, ending in a blunt point at the occiput; but the brain case is not developed to the same extent as the jaws, which are very long and wide at the nostrils, hollow and very lean in the cheek, and notably under the eyes. The muzzle should be deep and square. The brows are moderately prominent, and the general expression of the whole head is very grand and majestic. The skin covering the forehead and cheeks is wrinkled in a remarkable manner, unlike any other dog. These points are not nearly so developed in the bitch, but still they are to be demanded in the same proportionate degree.

*The Ears and Eyes* (value 10). The ears, which should be set on low, are long enough to overlap one another considerably when drawn together in front of the nose; the leather should be very thin, pendulous, and should hang very forward and close to the cheeks, never showing the slightest tendency to "prick;" they should be covered with very soft, short, silky hair. The eyes are generally hazel, rather small and deeply sunk, with triangular-shaped lids showing the third eyelid, or "haw," which is frequently, but not always, of a deep red color.

*The Flews* (value 5) are remarkably long and pendant, sometimes falling fully two inches below the angle of the mouth.

*The Neck* (value 5) is long, so as to enable this hound to drop his nose to the ground without altering his pace. In the front there is a considerable dewlap.

*The Chest and Shoulders* (value 10).—The chest is rather wide than deep, but in all cases there should be a good girth; shoulders sloping and muscular.

*The Back and Back Ribs* (value 10) should be wide and deep, the size of the dog necessitating great power in this department. The hips, or couples, should be especially attended to, and they should be wide, or almost ragged.

*The Legs and Feet* (value 15).—The legs must be straight and muscular and the ankles of full size. The feet should be round and cat-like.

*The Color and Coat* (value 10). In color the bloodhound is either black and tan or tan only, as is the case with all black and tan breeds. The black should extend to the back, the sides, top of neck and top of head. It is seldom a pure black, but more or less mixed with the tan, which should be a deep, rich red. There should be little or no white. A deep tawny, or lion color, is also coveted but seldom found. The coat should be short and hard on the body, but silky on the ears and top of the head.

*The Stern* (value 5) is like that of all hounds, carried gaily in a gentle curve, but should not be raised beyond a right angle with the back.

*The Symmetry* (value 10) of the bloodhound, as regarded from an artistic point of view, should be examined carefully and valued in proportion to the degree in which it is developed. The height should be from 25 to 27in. at the shoulders for dogs, and a little less for bitches. The weight of dogs should be about 80lbs. and upwards, bitches somewhat less.

J. L. Winchell, Dr. C. A. Lougest and Charles H. Inness are the gentlemen who have had charge of these matters.

### Flaps from the Beaver's Tail.

TORONTO, Canada.—Collies are continually growing in popularity in Canada, and not in one section alone, but all the country over. Mr. Arthur F. Gault, of Montreal, is the latest importer, having imported a dog bred by Mr. Tom Stretch and a bitch bred by Mr. Sutcliffe. No further particulars have yet reached me other than that they are to come out at Toronto. Mr. Gault has heretofore devoted himself to terriers.

Messrs. Cleather & Rathbone, of "Spratts," have lately bought that nice collie bitch Nancy, imported by the late H. P. Harrison, of Toronto. She was first at Toronto in both 1891 and 1892 under Mr. Davidson, and took in 1891 vhc. at Cleveland, third at Chicago and vhc. reserve at Hamilton.

Mr. Terry, of New York, has bought a dog puppy from Mr. Hart, of Belleville, by his recent purchase Scotch Bonivard. He is quite a baby and at seven weeks weighed twenty-eight pounds.

The Skye terrier bitch Islay, which did some winning the past year or two, is dead. She had a nice litter of nine, seven dogs, but had no milk, and a foster mother not being procurable all succumbed, the bitch herself dying a few days after.

Another one to go is Vixi, Mr. Macdonald's smooth fox-terrier bitch, winner of first puppy and second novice at last Toronto show. Vixi was chasing chickens and, in the words of the poet, "Got one in the neck" from the irate owner. I understand the case will be brought to court.

H. B. DONOVAN.

### Bulldog Argonaut.

*Editor Forest and Stream:*

I regret to announce the death of my bulldog Argonaut, who was overcome by the heat this morning. He fell by the roadside as he was following the carriage on its way to the station, unknown to the coachman, who would never have let him go on such a hot day, had he known he was behind the carriage. The thermometer was about 90°, and he was found by a bicyclist, dying, and before any of us could get to him he was dead. Argonaut was a promising son of King Lud, two years old, and was improving every day. While he was not a crack dog in points that tell in the show ring, he possessed a true bulldog character; affectionate and faithful to his friends, he showed great attachment for them, and his disposition was never ruffled without good reason. In case of emergency he showed plenty of grit, although I have never known him to pick a fight with another dog, or to be cross with any one. It is in the possession of a dog with such a character as this that we feel proud of the breed of bulldogs, which has been so much abused, and I cannot but feel that the more they come to be known, the more they will be admired for their native qualities. J. DANFORTH BUSH.

The puppies out of the Scottish terrier Wankie Freda are by Rhudaman and not Tiree, as stated in a recent issue.

### Overheard at the Store.

THE little village of Barmouth goes to bed regularly at 8 o'clock. But there are a few rollicking spirits who have the reputation of turning night into day, of burning the candle at both ends, and who on occasion have been known to remain at "the store" as late as 9 or even 9:15, thereby scandalizing the whole community and causing grave concern to the good wives and mothers through all the country roundabout.

As I entered on one stormy evening to inquire for my mail—for the post office is hidden in one corner of the store—a flickering lamp with its tiny flame, shielded from the draft by a smoky chimney, was doing all it could to light up the group that regularly resorted thither for the discussion of politics, religion, scandal, hunting, fishing or anything else which for the moment happened to be of unusual interest. The discussion had evidently been started by Joe, the greatest fox hunter on the Cape, whose hounds were looked upon as wonders, whose good luck and success in the chase were proverbial, and who was popularly supposed to make "a heap of money" by the sale of his peltry in the spring. His only rival was Ben, a younger man, who always thought it necessary to take the opposite side from Joe in all questions pertaining to sport. Just now he was balancing himself with considerable difficulty on a rickety chair, and hurling his sentences with great energy at Joe, who was stretched at ease on a pile of meal bags.

"I tell you what it is, Joe," he exclaimed, "it's all confounded nonsense for you to talk that way. Do you suppose that any hunter or any man who knows anything at all, is going to believe that a hound tells which way a fox has gone by his nose? Do you believe that your old Trailer runs into a track and smells of one step and then of the next, and knows that the fox has gone east because the scent is stronger in the second foot print than it was in the first? Of course, a hound 's got a nose. I ain't fool enough to dispute that, but his nose ain't good enough to strike a track six or eight hours old and say that the fox has gone one way or the other by the difference in the scent in two or three yards. Not much. That don't go."

"Well," said Joe, with more than his usual animation, "perhaps you'll tell us what does go. If Trailer's nose don't tell him, what does?"

"His eyes, of course," replied the other with an air of conscious superiority, "A hound's got the sharpest eyes of any animal on this earth. He just looks at the track and he sees right off which way the fox went. There ain't another animal can do it only a hound."

"Bah," cried Joe, "if Trailer runs by sight, what makes him so mighty willing to run a track backwards in the snow when it's as plain as a gun barrel?"

That was a clincher, but Ben rose to the occasion. "If he tells by his nose, what makes him keep on back-tracking all day?"

Just then the lamp gave a final flicker and went out. The postmaster said it was time to shut up for the night. So the meeting adjourned, and as far as I know it is still an open question whether Trailer runs by sight or by scent.

BRADLEY.

### New York's Dog Shelter.

A DOG pound in a large city like New York is usually associated in one's mind with a lot of measly curs huddled together in more or less unsavory quarters, presided over by the genus "tough," of greasy and ill-smelling attire. This may have been the state of things in years past, and Gotham's dog pound certainly had an unsavory and "grab all" reputation. Things are different now; even the name is changed.

In response to an invitation from Mr. John Read, the superintendent of the S. P. C. A.'s "shelter," as the new dog pound is now called, we examined, last Tuesday, the quarters provided by the society for Gotham's stray curs and cats.

Naturally, with Mr. Read at the helm, one expected a different state of things than obtained under the old *régime*, but we were scarcely prepared for the elegant "reception" rooms provided.

The "shelter" is a long wooden building set on piles at the foot of 102d street, opposite Randall's Island and Hell Gate, whose rushing waters prove so treacherous to the adventurous fisherman who essays to troll for striped bass, for which this locality is famous, or rather, used to be.

On entering the building you pass through a large and comfortable office supplied with telephone and all the paraphernalia of a busy man's sanctum. Here friend John keeps "tabby" on the tails that come in, and through his systematic arrangements one can tell at a glance just how New York's floating dog and cat population stands.

Passing on into the main building, which we should say is about 70×40ft., on the right hand side are a number of compartments built of matched pine, each about 15×10ft. The front and doors of these compartments or kennels are of open slats about 10ft. high, so that no dog can get out, but visitors can see all the dogs inside without danger. The floors are covered with clean pine shavings, and on one side of each kennel is a large zinc trough containing running water. Truly, there are few private kennels so well fitted up and so cleanly in all appointments. Only two of these kennels were in use when we called, and the motley crowd of dogs ill assorted with their bright surroundings.

At the other side of the room are several large low compartments that look like immense dry goods boxes. These are the cats' quarters and are of course so arranged that puss cannot use her claws and climb out of durance vile. The front of the boxes which are about 12×9ft. and 3ft. 6in. high, has three open work doors to as many compartments, and here poor puss awaits her doom. In the top of the box large round holes supply ventilation. Around the walls are piled several wicker baskets which are used to collect the cats from private houses. The whole building is very light and airy, and a pleasant breeze blowing in from the river kept everything cool and sweet.

At the entrance to the building is a large steam cooking apparatus and nearby are the lockers containing Spratts biscuits which with good meat soup constitutes the bill of fare, probably a good deal better diet than most of the curs ever sniffed before. As the building stands over the water it is conveniently situated for flushing the kennels, which is done after the dogs of that day have been destroyed. Each day of the week is represented by a kennel in which the dogs caught on that day are kept for 48 hours.

Off the main room is the execution box or suffocator. The apparatus used for putting the dogs to a painless death looks just about like a large hotel icebox laid flat instead of on end; several windows in the top carry out the illusion and also allow one to see Fido or Tabby's last struggles. The arrangements are effectual, but strike one as rather crude; but, we are told, this will be improved when the new shelter is built on the west side. The compartment, which is about 12ft. by 6, is supposed to be airtight. Around the inside of the compartment run rows of perforated gas-piping. The cats are shut in first and when all is ready, ordinary illuminating gas is turned on, and in three minutes puss turns up her toes; then the dogs are thrown in on top of the dead cats and but half a minute is sufficient to send the bow-wows to the happy hunting ground. The death is not a very pleasant one, but is probably painless. When the animals are dead, a plug at the bottom is opened to allow the fresh air to enter and two large pipes from the top of the compartment convey the gas to the outside air. Then the front door is opened, the animals pulled out with rakes, and the Board of Health wagon having backed up through the gateway, the dogs are loaded on and conveyed to Barren Island, to add their quota to the salubrious breezes which fan the shores of Coney Island and South Beach. Their ultimate destination is as much a mystery as their pedigrees.

The S. P. C. A. wagons are manned by three catchers in uniforms, who are paid a proper salary and therefore there is an end to the disgraceful scenes so common when 50 cents a head was the dog catcher's emolument and inducement to assault the luckless female who happened to own a dog. Mr. Read has wisely surrounded himself with men who are experienced dogmen. Harry Draper has charge of the kennels during the day time. He was long identified with the W. K. C. kennels at Babylon, L. I., as kennelman, and a look at his face is sufficient to show he has a kind heart. Nolan, the hero of the dog-box journey from Washington to Indianapolis in 1893, is the night watchman, who with official shield and whipcord uniform, looks quite gay and spruce. Exhibitors will remember him as Mr. Read's right hand man among the attendants at the various shows the past two or three years.

The day we visited the shelter there were thirty-two dogs and forty-five cats safely housed. Each animal is required to be kept by the Society for forty-eight hours after admission to allow the owners an opportunity to recover their property, which they can do by paying $3; the same privilege and price is extended to those who care to buy a dog that pleases their fancy. At 4 o'clock every day those animals whose probationary period is up retire to the gas tank and oblivion. Among the dogs we saw there was nothing that would have attracted the eyes of a fancier. There were one or two fair-looking English setters, a Harlequin great Dane, some elongated pugs, the curl of whose tails not even the hot weather and strange company could affect, and a nondescript lot of terriers and "just" dogs.

One little "sort of" Scotch terrier had evidently been some one's pet, and the way he climbed up the door and poked his nose through the top bars with an appealing look for rescue, was touching to one who loves a dog whatever his pedigree may be.

Mr. Read seems happy in his new position, and that he is the right man in the place no one can gainsay. He told us that though the putting to death of dogs is not exactly a pleasant pastime, the business has its humorous side, and he is astonished at the amount of superstition there is among the lower classes. During the short time he has been there he has been called upon to provide pieces of skin and hair from a black dog as a cure for rheumatism. Another frequent call is for dog fat, which is rendered and the oil used by consumptives to soothe and heal their bronchial troubles. But the most amusing request was made by an old lady, who asked him for one black eye from a black dog. This struck Mr. Read as peculiar, so he asked her what she wanted it for. She replied, "To make a soup of;" and this prompted him to ask her how many she had in the family.

Afterward a pleasant evening was spent with Mr. Read and family, when the handsome set of silver knives and forks presented to him by the exhibitors at the Boston show were put into practical use.

H. W. L.

### Poisoning Dogs.

DOG poisoning is so prevalent in many parts of the country just now, it may not be out of place to reproduce part of Mr. A. J. Sewell's, the noted English veterinarian, article on this subject in this month's *Kennel Gazette* (Eng.), so that dog owners may be prepared for such emergencies:

"In all cases of poisoning, more especially when due to strychnia, prompt action is required and means should be at once taken to make the dog disgorge what had been swallowed. An emetic that will act well and quickly must be at once administered; for this there is nothing better than a dose of apomorphia. This medicine acts in two ways; it is the quickest and surest emetic, and besides it relieves the spasms. The dose is the eighth of a grain for small dogs, and about the quarter of a grain for the large ones, given in a teaspoonful of water; but the best way of administering it is by injecting it under the skin with a hypodermic syringe—then from three to eight minims of the one in fifty solutions is to be given. I always advise persons who keep a number of valuable dogs to have a solution of apomorphia by them ready for emergency, for while it is being obtained the patient may die, and if huntsmen would always carry a small bottle of solution with them, many a valuable hound's life might be saved. When this medicine is not at hand some other emetic must be given. Ordinary table salt can be always quickly procured, and from one teaspoonful to a tablespoonful, according to the size of the dog, should be given in warm water. If the dose does not act freely repeat it in a few minutes, or, instead, give from five to twenty grains of powdered ipecacuanha, or from one to three grains of tartar emetic. Either of these may be shaken dry on the tongue; the dog must be made to vomit somehow, but any thing like salt requiring a quantity of water is often difficult to administer, as the dog's mouth is often tightly clenched and trying to open it induces a paroxysm, during which time it is impossible to give anything by the mouth, and here the advantage of the subcutaneous injection of apomorphia comes in. This may also be repeated in a quarter of an hour if the vomiting has not been free. Besides the emetic, some medicine is necessary to relieve the spasms. For this there is nothing better than chloral and bromide of potassium. From fifteen grains to two scruples of each may be given in from one to three tablespoonfuls of water if the dog can be made to swallow, and half the quantity of each may be given again in twenty or thirty minutes and repeated, if necessary, in half an hour. When the dog is unable to swallow, from three to ten mimims of nitrite of amyl held to the nose on a pocket handkerchief is useful. This may be repeated in a quarter of an hour, or chloroform may be given. Also inject into the rectum from half to two drams of laudanum, in from one to four tablespoonfuls of water, which repeat in a quarter of an hour, and again in another fifteen minutes if the paroxysms continue. After the severe symptoms have passed and the dog is weak and prostrate, from half to two teaspoonfuls of brandy added to some milk may be administered and repeated every hour for a time."

### Northwestern Beagle Club's Field Trials.

*Editor Forest and Stream:*

A meeting of the field trial committee of the N. W. B. C. was held at 2 P.M., July 1, at Milwaukee, the following members being present: G. A. Buckstaff, E. H. Rummele, F. F. Merrill, Chas. Niss, Jr., Louis Steffen and H. A. Dillingham in the chair. The following classes were made for the coming field trials, which will begin on Nov. 7. Class A, for dogs 13 to 15in.; class B, for bitches 13 to 15in.; class C., for dogs and bitches 13in. and under; class D, Derby, for dogs and bitches 15in. and under, whelped on or after Jan. 1, 1893; class E, open to all prize winners at these trials. Entry fee for classes A, B, C and D is $2 to nominate, $3 to start. No entry fee will be charged in class E

The prizes for classes A, B, C, D are 40 per cent. of entrance money to first, 30 per cent. to second and 20 per cent. to third. The winner in Class E will be given the title of Field Trial Champion.

The club wishes to announce that in order to make these trials the drawing card of the season it will give a great many valuable extra prizes, a list of which will be published in due time. The secretary was instructed to correspond with the different judges for terms, etc A resolution was adopted prohibiting the running of dogs on the field trial grounds before the trials are held. Mr. G. A. Buckstaff and Louis Steffen were appointed a committee to select grounds. Meeting adjourned.

LOUIS STEFFEN, Sec'y.

If Pittsburgh would hold a show this fall, as was at one time intimated, a good entry would be secured. Why not try it in connection with the fair?

# DOG CHAT.

### Toronto Dog Show.

Going to press a day earlier last week several communications had to stand over, among them the important particulars of Mr. C. A. Stone's efforts to secure proper transportation facilities for dogs to be exhibited at Toronto next September. To serve as a reference his communication is given in full at this early date to allow exhibitors time to arrange for this show and condition their dogs: The Grand Trunk Railway of Canada will carry dogs to Toronto over all their lines, charging regular fare going and returning them free. So too will the Canadian Pacific, Canada Atlantic, Michigan Central, Bay of Quinte Railway & Navigation Co., Kingston & Pembroke and Central Vermont from Canadian points. New York & New England one dog free and $1 for each additional. Concord & Montreal, dogs on chains, excess baggage rates. New York, New Haven & Hartford, dogs in crates at regular excess baggage rates. The Wabash will carry dogs as baggage 1 to 100 miles 25 cents, 100 to 250 miles 50 cents, over 250 miles 75 cents per dog. The Fitchburg, for rates apply to general passenger agent, Boston. Rome, Watertown & Ogdensburg reduced rates. Cincinnati, Hamilton & Dayton, for rates apply to general passenger agent, Cincinnati. Detroit, Grand Haven & Milwaukee and Toledo, Saginaw & Muskegon allow a reasonable number of dogs to be carried in baggage cars; special cars for transportation of dogs. The Trunk Line Association, which compose the following railroads, viz.: Grand Trunk Ry. (in U. S.), N. Y. O. & W. Ry., Lehigh Valley Rd., Pennsylvania Rd., N. Y. C. & H. R. Rd., N. Y. L. E. & W. Rd., Cent. Rd. of N. J., Balt. & Ohio Rd., West Shore Rd., D. L. & W. Rd., Phil. & Read. Rd., Ches. & Ohio Rd., will furnish to exhibitors upon application special baggage cars at the following rates, not exceeding 200 miles 2 cents per mile, between 500 and 625 miles, inclusive, $125 per car, and over 625 miles, 20 cents per mile. Exhibitors must make their own arrangements at least 10 days before requiring cars by applying to Wm. Fleming, Secretary Trunk Line Association, 143 Liberty street, New York city. The express companies will carry dogs under the usual conditions. Exhibitors are reminded that the dogs shipped by express are delivered at the grounds at Toronto and returned free of charge. Permits will be issued upon application to the Express Co.'s, allowing owners or attendants to visit and attend to their dogs while *en route*.

Exhibitors, by clubbing together, may obtain special express cars through to Toronto, attend to their dogs *en route*, and have their dogs delivered at the grounds and returned to the cars at no extra expense. The National Express Co state that they will start a special car from New York to run through to Toronto and arrange so that shippers *en route* can put their dogs in this car at all points on the West Shore Railway where the train stops. They will also arrange to pick up dogs along the line of the Fitchburg road between Boston and Rotterdam Junction for the same train. If there is not enough from both lines to run two cars through, will match the cars at Suspension Bridge and put all in one car from there. They will also start a car from Chicago which will be applicable to Michigan and points west of Port Huron and Detroit. The rates are double merchandise going, returning free; the company will furnish circulars giving full particulars upon application to G. W. Slingerland, General Superintendent, 145 Broadway, New York city. The American Express Co. will furnish a special car from New York, Boston and Chicago, charging from New York $3.70 per 100lbs., minimum charge $370 per 100,000lbs. This includes transportation both ways, and will permit of men riding with the animals to take charge of them. Wells, Fargo & Co. Express will furnish special cars from New York or Chicago, picking up shipments *en route*, allow attendants to inspect and attend to the wants of their dogs, provided they are passengers on the same train, charging double merchandise rates, returning free; minimum charge $185 from New York, $235 from Chicago; will do the same from Boston if necessary. United States Express Co. will issue permits allowing shippers to visit and attend to their dogs *en route* from Philadelphia, New York and Boston by applying to C. H. Crosby, 87 and 89 Washington street, Chicago, Ill. Considering the danger in traveling in the warm weather we may expect in early September, it would be a wise move if some handler or exhibitor took the initiative and engaged a car from one of the railroads, the cost to be defrayed by a *pro rata* payment from the exhibitors who avail themselves of this arrangement. The dogs could then be properly looked after, and any extra expense is warranted by the almost total absence of risk the dogs would otherwise incur if sent by express and not cared for.

### Rhode Island State Fair Show.

There are but a few short weeks intervening between now and the Rhode Island State Fair show, and it is almost time to expect the premium list. This, we are informed, will be issued next week. The Association intended giving a rousing show this year, as their first one, last year, was such an unexpected success. They have, however, experienced one or two setbacks at the outset. Mr. Walter J. Comstock was again appointed chairman of the dog show committee, but last week, after the premium lists had been sent to press, he found that he would be unable to serve, as he would be away on a tour during September. This, of course, robs the Association of one of its chief supports, and this gentleman's genial countenance will be greatly missed, but we must hope he will leave "Billy" Birch at home. Then John Read's affiliation with the S. P. C. A. will probably prevent him attending to the active conduct of the show, but this will in great measure devolve upon Fred Otto, who assisted him last year and at Boston, so a wise selection has no doubt been made.

As the Fair people are not conversant with dog show people and ways, they had to cast round for some one to take charge of the kennel department, and called upon Mr. S. H. Roberts to fill the office. This modest young man was unwilling to accept, but was finally prevailed upon to do so, and is probably as good a selection as could have been made, as his position on the Providence *Journal* enables him to bring the support of that widely read paper, and personally he is known as a hustler; and, having kept his eyes open, knows pretty well what is required.

The prize list has been considerably enlarged, and though we are told the present arrangement of some of the classes is not all that could be wished, this will be remedied later on. Messrs. Davidson and Mortimer are the only judges so far selected, but three others will be required, and until these are chosen no breeds will be assinged. This show, coming immediately after Toronto, does not leave much time for travel and rest, but as these are probably the only shows of much importance that will be held this fall, no doubt both will poll a good entry.

### Dog Poisoning.

Dog lovers will be pleased to see the *Democrat and Chronicle*, of Rochester, N. Y., come out so strongly on this subject in the following editorial. If the influential dailies will score these fellows there is some hope that their consciences will twinge, if any one guilty of such wanton acts can be said to possess such a commodity: "There is a two-legged animal bearing considerable outward resemblance to a man, residing in this city, whose cruel and depraved instincts find their highest gratification in inflicting a painful death on more estimable and valuable animals than himself. He is, in

short, that excessively contemptible being, an habitual dog poisoner. He has been remarkably successful so far, and more than one valuable dog has been killed by him, to his intense gratification. Of course, in cities, dogs are apt to be more or less of a nuisance to property holders who take a pride in the appearance of their door yards. They will doggishly cavort over freshly planted flower beds, dig holes in lawns and otherwise make their visits objectionable. Everybody appreciates this, but it is a small matter, and furnishes no excuse for the dog poisoner. A man who deliberately leaves poisoned meat about his premises isn't fit to live in a civilized community. He is a reckless lawbreaker, mean, cruel, regardless of the rights of others, and a constant menace to the safety of every one so unfortunate as to live in the same neighborhood with him. We sincerely hope that the efforts now being made to discover the identity of this latest dog poisoner may be successful, and that the owners of the dogs he has killed will see to it that he and his like are taught a needed lesson."

### Distemper Germs.

A rather interesting controversy was carried on in *British Fancier* after the Birmingham (England) show, which brought to light certain important possibilities in regard to distemper infection that have scarcely been sufficiently considered hitherto. Dr. Grindrod, who owns one of the principal toy spaniel kennels in England, purchased during that show a Japanese spaniel from Miss Hamilton's kennelman. The dog was taken to its new quarters at the close of the show and a day or so after developed distemper. The scourge was communicated to others in the kennel and several valuable spaniels succumbed before the disease could be stamped out. Dr. Grindrod accused the kennelman of selling him a dog with distemper, and the result has been much public correspondence and no little bitterness. Mr. Everett Millais, in a letter to the above journal, sums up the situation in a very plausible manner, and incidentally absolves Miss Hamilton's kennelman from any intentional blame in the matter. He maintains that, as asserted by Miss Hamilton, the bitch may have been quite well at the time of leaving home for the show and still have been the medium through which distemper was carried to Dr. Grindrod's kennels. He draws his conclusions from the fact that the normal period of distemper incubation is six to seven days. The bitch came to Birmingham on Nov. 24 and was taken ill on Nov. 30 and on Dec. 8 the first of Dr. Grindrod's dogs was taken ill and the epidemic followed during that month.

The bitch was not benched in the show, but on its arrival at Birmingham was taken by Miss Hamilton's kennelman to an inn where probably other kennelmen resorted. Now comes the important deduction which Mr. Millais's large experience prompts him to draw. He says: "If the bitch did not contract the disease in the train, she got it from another dog where Baxter (the kennelman) was staying, or from being handled by one of the guests at his place of abode, for, from experimental work, I know that distemper can be carried on the person of the human being, and this being so, who would, if they came from infected quarters, give it to the bitch, except such men as were in the society of Baxter."

Dog shows have been blamed, and doubtless with some justice, for most of the distemper that often follows these events, but here is a possibility of further danger that it is almost impossible to guard against if kennelmen and others coming from infected kennels are criminally careless enough not to take measures to disinfect themselves before mingling with dogs and dogmen at a show. A doctor after attending a smallpox patient would not think of mingling with his fellowmen until he had disinfected every part of his person which had come in contact with his patient. We are convinced that carelessness and thoughtlessness in this respect has often led to a spread of this dire disease distemper. How often we are told by a kennelman when he is asked why he did not show such and such dogs, that they were down with distemper, or just recovering from it; and possibly he came straight from his kennels to the show without a thought of being the medium of spreading the disease among the dogs he would be sure to handle sooner or later during the show. Of course, the only remedy for this lies in the conscienciousness of the kennelmen, and we merely allude to the above instance in order to draw greater attention to this possible danger.

### "Mad" Dogs.

This is the season of the year when our guardians of the peace do a little revolver practice with "mad" dogs as their targets. The other day the daily papers chronicled the shooting in the public streets of four of the "scare" dogs—we can think of no better term than that. As dog catching in this city is now under the control of the S. P. C. A., this society is brought into closer relations than formerly with our friend, the dog. It is just and proper that the stray dogs and curs of low degree should be subject to some restraining influence. It is impossible to catch all these dogs, and from motives of public safety some provision should be made whereby "tramp" dogs can appease their thirst these torrid days. Put yourselves in the dog's place. With the thermometer at 95 in the shade five feet from the pavement, what must be the temperature a foot or two feet from the surface of the heated stones? In this increasing and torrid temperature the street cur must breathe, therefore his condition is much worse than the average citizen's. Is it any wonder then that, routed out of the cooler corners by the ubiquitous small boy, his condition becomes insufferable by reason of the want of water? The human being, with perspiration oozing from every pore, forgets or perhaps does not know that the dog is denied this quiet and almost unobserved process of relieving exudation; the dog's open mouth and lolling tongue afford him the only means of relief from the heat and irritation he must experience. A good drink of water would solace and stop the irritable feelings that result in the strange and unwonted antics that lead to the cry of "Mad dog!" When water is constantly within reach there are no mad dogs, and there is no need of torturing sane dogs by muzzling them. In Constantinople, where dogs are as numerous as children on First avenue, canine madness is unheard of simply because there is always water within reach. Summer heat is no more conducive to rabies than winter's cold, but thirst is more conducive than both. In this large city a fountain or water trough is an exception, where really there should be one or the other every few blocks, and especially at park corners. Even if one does come across a water trough, it is so high that only horses can use it; but if the escaping water was caught in a lower receptacle which dogs could reach, many a poor dog would be able to slake his thrist and our people would, in a great measure be saved from the fear of "mad" dogs. The S. P. C. A., now that it has the charge of stray dogs in this city, should look a little more deeply into this subject and provide or institute some remedy.

### An Important Decision.

A decision has been recently rendered in the Civil District Court of New Orleans that has an important bearing on the property question of dogs. The owner of a St. Bernard that had been killed by an electric car sued the railway company for its value. The dog had not been listed for taxation according to the State law, and wore no license tag at the time it was killed. Therefore the counsel for the company argued that the dog was not property (as was held under the common law), and that damages for its loss could not be assessed or collected. The judge, however, took a different view in charging the jury and said "that it is a fundamental principle of law that no property can be deprived of the protection of the law except by legal process, and that any act in violation of that principle is illegal, unconstitutional and a nullity. The effect of the failure to have a dog listed and tagged is to render the owner liable to the legal penalty for such omission, but not to deprive him of the protection that the law of the land, as provided in the Constitution of the United States, accords to all property." The jury found for the plaintiff in the sum of $250.

Mr. T. M. Brumby, secretary of the Southern Field Trials Club, informs us that they will hold their next meeting at New Albany, Miss., commencing Monday, Dec. 17. The entries for the Derby will close Aug. 1 and the second forfeit is due Oct. 1. The purse will be worth $600. The nomination fee is $10, second forfeit $10 and $5 additional to start. The judges will be Messrs. Jas. H. Williams of St. Louis, Mo., John D. King of Jackson, Tenn., and Will. J. Wilson of Atlanta, Ga. The club will also run a Selling Stake, the entries to which will close Oct. 1. The value of the purse and the popularity of this club's fixture should result in very interesting trials. The change of date leaves field men with quite a long interval for rest between these trials and trials B of the United States Field Trials Club.

A meeting of the stockholders of the Western Kennel Club was held in Denver, June 27, and the following directors were elected: J. M. Norman, Luke Wilcox, Fred C. Kilham, Jas. A. Curran and E. T. Weiant. The officers of the club are: President, J. M. Norman; Vice-President, Luke Wilcox; Secretary, E. T. Weiant; Treasurer, F. C. Kilham.

Mr. T. G. Davey, now that he has an English trainer, and not content with winning honors in the field at home, has made three entries in the Derby of the National Field Trial Club of England. He also intends entering some all-aged dogs over there. His dogs will start for Manitoba this month to prepare for the Manitoba field trials.

If the municipal authorities of our large cities could see the humane provision made for stray dogs at the S. P. C. A's shelter in New York, we are convinced that it would not be long before these cities would adopt the same plan. In this shelter, business principles and sentiment work hand in hand, and New York's stray-dogs are no longer subjected to the whims and courtesies of ward heelers whose only incentive was the number of half dollars each haul was worth.

Mr. Mortimer is evidently enjoying himself among the English fanciers. He attended the Hampstead and Bicester shows. Commencing with Mr. Sam Woodiwiss's kennel, of which the bulldog Dockleaf and dachshund Pterodactyl are noted inmates, he will visit most of the principal kennels. He has several commissions in his pocket and the fall shows will probably see some more good ones on our benches as a result of his "observant eye," as "Scotch" Bailey used to say. By the way, the latter's many friends in this country will be pleased to hear that he is still very much in the swim, for at the International dog show at Haarlem, Holland, he won everything before him with the Glenboig Kennels, of which he is manager.

Another American, Mr. Rathbone, at one time a prominent official of the now defunct Syracuse Kennel Club, is also in England, having sailed May 30. Mr. Rathbone's inclinations run to field work and English setters, and as he intended visiting the principal setter kennels we shall look for an interesting account of his pilgrimage, especially as he has taken his camera along with the intention of "snapping" some of the best and most noted dogs that he comes across.

It has been customary for some of our kennel lights to measure their experience in kenneldom by years, but we believe even the most ambitious one will not hesitate to give George Raper, the well-known judge and exhibitor, the palm in this respect. We are told in *Scottish Fancier* that no less that thirty-one years ago he exhibited and won prizes with Dandie Dinmonts. After this no one will gainsay the fact that our Sheffield friend is a stayer.

Mr. Armstrong called at this office with the collie Rufford Ormonde last Tuesday, the latter having just arrived on the White Star Line s.s. Bovic in charge of a kennelman who sailed back to England the next day. Rufford Ormonde is fully as tall as Sefton Hero, stands on good legs and feet, with lots of bone; has enormous mane and frill and head and ears leave little to desire, while his expression is very keen. In color he is a rich golden sable with white on chest and feet; his body is well formed; in fact, he is a beau ideal collie. He arrived in good shape and will make his first appearance at Toronto in September.

Unless Mrs. Hicks-Lord, the well known leader in society, permits herself to be served with a summons in a suit for the recovery of $2,000 for a dog bite brought against her in the City Court by a four-year-old girl, the summons is to be nailed to her front door. Why not try it on the dog?

There is no law now for muzzling dogs in New York city, the S. P. C A. rightly arguing that a muzzle to be any good must close a dog's mouth, and this the society holds is more dangerous than allowing a dog a free breathing apparatus. Of course the nervous people who see in every dog the specter of hydrophobia will feel anxious on this account, but really there is less reason to be alarmed than before.

Mr. Wilmerding, president of the American Spaniel Club, is having a round of gayety. After arriving in London he visited, in company with Mr. Cowell, Major Claude Cane at the Army and Navy Club, with whom they lunched, being joined by Mr: Farrow, the noted cocker breeder, and later they dined with Mr. Woolland. The next day they visited Col. the Hon. Le Poer Trench's famous kennel of Irish water spaniels, at Gerrard's Cross. On Friday Mr. Wilmerding ran across Mr. J. F. Kirk, the well known Canadian spaniel man and judge, and with him he paid a visit to Mr. Woolland's kennel of Sussex spaniels, after which Mr. Farrow's noted cocker kennel was inspected. After visiting Paris he will look over the Duke of Portland's Clumber kennels at Welbeck, and then take in Mr. McKenna's kennels at Manchester on his way to Scotland, from whence he journeys to Ireland, and, according to the *British Fancier*, will join the Britannic at Queenstown about the middle of July.

The Preston—Morris case has, we are informed, been satisfactorily compromised, and therefore will not go to court. The field spaniel bitch Sola is to be appraised by Mr. Mortimer, as of May 1, 1894, when she appeared at the Specialty show, and Mr. Preston pays the valuation less the amount already paid by him for the dog that did not come over. Mr. Preston also pays Mr. Morris's legal fees.

This does not affect the charges now pending before the A. K. C., and they will now be compelled to render a verdict which should have been arrived at when the case was considered in May last. On May 28 the bitch in question, which is now in Mr. Preston's kennels, whelped eight pups, four of which died and the others are alive; three are sable and white with collie attributes, the other a black spaniel. The bitch was shipped March 15 and it is supposed contracted a *mésalliance* during the trip with a collie, which was the only dog on board and was also consigned to Mr. Morris.

Several circumstances have arisen lately which in all probability will result in the N. J. K. L. deferring their proposed November show till next year. The matter will be definitely settled at a meeting to be held very shortly. Mr. E. H. Morris is now secretary in place of Mr. Winter, who resigned the office.

Mr. Jos. Kennedy received the verdict of $200 against the Canadian Express Company for failing to deliver his cockers at New York in time for the show of 1892, and not, as we were wrongly informed, for their loss.

The well known great Dane Ajax came over on the Champagne on Monday last. Mr. T. B. Burnham, Tuxedo, N. Y., who already owns several winners, is the purchaser. This dog, we are told, won at the Paris show recently held, and in fact has not experienced defeat since 1892. His advent should stir things up a bit in great Dane circles. He with the others in this kennel are at the Hempstead Farm.

Those who study our advertising columns will notice that Mr. Hodgman is offering a number of well-bred dogs, among them the noted pointer Arthur; lock box 76 offers beagle Little Duke; W. L. Manderson, bull-terriers, etc.; C. D. Roberts, pointer pups; Dr. G. F. Richardson, English setter pups; N. A. Baldwin, beagle Laddie; Woronoco Kennels, foxhound.

### Illusion or Shadow.

*Editor Forest and Stream:*

I notice "Illusion or Shadow" by W. W. Titus in yours of June 30. No illusion at all; dog had moved out of position for part of exposure, leaving the fence open for exposure without the dog, on the same principle as "ghost photos."

JOHN W. RUSK.

HAINES FALLS, N. Y., July 9.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

BRED.

☞ **Prepared Blanks sent free on application.**

*Minnie Sefton—Woodmansterne Trefoil.* Hempstead Farm Kennels' (Hempstead, L. I.) collie bitch Minnie Sefton to their Woodmansterne Trefoil, Jan. 31.

——*—Millard.* Hempstead Farm Kennels' beagle bitch —— to their Millard, May 27.

*Hempstead Daughter—Hempstead Duke.* Hempstead Farm Kennels' pointer bitch Hempstead Daughter to their Hempstead Duke, April 8.

——*—Robert le Diable.* Hempstead Farm Kennels' pointer bitch —— to their Robert le Diable, April 2.

*Hempstead Game—Sandford Druid.* Hempstead Farm Kennels' pointer bitch Hempstead Game to their Sandford Druid, April 2.

——*—Duke of Hessen.* Hempstead Farm Kennels' pointer bitch —— (King of Kent—Woolton Game) to their Duke of Hessen, March 21.

*Woolton Game—Sandford Druid.* Hempstead Farm Kennels' pointer bitch Woolton Game to their Sandford Druid, March 21.

*Hempstead Meg II.—Conrad II.* Hempstead Farm Kennels' collie bitch Hempstead Meg II. to their Conrad II., March 9.

*Brittany—White Topper.* Hempstead Farm Kennels' wire-haired fox-terrier bitch Brittany to Geo. Raper's White Topper, March 7.

*Hempstead Lady—Woodmansterne Trefoil.* Hempstead Farm Kennels' collie bitch Hempstead Lady to their Woodmansterne Trefoil, March 1.

*Westminster Blanche—Duke of Hessen.* Hempstead Farm Kennels' pointer bitch Westminster Blanche to their Duke of Hessen, Feb. 22.

——*—Conrad II.* E. P. Kirby's collie bitch —— to Hempstead Farm Kennels' Conrad II., Jan. 28.

*Mary Jane—Fenian Boy.* W. Faversham's Irish terrier bitch Mary Jane to Hempstead Farm Kennels' Fenian Boy, Feb. 1.

*Duchess of Fife—Woodmansterne Trefoil.* Woodlawn Park Kennels' collie bitch Duchess of Fife to Hempstead Farm Kennels' Woodmansterne Trefoil, Feb. 7.

*Ormskirk Dollie—Woodmansterne Trefoil.* J. P. Morgan's (Highland Falls, N. Y.) collie bitch Ormskirk Dollie to Hempstead Farm Kennels' Woodmansterne Trefoil, Feb. 13

*Bobette—Suffolk Trimmer.* A. M. Young's wire-haired fox-terrier bitch Bobette to Hempstead Farm Kennels' Suffolk Trimmer, Feb. 18.

*Kathleen—Romulus.* W. C. Dulles's Irish terrier bitch Kathleen to Hempstead Farm Kennels' Romulus, March 6.

*Diane—Tack.* S. D. Ripley's (Westbury, L. I.) dachshund bitch Diane to Hempstead Farm Kennels' Tack, March 17.

*Duchess of Highlands—Sandford Druid.* E. Smith's (New York) pointer bitch Duchess of Highlands to Hempstead Farm Kennels' Sandford Druid, March 25.

*Westminster Gladys—Duke af Hessen.* P. Daley's (Long Branch, N. J.) pointer bitch Westminster Gladys to Hempstead Farm Kennels' Duke of Hessen, March 26.

*Ethel II.—Woodmansterne Trefoil.* J. Van Schaick's collie bitch Ethel II. to Hempstead Farm Kennels' Woodmansterne Trefoil, April 3.

*Ethel III.—Woodmansterne Trefoil.* J. Van Schaick's collie bitch Ethel III. to Hempstead Farm Kennels' Woodmansterne Trefoil, April 14.

——*—Duke of Hessen.* J. N. Lewis's (Ramseys, N. J.) pointer bitch —— to Hempstead Farm Kennels' Duke of Hessen, April 28.

*Bloomo II.—Sandford Druid.* A. C. Pickhardt's (Massapequa, L. I.) pointer bitch Bloomo II. to Hempstead Farm Kennels' Sandford Druid, April 22.

*Lassie—Duke of Hessen.* A. C. Pickhardt's (Massapequa, L. I.) pointer bitch Lassie to Hempstead Farm Kennels' Duke of Hessen, May 4.

*Deepdale Madge—Woodmansterne Trefoil.* F. Bourne's collie bitch Deepdale Madge to Hempstead Farm Kennels' Woodmansterne Trefoil, May 14.

——*—Woodmansterne Trefoil.* C. F. Judson's collie bitch —— Hempstead Farm Kennels' Woodmansterne Trefoil, May 16

*Jess Frost—White Topper.* Woodlawn Park Kennels' (Saratoga, N. Y.) wire-haired fox-terrier bitch Jess Frost to G. Raper's White Topper, May 17.

——*—Jim.* A. H. Larkin's fox-terrier bitch —— to Hempstead Farm Kennels' Jim, May 18.

*Duchess of Fife—Woodmansterne Trefoil.* Woodlawn Park Kennels' (Saratoga, N.Y.) collie bitch Duchess of Fife to Hempstead Farm Kennels' Woodmansterne Trefoil, May 26

*Shotover—Duke of Hessen.* G. Hopkins's (Hempstead, L. I.) pointer bitch Shotover to Hempstead Farm Kennels' Duke of Hessen, May 28.

*Flora—Manuscript.* G. Hopkins's (Hempstead, L. I.) spaniel bitch Flora to T. Marples's Manuscript, May 28.

*Bellmont—Doc.* J. B. Blossom's (New York) Gordon setter bitch champion Bellmont to W. S. Lee's Doc (champion Beaumont—Bessie III.), May 30.

*Lady Alice—Bedford.* J. B. Blossom's (New York) Irish setter bitch Lady Alice (Redstone—Lady Noreen) to his Bedford (Minstrel—Aurora), April 1.

*Ruby—Heather York.* C. R. Griffin's Gordon setter bitch Ruby (Phil champion Madge) to J. B. Blossom's Heather York (Heather Harold—champion Bellmont), May 11.

*Hilda—Reginald H.* Lawn Gordon Setter Kennels' (Chicago Lawn, Ill.) Gordon setter bitch champion Hilda (Jack—champion Becky Sharp) to their Reginald H. (Leatherstockings—Smith's Rhoda), June 13.

WHELPS.

☞ **Prepared Blanks sent free on application.**

*Woodmansterne Deborah.* Hempstead Farm Kennels (Hempstead, L. I.) collie bitch Woodmansterne Deborah, Feb. 12, six (three dogs), by their Woodmansterne Trefoil.

*Thorndale.* Hempstead Farm Kennels' English setter bitch Thorndale, Jan. 4, eleven (six dogs), by their Rab.

*Hempstead Duchess.* Hempstead Farm Kennels' pointer bitch Hempstead Duchess, Feb. 15, one bitch, by their Duke of Hessen

*Westminster Blanche.* Hempstead Farm Kennels' pointer bitch Westminster Blanche, April 26, five (three dogs), by their Duke of Hessen.

*Hempstead Meg II.* Hempstead Farm Kennels' collie bitch Hempstead Meg II., May 5, one dog, by their Conrad II.

*Hempstead Lady.* Hempstead Farm Kennels' collie bitch Hempstead Lady, May 6, three (two dogs), by their Woodmansterne Trefoil.

*Woolton Game.* Hempstead Farm Kennels' pointer bitch Woolton Game, May 24, seven (five dogs), by their Sandford Druid.

*Green Mountain Lass.* Hempstead Farm Kennels' collie bitch Green Mountain Lass, June 1, seven (four dogs), by their Conrad II.

*Hempstead Game.* Hempstead Farm Kennels' pointer bitch Hempstead Game, June 3, nine dogs, by their Sandford Druid.

*Hempstead Daughter.* Hempstead Farm Kennels' pointer bitch Hempstead Daughter, June 10, one dog, by their Hempstead Duke.

*Queen Zip.* Eberhart Pug Kennels' (Cincinnati, O.) French poodle bitch Queen Zip (Carlo—Frenchie), June 4, six (three dogs), by their Moughlow.

*Chloe.* F. K. Pidgeon's (Saugerties, N. Y.) pointer bitch Chloe (champion Tammy—Bertie), June 9, five (three dogs), by his Graphic VI. (champion Graphic—Daisy II.).

*Blemton Title.* W. F. Porter's (Sharon, Pa.) fox-terrier bitch Blemton Title (Blemton Victor II.—Tiara), June 14, six (four dogs), by his Woodale Driver.

*Belle of Sharon.* W. F. Porter's (Sharon, Pa.) fox-terrier bitch Belle of Sharon, June 18, six (three dogs), by his Woodale Driver.

*Lady Alice.* J. B. Blossom's (New York) Irish setter bitch Lady Alice (Redstone—Lady Noreen), June 3, nine (six dogs), by his Bedford (Minstrel—Aurore).

SALES.

☞ **Prepared Blanks sent free on application.**

*Trefoil Princess.* Collie bitch, whelped May 20, 1893, by Woodmansterne Trefoil out of ——, by Hempstead Farm Kennels, Hempstead, L. I., to W. P. Smith, Jersey City, N. J.

*Hempstead Kit.* Pointer bitch, whelped July, 1892, by Duke of Hessen out of Queen Fan, by Hempstead Farm Kennels, Hempstead, L. I., to Rinada Kennels, Massapequa, L. I.

*Suffolk King.* Fox-terrier dog, by Starden's King out of ——, by Hempstead Farm Kennels, Hempstead, L. I., to W. Whitney, Rochester, N. Y.

*Olivia.* Russian wolfhound bitch, whelped July, 1891, by Vladimir out of Princess Irma, by Hempstead Farm Kennels, Hempstead, L. I., to C. S. Hanks, Manchester-by-the-Sea, Mass.

*Zmeika.* Russian wolfhound bitch, by Hohlik out of Yachsum, by Hempstead Farm Kennels, Hempstead, L. I., to C. S. Hanks, Manchester-by-the-Sea, Mass.

*Herdman II.* Bob-tail sheepdog, by Hempstead Farm Kennels, Hempstead, L. I., to J. P. Morgan, Highland Falls, N. Y.

*Hempstead Reeve.* Pointer, whelped Aug. 3, 1893, by Sandford Druid out of ——, by Hempstead Farm Kennels, Hempstead, L. I., to G. C. Cross, Rochester, N. Y.

*Hempstead Olga.* Russian wolfhound bitch, whelped October, 1892, by Kaissack II. out of ——, by Hempstead Farm Kennels, Hempstead, L. I., to C. R. Christopher, Newark, N. J.

*Hattie M.* Light brindle greyhound bitch, whelped May 13, 1893, by Gem of the Season out of Wild Rose, by Joe Lewis, Moodus, Conn., to Dr. Q. Van Hummel, Indianapolis, Ind.

*Suffolk Trimmer— ——whelp.* Fox-terrier dog, whelped June 26, 1893, by Hempstead Farm Kennels, Hepstead, L. I., to W. P. Crouch, Dubuque, Ia.

——. Yorkshire terrier, by Hempstead Farm Kennels, Hempstead, L. I., to G. DeF. Grant, New York city.

## ANSWERS TO CORRESPONDENTS.

*There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.*

J. S. L.—The pedigree as given is a good one.

S. L. Harrison, N. Y.—See answer to A. G. B.

J. W. B. Danvers, Mass.—Give the dog some sulphur in his food.

F. T. M., Trenton, Ont.—The Windrush Kennels are owned by Mr. E. A. Manice, Pittsfield, Mass.

R. C. L., New York.—We have forwarded your postal to M. C., as we are not at liberty to divulge his name.

A. G. B., Holland, Mich.—Will you kindly prescribe for my friend's setter; probably has the mange. Started eight weeks ago with small red spots on the head, gradually spreading to legs and hind parts. On the rest of the body there are no sores, but the hair is falling out badly. Used carbolized vaseline, which helped a little. The dog also has two lumps on left side of throat, which hang down two inches. Appetite good, lively and healthy in every other way. Had two fits early in the spring. Ans. Treat dog for worms. Bathe in a solution of creolin twice a week (½oz. of creolin to a pailful of warm water). Give the following mixture:

℞. Mag. sulph.....℥i.
Ferri sulph.....ʒi.
Acid sulph. dil.....℥i.
Aq ad.....℥viii.
Mix. Give one teaspoonful twice a day.

# Hunting and Coursing.

## FIXTURES.

Oct. 23.—New England Beagle Club, at Oxford, Mass. W. S. Clark, Linden, Mass., Sec'y. Nominations close Oct. 1.
Oct. 29.—National Beagle Club. Geo. Laick, Tarrytown, N. Y., Sec'y.
Nov. 7.—Northwestern Beagle Club. Louis Steffen, Milwaukee, Wis., Sec'y.

### Running a Small Boy.

A SMALL boy playing the part of the fox in an exciting chase on the Cedar Hollow hills near Phœnixville, Pa., narrowly escaped being torn to pieces by George Fulmer's pack of hounds the other day. The dogs had not enjoyed a run for weeks, and Mr. Fulmer decided to give them an exercise. Taking a bag from the box in which he keeps several foxes, and which the Reynards slept upon, he gave it John Rambo. He told the lad to drag the heavily scented bag across the hills and he would turn loose the hounds. The boy had a long start and had disappeared below the brow of a distant knoll when Fulmer released the eager dogs. Around they circled until one of them struck the trail, and then away they dashed in pursuit of the bogus fox.

Instantly, a great fear seized the hunter. It dawned upon him that if the hounds overtook the lad they would tear him to pieces. Without longer hesitating, he rushed to the stable, bridled a horse, and galloped in pursuit of the baying hounds. They had a good start, and Fulmer knew that the boy's life depended upon whether the hounds or the horseman reached him first. In no real fox chase did the veteran hunter ever ride more furiously.

It was a long, hard gallop, but he had told the boy where to drag the bag, and by a short cut reached him ahead of the hounds. The dogs were close upon him and running madly. Fulmer seized the astonished boy and lifted him upon the horse beyond the reach of the hounds, which he could even then hardly prevent from tearing young Rambo to pieces—*Philadelphia Record.*

### National Beagle Club Meeting.

AN adjourned meeting of the National Beagle Club of America was held in the A. K. C. rooms, 44 Broadway, New York, on July 2. The meeting was called to order by President H. L. Kreuder at 3:15 P. M. Present were H. L. Kreuder, George Laick, H. F. Schellhass, J. W. Appleton, George B. Post and A. D. Lewis.

Minutes of previous meeting were read and approved. A letter was read from the City of Straits Kennel Club stating that the special prize donated to them by this club had been received after the judging began and they could therefore not accept it. The secretary was requested to note the fact on the minutes.

A letter was read from the New England K. C. stating that the special prize donated to them by the N. B. C. of Am. had been awarded to Mollie L. (Don—Mollie), owned by Mark Lewis, Jr., Cannonsburg, Pa.

The committee on prizes was requested to forward the special to Mr. Mark Lewis, Jr.

Voted that the resignation of Mr. F. W. Chapman be accepted. Messrs. H. H. Donnell, S. B. Arthur, F. J. D'Arcy and Harry Twyford were dropped from the books.

Moved by Mr. Schellhass and seconded by Mr. Appleton, that the name of R. F. Mayhew be taken from the books, inasmuch as he has never qualified as a member.

Mr. W. E. Johnston, Etna, Pa., offered his resignation, which was on motion accepted.

Mr. J. W. Appleton proposed for membership Mr. Rowland P. Keasbey, New York, and he was elected.

The auditing committee reported that they had examined the books and accounts of the secretary and treasurer and found the same correct.

It was reported to the club that there is a vacancy in the field trial committee of the A. K. C. It was therefore voted that the secretary be instructed to communicate with the secretary of the A. K. C. and respectfully ask that the National Beagle Club of America be given a place in the said field trial committee inasmuch as the N. B. C. of America is holding annual field trials.

The following committees were appointed by the chair: Committee for locating grounds to hold field trials—Messrs. J. W. Appleton, A. D. Lewis and H. F. Schellhass. For selecting judges—H. L. Kreuder and George Laick. For formulating classes and prizes—George Laick, H. F. Schellhass and H. L. Kreuder. For soliciting special prizes—H. L. Kreuder, B. S. Turpin, H. W. Lacy, Geo. B. Post, Jr., A. D. Lewis and H. F. Schellhass. Field Trial Committee—B. S. Turpin, J. W. Appleton, John Bateman, J. B. Lozier, C. S. Wixom, George Laick, H. L. Kreuder, H. F. Schellhass, W. S. Clark, Geo. W. Rogers, Geo. B. Post, Jr., Edwin Field, M.D.

Meeting adjourned to Aug. 9 at 3 P. M.

GEORGE LAICK, Sec'y.

## HUNTING AND COURSING NOTES.

The well-known greyhound Troughend, that divided the Waterloo cup with Fullerton, died in Russia recently. He was by Greentick out of Toledo and cost Col. North, who presented him to his late owner, 470 guineas. It is said he has left some good stock behind.

# Yachting.

The winners were: Second class, Reaper, Marina; class B, cruisers, Edith, Kraken, Mosco; knockabouts, Nancy, Betsy, Trouble; dories, Snipe, Witch, Inez, Freddie C, Baby Lou. Thorn was disqualified, as not being dory, having a fin and a rudder post through the stern. The judges were Messrs. George W. Mansfield, Benjamin W. Knapp and Howard Whitcomb.

### Squantum Y. C. First Championship.

SQUANTUM.

*Wednesday, July 4.*

THE first championship race of the Squantum Y. C was sailed on July 4 in the fresh S.W. breeze, the times being:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| FIRST CLASS - SLOOPS. | | | |
| Gretchen, J. N. Tewksbury | 26.05 | 2 45 30 | 2 00 09 |
| Agilis, Seaweed Club | 30.05 | 2 52 16 | 2 20 03 |
| SECOND CLASS—SLOOPS. | | | |
| Starlight, Barston & Freeman | 20.01 | 1 34 25 | 1 07 38 |
| Eva, H. E. Nelson | 20.07 | 1 35 45 | 1 09 30 |
| Restless, G. H. DeHuff | 24.00 | 1 35 50 | 1 12 37 |
| FIRST CLASS—CATS. | | | |
| Myrtle, H. F. Burkhardt | 20.05 | 1 19 45 | 0 53 22 |
| Payomet, Flood & Snow | 21.01 | 1 21 48 | 0 56 00 |
| Arcturus, G H DeHuff | 24.00 | 1 35 50 | 1 12 37 |
| JIB AND MAINSAIL. | | | |
| West End, C. F. Marr | 16.02 | 1 31 50 | 1 00 06 |
| Yolande, G. P. Emerson | 15.11 | 1 33 20 | 1 00 35 |
| Mary C., C. Johnson | 16.02 | 1 37 29 | 1 06 05 |
| FOURTH CAASS. | | | |
| Trix, F. S. Pierce | .... | 0 26 10 | .. .. .. |
| 1492, E. R. Linnie | Disqualified. | | |

Agilis protests Gretchen for turning a mark from the wrong side, and 1492 was disqualified for sailing a wrong course.

The judges were F. E. Badger, J. E. Drew and W. E. Burrell.

### Boston City Regatta.

*Wednesday, July 4.*

THE annual regatta given by the city of Boston was this year a great success, a large fleet starting with a fresh S.W. breeze. There were no serious mishaps and the racing was interesting in every class. A separate class was made for fin-keels between 28 and 40ft. l.w.l., debarring Handsel from the 30ft. keel class, but she, having no competitor, did not start. The times were:

| | Elapsed. | Corrected. |
|---|---|---|
| FIRST CLASS, CENTERBOARDS. | | |
| Violet, H. J. McKee | 3 34 25 | 2 57 11 |
| Nimbus, J. S. Cushing | 3 35 23 | 2 58 21 |
| FIRST CLASS, KEELS | | |
| Countess, J. F. Blanchard | 3 46 16 | 3 05 05 |
| Gracie G., M. J. Sughrue | 3 49 00 | 3 11 46 |

| Marigold, W. Greenlaw | 1 11 20 | 0 51 49 |
| Phillis, W. A. Comey | 1 18 18 | 0 56 56 |
| Cupid, I. H. Graves | Did not finish. | |

The judges were Wm. Daly, Jr., chairman; J. S. Cushing, James Bertram, F. O. Vegelahn, C. J. Rushton, T. D. Rice, Harry Hutchinson, James Otis Fallon, Ambrose A. Martin, Wm. H. Crane, A. T. Bliss, Walter R. Crimes.

Duck protests Egeria for crowding at Buoy 6. Areva protests Laurel for fouling her at Buoy 7. Black Cloud and Raccoon protest Harolde for leaving the stakeboat off the Marine Park pier on the starboard hand. Good Luck also protests her on measurement. Countess protests Gracie G. for fouling her at Buoy 7, and Attempt protests In It on measurement.

### Plymouth Y. C., Third Regatta.

PLYMOUTH—PLYMOUTH HARBOR.

*Wednesday, July 4.*

THE third regatta of the Plymouth Y. C., on July 4, was sailed in a light S.W. wind, the times being:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| FIRST CLASS. | | | |
| Eclipse, H. H. Sears | 25.10 | 1 45 32 | 1 17 29 |
| Future, W. T Whitman | 21.07 | 1 55 44 | 1 23 09 |
| SECOND CLASS. | | | |
| Fanny D., M. McDowell | 18 00 | 1 45 26 | 1 08 01 |
| Priscilla, W. M. Goodwin | 18.03 | 1 55 56 | 1 18 53 |
| Straight Tip, N. Keith | 17.08 | 1 59 29 | 1 21 34 |
| THIRD CLASS. | | | |
| Gypsy Girl, T W. Stole | 15.02 | 2 06 51 | 1 29 36 |
| Perhaps, T. S. Diman | 14.08 | 2 08 17 | 1 25 02 |
| Dolphin, N. Morton | 15.03 | 2 12 33 | 1 30 27 |
| Major D, S Drew | 15.05 | 2 12 08 | 1 30 31 |
| Spray, C. F. Bradford | 16.05 | 2 11 10 | 1 31 12 |
| Puritan, C. D. Craig | 16.06 | 2 17 18 | 1 37 28 |
| Vigilant, A. M. Watson, Jr. | 15.11 | 2 05 07 | 1 24 15 |
| Eunice B. Weston, I Symmes | 16.04 | 2 17 50 | 1 37 43 |
| Honest John, J. C. Dawes | 14.01 | Withdrew. | |
| Pilgrim, A. Bartlett | 16.02 | Withdrew. | |
| Katie L., J. Bagnell | 16.08 | Withdrew. | |
| FOURTH CLASS. | | | |
| Solitaire, G. P. Thrasher | 17.02 | 2 01 20 | 1 22 36 |
| Nereid, A. E. Walker | 16.00 | 2 08 04 | 1 27 21 |
| Lady Mary, M. McDowell | 16.10 | 2 08 41 | 1 29 25 |
| Natalie, H. M. Jones | 14.08 | 2 13 00 | 1 29 45 |
| Aphrodite, A. G. Fay | 16.02 | 2 08 04 | 1 28 18 |
| FIFTH CLASS | | | |
| Ivan, W. S. Cole | .... | .. .. | 2 15 10 |
| Manatee, J. F. Gaylord | .... | Withdrew. | |

Winners were: First class, Eclipse; second class, Fanny D.; third class, Gipsey Girl; fourth class, Solitaire; fifth class, Ivan. Vigilant fouled the judges' boat and stakeboat, and Aphrodite fouled Natalie.

On July 2 the steam yacht Marietta, sunk at Erie Basin, was raised. The cause of the sinking is said to be a corroded sea cock, but such a mishap betokens carelessness on the part of some one. The damage is stated at $10,000, the upholstery, furniture and woodwork being ruined and the machinery more or less damaged.

## Larchmont Y. C. Annual Regatta.

LARCHMONT—LONG ISLAND SOUND.

*Wednesday, July 4.*

THE annual regatta of the Larchmont Y. C., on July 4, was a good wholesome race, of the kind that is too seldom seen of late years, with many classes, each well filled yachts, which are in practical service, and not specially built for racing. There were no star performers, but mainly such craft as Ariel, Sachem, Shamrock, Viator, Minerva, Nymph, Sasqua, Audax and Madrine; ex racers or fast cruisers, but in no sense racing machines. The day was fair and pleasant, with a fresh south wind until late in the race, when after a short calm a thunderstorm in the northwest sent out more angry gusts, but amounted to little in the end. The usual club courses were sailed. Emerald beat Ariel quite handily, for the second time this season. Queen Mab, of 59ft., proved too much for Katrina, the fast 70-footer. Wasp beat Gloriana quite badly. Gossoon broke the jaws of her gaff before reaching Captain's Island, and withdrew. Minerva finished first, but fouled a markboat, the prize going to Nymph. Sasqua, an older and smaller Ellsworth boat, pushed the fast Tigress very hard, and lost but by a few seconds.

The new Memory in class 8, is a Herreshoff fin-keel, completed this year. Audax, Mr Eaton's fast yawl, has now no competitors of her own rig, so went in the 30ft. class, beating Pyxie and Gavilan; Madrine losing her mast on the first leg. In the larger cabin cat class, Almira broke down, and Onaway won

The 21ft. class was again a failure, several boats were absent, and of those present Maysie lost her mast, and Flirt, Houri and Blonde and Brunette came to grief in their rigging. Minnetonka gave up, being overpowered on the wind. The official times were:

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| SCHOONERS—CLASS B. | | | | |
| Emerald | 11 39 47 | 3 37 08 | 3 57 21 | 3 57 21 |

| Houri | 12 12 00 | Disabled. | | |
| Minnetonka | 12 12 00 | Withdrew. | | |

The winners are Emerald, Sachem, Elsiemarie, Viator, Queen Mab, Wasp, Nymph, Tigress, Memory, Audax, Christine, Onaway, Kittie, Pauline B, Edna, Ione and Vaquero.

Wasp wins the Gould cup and Awa the Connor cup. The regatta committee included Messrs. Loresoy, Sarony and Boretta.

## Shrewsbury Y. C. Annual Regatta.

RED BANK—SHREWSBURY RIVER.

*Wednesday, July 4.*

THE second annual regatta of the Shrewsbury Y. C. was sailed at Red Bank on July 4. Since the opening of this club's new house last summer many improvements have been made, includimg among others the grading and leveling off and sodding of the ground about the house, an expense of more than $700, and the introduction of gas in the house. Great interest was centered in the race, and the club house and balconies were filled with ladies and their escorts to the number of nearly 1,000. No better day could have been selected for the regatta, the wind was a good sailing breeze from S.W. and the day in other respects a beautiful one.

The start and finish lines were in plain view off the club house, the courses being as follows: Classes A, B, C, D and G from the starting line across the river to flag stake No. 1 at Guion's Point, leaving it to starboard; then back to No. 2 in Boyd's Cove, leaving it to port; thence down the river to stake No. 3 off Brown's dock, leaving it to starboard; thence across river again to stake No. 4 off Fair Haven dock, leaving it to port; thence to flag stake No. 5 at head of the flats, leaving it to port; thence back to No. 4, leaving it to starboard; thence to No. 3, leaving it to port; thence No. 2, leaving it to starboard; thence to No. 1, leaving it to port, to finish, distance 10 miles. Classes E and F, same starting and finishing line, to stakes 1 and 2; thence to white and blue stake at mouth of McClees Creek; thence back to stake 2 and 1 and between judge's boat and red flag stake; thence twice over following course to stakes 1 and 2 and around judges' boat, distance 10 miles.

For this race most of the crack boats on the Shrewsbury River were entered, including W. N. DeGraw, Jr.'s new Stewart & Binney boat and McGiehan's new U and I. The DeGraw boat is a small Pilgrim without the fin-keel; she is fitted with a Tobin bronze centerboard and a brass rudder, both having been made at Lawley's in Boston, while the boat itself was built by Riddle on the South Shrewsbury, who sailed her in this race. Her sailing measurement was given as 26ft., she being 29ft. over all and 23ft. on waterline. There is no question that she is over-rigged, and would do much better with a smaller rig. From what could be learned, she has a hollow spar of 44ft., a very long bowsprit, and her boom must be fully 37ft. Her present rig would be suitable with a fin-keel, but in the whole sail breeze that was blowing she was unable to carry it. The only rig anywhere resembling this was carried by the late Com. Dilworth's Dare Devil, 27ft. 4in., carrying a 43ft. spar and 37ft. boom. The Dare Devil was a much more powerful boat, however, having 12ft. beam. She should have made a much better showing, as she only beat Augusta, 22ft., an old-style Pat McGiehan boat belonging to Mr. Edward Kemp, by 5m. 57s. corrected, and Mr. Clinton James's Undine, a 22ft. cat, by 1m. 39s. elapsed time. The DeGraw boat is peculiarly constructed in many respects, the tiller coming under the deck, and we understand the water came in the boat through her rudder trunk during the race. This will be remedied, however, by carrying the rudder trunk up to the deck.

Most of the interest was centered in the 22ft. open cat class, in which was entered McGiehan's new creation, U and I. It is to be regretted, however, that Mr. Oakes's Enigma could not take part, but it is understood that on account of boat builder Riddle's working to get the DeGraw boat ready, he was unable to get Enigma out in time. Much expense had been gone to by the owner of Undine for this race by procuring a new rig for her, she carrying a 40ft. Young hollow spar with 32ft. hoist, the result showing the good judgment of Com. James, who sailed her in this race; and Undine has once more resumed her place at the head of this class. The following are the full times:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| CLASS A—CABIN SLOOPS. | | | |
| Edla, M. P. Sherman | 27.07 | 2 16 57 | 1 47 32 |
| Zulu, Frazer & Worthley | 26.09 | 2 26 01 | 1 55 46 |
| Adele, C. H. Humphreys | 24.10 | Did not finish. | |
| CLASS B—OPEN JIB AND MAINSAIL. | | | |
| Presto, Harry Randall | 28.00 | 2 45 09 | 2 16 04 |
| Kathay, W. N. DeGrauw, Jr., S. Y. C. | 26.00 | 2 12 23 | 1 41 23 |
| Iroquois, W. W. Genet, N. J. A. C. | 23.00 | 2 26 15 | 1 51 52 |
| Lassie, A. E. Good | 22.04 | 2 25 44 | 1 50 31 |
| Augusta, Edward Kemp | 22.02 | 2 22 40 | 1 47 20 |
| CLASS D—CAT-RIGGED, 20 TO 23FT. | | | |
| Irma T., Forman R. Smith, S. Y. C. | 22.00 | 2 15 26 | 1 39 47 |
| U & I, P. H. McGiehen, N. Y. B. Y. C. | 21.11 | 2 17 36 | 1 41 51 |
| Undine, Com. C. R. James, S. Y. C. | 21.10 | 2 14 02 | 1 38 10 |
| Arrow, Jno. M. Sawyer, Jr., S. Y. C. | 21.10 | 2 17 49 | 1 41 57 |
| Shrewsbury, Carl Wagner, S. Y. C. | 21.09 | 2 23 26 | 1 47 27 |
| CLASS E—CAT-RIGGED, 17 TO 20FT. | | | |
| Maygus, E. D. Miner, S. Y. C. | 19.10 | Did not finish. | |
| Anna, W. B. Parsons, L. M. Y. C. | 18.04 | 1 44 50 | 1 03 40 |
| Frances R., Dr. R. P. Thompson | 18.00 | 1 51 34 | 1 09 59 |
| Pauline, J. Frank James, S. Y. C. | 18.00 | 1 43 06 | 1 01 31 |
| Baby, Edward V. Willis | 19.11 | 1 42 36 | 1 04 04 |
| CLASS F—CAT-RIGGED, UNDER 17FT. | | | |
| Little Silver, H. L. Powers, L. M. Y. C. | 16.02 | 1 47 42 | 1 02 47 |
| Yum Yum, Vantini & Chadwick | 16.01 | 1 57 43 | 1 12 38 |
| Clytie, Malcolm Fisher | 15.11½ | 1 55 53 | 1 10 43 |
| Louisa, Frank Taylor | 15.01½ | 1 57 05 | 1 10 02 |
| CLASS G—SPECIAL CLASS, CABIN CATS. | | | |
| Win or Lose, F. M. Randall, P. Y. C. | 22.09 | 2 25 24 | 1 50 42 |

The winners are: Class A, Edla; class B, Kathay first and Augusta second; class D, Undine first and Irma T. second; class E, Pauline first and Anna second; class F, Little Silver first and Louisa second; in class G Win or Lose had a walkover. The judges were George E. Gartland, New Jersey Y. C.; Henry Clay Miner, Jr., and George Williams, Shrewsbury Y. C. The regatta committee comprised Com. Clinton R. James, Edwin D. Miner and Forman R. Smith.

After the race the prizes, handsome silver plates, were presented to the winners by Mr. John F. James. In the evening the club house was brilliantly illuminated, and there was fireworks and dancing.

## Beverly Y. C., 208th Regatta.

MARBLEHEAD—MASSACHUSETTS BAY.

*Saturday, June 30.*

THE 208th regatta, first championship and open, was sailed on June 30 at Marblehead. The day opened with a dead calm and dense fog. At 12 M., the starting hour, it was impossible for a boat to move, and fully half the entries had not arrived. By 12:30 a light W. by S. air struck in, and the start was made; but fourteen boats, mostly in second class, and including many of the best boats in the bay, were unable to arrive in time owing to the calm. Amorita and Wanda had it all their own way. In knockabout class, Trouble led to Halfway Rock and Otatsu was badly beaten; but windward work reversed the order. The result in the tender class was very close. Course for second and knockabout classes, 10 miles; third and fourth classes, 9 miles; tender class, 3 miles. Summary:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| SECOND CLASS. | | | |
| Amorita, S. H. Y. C., W. F. Bache | 27.01 | 2 23 20 | 2 13 25 |
| Ariel, C. Y. C., J. Barrett | 25.05 | 2 30 33 | 2 19 06 |
| Brenda, Burgess Y. C., H. S. Goodwin | | 2 37 05 | . . .. |
| Six entries did not start. | | | |
| THIRD CLASS JIB AND MAINSAIL. | | | |
| Nonpareil, B. Y. C., C. P. Curtis | 18.06 | Withdrew. | |
| Two entries did not start. | | | |
| THIRD CLASS CATS. | | | |
| Koorali, B. Y. C., Com. Robbins | 23.04 | 2 18 41 | 2 34 35 |
| Edith, C. Y. C., F. M. Wood | | 2 25 45 | . . .. |
| Don, L. W. Burleup | | Not timed. | |
| Frolic | | Not timed. | |
| FOURTH CLASS. | | | |
| Bonita, C. Y. C., C. O. Hood | 20.00 | 2 50 52 | 2 34 26 |
| Duck, B. Y. C., C. E. Hodges | 19.03 | 2 56 33 | 2 39 05 |
| Hera, C. Y. C., W. P. Fowle | | Not timed. | |
| Weazel, C. Y. C., J. M. Dutton | 15.10 | Not timed. | |
| Alpine, L. Y. C., C. J. Blithen | | Did not start. | |
| Box, M. Y. C., F. Gray | | Did not start. | |
| KNOCKABOUTS. | | | |
| Otatsu, B. Y. C., F. O. North | | 2 35 58 | . . .. |
| Jane, C. Y. C., C. S. Parker | | 2 40 27 | . . .. |
| Esther, B. Y. C., H. Taggard | | 2 42 32 | . . .. |
| Carl, B. Y. C., C. H. W. Foster | | 2 43 06 | . . .. |
| Trouble, C. Y. C., H. Wheeler | | 2 43 47 | . . .. |
| Two entries did not start. | | | |
| TENDER CLASS. | | | |
| Shrimp, B. Y. C., C. E. Hodges | 13.07 | 1 16 06 | . . .. |
| Thelma, Jr., E. Y. C., W. O. Gay | 10.07 | 1 18 35 | . . .. |
| Iris, C. Y. C., G. Owen, Jr. | | 1 36 40 | . . .. |
| Cigarette, M. Y. C., E. P. Sharp | | Did not start. | |

Winners: Second class, Amorita first. Knockabouts, Otatsu first, Jane second. Third class cats, Koorali first, Edith second. Fourth class, Bonita first, Duck second. Tender class, Shrimp first. Koorali and Duck win legs for championships. Judges, F. Elliott Cabot and W. Lloyd Jeffries.

The 209th regatta, first Buzzard's Bay championship, was sailed on July 4 at Monument Beach in a double reef S.W. breeze, but comparatively smooth water. In second class Susie, who has had an excellent record at Marblehead, wished to enter as a sloop, but not knowing of any other boat in the class, came round as a cat, only to find Typhoon ready to meet her in sloop class. This of course left Typhoon alone, and she did not start.

In the second class Gymnote has added a new and long stern, improving her running, but her new sail is a failure, and spoiled her to windward.

The new Linotte had bad luck, breaking her boom just before the start; Anonyma led easily to windward with Mist a good second. Off the wind Gymnote gained rapidly and took second place. Ulula shook out both reefs and nearly saved her time. Mist enlivened the finish by running away with her owner and bringing up on the judges' boat while going at full speed. The force of the blow wrecked the rigging of the judges' boat and broke the shank of her anchor short off.

In the third class Nobska had it all her own way. She now sails as well to windward as free, and it will take a very fast boat to stop her. Gilt Edge, while doing very well, was fouled by Puzzle and lost her headstay. Both boats withdrew.

Scintilla and Colymbus also fouled and later withdrew.

In the fourth class cats Dawdle had a walk over, as Dodo broke her boom the night before, and Squall, who was expected, did not appear. Dawdle sailed a close race with the knockabouts.

P D Q held a walk over in fifth class.

The interest of the day centered on fourth class jib and mainsails, where three of the new centerboard knockabouts met Fin, an exceedingly good Herreshoff fin-keel who has had it all her own way for two years; and last but not least, Grilse, a 17ft. waterline Onawa, just built by Dyer and brought on from Lake Minnetonka. When delivered, her sail plan was larger than that of Onawa and utterly unfit for Buzzard's Bay. It was reduced one-third and is now rather small, though none too small for this class. She was sailed by Mr. Sidney Burgess and a good Corinthian crew, and carried a single-reef mainsail and a mere handkerchief of a jib. Her mainsail set very badly, and she broke her port shroud and various other things before the start, and started in a patched up condition.

P D Q led off on the gun, with Grilse close at her heels, then Kitten with but little way on, and Dolly, who came with a rush and tried to get inside Kitten where there was no room, the result being that she hung up on the boom of the judges' boat and forced Fin and Turkey, who were close hauled, to go back and start again, losing them some two minutes.

Grilse at once took the lead, sailing fast and fairly close, and steadily gaining. She was wet, running her nose into a sea and scooping it upon deck till more or less water broke into the cockpit. This, however, did not stop her, though sometimes she would spank down on a sea and stop, but start off again in an instant.

Fin did well, but hardly held Grilse, and it is doubtful if she was beating Kitten or Turkey. She carried away jib off Toby Island and withdrew.

Course was dead to windward to Pines Buoy, run home and repeat. There was no reaching.

At end of first round Fin had repaired damages and started again with Grilse. She seemed to sail as fast, but did not hold as good a wind as Grilse, and soon the head of her sail came off her gaff. Fin will discard cotton rope in future, as her new cotton rigging went in every direction. Kitten, Dawdle and Turkey crossed in a bunch, a very pretty finish. Come On and El Paso were timed by request, but not being owned in the club were not really in the race. Mist crossed wrong side of judges' boat, but her time is given for comparison, and taken when she fouled the judges' boat.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| SECOND CLASS CATS. | | | |
| Anonyma, F. L. Dabney | 23.08 | 1 53 58 | 1 40 13 |
| Gymnote, W. E. C. Eustis | 23.08 | 1 55 30 | 1 41 45 |
| Mist, Geo. H. Lyman | 23.09 | 1 56 00 | 1 42 21 |
| Ulula, W. H. Winship | 22.04 | 1 57 30 | 1 41 47 |
| Agawam, J. G. Young | 23.08 | 2 00 07 | 1 45 22 |
| Susie, W. D. Turner | 23.10 | 2 07 36 | 1 54 03 |
| Linotte, W. P. Wilson | 23.02 | Disabled. | |
| Come On, W. W Phinney | 23.06 | 2 55 53 | 1 41 54 |
| THIRD CLASS—CATS. | | | |
| Nobska, A. A. Beebe | 19.06 | 1 39 13 | 1 22 32 |
| Kaloolah, H. Richards | 19.08 | 1 49 16 | 1 33 49 |
| Doris, John Parkinson | 19.08 | 1 49 54 | 1 34 27 |
| Scintilla, Geo. S. Fiske | 20.00 | 1 50 32 | 1 35 29 |
| Gilt Edge, D. L. Whittemore | 19.07 | Disabled. | |
| Puzzle, Wm. Amory, 2d | 19.09 | Withdrew. | |
| Colymbus, Henry Winsor | 19.11 | Withdrew. | |
| El Paso, C. C. Hanley | 19.01 | 1 45 27 | 1 29 15 |
| FOURTH CLASS—JIB AND MAINSAILS. | | | |
| Grilse, W. E. C. Eustis | 17.00 | 1 07 42 | 56 07 |
| Kitten, C. H. Jones | 16.03 | 1 10 08 | 57 45 |
| Turkey, C. S. Dennison | 16.08 | 1 10 13 | 58 19 |
| Dolly, F. W Downes | 16.02 | 1 14 20 | 1 02 52 |
| Fin, L. M. Stockton | 16.02 | Disabled. | |
| FOURTH CLASS—CATS. | | | |
| Dawdle, R. S. Hardy | 16.03 | 1 10 11 | 57 48 |
| FIFTH CLASS. | | | |
| P D Q, R. W. Emmons | 12.00 | 41 30 | 32 39 |

Anonyma won first in second class, Gymnote second; Nobska won first in third class, Kaloolah second; Grilse won first in fourth class, Kitten second. Anonyma, Nobska, Grilse, Dawdle and P D Q take legs for pennants.

Judges, N. H. Emmons, W. Lloyd Jeffries.

## Southern Y. C., Brewster Cup.

WEST END—LAKE PONTCHARTRAIN.

*Tuesday, June 26.*

THE Brewster cup race for sloops over 30ft., in cruising rig, was sailed at New Orleans on June 26, and was won for the third consecutive time by Mr Chas. P. Richardson's 45ft. Burgess sloop Nepenthe. The day was very favorable for yachting, with about an eight-knot breeze. The race was on the order of a procession; beginning with the largest boat first they were strung out like the tail of a kite, tapering to the rear with the little Elaine, the centerboarder that was rebuilt to fit the lines of a 30ft. modern-bowed keel boat. Corrected time made a slight change in the order of the finish, Com. O'Donnell's Florence taking second place by 44 seconds:

| | Finish. | Elapsed. | Corrected. |
|---|---|---|---|
| Nepenthe | 4 02 17 | 3 00 32 | 3 00 32 |
| Florence | 4 17 21 | 3 16 29 | 3 06 37 |
| Montauk | 4 14 29 | 3 11 42 | 3 07 21 |
| Zoe | 4 30 15 | 3 27 39 | 3 14 15 |
| Elaine | 4 38 16 | 3 35 19 | 3 19 50 |

Two interesting match races were sailed over the Southern Y. C. course on July 30. The first event was a catboat race for a prize of $50 between Helen M. of the Mandeville Y. C. and Augusta of the Southern Y. C. There was a steady six-knot N.W. by W. breeze. Course, three times around a 15-mile triangle. The summary is as follows:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Augusta, W. A. Lawler | 24.61 | 3 58 08 | 3 58 08 |
| Helen M., T. M. Moorman | 22.61 | 4 18 05 | 4 09 10 |

The event of the day was a match race between Lufki Humma, Glenny Bros., and Silence, Peter Labouisse, for $250 a side. Just before the race started Lufki Humma reported a split in her masthead. The judges decided that if either boat carried away a masthead it would be no race. The race was sailed without accident. Lufki Humma started first, but was passed on the first round. Silence held her lead and won handily. Com. Alex. Brewster sailed Silence and Sam. Gautier Lufki. The times were:

| | Finish. | Elapsed. | Corrected. |
|---|---|---|---|
| Silence | 5 15 48 | 2 53 19 | 2 53 19 |
| Lufki Humma | 5 24 15 | 3 03 28 | 2 55 59 |

The much talked of match between Nepenthe, of the Southern Y.C., and Annie, of the Mobile Y. C, will take place this month. There will be three races, the first to take place July 20, off Fort Morgan, Mobile, in deep, open water, over a course of 15 miles to windward and return. The conditions of the race are as follows; Sweepstakes and no time allowance. The crews are limited to sixteen men each, all to be amateurs except the sailing master and two men each. The other two races are to be sailed on Mississippi Sound between July 20 and 27.

The Southern Y. C. annual cruise will start July 26. A big regatta will be given at Bay St. Louis in their honor July 28.

The Mandeville Y. C., situated across Lake Pontchartrain from New Orleans, will give a regatta July 21. L. D. S.

## Quincy Y. C. Second Championship Race.

HOUGH'S NECK—BOSTON HARBOR.

*Thursday, June 28.*

THE Quincy Y. C. sailed its second championship on June 28 in a variable wind, ending in a squall from the south, the times being:

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| FIRST CLASS. | | | |
| Beatrice, J. Cavanagh | 26.00 | 1 52 55 | 1 23 43 |
| Mudjekeewis, Davis & Abbott | 25.09 | 1 53 16 | 1 23 54 |
| Eulalie, R. G. Hunt | 21.08 | 2 00 28 | 1 26 12 |
| White Fawn, A. E. Jones | 25.00 | 1 56 55 | 1 26 45 |
| SECOND CLASS. | | | |
| Magpie, H. G. Otis | 19.08 | 1 32 35 | 1 05 27 |
| Opechee, W. P. Barker | 19.08 | Disabled. | |
| THIRD CLASS. | | | |
| Primrose, H. M. Faxon | 17.11 | 1 32 18 | 1 03 11 |
| In It, R. B. Williams | 17.04 | 1 33 20 | 1 03 25 |
| Mab, John Shaw | 17.05 | 1 33 25 | 1 03 26 |
| Dandelion, A. Adams | 17.06 | 1 39 05 | 1 09 23 |
| Sunbeam, H. B. Faxon | Broke down. | | |
| Dux, C. F. Colby | Withdrew. | | |
| CRUISING CLASS—HANDICAP. | | | |
| Niobe, A. F. Schenkelbergen | Scratch | 1 31 59 | 1 31 59 |
| Smoke, H. L. Rice | 1 58 | 1 36 10 | 1 34 12 |
| Vision, G. Grace | 2 08 | 1 41 56 | 1 39 48 |
| Elsie, G. M. Keating | Withdrew. | | |
| Nereid, C. Brackett | Disabled. | | |

The squall made hot work for a time, disabling several boats. Beatrice and Magpie each win a second leg and Primrose and Niobe a first.

## Minnetonka Y. C. Club Races.

LAKE MINNETONKA.

*Saturday, June 30.*

THE second race of the Minnetonka Y. C. was sailed on June 30 in a fresh breeze. Alpha did not start, but Kite won again, the times being:

| | Elapsed. | Corrected. |
|---|---|---|
| FIRST CLASS—SLOOPS. | | |
| Kite, E. W. Peet | 1 36 12 | 1 33 34 |
| Marie, Watson Syndicate | 1 41 12 | 1 36 27 |
| C. L. C., Cook & Champion | 1 42 48 | 1 37 50 |
| Idler, Idlers | 1 52 05 | 1 52 05 |
| SECOND CLASS—SLOOPS. | | |
| Psyche, Walker | 1 47 04 | 1 37 53 |
| Hawk, Wilson | 1 48 55 | 1 39 44 |
| FIRST CLASS—CATS. | | |
| Pinafore, Brooks | 1 44 53 | 1 37 06 |
| Aurelia, Langdon | 1 51 01 | 1 43 14 |
| Aurora, Gaty | 1 51 37 | 1 51 37 |
| SECOND CLASS—CATS. | | |
| Senorita, Ankeny | 1 57 47 | 1 45 29 |
| Kestrel, Wyman | 2 02 24 | 1 50 06 |
| Kingbird, McMullen | 2 04 26 | 1 52 08 |
| SPECIALS. | | |
| Cupid, Donaldson | 2 06 41 | 1 48 52 |
| Kid, Jenny | 2 16 55 | 2 01 22 |

On July 3 the steam yacht May, Com. Morgan, New York Y. C., sailed from New York for Cowes, first calling at Fayal. On board with Com. Morgan were Mrs. Morgan, Mrs. Arthur Mason Jones, H. H. Crocker and Dr. W. T. Luss. Capt. Harry Craven is in command with a total crew of 40. The yacht has been completely redecorated this spring and is now in perfect condition. Com. Morgan will watch the Vigilant-Britannia races, the length of his stay being uncertain. In view of his absence the following orders have been issued: General Order No. 1—I have appointed Mr. F. T. Robinson fleet captain.—E. D. MORGAN, Commodore. General Order No. 2—Absence from home waters will prevent Commodore Morgan from undertaking his official duties this summer. Vice-Commodore Brown will therefore assume command of the squadron.—F. T. ROBINSON, Fleet Captain.

## THE CLYDE RACES, 1894.

THE past week has been a stirring one on the Clyde, the racing being close and exciting, and marked by a disaster which, apart from the loss of a life, is still more serious than is usual in yacht racing: the sinking and total loss of Valkyrie. Intense as has been the interest in the meeting of Vigilant with the three champions of the British fleet, the actual racing has been entirely overshadowed by the accident to Lord Dunraven's noble vessel. During the start of the third day's race, the first in which Vigilant was entered, in a strong wind and heavy rain, Valkyrie, while on the line at gunfire, was struck by Satanita, coming up on the wrong tack. The huge cutter, of 98ft. waterline, was going at a high speed, and on striking Valkyrie she cut the latter down to the water. Those on board were quickly rescued by the surrounding boats and steam yachts, the only serious injury being to one of Valkyrie's crew who was crushed in the collision, causing his death next day. The yacht sunk within three minutes, in sixteen fathoms of water, and though efforts will be made to raise her, it is unlikely that the wreck will be of any value other than the lead, copper, sails and rigging.

After a light weather race on the Mersey on June 30 in which Britannia defeated Satanita by 45 minutes, the pair turned up on the Clyde in good season, to find Valkyrie awaiting them for the first day, the Royal Largs Y. C. regatta of July 3. Vigilant had come out of the dock and was in readiness, but Capt. Haff had not yet sailed her, and there was the usual number of little things to be attended to that always accompany the first of the season. It was decided not to start her until she had been under way a little about the Clyde, so only Britannia, Valkyrie and Satanita started in the first race. The course was almost a square, starting off Largs, then up along the east shore of the Clyde to the Skelmorlie mark, then across to Toward Bank, then down the Bute shore to a mark off Mount Stewart, and then across the Clyde to the starting line, after which the yachts sailed diagonally across the square from Largs around the Toward mark, and back home. The wind was fresh from the west, making a reach on the first and third legs, a beat on the second, a run on the fourth, then a beat over to the Toward mark and a run home.

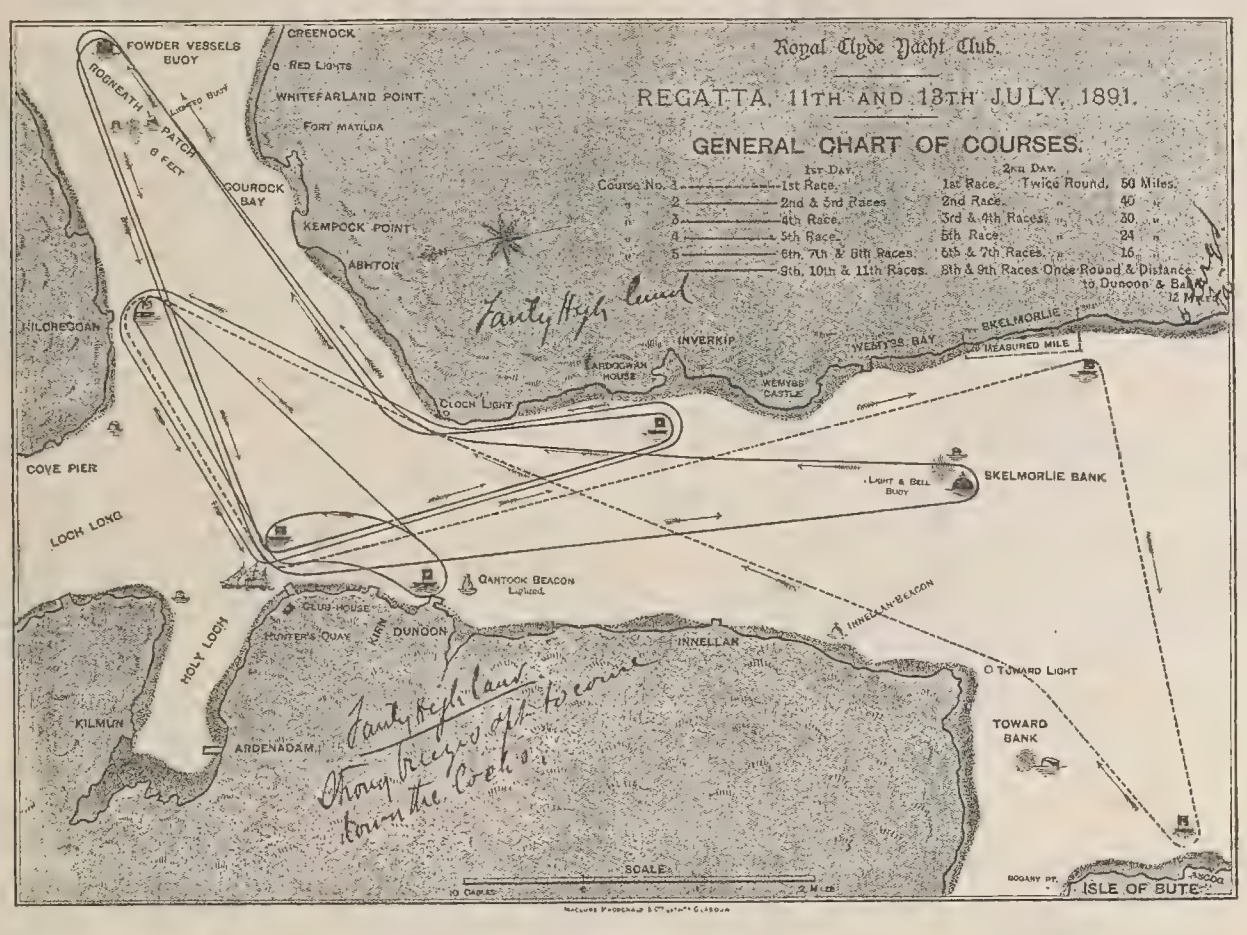
Valkyrie led at the line, with Satanita 32s. later and Britannia in the rear berth. On the first reach Satanita held her place, but on the beat Britannia caught her, and on the second reach Britannia closed on Valkyrie, the times at the end of the fourth leg, which was run under spinakers, were:

Valkyrie.....12 25 35 Satanita.....12 29 44
Britannia.....12 28 51

On the beat across Britannia caught Valkyrie and led her out and home, Satanita being disabled and giving up. The times at the finish were:

Britannia.....3 28 48 Valkyrie.....3 30 28

Britannia's rating is 152, Valkyrie's increased since last year, is 153 and Satanita's is 171, increased from 163 last season; she allowing each of the others 2m. 36s. Britannia won by 1m. 49s. corrected time.



The second day's racing, on July 4, fell to the Royal Western Y. C., sent home next day. Lord Dunraven has still three large yachts, L'Esperance, of 70ft. l.w.l., a modern fast cruiser that sails in some of the races every year, the 20-rater Dragon and the new 20-rater of his own design, Audrey, not yet in commission. A later dispatch says that Valkyrie was insured for £8,000, and that Lord Dunraven has ordered a new Watson boat to replace her. The work of raising her began on Tuesday.

In the excitement of the start and with the yachts partly hidden by the rain, nothing was known of the disaster on board of Vigilant or Britannia, but the two kept on their courses. Britannia led over the line, in a good weather berth, and both started on starboard tack across to Cloch Point. The positions were similar to those in several of the Cup races last fall, the American boat starting in a poor berth to leeward and constantly gaining a little until she got clear. In this case Britannia, by clever working of the stick, held the lead over the whole eight miles to Skelmorlie, but just before that mark was reached Vigilant went by.

On the short reach across to Ascog Vigilant gained more; then spinakers were set to port for the run of 10 miles, to Kilcreggan, Vigilant setting her balloon as well. She gained steadily but slowly, and after the short reach across to the starting line she had just two minutes' lead. With clubtopsails aloft and rather less wind, the windward leg to Skelmorlie was sailed for the second time, Vigilant having more than her time at the weather mark, and continuing to gain on the reach across and the run up. Off the Cloch, however, the wind fell and Vigilant was slowed down, Britannia catching the first breeze, when it came in from the West and quickly jibing over. She ran into first place and finally crossed the line with a lead of some 35s., thus winning by about 3m. 35s. corrected time.

The second meeting of the two took place on Saturday, the first of the two days of the Royal Clyde Y. C., over the same course as on Thursday; the principal prize being a Queen's cup. With Britannia and Vigilant was the old cutter Marjorie, owned by Mr. James Coats and sailed by Capt. Robert Duncan, who sailed Madge in this country. Marjorie had an allowance of 18m., but was never dangerous. The day was fair and bright, with a smooth sea and a moderate southerly breeze, clubtopsails being carried over the course, though the wind stiffened on the second round. Capt. Haff steered Vigilant and Capt. Carter, assisted by Capt. O'Neil, of Iverna, sailed Britannia. The start was after the usual fashion, Britannia leading over the line by 1m. 3s., then came a long beat to Skelmorlie, with luffing and weather-bowing all the way, the two being in close company. Vigilant had shipped two tons of lead since the previous race, and was consequently stiffer. On the eight-mile beat Vigilant gained but 8s., on the reach across to Ascog she gained 25s., and on the ten-mile run she lost 10s.; Britannia still having a lead of 1m. 8s. at the end of the first round. Down to Skelmorlie, across to Ascog and up to Kilcreggan the positions were practically unaltered, the differences being measured by seconds; but on the last short leg Vigilant ran ahead and finished with a lead of 1m., being beaten by 2m. corrected time.

Monday, the second day of the Royal Clyde Y. C., was cloudy, with a light southerly wind in the morning, making the first leg again to

COURSES OF THE ROYAL CLYDE Y. C.

Starting off the club house, Hunter's Quay. The broken line represents the course sailed by the largest class. Dacotah's class sails the course around mark off Ardgowan House and Kilcreggan mark, two rounds, 24 miles.

the course, of 48 miles, naut., being from Wemyss Bay, above Skelmorlie, down to Largs, thence across to the Mount Stuart markboat and home, three rounds. A south wind made a beat to the Largs mark, a reach across, and a free reach home. Satanita was under way during the day, but did not start, leaving but Valkyrie and Britannia. Valkyrie got the start, and held the weather berth through the first round, but Britannia, carrying sail better in the puffs from the high shores of the Clyde, passed her on the first leg of the second round, and thence on increased her gain, finally winning by 7m. 23s.

The annual regatta of the Mudhook Y. C. took place on July 5, and for this Vigilant was entered, there being a general desire to see her sailing with the others. The principal prize was the Muir memorial cup, and the conditions called for amateur helmsmen, so Mr. Herreshoff had the wheel on Vigilant, Lord Dunraven steering Valkyrie, with Mr. Watson, Mr. W. G. Jameson steered Britannia, and Mr. A. D. Clarke, her owner, steered Satanita. Captain Haff, Tommy Diaper, and the pilot, Morris, of Largs, an old and skillful skipper, were on board of Vigilant, making a total of 49 men, Valkyrie carried 46, Britannia 47, and Satanita 50 men all told. The wind was strong from S.S.W., up the Clyde, with rain at the start and during the race. The course was from off Hunter's Quay, 8 miles down the river to the Skelmorlie mark, then across a couple of miles to the Ascog mark, then up the river for 10 miles to a mark off Kilcreggan, and a short leg across to the starting line, two rounds, making 50 miles naut.

The attendant fleet was very large, and the shores were crowded with people, no vessels, however, were allowed to follow the racing yachts, there being ten classes in all, sailing various courses. The starting line, off Hunter's Quay, the station of the Royal Clyde Y. C., was very much crowded by boats and yachts, among them being Atalanta. Vigilant was rated at 175, thus giving three minutes to Valkyrie and Britannia, though she had not been officially measured. With a strong breeze and working topsails over whole mainsails, the yachts worked very fast as they waited about the line for the gun, the first leg being dead to windward. On the weather end of the line, inshore, was Valkyrie, on starboard tack, while Vigilant was near the lee end, with Britannia just to weather of her, they being also on the starboard tack. Satanita came for the line with a rush on port tack, and being ahead of the gun had to reach along to avoid crossing too soon.

As she approached Valkyrie a small boat lay in her path and in the effort to clear it she ran into Valkyrie on the port side near the runner, cutting far into the hull. Topmasts and gear fell on both yachts, and it was soon evident that Valkyrie must sink at once. On board with Lord Dunraven were Lord and Lady Lennox, and they were taken off in a small boat. Lord Dunraven and Captain Cranfield stayed by the yacht to the last. As she sank, stern first, her decks burst. All of the crew, as well as Lord Dunraven's brother-in-law, Mr. Langrishe, were taken from the yacht or picked up from the water, but one sailor, William Brown, of last year's crew in the Cup races, was badly crushed between Valkyrie and the steam yacht Vanduara. He was taken ashore and cared for but died next day. Satanita was stove in forward and so badly damaged that she will not be in the racing for some time.

It is stated that Valkyrie is insured at Lloyds for £12,000, in which case her owners will lose nothing, but the whole season is gone, and the work of altering and refitting the yacht has been thrown away. The steam yacht Vanduara went to the aid of the yachts and was struck by Valkyrie before she lost headway, sustaining some damage. She rescued a number and others were taken off by the Hebe. Capt. Cranfield and his men lost everything but their clothes; they were

windward, the yachts starting with clubtopsails aloft, Vigilant had bent another mainsail, one used last year. This time she came for the line ahead of Britannia and in the weather berth, both on port tack. At the last moment she swung to starboard tack, Britannia following, but under Vigilant's lee bow. Vigilant crossed at 10:30:20 and Britannia at 10:30:25. Vigilant carried a jibtopsail, but soon stowed it.

The first leg carried them in under the Cloch Light, Britannia sticking very close, but after tacking, the wind fell very light, and both worked short boards in shore, the work being slow, but rather to Vigilant's advantage.

After working out from under the shore they caught the wind fresher and freer for a little while, and jibtopsails were set as they headed for the Skelmorlie mark. The wind dropped and also headed them as they neared the mark, and a short leg was needed to weather it. The times at Skelmorlie were:

Vigilant.....12 14 18 Britannia.....12 15 24

Both headed high on the reach to clear the Ascog mark, the wind still being very light, but Capt. Carter took Britannia to the south on the chances of meeting the breeze and made a decided gain, Vigilant losing the wind meanwhile, the times at Ascog being:

Britannia.....1 13 31 Vigilant.....1 17 11

The wind, such as it was, came from S.W., and spinaker booms were dropped to port, ready to set the sails when the Toward Light was cleared. They drifted slowly on, Britannia gaining. At 2:22 she jibed, and both set spinakers to starboard. About 3:15, when nearing Kilcreggan, Britannia lost the wind entirely, and Vigilant passed her, but a little later Vigilant was hung up, much as in the first race with Valkyrie, and Britannia passed her and turned the Kilcreggan mark. Vigilant was becalmed on one side of the mark, but Britannia was no better off on the other, as the times show a greater difference than really existed:

Britannia.....4 29 15 Vigilant.....4 45 10

The custom in British racing is to give the regatta committee the power to end the race at the end of any round when the weather conditions make it impossible to sail the whole course. With a race set for nearly every day in the week, no postponement or re-sail is possible. In this case, with both yachts entered for the Clyde Corinthian Y. C. regatta on the morrow, the committee called the race at the end of the first round, the times being:

Britannia.....5 34 05 Vigilant.....5 43 40

Britannia wins by 9m. 35s. elapsed, and Vigilant's allowance makes this 11m. 5s. corrected.

Both yachts will sail in the Royal Munster Y. C. regatta of July 23, and the Royal Cork of July 24-25.

In Monday's race Dacotah and Sala were in collision, both losing their bowsprits and Dacotah withdrawing.

The race of the Clyde Corinthians on Tuesday was a repetition of Monday in the matter of weather. Vigilant bent another mainsail over night, and she and Britannia were ready in season, but at 10:30 the wind was very light from the south, with the promise of a clear, hot day. Both were late at the line, being timed:

Britannia.....10 33 00 Vigilant.....10 36 00

Crossing on port tack, with light sails set, they headed, as usual for the Cloch Light, working short tacks, together, Britannia was successful in keeping the lead, Capt. Carter managing to weather-bow Vigilant all the way to Nemyss Bay. Standing across on a long board to Inellan, Britannia opened out a lead, and at Skelmorlie they were timed:

Britannia.....11 59 01 Vigilant.....12 01 44

Both held to the southward in reaching across to Ascog, but to-day no flukes rewarded them. The times at Ascog were:

Britannia.....12 31 13 Vigilant.....12'35 19

They rounded the mark with spinaker booms to port, and spinakers were set for the 10-mile run to Kilcreggan. When above Toward Point, Vigilant ran ahead; but as the wind fell a little later, Britannia again passed her. After a slow run they were timed at Kilcreggan:

Britannia.....2 13 18 Vigilant.....2 13 45

The wind had stiffened and the short reach to the line was made in better time, Britannia still gaining:

Britannia.....2 30 44 Vigilant.....2 31 40

The windward leg was a repetition of the first round, the times at Skelmorlie being:

Britannia.....3 50 56 Vigilant.....3 52 03

At Aseog mark the times were:

Britannia.....4 17 30 Vigilant.....4 20 05

They ran up with spinakers to starboard, being timed off the Cloch:

Britannia.....5 30 58 Vigilant.....5 34 48

As we go to press the times of the finish are not known, but Britannia was again the winner.

### Vigilant's Passage.

THE story of Vigilant's extraordinary passage is well told in the following letter to the New York *Sun* by her mate, Clayton Haff, son of Capt. Haff:

GOUROCK, Scotland, June 20.—The voyage of the American yacht Vigilant from Sandy Hook to Tory Island and from there to Gourock was undoubtedly the most remarkable trip made by a yacht across the Atlantic Ocean in many a day. Her time, 14 days and 7 hours, has been seldom equalled, and was much quicker than her most enthusiastic admirers hoped she would make. Although the weather was not sufficiently rough at any time to put her qualities as a sea boat to a severe test, still it was enough to prove to the entire satisfaction of all on board that she could, if properly handled, weather any gale.

It is true that Vigilant was favored by wind and weather from start to finish, there being but two days that she was close hauled, and only two tacks were made in sailing the 3,000 miles. The steamer or straight course from Sandy Hook to Tory Island is 2,905 miles. The distance sailed by Vigilant was 2,932 miles, or 28 miles more than a straight line from land to land. The prevailing winds on the passage were southerly, varying to southwest and west. It was expected that the southwest winds would give out after the Banks were passed and northerly winds encountered, but this did not prove to be the case, as there were on an average stronger southerly winds to the eastward of the Grand Banks than to the westward. The average daily runs of Vigilant will show that the winds, though fair, were not heavy. Vigilant left Sandy Hook at midnight on May 31, and made 88 miles up to noon of June 1. From that time up to the end of her voyage the daily runs were:

| Day. | Miles. | Day. | Miles. |
|---|---|---|---|
| First | 222 | Eighth | 211 |
| Second | 133 | Ninth | 133 |
| Third | 177 | Tenth | 256 |
| Fourth | 247 | Eleventh | 188 |
| Fifth | 212 | Twelfth | 197 |
| Sixth | 243 | Thirteenth | 150 |
| Seventh | 230 | Fourteenth | 246 |

This shows an average daily run of 204½ miles for each 24 hours.

The weather until the Banks were passed was exceptionally clear, but considerable fog was encountered after the Banks were passed. At noon on Wednesday, June 6, the air became somewhat cool and a large fog bank was seen ahead. Capt Jeffrey said there was ice close by. Soon afterward the yacht ran into a thick fog, and later the lookout on the masthead sighted an iceberg a point on the port bow. The yacht at that time was steering east by south and running at a 9-knot pace before a fair south wind. Notwithstanding the fair rate of speed, the berg was not abeam until 2:30 o'clock in the afternoon. It was then in longitude 49° 32′ west, latitude 42° 7′ north. As soon as the berg was sighted the course was changed. It was truly a beautiful sight. The ice was fully 200ft. high, towering above the lofty mast of Vigilant. There were probably two bergs connected under water.

The next event of any particular interest was the carrying away of the topmast, which happened just before noon on Friday, June 8. The yacht was bowling along at an 11-knot gait with all plain sail and big jibtopsail set, when the ringbolt, to which the preventer backstay was belayed, pulled out of the deck and the topmast went over the bow. The wreck was speedily cleared away and all hands set about rigging of a jury topmast. The only spar available was the spinaker boom; but that was not large enough to form a heel on or cut a fid hole in, so the heel of the old topmast was trimmed up and a piece of the spinaker boom was spliced into it. In four hours from the time of the accident the jury topmast was on end and sail hoisted on it.

Probably the most remarkable feature of the trip was the fact that the mainsail was never reefed and only taken in once, and then for the purpose of putting a new shackle in the peak halyard block. The topsail was clewed down only twice, but not because the yacht could not carry it. There was not a day that we could not stay on deck dry-footed in slippers.

Every one on board was extremely glad to know when on the afternoon of July 15 Tory Island was passed, that the trip though a short one was over. The wind from Tory Island down the Clyde and then up to Gourock was very light, and it was not until 4 o'clock on the next day that Gourock was reached. Before we got to that port, however, several yachts came out to meet the American champion. Among them was the steam yacht Mohican and Mr. Henderson's schooner Selene.

A right royal reception was tendered to Vigilant when Gourock Harbor was reached. All who wished were allowed to go on board and inspect the yacht between the hours of 4 o'clock in the afternoon and 10 o'clock at night. Fully 500 persons were shown over the yacht. The centerboard was the greatest curiosity to the Scotchmen. The great beam also was a surprise to the Clyde yachtsmen. There were not a few admirers of the yacht who expressed their wish that the American would beat their own yachts.

Taking the entire voyage into consideration, it was the most enjoyable trip that any one could wish for. I have been going to sea for a number of years and sailed on many yachts, yet I must say Vigilant is the best sea boat I ever put my foot on. Take her in a cross sea and she climbs on top of the water like a big can buoy, with not a drop of water coming on board. Vigilant's bulwarks are only eight inches high, yet she sailed across the ocean without having a single hatch battened down.

Among the amusements on the trip was the race between the two watches. Before the yacht left Sandy Hook Capt. Jeffrey offered $25 to the watch making the biggest four-hour run, and $25 to the watch making the most miles on the whole trip. Of course this led to a great deal of "cracking on" sail, and had something to do with the short time occupied in crossing.

About eight days out, the starboard watch, under my command, took the lead by making 47½ miles. A few days afterward this was beaten by the port watch, under Second Mate Leonard Miller, by a run of 49¾ miles. This was not beaten during the remainder of the voyage. The starboard watch, however, secured the prize for making the most miles in the run from land to land, beating the port watch, according to the log. 57 miles.

Perhaps the most laughable incident on the voyage was the effort on the part of the sailors to hoodwink the Custom House officials by hiding away their tobacco. Heads were taken out of water breakers, tobacco tacked about the inside, and the heads replaced. Some unscrewed the deck plate and stowed the pump box full of tobacco plugs: but the most audacious act of all was upon the part of the sailor who ripped open the cork fenders, stowed them full of tobacco, and, when the revenue officials came alongside, dropped the fenders over the yacht to protect her side.

H. CLAYTON HAFF,
First Mate of the Vigilant.

### Hull Y. C. Club Race.

HULL—BOSTON HARBOR.

*Saturday, June 30.*

THE club race of the Hull Y. C. on June 30 was sailed in a fresh S.W. breeze, the times being:

| | Elapsed. | Corrected. |
|---|---|---|
| THIRD CLASS. | | |
| Beatrice, John Cavanagh | 1 40 48 | 1 15 59 |
| Moondyne, A. J. Shaw | 1 48 22 | Not meas. |
| FOURTH CLASS. | | |
| Vanessa, A. Bigelow, Jr. | 1 32 25 | 1 09 23 |
| Eulalie, R. G. Hunt | 1 36 40 | 1 14 32 |
| FIFTH CLASS. | | |
| Magpie, H. G. Otis | 1 35 20 | 1 10 41 |
| Opechee, W. P. Parker | 1 38 12 | 1 13 41 |
| Hagedorn, C. V. Souther | 1 38 54 | Not meas. |
| Aurisy, H. M. Faxon | 1 45 06 | 1 18 38 |
| SIXTH CLASS. | | |
| Primrose, H. M. Faxon | 1 43 49 | 1 18 47 |
| KNOCKABOUTS. | | |
| Club Boat, H. Y. C. | 1 35 19 | 1 14 19 |
| Becky Sharp, Waldo Friend | 1 39 39 | 1 16 35 |
| Nike, T. E. Jacobs | 1 40 00 | 1 10 00 |
| Santa Maria, J. J. Souther | 1 41 20 | 1 20 20 |

The judges were E. C. North, G. K. Tinker, E. K. Friend and W. A Cary.

## Rescue From Drowning.

*From the Western Morning News, Plymouth, Eng.*

MR. J. WARD, retired boatswain R. N., of Morristown, who has been instrumental in saving many lives from drowning, has drawn up a series of practical rules to be observed by persons attempting to rescue. They have been approved by the Royal Humane Society, and issued by the Lords Commissioners of the Admiralty to all training ships for boys. We print them with a view to their being cut out and hung up in all shipping offices, police stations and other convenient spots adjacent to sea or river for the guidance of those who are willing to imitate Mr. Ward's example, and attempt to rescue their drowning fellow creatures:

Practical points to be taken by a diver previous to making a dive for a man.

1. Inhale all the air you possibly can previous to making a dive.

2. Make your dive as perpendicular as possible if in deep water; by so doing you will prevent the shock from chest and body.

3. After your plunge, ease the air from the body as easily as possible.

4. When the diver sights his man he should be very careful not to attempt to seize above him, for, if he did so and the man had life in him, he would be likely to seize the diver, and there would be no chance of your freeing yourself, and you would be acting as a tendency to drive the man downwards, and thus be the means of your both being drowned. In order to avoid this, you must dive directly underneath his body, and prepare to relieve or arrest his downward progress, as the least touch from your hands will be the means of stopping the downward progress, and the body will immediately commence to rise. As soon as you discover this, tread water and push your man to the surface with all your might.

5. When you get to the surface, seize your man by the back hair with one hand or where that is impossible, place one hand under the armpit, and keep him off at arm's length, with his head above water, until help reaches you.

Practical points to be used by a swimmer while swimming in a heavy sea:

1. Make your plunge in the hollow between the crests of two seas.

2. Be very careful not to attempt to surmount a heavy sea; should you do so and the crest parted asunder, you lay yourself open to be disabled thereby.

3. To avoid this, you must, when rising on the incline, and just before you reach the top of the wave, drop your head under the surface of the water and the sea will roll harmlessly over you.

4. The swimmer, by so doing, will come out quite fresh in the hollow of the next sea.

5 When within hail of your man, hail him and cheer him up, telling him that there is help near.

6. Do not attempt to meddle with your man in front, but keep him at bay and wait your chance to pin him by the back hair; keep him off at arm's length with one hand and swim with the other, and encourage him to help you.

7. Should there be no boat to your rescue and should the life buoy be passing your track, and you are desirous of gaining it, tell your man what you intend doing, so that you may get all the help you can from him.

8. Turn over on the flat of your back, causing the man to do the same; take him in your arms with the back of his head resting on the upper part of your chest, and continue to swim on your back until you gain the life buoy.

9. Having gained the life buoy, be very careful not to allow your man to straddle the buoy, for should the life buoy cant, there is a likelihood of you losing your man. Secure him to the cross bar on the upright pole and quietly wait for rescue.

There is one point, and that an important one, that I omitted to mention, viz.: Should the drowning man grip his rescuer and he finds no chance of shaking him off, he should allow himself to sink beneath the surface of the water, for as soon as the drowning man finds himself going down, he will immediately let go his hold. When you find yourself clear take a fresh hold of your man in the manner described in point 6.

## Open Courses.

IT is not so many years since that the FOREST AND STREAM went contrary to public opinion and to the New York Y. C., in opposing the inside course of the club as entirely unfit for international races; nor was it until the two facts were clearly proven, that the inside course was too shoal, not for the British cutter drawing 13ft., but for the modern American centerboarder drawing 22ft.; and that the superiority of the latter lay in windward work instead of reaching; that the course was finally abandoned for a fairer one on the open sea. In view of all that has been said in the past in favor of the inside course, the following remarks, from interviews in the *Herald*, are very interesting. The three gentlemen mentioned have been prominent for years as apologists for the inside course of the New York Y. C. The Clyde courses, though necessitating many turns, have deep water in plenty, and are superior to the narrow and twisting course through the Narrows and around the South West Spit, with narrow channels, short cuts for the old type of centerboard, and very light airs. In discussing Vigilant's defeat in her first race, these gentlemen speak as follows, according to the *Herald:*

Ex-Commodore Gerry was among those who were not suprised.

"Five minutes before you came in," said he, to me, "I did not know the result, and I predicted that the Vigilant would be beaten. It is my belief that in any race other than one out in the open, where the course is known as a local one, the odds are against the American vessel, for the reason that success in the race depends almost invariably upon the knowledge of the local tides, the local currents and the local variations of wind incidental to headlands. Wait till the Vigilant sails over an outside course."

"The Vigilant could not have been well sailed," said Vice-Commodore Brown. "Wait till Capt. Haff has the hang of her, and she meets the English yachts in the open."

"It was a crooked course, most unfavorable to the Vigilant," said Frank T. Robinson. "The course was full of crooks and turns, and there were lots of chances for flukes. The Vigilant was fully fifteen seconds slower in stays than the Valkyrie. She must have lost much over such a course as that sailed to-day. But just wait till she gets out in the open, then she will make up all that she may lose while in stays."

## St. Lawrence Y. C. Challenge Cup.

MONTREAL—LAKE ST. LOUIS.

*Monday, July 2.*

THE St. Lawrence Y. C. sailed a good race on July 2 for the annual challenge cup presented by Sir Donald A. Smith, in addition to which the 18ft. class had a race. The starters were: Class A, Molly Bawn, Walter Kavanagh; Xania, G. H. Duggan; Chaperon, E. S. Clouston; Coquette, Arthur Hamilton; Good Luck, Mr. Lockerby; Undine, G. R. Marler; Unda, T. C Kidd. 18ft. class: Bug, G. H. Duggan and F. W. Sherwood; Pirate, C. H. Routh and H. Routh; Tombola, W. A. C. Hamilton and F. W. Molson; Jubilent, J. C. C. Almon. The race was sailed in a fresh east wind. Xania is a new boat, designed by Mr. G. H. Duggan and built under his immediate superintendence. She is similar to the design recently published in the FOREST AND STREAM. The times were:

Class A.

Jubilant is a new fin-keel. Tombola broke her boom on the last leg.

## YACHT NEWS NOTES.

We are indebted to Secretary Cary, of the Hull Y. C., for a copy of the neat year book of this prosperous club. The club uses the Seawanhaka rule, with a waterline classification.

The Beverly Y. C. race, set for July 7, at Marblehead has been postponed to July 27, the day before the Corinthian Y. C. race.

On July 1, about noon, the steam yacht Aztec, owned by F. C. Dininny and commanded by Capt. Fred Seaman, was passing through Hell Gate, bound for the Sound, with her owner and two guests aboard. The Starin excursion steamer Sam Sloan attempted to pass inside the yacht when abreast of Hallett's Point; having come up astern, but the strong current swung the steamer's bow out, and she struck the yacht, cutting off about 10ft. of the after end. The yacht was turned by the force of the blow, and headed for the shore, being thrown on the rocks near the light house. Very fortunately all hands were forward; Mr. Dininny and his guests being seated forward of the pilot house, thus escaping injury. They were assisted to land, and the crew then set to work to run hawsers from the wreck to the shore, to prevent it from reaching off and sinking. Everything moveable was carried ashore, but the hull in addition to the damage done by the Sloan, was badly injured by the swells. On July 5 the Chapman derrick lifted the wreck and placed it on a drydock. The blame is attributed solely to the captain of the steamer.

The latest addition to the 21ft. class of the Royal Canadian Y. C. is a fin-keel designed by W. P Stephens for W.G.MacKendrick, an old canoe sailor making his debut as a yachtsman. The new boat, which Mr. MacKendrick has named Koko, is similar to Scarecrow, but larger, 29ft. over all, 19ft. 6in. l.w.l., 6ft. 6in. beam, 11in. draft of hull. 5ft. draft with fin, the fin and bulb weighing about 900lbs. The sail area, to make 21ft. sailing length, is 500sq. ft., a jib and a leg o' mutton mainsail similar to Scarecrow. The boat sailed her first race on June 30, her owner steering, and won easily, the times being:

| | Corrected. |
|---|---|
| Koko, W. G. McKendrick | 1 38 00 |
| Thistledown, A. E. Jarvis | 1 46 19 |
| Edna, G. P. Reid | 1 49 54 |
| Wanita, H. Cartwright | .. .. |
| Kathleen. H. D. Ellis | 2 03 28 |
| Gwendoline, G. Robertson | 1 46 49 |

On July 7 the house-boat Caiman, anchored at Gravesend Bay, settled on her own anchor at low tide and stove a hole in her bottom, sinking as the tide rose. The Chapman derrick raised her and discovered the anchor still in her bottom. She was taken to Starin's shipyard for repairs, the only damage being to the furnishings.

## MODEL YACHTING.

### American Model Y. C.

*Prospect Park, July 4.*

THE regular regatta of the above club was sailed in a fresh S.W. wind, the only drawback being the small entry, only two schooners showing up in the schooner class, May and Dora S. The new yacht Magic and Valkire in first class, second class being void. Vesta and Dolphin in the third class, also Ida May, this latter class making the most exciting race of the day. Below is summary in minutes and seconds:

SCHOONERS—FIRST HEAT.

| | Elapsed. | Corrected. |
|---|---|---|
| May, H. Fisher | 15 05 | 16 55 |
| Dora S., J. Smith | Disqualified. | |

SECOND HEAT.

| | | |
|---|---|---|
| May | 15 34 | 15 34 |
| Dora S. | 19 25 | 19 09½ |

FIRST CLASS—FIRST HEAT.

| | | |
|---|---|---|
| Magic, F. C Pinkham | 19 08 | 19 08 |
| Valkire, F. Henges | Not timed. | |

SECOND HEAT.

Valkire concedes this heat to Magic.

THIRD CLASS—FIRST HEAT.

| | | |
|---|---|---|
| Vesta, J. D. Casey | 18 12 | 18 12 |
| Dolphin, J. Smith | 20 08 | 20 35½ |
| Ida May | Not timed. | |

SECOND HEAT.

| | | |
|---|---|---|
| Vesta | 19 18 | 19 28 |
| Dolphin | 18 40 | 18 37½ |

THIRD HEAT.

| | | |
|---|---|---|
| Vesta | 18 27 | 18 27 |
| Dolphin | 20 03 | 20 00½ |

Winner in schooner class, May; first class. Magic; third class, Vesta. Regatta committee, Messrs. Davis and Nichols.

### Midget Y. C.

Race July 7, on Red's Pond: course, length of pond and back; a beat to windward and run back to starting point; weather clear; wind westerly; start at 2:30:

CLASS 1.

| | Length. |
|---|---|
| T. O. T. E, John Giles | 2.08⅞ |
| May, Robert Hampson | 2.08⅞ |
| Fairy, H. Brown | 2.07 |
| Ami, B. Vickery | 2.07½ |
| Hattie, Robert Williams | ..... |
| —— Frank Arthius | 2.08⅞ |
| —— W. Trasher | 2.08⅛ |
| Spindrift, A. Barr | 2.08⅞ |
| —— C. Bowden | 2.09 |
| —— Wm. Gilley | ..... |

CLASS 2.

| | Length. |
|---|---|
| Midget, E Dixey | 2.08 |
| Pappose, J. Goodwin | 2.08⅞ |
| Cucumber, F. Smethurst | 2.08¼ |
| Una, E. Ferguson | 2.08⅛ |
| Corn-cob, H. Nutting | 2.07⅞ |
| Porpoise, A. Whitmore | 2.08¾ |
| Venus, F. Lewis | 2.08½ |
| Squall, W. Brown | ..... |
| —— T. T. Paine | 2.09 |

Winner first leg, W. Gilley and Porpoise; winner second, T. O. T. E. and Corn-cob; winner third, T. O. T. E. and Midget.

# Canoeing.

## FIXTURES.

JULY.

7 21. W. C. A. Meet, Picnic Point, Lake Mendota, Wis.

13-28. A. C. A. Meet, Croton Point.

AUGUST.

4-11. Owanux Meet, Woodmont, Ct

SEPTEMBER.

3. Holyoke, Ann., Holyoke, Mass.
3-5. Passaic River Meet.
5. Ianthe, An., Passaic River.
15. Red Dragon, Fall Regatta, Delaware River.

## Canoeing Song.

*(Dedicated to the A. C. A.)*

The south wind blows, and gayly throws
The waves about in glee;
While wing and wing, with dip and swing,
Comes old canoe with me.
The sea is rough, but just enough
To dare us for a skim;
And here are we, right merrily,
All sails set neat and trim.

CHORUS.

Ahoy! Ahoy! You lubber boy,
Clear out or down you go;
Canoe and I o'er water fly,
So blow ye south winds, blow!

O, see her dip, my saucy ship!
And see her rise again;
No stancher boat was e'er afloat,
Or ever crossed the main.
The camp is near, I hear them cheer,
Blow strong, ye south winds, blow;
While wing and wing, we plough and swing,
And shoreward fast we go.

CHORUS.

Ahoy! Ahoy! You lubber boy,
Clear out or down you go;
Canoe and I o'er water fly,
So blow ye south winds, blow!

CAMBRIDGE, Mass. JOE CONE.

## THE A. C. A. MEET.

THE fifteenth annual meet of the American Canoe Association, and the second held within the territory of the Atlantic Division, will open on Friday of the present week, at Croton Point, near Sing Sing, on the Hudson River. The arrangements for the camp, transportation, etc., have been carefully made, and the outlook for a pleasant meet is most promising. The arrangements are given in detail in the camp programme of the races and details of transportation will be useful to all who intend to visit the camp.

### A. C. A. Regatta Programme.—1894.

Event No. 1.—Record race. Paddling and sailing combined. ½ miles alternately, total 3 miles. Time limit 1½ hours. Sails to be known as lowering sails.

Event No. 2.—Record race. Paddling. ½ mile straightaway. Same canoe to be used as in event No. 1.

Event No. 3.—Record race. Sailing. 4½ miles. Time limit 2 hours. Same canoe and sails, seat, etc., to be used as in event No. 1.

Note. For record races see Rule 5, sailing regulations.

Event No. 4.—Trophy Paddling 1 mile straightaway.

Event No. 5.—Paddling. Open canoes, not under 50lbs. weight. ½ mile straightaway. Single blades

Event No. 6.—Unlimited sailing. 6 miles. Time limit 2½ hours. Starters in the trophy sailing race to be selected from this race. See rule 5, racing regulations.

Event No. 7.—Trophy sailing. Time limit 3½ hours. Starters to be selected as per Rule 5, racing regulations.

Event No. 8.—Dolphin sailing trophy. 7½ miles, time limit 3 hours. The canoe winning first place in event No. 7 will not be allowed to compete in this event.

Note.—This race will not be called until event No. 7 has been sailed.

Event No. 9.—Novice sailing. 3 miles. Time limit 1½ hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1893.

Event No. 10.—Club sailing. 4½ miles. Time limit, 2 hours. First three members of any one club to count. No club can be represented unless it enters at least three men. All men entered must have become members of the club they represent before the first day of the 1894 A. C. A. meet.

Event No. 11.—Passenger cruising sailing. 3 miles. Time limit 1½ hours. Canoes to enter this event must come within the regular classification to have a well 16in wide for a length of 3ft. 6in., with a sleeping space of 6ft., of which at least 5ft. shall be clear. Lowering sails must be used. No limit on seats. Canoes must carry a passenger weighing at least 110lbs.

Event No. 12.—Outclassed sailing. 3 miles. Time limit 1½ hours.

Note.—It is the intention to give this race for the outclassed canoes, without bath tub wells, etc. Conditions will be posted when the committee see what class and number of boats there will be to enter this race.

Event No. 13.—Unclassified sailing. 4½ miles. Time limit 2 hours. Conditions to be posted.

Event No. 14.—Tandem paddling. ½ mile straightaway. Decked sailing canoes, double blades, open canoes, single blades.

Event No. 15.—Club four paddling. ½ mile straightaway. Not limited to a 16ft.×30in. canoe.

Event No. 16.—Sailing upset and maneuvering. At signal throw paddle over astern and recover; second signal canoe to be heeled over until top of mast touches the water. Canoes to be righted and cross finish line under sail.

Event No. 17.—Paddling upset. Usual conditions. No special appliances.

Event No. 18.—Hurry-scurry. Run, swim and paddle. Short distance.

Event No. 19.—Gymnastics.

Event No. 20.—War canoe. 1 mile. Conditions to be posted.

Note.—This race will be made a special feature if the committee receive enough entries.

Sing Sing is the railroad and steamboat terminal for the camp. It is on the New York Central and Hudson River R R. 30 miles from New York city. All baggage can be sent to Sing Sing care of steamer Lewis D. Black, which will transfer same to camp.

The propeller Lewis D. Black runs from Sing Sing to camp at 9 A. M., 12 M (noon) and 4 and 6 P.M. Camp also can be reached by rowboat from Sing Sing in case of necessity. A large proportion of the New York Central and Hudson River trains stop at Sing Sing, and the wharf from which the steamer leaves for camp is at the foot of Main street, about two minutes' walk from the railroad. There is also a steamer leaving foot of Franklin street, New York, at 3 P.M. each day, which connects with the 6 P. M. steamer to camp, giving a pleasant sail up the Hudson.

For all members coming to Sing Sing (via N. Y. C. & H. R R.R.) or to Haverstraw (via West Shore R.R.) from points north or west on these roads, and from points on the R. W. & O. R R., special excursion tickets will be on sale from July 11 to 20, good returning until July 31 at the rate of a fare and one-third, upon presentation of A. C. A. membership certificate to selling agent.

All members coming from other points in Trunk Line Association territory, via New York city, will pay full fare from point of starting to New York city, obtaining from selling agent a trunk line certificate, which being vised by the duly authorized official of the Association, and by the agent of the Trunk Line Association at the meet, will entitle the member to a rate of one-third fare from New York city to the point of starting.

The excursion rate from New York to Sing Sing (via N. Y. C. & H. R R.) will be $1. Thirty trains daily each way.

Members coming to New York from points in New England, via Sound steamers, may reach Sing Sing by steamer Sarah A. Jenks leaving foot of Franklin street daily, except Sunday, at 3 P. M., fare 25 cents. Canoes and duffle may easily be shipped by the same route.

The steamer Lewis D. Black will leave Sing Sing (close to railroad station and New York boat landing) at 9 A. M., 12 noon and 4 P. M., except Sunday. Returning leave Haverstraw at 10 A. M. and 5 P. M., except Sunday. Trip to camp about half an hour each way. Fare 15 cents. If wanted, the Black will also leave Sing Sing about 6 P. M. on arrival of New York boat.

Cars loaded with canoes and duffle can be side-tracked at Sing Sing on the bulkhead opposite railroad station, thus reducing the labor of unloading and handling to a minimum.

The post office address will be, American Canoe Association Camp, Croton Point, Sing Sing, N. Y.

Com. Dorland wishes to thank the following individuals and clubs for contributions of prize flags or its equivalent: Mrs. W. C. Lawrence, Trenton, N. J., Knickerbocker Canoe Club and W. J. Stewart.

The steamer between Sing Sing and camp will commence her trips on Thursday, July 12, with the 6 o'clock trip, as there is quite an amount of duffle and canoes to be shipped to Sing Sing that day There has been no hitch in any of the arrangements, so that we hope to have everything go along smoothly at the opening of the meet.

Vice-Com. Schuyler pitched the first tent on the ground on Monday morning, Mr. Quick of the regatta committee joining him next day.

## Brace Up the Racing.

*Editor Forest and Stream:*

Now that the recent "what-do-I-get-for-my-dollar" discussion has quieted down from its exalted position of glittering personalities, I believe that some legitimate discussion should be entered into regarding the A. C. A. The meetings to be held at the annual meet should be characterized by some definite action looking toward changes in the rules. The delegates to the general executive committee meeting in November should be treated to an allopathic dose of suggestion before they go to the meeting. I will endeavor to point out a few changes that are necessary or desirable. Most of the A. C. A. men who attend the camps do so to enjoy in a measure the sight of keen racing. As you truthfully stated in last week's issue of your valuable journal, the present conditions and rules have ended in the extinction of the racing fleet, and that for which many attend the meets obtains not.

Other organizations besides the A. C. A. have suffered the same result from practically the same causes. Now, what have they done, and what success have they attained? Horse trotting, yachting, bicycling and rowing are all sports where the racing element is most prominent, and in each the racing men, animals or boats are divided into classes. Why not canoeing?

I should suggest that there be three classes and a novice race, say junior, intermediate and senior classes. The novice race as at present could be made a part of the junior class race. The winner in each class race moves into the class above, and the senior class will never be too large, as from it the men naturally graduate from racing. A man from the junior class may enter an intermediate class race, and if he wins he at once becomes a senior; but a man from a higher class cannot enter the races of a lower class. There certainly is no encouragement for a comparative novice to start in a race against the older expert racers. But on the contrary if he could be certain of meeting men more nearly his equal, I believe that he and others would enter and sail, and the races would be well filled and more interesting to both contestant and spectator.

At the start the races of the past two or three years may be taken as a basis for classification. The winners in those races constituting the senior class, the second prize men going to the intermediate, and all others the junior class. The second-place men going to the intermediate in the first classification would probably be a bit unjust, but the matter would in a couple of years regulate itself properly.

When such a system shall have been perfected, we will see again upon the water such fleets as '89 and '90 showed. The above scheme, coupled with a rule placing a moderate tax on sail area, would, I believe, make a perfect racing system, and even though a man did not carry a tremendous rig he would still have a chance at prize winning. Let us hear from some of the racing men as well as from those having only the best interests of the Association at heart. ILEX.

## Detroit Boat Club.

LAST week was a gala week for the Detroit Boat Club, the new house being open and ready for use. A reception took place on June 28 and another on June 30, a very large number being present on each occasion. The destruction of the house by fire last year has, through the energy of some of the club members, and notably of the president, Mr. Wm. C. Jupp, been turned into good instead of bad fortune, and the club has now the finest and best appointed house in the country.

## A. C. A. Membership.

ATLANTIC DIVISION: C. T. Middlebrook, Jr., Arthur E. Fish, Stanton Curry, New York; J. F. Eastmond, Brooklyn, N. Y.

## Royal Canoe Club Cup.

*From the Field.*

ON Tuesday morning, June 20, the postponed canoe yawl race was sailed off, and in the afternoon the race for the sailing challenge cup, always an event of interest. On this occasion the entry of a competitor from the New York C. C. bade fair to give the race an international character, and there was a good muster of spectators on the river bank in anticipation of an exciting contest. The Northern C. C. also sent a representative in the person of Mr. G. U. Laws, who raced in a new canoe of sharpie model. The only other canoe built for the race was Dragon, belonging to Mr. B. de Q. Quincey, but as neither Mr. Laws nor Mr. Quincey had their boats delivered before the 18th inst., they were necessarily at a great disadvantage

The wind in the early morning had been light and variable, but by noon it had come right down the reach, thus giving half the course dead to windward and the other half a dead run to the lower buoy. Half an hour before the start the executive were surprised to receive a note from Mr. Howard withdrawing his challenge on behalf of the New York C. C., on the ground that the course was suitable for an international contest. This unexpected and somewhat extraordinary action on the part of the American visitor was disappointing, but the spectators were rewarded by seeing a very pretty race between the three leading canoes, Battledore securing a meritorious win, while Stella, last year's winner, finished second. Mr. Baden Powell acted as officer of the day, assisted by Mr. Paul L. Waterlow, who officiated at the upper buoy. The captain, mates, secretary and most of the committee were also in attendance.

The entries were: Curlew, Mr. G. U. Laws, Northern C. C.; Yankee, Mr. W. Willard Howard, New York C. C.; Whizz, Mr. Walter Stewart, R. C. C.; Dragon, Mr. B. de Q. Quincey, R. C. C.; Stella, Mr. G. E. Webster, R. C. C.; Battledore, Mr. R. A. Hinckley, R. C. C. Yankee, as stated above, did not start. Curlew was first over the line with a good lead, Dragon next, while Stella was in the rear. Turning to windward up the reach, Whizz went into first place, with Dragon second, and all speedily passed Curlew, who got lapped in the fourth round by Battledere and Whizz. The breeze freshened very steadily during the race, and Battledore, making up to it, gradually gained on Whizz, passing her in the third round after a grand tussle. The breeze still increasing, Whizz was losing ground to Stella, who took second place in the sixth round; and Dragon, who was doing no good with an ill-sitting sail, here retired. Whizz capsized soon after rounding the lower buoy for the seventh time, leaving Battledore and Stella to fight it out. Battledore still continued to gain, and scored a very popular win after a hard-fought race, void of flukes throughout. Stella sailed it out to the end, and capsized immediately after the finish. The times were:

| | 1st Round. | 2d Round. | 3d Round. | 4th Round. | 5th Round. |
|---|---|---|---|---|---|
| Battledore (winner) | 1 53 15 | 2 23 48 | 2 41 44 | 2 59 25 | 3 18 35 |
| Stella | 1 52 56 | 2 24 33 | 2 43 36 | 3 02 14 | 3 22 35 |
| Whizz | 1 51 21 | 2 22 31 | 2 42 36 | 3 01 50 | 3 21 10 |
| Dragon | 1 52 55 | 2 25 15 | 2 48 24 | 3 08 50 | 3 30 44 |
| Curlew | 1 56 35 | 2 27 28 | 2 52 11 | Gave up. | |

| | 6th Round. | 7th Round. | 8th Round. | 9th Round. | Finish. |
|---|---|---|---|---|---|
| Battledore (winner) | 3 38 26 | 3 57 12 | 4 15 40 | 4 32 09 | 4 48 51 |
| Stella | 3 42 27 | 4 01 46 | 4 20 51 | 4 38 50 | 4 58 57 |
| Whizz | 3 44 11 | 4 04 49 | Capsized. | | |
| Dragon | 3 04 00 | Gave up. | | | |

Next day Mr. Howard started in a race for sailing canoes: Battledore, Mr. R. A. Hinckley; Yankee, Mr. Willard Howard; Dragon, Mr. B. de Q. Quincy; Curlew, Mr. G. U. Laws. Wind S.W., light and variable; start 4:42 P. M. The American canoe for the first time made an excellent start, and for the first few boards sailed well, but before reaching the top buoy, was passed by the wind-eating Battledore. As the race proceeded Dragon and Curlew crept up to the American, who evidently wanted more wind. Battledore eventually won by 4m. off Dragon, the latter being 4m. ahead of Curlew.

| | 1st Round. | 2d Round. | 3d Round. | Finish. |
|---|---|---|---|---|
| Battledore (winner) | 5 02 08 | 5 27 45 | 5 40 20 | 6 20 30 |
| Dragon | 5 03 05 | 5 29 00 | 5 59 50 | 6 24 45 |
| Curlew | 5 04 46 | 5 36 00 | 6 03 30 | 6 28 44 |
| Yankee | 5 03 03 | 5 32 42 | 6 05 00 | Gave up. |

On June 21 was sailed a handicap race for canoe-yawls and canoes; five rounds: Worry, canoe-yawl, Mr. F. G. Todhunter; Snake, canoe yawl, Mr. C. C. Lyman; Vestal, canoe-yawl, Mr. Percy Nisbet; Dragon, canoe, Mr. B. de Q. Quincey; Yankee, canoe, Mr. W. Willard Howard. Wind, light, down stream. Mr. B. de Q. Quincey, officer in charge. Snake and Dragon got away first, followed by Worry and Yankee, while Vestal got a poor start, Stewart, in the Dragon, worked out a slight lead of Worry, and they had a close run down to the lower buoy, Worry being ahead; but Dragon cut and seemed to hold her own going to windward. The wind falling light, Worry went away; Dragon's sail was baggy, and did not sit well. Worry took first prize and Dragon second. By the handicap, Worry allowed Snake 12m. 30s., Dragon 15m., Vestal and Yankee 20m. The times were:

| | 1st Round. | 2d Round. | 3d Round. | 4th Round. | Finish. |
|---|---|---|---|---|---|
| Worry | 11 28 13 | 11 56 10 | 12 24 32 | 12 53 19 | 1 19 3 |
| Dragon | 11 28 15 | 11 58 22 | 12 32 1 | 12 59 23 | 1 36 57 |
| Yankee | 11 46 45 | 12 16 22 | 12 55 22 | 1 35 29 | gave up. |
| Snake | 11 36 28 | 12 10 21 | 12 52 18 | gave up. | |
| Vestal | 11 54 28 | 12 44 46 | 1 38 52 | gave up. | |

Race for sailing canoes; five rounds: Whizz, Mr. W. Stewart; Dragon, Mr. B. deQ. Quincy; Curlew, Mr. G. U. Laws; Yankee, Mr. W. Willard Howard; Battledore, Mr. R. A. Hinckley. Wind light, downstream; Mr. Percy Nisbet, officer in charge. Whizz made a good start to windward of the lot, and was closely followed by Battledore and Dragon, Yankee and Curlew bringing up the rear. Soon after the start Battledore got the lead, and on the run down again increased it. Yankee was going very badly to windward, being very slow in stays as usual. During the second round the wind fell to almost a calm, relieved by occasional slight puffs, Dragon managing to draw ahead of Whizz before rounding the buoy for the second time Curlew was some distance astern, and Yankee a bad last. In the third round Whizz was run down by the steam launch Leonora, and capsized. Battledore kept the lead while Dragon was second, and Curlew third. Yankee only sailed four rounds, and was then a round and 3m. astern of Curlew:

| | 1st Round. | 2d Round. | 3d Round. | 4th Round. | Finish. |
|---|---|---|---|---|---|
| Battledore | 3 57 05 | 4 26 20 | 4 53 30 | 5 18 20 | 5 48 30 |
| Dragon | 4 00 30 | 4 31 15 | 5 06 00 | 5 38 25 | 6 08 05 |
| Curlew | 4 01 00 | 4 35 30 | 5 06 10 | 5 45 27 | 6 11 00 |
| Yankee | 4 11 35 | 4 54 16 | 5 37 42 | 6 14 00 | gave up. |
| Whizz | 3 58 40 | 4 53 00 | run down by steam launch. | | |

The sailing races of the Royal C. C. at Bourne End were brought to a close on Friday, the 22d inst. It was the first "racing week" of the club in its twenty-eight years of existence and will probably not be the last, if we may judge of its chances by the excellent sport obtained. Whether the locality chosen has proved satisfactory to the majority in the club is a question which cannot be definitely answered till next year's spring meeting. Two quite opposite elements will enter largely into the question. The first is, that the canoe entries this season were due almost entirely to the American challenge for the cup race; in the second place, the "open ½-rate race" brought in entries which would not have been admitted had the race been confined to canoe-yawls only, because nearly all the ½-raters have their rudders hung considerable inboard, or have, in other words, a counter.

The blot of the meeting, of course, was the withdrawal of the New York C. C.'s challenge at the last moment by Mr. Howard, the American canoe sailer; but as the canoe Yankee was sailed by Mr. Howard in five races some reliable ideas may be formed as to her performance in light wind and smooth water. It is claimed that she would perform better in a breeze and on open water, but she is far away the lightest and least stable of the canoes in the Bourne End races, and it will be seen from the official times, published above, that she has a rare lot to make up even to come level with the slowest, and when level with the best we should rather place our fancy on the bulb keel Battledore as an open rough water performer.

The times between the leading canoe and the American canoe Yankee in each race, at the end of the round previous to her giving up or ending the contest, were: First race, Yanke 10m 56s. behind Whizz in (estimated) four miles, and then gave up; second race, 2m. 58s. behind Battledore at finish—five-mile course; third race, 10m. 40s. behind Battledore at end of third round (about three miles), and then gave up; fourth race, 36m. 6s behind Dragon at end of fourth round (about four miles sailed, and then gave up; fifth race, 55m. 40s. astern of Battledore at fourth round (about four miles sailed), and then gave up. These time differences may seem peculiar, but they are taken from the official return; and if we take the difference between the next boat to her in the last race, Yankee is actually 28m. 33s. astern of Curlew in four miles.

The wind in most of these races was light or moderate, and though the time taken to do the course was rather long, it should not be forgotten that the wind was down stream, and a beat up against a light wind and adverse current is always slow progress over the ground, but not necessarily slow through the water. And, after all, there is the barefaced fact that all the other canoes were sailing in similar circumstances, but traveled faster.

The *Yachting World* gives the following statement by Mr. Howard: "My racing with the Royal C. C. at Bourne End ended with Thursday's two races. I have sailed five races, and in no race has the speed of the winning boat been more than three miles per hour. In America if we do not make six miles an hour we call it a slow race. In all of these five races the wind was very light, being merely catspaws of air, with long streaks of calm sandwiched in between. Only at the start of one race was there wind enough to bring out the superior speed of my boat, and in ten minutes of short tacking to windward I drew well away from the others and gained steadily until the wind died away. Upon my withdrawal of the New York C. C.'s challenge [for the ?] cup the Royal C. C. promptly withdrew the special cups for three races on open water in August. That left me without any prospect of fair, open racing with this club, so I challenged Mr. Hinckley, winner of the challenge cup, to a sailing match on open water. Mr. Hinckley declined on the ground that I had refused to race for the cup. To this I have replied that as I have sailed five races in water suited to his canoe, it was not inconsistent with the tradition of English fair play that I should ask for at least one race on water suited to my canoe. Having thus failed to get a test of my boat on a fair course, I shall be compelled to issue a general challenge to English canoeists to race on a body of water large enough to lay out a triagular course with half mile sides. Failing in that, I shall go to the British Canoe Association camp in August and go in against the half-raters and other big boats. It is conceded that on a fair course my canoe is the fastest ever seen in England."

## Canvas Boats.

*Editor Forest and Stream:*

In your issue for Sept 9, 1893, my attention is called to the subject of canvas boats by "Kelpie," who expresses a good idea in relation thereto. Too many of the canvas boats put upon the market have a very poor quality of canvas, which is often unsafe after the first season's use. It pays to put on the very best. I have been using canvas boats in my bass fishing and duck shooting for the past twelve years, and have never been upset, thrown out nor swamped. I consider them much safer and far more convenient than any wooden boat. But, as "Kelpie" says, they do not need to be very long or deep, the former makes them unhandy in turning, the latter unmanageable in the wind. I have made and used several and also sold a great many, but by experience I have found about what gives the best service and is easiest managed, both on the water, on a portage or in a stiff breeze.

For the benefit of your angling readers, I will give description of the last one I made. I got a pine board 10ft. long, 16in. wide, ⅜in. thick. I rounded one end from the middle back toward the center 3ft. The other end had the corners rounded off for a short distance, so as to leave the after end of the boat 8in. wide. On the bow I put a triangular block 1ft. long (made up of 2×4 soft pine). On the stern I put a ½in. pine piece, 8in. at bottom and 10 at top, 1ft. long. From the triangular block to the top of the last-named board fasten two pieces for gunwales ½in.×¾in. about 12½ft. long. Bind the two strips with cross pieces 1 and 2ft. from either end; just the right lengths to give the boat a nice shape.

Across the bottom board of the boat nail strips of tough wood $^{3}/_{16}$in. ×1in., bend them and fasten to gunwales so as to give your boat a nice shape and the proper depth, 9in. in center and 12in. at ends. These may be 20 or 24in. apart.

Take strips of the same tough wood $^{3}/_{16}$×1in., long enough to reach from the triangular block in the bow to the stern board, and nail eight of them equi-distant on either side of block, board and ribs. This makes a good, strong and light frame upon which to put the canvas. Procure a piece of heavy canvas, wide enough to cover the boat. Tack it along the gunwales to the bow and stern, with copper or plated tacks—iron soon rots the canvas.

Paint the canvas after being tacked on, first coat, white lead and yellow ochre equal parts, thinned with pure raw linseed oil. Force in all the canvas will hold. Give from four to eight days to dry, then coat again with any color desirable of good lead and oil paint. Two coats are enough—better than more. I have used one painted as above, for nine years; every season I rub it over with raw oil. The boat I have now only weighs 16lbs., is 12ft. long, 9in. deep and about 2ft. wide, has a flat bottom and sits very steady, and is wonderfully handy. Two large men can ride it with perfect safety, and in a wind it will climb the waves much better than a heavy wooden one. On a portage, I can carry it for two or three miles without a rest.

Not more than two should ever be in a boat when fishing for black bass, and I am almost persuaded that one is enough. With one of these boats you can steal gently along, casting here and there in so quiet a manner that success is sure to follow. I could not do without my canvas boat when casting. One of its advantages is that it cost me less than $5.

S. M. HARPER.

# Rifle Range and Gallery.

## Greenville Defeats Excelsior.

AN interesting team match was shot off on the Greenville range on Saturday of last week. The competing teams were Plaisted and Collins, of the Greenville Rifle Club, against Hansen and Boyce, of the Excelsior Rifle Club. It was the second match in a series of best two out of three, the first of which was shot off during the past winter and resulted in a victory for Greenville. The match on Saturday drew together quite a number of the members of the two clubs, many of which brought along their rifles and indulged in informal practice. The weather was clear and cool with a strong southwesterly wind. The conditions of the match called for 50 shots per man, the stakes refreshments and range expenses. The result was another victory for Greenville by a margin of 34 points. Scores:

Marcellus Wauters was official scorer.

## Revolver Shooting in England.

THE South London Rifle Club had their first fine day for revolver shooting on June 26 and good scores were the result. Below are the details of the scores made (Mr. Winan's 41 is the best score made this season at 20yds.).

Stationary target, 20yds.:

| | | | |
|---|---|---|---|
| Walter Winans | 776777—41 | F Rand | 777557—38 |
| Capt Heath | 777577—40 | Dr E Howe | 547676—35 |
| Clementi-Smith | 677577—39 | | |

Disappearing target, 20yds.:

| | |
|---|---|
| Walter Winans | 7 6 7 6 7 7—40 |

50yds. target:

| | | | |
|---|---|---|---|
| Walter Winans | 767677—40 | Clementi-Smith | 645666—33 |
| Capt Heath | 677765—38 | Dr E Howe | 551566—31 |
| F Rand | 777665—38 | | |

At the 50yds. Mr. Winans's score equals his "best on record" made at Bisley last year.

At the North London the leading scores for the revolver championship of the club now stand:

| | 20yds. | | | | | | 50yds. | Total. |
|---|---|---|---|---|---|---|---|---|
| Walter Winans | 41 | 41 | 40 | 40 | 40 | 39 | 30 29 | 300 |
| Skilton | 40 | 39 | 39 | 39 | 38 | 38 | 27 27 | 287 |
| Rand | 40 | 38 | 38 | 38 | 38 | 38 | 26 25 | 285 |
| C F Lowe | 40 | 39 | 37 | 37 | 36 | 35 | 27 23 | 285 |
| Capt Cowan | 38 | 38 | 38 | 38 | 37 | 36 | 27 26 | 278 |
| Major Munday | 39 | 37 | 36 | 36 | 36 | 35 | 26 25 | 270 |
| Ashby | 36 | 35 | 34 | 33 | 32 | 32 | 28 22 | 252 |
| Capt Richardson | 38 | 36 | 35 | 34 | 34 | 34 | 25 24 | 260 |
| Carter | 36 | 36 | 36 | 36 | 35 | 34 | 24 21 | 258 |

## Cincinnati Rifles.

CINCINNATI, O., July 1.—The Cincinnati Rifle Association held its regular practice shoot at its range to day and made the scores appended. Conditions 200yds. off-hand, at the standard target:

O. C. G.

## Independent New York Schuetzen Corps.

THE Independent New York Corps, Captain Wm. V. Weber, held its monthly shoot in Glendale Park, on Friday of last week. Heavy showers during the day kept many of the members away from the park, and the consequence was the attendance was small. The members who were present were highly pleased with the commodious shooting house and the many accomodations that are connected with the range for the comfort of riflemen. Owing to the heavy showers Capt. Weber did not open the shoot until 2 P. M. B. Walther was credited with the first flag although it was an open question as to whether Ignatz Marten had not as good a title to it, both men firing their shots at nearly the same moment. The most flags were made by Ignatz Marten, Wm. Hayes was second; the best score on the ring targets was made by Wm. Hayes. On the man target Messrs. Stein, Marten, and Walther tied for first place with 57 each.

Ring target, 5 shoots, possible 125: Hayes 114, Marten 105, Krauss 104, Walther 102, Greiner 94, Toell 91; Hotz 90, Bauer 88, Kronsberg, 78.

Man target, 3 shots, possible 60: Stein 57, Walther 57, Hayes 56, Krauss 55, Greiner 52, Marten 67, Bittschier 48, Bauer 48.

Point target, 5 shots, possible 20: Hayes 18, Marten 18. Walther 18, Bittschier 17, Greiner 17, Krauss 17, Begerow 17, Stein 16, Bauer 14, Soell 13, Hoffman 13, Hotz 12, Kronsberg 12, Hencke 11, Kurtzer 9, Stemkopf 12, Schmitt 12.

## Greenville Rifle Club.

AT the weekly gallery shoot of the Greenville Rifle Club which was held at headquarters July 6, seventeen members were present and participated in the competition for class prizes. Scores: First class, J. Boag 243, C. Boag 238, Collins 237, Purkess 236, Robidoux 234, Scheeline 227. Second class, Lutz 238, Charlock 234, Chase 233, Chavant 233, Agneau 226. Third class, E Wuestner, Jr., 226, Daniels 222, Hill 222, Holzapfel 217, F. Wuestner 214, E. Wuestner, Sr., 197.

## Schlicht Rifle Club.

WEST NEW YORK, N. J., July 2.—At the weekly shoot of the Schlicht Rifle Club held at headquarters this evening, the class medal winners were: Fred Lambrix champion medal, Geo Dorr first class, M. Dans second, John Dedrick third. Scores: Geo. Schlicht 241, Fred Lambrix 330, M. Dans 230, John Dedrick 228, Geo. Dorr 228, Wm. Schlicht 227, Geo. Richert 227, Jacob Schlicht 217, L. Dorr 215, E. O. Brellenthine 214.

## RIFLE NOTES.

AFTER the close of the Independent New York Schuetzen Corps shoot at Glendale Park last week, the members formed themselves into a committee of observation for the purpose of examing the park as to its adaptability for the great international festival in 1895. Passing down through the park to the rear end, the visitors found that the Manhattan Beach Railroad tracks constituted its rear boundary, with the ground well situated for a way station right at the park boundary. The running time on the Manhattan road from this point to the Thirty-fourth street ferry is said to be only ten minutes. The next point of interest to the observers was where the forty or sixty targets could be placed. A strip of ground was pointed out which is well situated for the purpose. The park throughout is heavily timbered with oak and chestnut trees. The central pavilion is large and commodious, and contains the dining room, with accommodations to seat 1,800 guests. All of the other buildings and fixtures in and about the park are built upon a most liberal scale. When the committee returned from the tour through the grounds and various buildings contained in the park the prevailing opinion was that it was the most available spot in or about New York for the holding of a successful festival. The transportation facilities from Brooklyn to the park are good. The surface road (dummy) from Ridgewood to Richmond Hill passes the front end of the park. It is reported that the Myrtle avenue trolly line will be extended to Richmond Hill, making one continus line from all the Brooklyn ferries.

The Brooklyn Independent Corps and the Brooklyn Schuetzen Corps will hold a joint festival in the Glendale Park on Wednesday of this week.

The New York Schuetzen Corps holds its monthly shoot in the Union Hill Park on Friday of this week.

The Zettler Rifle Club will hold its bi-monthly shoot in Wissel's Cypress Hills Park on the 15th.

The New York City Corps will hold its annual festival and prize shoot in Brummer's Union Park July 17.

Teams from the Portchester and Greenville rifle clubs will meet on the Greenville Schuetzen Park ranges Saturday, July 21.

Gus Zimmerman, in writing to a friend in New York, informing him of his experience and success at the festival in Mainz last month, says: "In making my preparations for entry in the quick-firing match on the opening day I found that my sights were missing and I was compelled to use a German rifle on that day." There have been many conflicting rumors as to Zimmerman's winnings at the Mainz festival, but so far as we can learn he has been quite successful. When he left America he had great hopes of winning first position in the rapid-firing match. We understand he was the sixth on the list of winners. He got first prize on the field target, making 59 out of a possible 60 (2 shots, no re-entry). He also won second prize on the Leipsic target. He says of the Mainz shoot that he won 25 of the principal prizes, so many in fact that he was afraid the Germans would accuse him of being a pot-hunter.

ARMBRUSTER'S Greenville Schuetzen Park has fine facilities for salt water bathing. Bath houses are located foot of park, on New York Bay shore.—*Adv.*

# Trap-Shooting.

**All ties divided unless otherwise reported.**

**If you want your shoot to be announced here send in notice like the following:**

## FIXTURES.

July 16-18.—Standard Gun Club tournament, at Baltimore, Md.; $150 added.

July 18-19.—Interstate Manufacturers' and Dealers' Associations's seventh tournament, under the auspices of the Kentucky Gun Club, at Louisville, Ky. The Kentucky Gun Club will add from $200 to $400.

July 18-19.—Dr. Wallade's bluerock target and live bird tournament, at Newport, Mich.

July 19.—Hartford Gun Club tournament, Hartford, Conn. Open to all.

July 24-26.—Lafayette (Ind.) Gun Club tournament.

July 25.—Central New York Trap-Shooters' League, fourth tournament, at Syracuse

July 26.—New England Shooting Association championship tournament, under the auspices of the Willimantic Rod and Gun Club, at Willimantic, Conn.

Aug. 7-9.—Memphis (Tenn.) Gun Club tournament.

Aug. 8-10.—Missouri State Amateur Association, at Richmond, Mo.; $300 added.

Aug. 13-18.—John Parker's fourth international tournament, blue rock targets and live birds, at Des-chree-shos-ka Island, near Detroit, Mich.

Aug. 15-16.—Richmond (Me.) State shoot. C. O. Rowe, Sec'y.

Aug. 21-23.—Hot Springs (S. D.) Gun Club's tournament; $250 added.

Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wop sononock Park, Altoona.

Aug. 22-24.—Central Illinois Sportsmen's Association annual tournament, at Bunker Hill, Ill.

Aug. 23.—New England Shooting Association championship tournament, under the auspices of the Atlantic Trap Shooting Association, at Lynn, Mass.

Aug. 29.—Central New York Trap-Shooters' League, fifth tournament, at Auburn.

Sept. 3.—Endeavor Gun Club's annual shoot, Marion, N. J. E. Hollister, Sec'y, Jersey City Heights, N. J.

Sept. 19 20.—Interstate Manufacturers' and Dealers' Association's tournament, under the auspices of the Chattanooga Gun Club, at Chattanooga, Tenn.

Sept. 26.—Central New York Trap-Shooters' League, sixth tournament, at Rochester.

Oct. 3-5.—West Newburgh (N. Y.) Gun and Rifle Association tournament. Last day live birds. W. C. Gibbs, Sec'y

Oct. 10-11.—Interstate Manufacturers' and Dealers' Association tournament, under auspices of the Palmetto Gun Club, at Charleston, S. C.

Oct. 22-24.—Emerald Gun Club tournament, at Dexter Park. Targets and live birds. Dr. G. V. Hudson, Sec'y, 9 Madison street, New York.

Oct. 24.—Central New York Trap-Shooters' League, seventh tournament, at Utica.

Nov. 28.—Central New York Trap-Shooters' League, eighth tournament, at Syracuse.

1895.

April 3-5.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York.

May.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

The members of the Kentucky Gun Club, of Louisville, anticipate a grand time at the Interstate shoot to be held on their grounds on July 18 and 19. A big delegation of shooters has been promised from the Ohio district, and Knoxville is always expected to send a batch of experts. This club has been recently reorganized and claims to have the best equipped and best located shooting grounds in its section. They are situated at the corner of Fifth and L streets, and are reached in fifteen minutes from the center of the city, via the Fourth avenue electric car line. The club has just completed a handsome and conveniently arranged club house, and has nothing except the latest paraphernalia. Its officers are: W. L. Lyons, President; Allen P. Houston, Vice-President; Harry L. Means, Secretary, and H. L. Smyser, Treasurer. Governors: J. B. Hutchings, Allen P. Houston, Harry L. Means, H. L. Smyser, W. W. Thompson, Fred. W. Hussey, W. L. Lyons, John B. Williamson, Emile Pragoff, William Clegg, H. L. Lyons and J. S. Phelps, Jr. The programme for the coming tournament as published by the Interstate Manufacturers' and Dealers' Association, is as follows: (Both days being the same): Event No. 1, 15 targets, novelty rule, entrance $1.50. $5 added: No. 2, 20 targets, known trap, unknown angle, entrance $2, $10 added. No. 3, 25 targets, known trap, unknown angle, entrance $2.50, $15 added. No. 4, 15 targets, known trap, unknown angle, entrance $1.50, $5 added. No. 5, 20 targets, novelty rule, entrance $2, $10 added. No. 6, 25 targets, known trap, unknown angle, entrance $2.50, $15 added. No. 7, 20 targets, novelty rule, entrance $2, $15 added. No. 8, 15 targets, novelty rule, entrance $1 50, $10 added. No. 9, 20 targets, known trap, unknown angle, entrance $2, $15 added. No. 10, 25 targets, known trap, unknown angle, entrance $4, $25 added. The Galt House will be headquarters for the shooters.

The sixth annual tournament of the Standard Gun Club, of Baltimore, Md., will be held at Acton's Park on July 16, 17 and 18, and a good attendance is expected. The feature of the tournament will be the team contest for the $150 in cash and a silver cup donated by the Standard Gun Club. The Baltimore *American* says eight teams have already entered. The programme for the first day comprises the above team shoot and eight sweeps, and on each of the other days there will be eight sweeps and a four men team shoot. The following teams are said to have entered: Standard Gun Club—W. E. Buckley, G. C. Tracey, L. Jory, J. W. Edel. B. C. Claridge. W. F. Clements, G. E. Bauckman. L. C. Rice, J. M. Hawkins. C. H. Starr, W. M. Wilson, F. M. Franklin. J. Duvall, R. V. Bond, H. F. Ducker, C. E. Bonday. T. H. Evans and Dr. H. E. Lupus. Washington Team—E. A. Happer, J. D. Arnold, J. M. Green, W. Wagner, J. H. Gulick, A. S. Mattingly, J. H. Bothwell, H. A. Pruitt. J. R. Pristor, A. H. Barker, James Hunter and C. A. Osborn. Virginia Team—W. F. Summerson, Dr. Wayman, W. F. Mitchell, J. P. Haddox, C. O. Saville and J. W. Haddox. New York Team—H. McMurphy, T. Hunter, W. L. Colville, A. G. Courtney, H. B. Bartlett, W. P. Wyth and C. A. Damon. New Jersey Team—W. F. Lindsley, Charles Smith, W. F. Quimby, C. C. Hebbard. F. H. Keller and A. C. Kruger. Pennsylvania Team—W. R. Fieles, H. Landis, H. Thurman, W. William and James Wolstencroft.

One of the most popular and strongest of the many gun clubs of New Jersey is the Freehold Gun Club, which has splendidly appointed grounds about five minutes' walk from the depot. The roll shows the names of a number of the most prominent business men of the town as well as some well-known people from surrounding places. The club has a neat club house about 15×30ft., one story in height, one end being provided with lockers for the use of the members, and the other end being utilized as a store room. They shoot from five traps, using the lever pull. The traps are firmly fastened on heavy timbers on the edge of a pit which extends the entire 20yds., and is covered by a shed with a slanting roof. The pulling apparatus is in a house just in front of the club house, and the levers are in such a position that the shooter at the score can not see them. The club is run on an economical basis, the members paying one and one-half cents for each target shot at, and no sweepstake shooting for purses being allowed on club days.

W. H. Davis, treasurer, and one of the leading spirits of the Freehold (N. J.) Gun Club, is trying to work up a scheme for a series of live bird contests that is bound to be a success. He proposes to form a league comprising the Freehold Gun Club, Central Gun Club of Long Branch, Riverside Gun Club of Red Bank, and the Midway Gun Club of Matawan, and have a series of competitions, one on the grounds of each club, during the coming season, the contest to be for a prize, the value and style of which will be decided upon later. The club winning the trophy will hold it in trust until the following competition, the trophy to become the property of the club winning it three (or four) times. The teams will comprise 10 men each and each man will shoot at 10 live birds in each contest The entrance fee will be simply the price of the birds and a sum in addition thereto sufficient to cover the cost of the trophy. The scheme is a commendable one, and we wish Mr. Davis every success in his efforts in its behalf.

The Heights Hunting and Shooting Club, of Wilkesbarre, Pa., held its annual target smashing contest on July 4, each man shooting at 7 targets for three prizes. M. R. Morgan broke 5, J. G. Jones 7, John James 6, M. D. Morgan 5, M. L. Lewis 4, Chas. Renowder 3, D. P. Griffiths 5, T. H. Griffiths 4, J. R. Jones 4, T. N. Jones 2, L. Lewis 5, Thos. Owens 4, C. M. Williams 0, John Barnett 3, David Evans 6, D. L. John 3, Ed. Clocker 2, Lewis Morgan 5.

"Doctor Jim" Wolstencroft, of Frankford, Pa., one of the best known and most popular sportsman in the country, was in town last week, looking as genial and hearty as ever. In the course of conversation, he informed us that he intends to have a go for the Riverton Cup as soon as Mr. Welch, its present holder, returns from Europe. In the initial contest for this cup it will be remembered that Mr. Wolstencroft scored 46 kills out of 50 birds shot at, and of these 43 were killed with the first barrel. The "Doctor" is president of the Keystone Shooting League, of Frankford, and says that the League has just completed a $1,500 club house which is "heads over" any other structure in the country. The League own their own grounds and have them fitted with everything that is modern in the way of equipments, for live bird and target shooting. Some time during September, the League will hold a two days' tournament combined with a housewarming.

The new grounds of the Lancaster (Pa.) Gun Club, on the east bank of the Conestoga, near Whitmer's bridge, were formally opened on the Fourth, with a grand banquet and several target contests. In the prize event at 20 singles, the first prize of $35 was won by W. P. Cummings on 17 breaks. Second prize was divided by G. M. Franklin, Thomas Anderson and James C. Wiley on 16 each, and third went to A. Anderson on 15. Other scores were: Galbraith 15, Martin 12, Evans 11, Bush 11, Kendy 12, Zahm 11, Dounnel 11 and Clark 10. H. O. Leachey was referee.

During September or October the Freehold (N. J.) Gun Club will hold a two days' tournament at targets and will introduce several taking features. One of these will probably be a contest for five men teams, at 25 targets per man, to be shot on the second day, the club to offer a substantial purse for first and second best teams. They will charge three cents for each target thrown. The events will probably be at 15 and 20 targets each, with entrance fees of $2 and $2.50. It is possible that some handicap may be used.

Mr. Elmer E. Shaner writes: "During the progress of the Elwood tournament of the Interstate Association, I received a telegram from Indianapolis stating, 'Mr. E D. Fulford has been acquitted on the charge of bribery.' On reading this telegram to the shooters assembled, Col. J. T. Anthony suggested three cheers for Mr Fulford, and they were given with a hearty good will."

The Waukesha (Wis.) Gun Club ended its competitive season on June 20. In the year's contest for a gold medal R. Greengo broke 361 targets in 10 contests at 50 each and won. These officers have been elected for the ensuing year: President, Ed. Foster; Vice-President, J. Johnson; Secretary, E. Estberg; Treasurer, Frank Gault; Captain, R. Greengo.

The Wollaston (Mass.) Gun Club and the Lincoln Gun Club, shot a match on the Wollaston grounds on July 7, four men to a team, 25 targets per man. The results: Wollaston—H. T. Whitman 13, H. M. Federhen, Jr., 17, H. W. Marden 8, A. A. Lincoln 17; total 55. Lincoln—D. B. Lincoln 13, G. H. Brainard 12, F. N. Bates 11, Geo. Elcock 11; total 47.

E. C. Hall of the Baltimore Gun Club, and C. E. Bondy of the Standard Gun Club, recently shot a match at 100 targets each, known traps and unknown angles, for $50 a side at Halstead's. The score at the finish was Hall 90, Bondy 82.

Everybody was pleased to see the great pace cut out by "Wick" Smith at the Maplewood grounds on the Fourth. When he finished the score that won the team race for his club, they gave him a round of cheers that made the welkin ring.

At the merchandise shoot of the New London (Conn.) Gun Club, on July 4, the scores were: Ames 24, Connor 23, Bush 23, Bindlors 21, Comstock 20, Smith 17, Crocker 15, Higgins 14, Dart 14, Gunn 13.

We beg to acknowledge the receipt of an invitation to the sixth annual shooting tournament and family picnic of the Lynchburg (Va.) Gun Club and to express regret at our inability to attend.

The Standard Gun Club, of Baltimore, Md., will hold a tournament on Monday, Tuesday and Wednesday of next week, and expects a big list of entries. The special feature will be the team shoot.

The September tournament of the Interstate Manufacturers' and Dealers' Association will be held in Chatanooga, Tenn., instead of at Greensboro, N. C., as previously sheduled.

The Memphis (Tenn.) Gun Club, intends to attract a big attendance to its tournament on August 7, 8 and 9. The programme will be ready for distribution in a few days.

Howland Gasper, the author of the "Complete Sportsman," will spend the summer with gun and camera in trudging and boating in the far Northern country.

"Dutchy" Smith has gotten rid of the rheumatism and is happy. This was the cause of his non-appearance at some of the recent big tournaments.

The "Trap-Shooters' Ready Reckoner" is a rapid seller, and meets the approval of all who have examined it. Send 25 cents for a copy.

The Memphis Gun Club will add $760 in cash for the shoot of Aug. 7, 8 and 9. This ought to bring out a big crowd

Gus Greiff says he has parted company with the malaria which had a grip on him during the entire spring.

Neaf Apgar has recovered from his recent attack of malaria and is rapidly coming back to his old form.

C. H. TOWNSEND.

### Another Method of Handicapping.

*Editor Forest and Stream:*

The problem of handicapping shooters at tournaments is one that has received a great deal of attention from trap-shooters and tournament managers all over the country, and while some more or less satisfactory handicaps have been tried, still the fact remains that a real good system has not as yet been discovered.

With the introduction of the expert trap throwing unknown angles, the style of handicapping suggested by myself and generally adopted throughout the country, gave very good satisfaction, but as the shooters became familiar with the shooting at unknown angles it was no handicap at all for the majority of them, and at large tournaments the difficulty of keeping track of the two different styles of shooting is so great that the system is very faulty and must be abandoned.

The most praiseworthy feature of that system was the sliding scale that handicapped a shooter when he was shooting well, and did not when he was not in form.

Since the Chamberlin tournament, where the faults of the old style of handicapping were so very apparent, I have put a great deal of study on the subject, and have thought out a system new to me at least, that retains the sliding feature of the old handicap, but handicaps in an altogether different manner than the old style.

In the new system the shooting is alike for all, either known angles and traps or known traps and unknown angles.

This does away with the great trouble of separating the two classes and making up squads for the two different styles of shooting.

Everybody shoots alike and the handicapping is done after the event is shot out in the following manner:

The programme should be made up of about eight races and they should preferably all be of the same number of targets, say fifteen or twenty-bird races, although both can be used.

In the fifteen-bird races the money should be divided 40, 30, 20 and 10% and in the twenty-bird races 30, 25, 20, 12½ and 12½%.

In the first event all shoot for all the moneys. In the second event winners of first or second, if event one was a fifteen-bird race, or of first, second or third if event one was a twenty-bird race, will only be allowed to compete for first or second if event two is a fifteen-bird race, or for first, second or third if it is a twenty-bird race.

Failing to win in the second event the moneys they are allowed to compete for, they will be allowed in the third event to compete for all the moneys again. In this manner each event will be the basis for handicapping the following event, and the cashier will have but little if any more work than if there were no handicap at all, as he can readily tell from his list of winners in the previous event whether each shooter has shot out of a place or not

If desirable, professionals and manufacturers' agents can be limited to first and second in 15, and first, second and third in 20-bird races, all the time regardless of the scores they make.

This will make good hard shooting for the expert, and will prevent a great many of them from being in the lower moneys part of the time, with the result of making these moneys more profitable to the amateur, who has all he can do to get in for money at all, and under the old system only to find so many in with him that less than half of his entrance money would be paid back to him.

The greatest fault with this handicap is that when a poor shot by a supreme effort makes a straight or win in the upper moneys, he is compelled to shoot in the following event for moneys that is almost an impossibility for him to reach.

Still, the system gives him a better chance than any that is now in use, and I think that a few trials will prove that it will be satisfactory to all concerned. It may be that this system of handicapping has been tried before, but if so, I have not heard of it; and would like to have all shooters who are interested in the sport express their opinion of same either personally to me or through the columns of the FOREST AND STREAM.

PAUL NORTH.

### Lynchburg's Annual.

LYNCHBURG, Va., July 5.—The Lynchburg Gun Club held its sixth annual shoot and picnic at its Rivermount grounds yesterday. It was a model Fourth of July day, clear and bright, with just wind enough to temper the heat and not enough to play pranks with the targets. This being a family affair there was a very large attendance The ladies and children lost no opportunity to enjoy the day fully. A string band furnished music for the dancers who danced in the club house and out under the trees. At 1 o'clock lunch was spread under the great oaks in the rear of the house. All hands participated in this event and all made full scores. We were glad to see Mr. Summerson and Mr. Bowman, of Staunton; Mr. E. P. Miller, of Richmond, and Dr Hamlet, of Pamplins, and Messrs. C. A. and C. C Spencer in attendance. It was a most enjoyable occasion and a delightfully spent day. Shooting commenced at 10 o'clock A. M. with the following results. All matches at 15 targets, 5 known traps, unknown angles, American Association rules, 50 cents entry:

| | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
|---|---|---|---|---|---|---|---|
| Nelson | 14 | 12 | 13 | 9 | 13 | 11 | 9 |
| Terry | 8 | 12 | 11 | 9 | 12 | 13 | 11 |

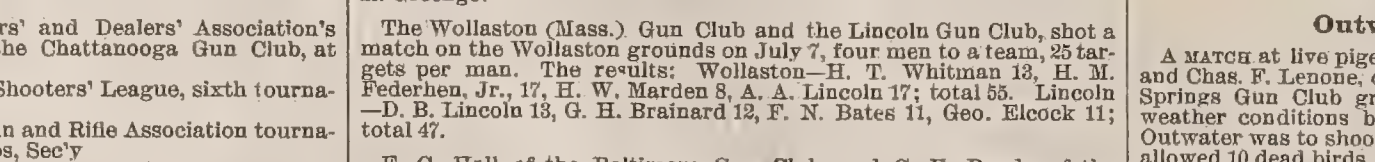
| J M Payne | .. | .. | .. | .. | 5 | .. | .. |



Summerson, Bowman, Dornin, Empie, Hamlet, Stearns, Staother, Terry, Nelson, Clark, Christian, Durphy and Scott divided the prizes offered by the merchants and citizens.

F. M. D.

### Outwater Defeats Lenone.

A MATCH at live pigeons between John H. Outwater, of Rutherford, and Chas. F. Lenone, of Passaic, drew a fair sized crowd to the Boiling Springs Gun Club grounds, at Rutherford, N. J, on June 30, the weather conditions being favorable. According to the agreement, Outwater was to shoot at 50 and Lenone at 40 live birds; Lenone being allowed 10 dead birds. Outwater started on his score and at the end of the tenth round had 9 kills to his credit. From this point of course Lenone had 1 bird, instead of 10 the best of the game. The stake was for $100 a side, American rules governing. J. H. Richmond was referee and Wm. Dutcher scorer. The result:

*Trap score type—Copyright, 1894, by Forest and Stream Publishing Co.*

The following sweepstakes were also shot. Nos. 1, 2 and 3 were at 5 birds, $5 entry; No. 4 a $1 miss-and-out:

| | | | | |
|---|---|---|---|---|
| Lenone | 22220—4 | 02•12—3 | 22000—2 | 1212 |
| Paul | 12221—5 | 1•120—3 | ..... | .... |
| Jones | 12000—2 | 2••10—2 | 20120—3 | 120 |

| Bower | ..... | 20122 4 | .... | |

### Trap-Shooting at Ellicott City, Md.

THE Ellicott City Gun Club celebrated the glorious Fourth by a pleasant afternoon of sport at the traps. The great event was a general contest for the *Democrat* medal made necessary by the last winner refusing to accept a challenge; some excitement was created by the fine shooting done by one or two of the younger members in recent contests and their expressed intention to go in and win The scores shot during the afternoon were as follows:

| | 10 | 10 | 10 | 10 | 10 | 10 | 10 | 10 | 25 | 15 |
|---|---|---|---|---|---|---|---|---|---|---|
| E A Talbot | 8 | 7 | 7 | 6 | 8 | 7 | 6 | 7 | 23 | 15 |
| Kirby | 8 | 8 | 7 | 6 | 8 | 7 | 10 | 9 | 23 | 14 |
| J O Jones | 9 | 9 | 8 | 8 | 8 | 7 | 7 | 6 | 20 | 12 |
| Makisson | 6 | 5 | 6 | 5 | 6 | 4 | 4 | 5 | 11 | 6 |
| Hillsinger | 5 | 6 | 4 | 5 | 3 | 4 | 6 | 4 | 9 | 7 |
| Hardinge | 8 | 7 | 6 | 6 | 8 | 6 | 6 | 7 | 18 | 11 |
| Dr Sykes | 7 | 7 | 8 | 6 | 7 | 9 | 7 | 8 | 16 | 11 |
| R Wilson | 9 | 9 | 8 | 7 | 9 | 7 | 6 | 7 | 23 | 12 |
| W Talbot | 6 | 5 | 6 | 6 | 7 | 6 | 5 | 4 | 11 | 8 |
| J H Leishear | 6 | 4 | 4 | 5 | 4 | 6 | 4 | 3 | 12 | 7 |
| Dr Fort | 8 | 7 | 8 | 9 | 8 | 8 | 7 | 9 | 22 | 14 |
| Scaggs | .. | .. | .. | .. | .. | 7 | 8 | 7 | 16 | 11 |

In the medal race at 25 targets, three men tied on 23, and the tie was shot off in the next event at 15 singles, E. A. Talbot, the genial president of the club, bearing off the coveted trophy by the score of 38 out of 40 and Kirby a close second. Mr. Talbot has been challenged by Mr. Kirby and the match will be shot July 12. SECRETARY.

### Chatham Prize Shoot.

CHATHAM, N. J., July 4.—Prize shoot of the Chatham Fish and Game Protective Association at bluerocks. A large audience of onlookers was also on hand, and the event was in every sense a decided success. The morning proved to be almost perfect, and while the wind was rather detrimental to high scores, it was very enjoyable under the trees which surround the club house. The Bob Whites could be heard in every direction, and these, together with the crack of smokeless powder and jingle of broken targets, made sweet music to the sportsman's ear.

There were five prizes contested for. A 50-bird sweep was shot, resulting in the following scores: E. L. Phillips killed 40, Benj. Morris 29, M. Pitney 29, Jos. Minton 28, A. M. Hopping 29, A. L. Page 25, R. E. Budd 22, H. D. Ogden 21, A. M. Budd 20, J. H. Valentine 18.

## Binghamton's First Annual.

BINGHAMTON, N. Y., Jan. 30.—With the ending of to-day the Binghamton Gun Club's first annual tournament is a thing of the past, but it has been one to be remembered as most successful in every way. Everybody expressed themselves as highly pleased. Those who attend them all said that, outside of the State shoot, they have attended nothing like it in a long time. The attendance proved even better than expected, some events having 30 or more entries. Among others on hand early Thursday morning were M. F. Lindsley and wife. Mrs. Lindsley participated in the sport, shooting under the name of "Wanda." The weather was all that could be asked for, except that the sun shone pretty hot; but the shooters were completely protected from this with a large canvas fly which extended over the score. Everything moved along without a hitch, which may be judged from the fact that quite 5,000 targets were thrown the first day and almost the same the last day, making 10,000 in two days with one set of expert traps. The management offered a $60 Lefever hammerless gun to the individual making the best average for the two days, which was won by handsome Harvey McMurchy, who made the splendid record of 160 broke out of 165 shot at the first day As soon as assured of the fact that he had won the gun, Mr. McMurchy presented it to the home club to be contested for under a handicap rule, so that each member may have as equal a chance as possible to win it. Words can hardly be found to express the keen appreciation by all members of Mr. McMurchy's great generosity.

Shooting for the first day was advertised to begin at 10 o'clock, but 9 o'clock found the early worm pecking away at the birds, the result being that several extra 10 target sweeps were run off. Ten o'clock found the following squad lined up to the score: McMurchy, A. M. S., Lefever, "Hardie" Richardson, Mosher and Courtney. A moment later he who was destined to win first prize called pull, and from that time on the firing was incessant until quite 5,000 kingbirds had been demolished. The shooting of the second day was much the same as the first. Saturday, the third day, was devoted to live birds; the birds were a good lot, although somewhat loth to fly, but when once on wing they proved very strong, some of them veritable hummers. Now that we have made our bow to the public, we hope that shooters will keep in mind that there is such a place on earth as Binghamton, and give us a call whenever they can, they will always find the latch string on the outside. We are thinking of having another tourney this fall. Appended find full scores of all regular events.

WINFIELD.

## Fourth of July at Maplewood.

THE all-day tournament of the Maplewood (N. J.) Gun Club, held on the Fourth of July, was an enjoyable affair, although attendance was rather lighter than was anticipated. The extreme heat doubtless kept many away. The feature of the day was the team contest between the Maplewoods and the Unions of Springfield, teams of six men each shooting at 25 Empires per man. Enoch Miller showed that he was back to his old form by smashing 25 straight, while E O. Yeomans lost only one. What pleased the boys most, however, was the work of the Maplewoods' old war horse, "Wick" Smith, the oldest and most enthusiastic member of the club, who pulverized 23 out of 25 targets and won the race for the Maplewoods. Owing to ill health Mr. Smith has been unable to shoot his gait for many months, but will soon be in good fettle. The team race was a hot one, there being the slim difference of two breaks in favor of Maplewood at the finish.

The scores of the team race are here given and are followed by the scores of the regular programme sweepstakes:

Maplewood Gun Club.

## June Trophy Scores of Garfield Gun Club.

CHICAGO, July 2.—The following is a tabulated statement of the scores for June in our trophy contest, at 25 targets, unknown angles:

Class A.

| | June 2. | June 9. | June 16. | June 23. | June 30. | 3 best scores. |
|---|---|---|---|---|---|---|
| S Palmer | 23 | 22 | 24 | 19 | 25 | 72 |
| O'Brien | 25 | 22 | 23 | 20 | 20 | 70 |
| Hicks | 19 | 20 | 23 | 24 | 22 | 69 |
| Tefft | 19 | .. | 24 | .. | 22 | 65 |
| Richards | 20 | .. | 16 | 20 | .. | 56 |
| W Palmer | 20 | 17 | 15 | .. | .. | 52 |
| Drake | 20 | 18 | .. | .. | .. | .. |
| Class B. | | | | | | |
| Mott | | 24 | 23 | 22 | 20 | 69 |
| Young | 21 | 16 | 21 | 22 | 19 | 64 |
| Bowers | 20 | 22 | 20 | 19 | 19 | 62 |
| Dr Meek | 16 | 17 | 21 | 18 | .. | 56 |
| Baird | 20 | 18 | 17 | .. | .. | 55 |
| Blatherwick | 17 | 15 | 16 | .. | .. | 48 |
| Bortree | .. | .. | 19 | 18 | .. | .. |
| Class C. | | | | | | |
| Dr Hodson | 16 | 11 | 15 | 23 | 20 | 59 |
| Northcott | 10 | 18 | 15 | 12 | 18 | 51 |
| Ackerman | 19 | 19 | 13 | .. | .. | 51 |
| Jones | .. | 11 | 15 | 17 | 11 | 43 |
| Smith | 15 | 12 | 14 | .. | .. | 41 |
| Bogle | 10 | 7 | 17 | .. | .. | 34 |
| S M Meek | 11 | .. | .. | .. | 7 | .. |

S. Palmer won Class A trophy, S. E. Young won in Class B (Mott being barred, having won in May) and Dr. Hodson won in Class C. The trophies were three fine silk umbrellas and were very acceptable prizes, as the afternoon of the 30th turned out stormy and most of the boys were caught unprepared. The winners are barred for two months from receiving trophies, so as to insure a more equitable distribution thereof.

R. S. M., Sec'y.

## Maine State Shoot.

RICHMOND, Me., July 2.—The Maine State shoot will be held Aug. 15 and 16, under the auspices of the Richmond Gun Club, Richmond, Me.

C. O. ROWE.

## New England Shooting Association.

HARTFORD, June 29.—The opening tournament of the New England Shooting Association took place on the grounds of the Colt Hammerless Gun Club yesterday, and all in all, it can be classed as one of the grandest and most successful tournaments ever held in the beautiful city of Hartford. While the New England Shooting Association is newly born, consequently its facilities and capabilities for operating a tournament of this size was looked upon with much interest, but to-day proved to the shooters of New England that nothing lacks its intelligence.

The entire shooting paraphernalia, including traps, targets, pulls, indicators, etc, were furnished by the Empire Target Co., Mr. Chas. C. Hebbard of New York, superintending. Everything worked in good order; the targets flew well, consequently good scores were made by local and visiting sportsmen.

There were present about 50 shooters, representing a fraternity of skill, from nearly every State in New England. Connecticut furnished a majority of the delegation present, New London, Willimantic, New Haven, Meriden, Bristol, Unionville, Collinsville, Bridgeport and Hadleyville responding generously. President W. A. Witherbee of Boston and Secretary W. F Brown of Lynn managed the tournament aside from trap mechanism, and the greatest satisfaction was expressed by all. Not a hitch or a word of dissatisfaction was expressed during the tournament, and it was indeed a most courteous community.

Warm weather and counter attractions had a tendency to decrease the attendance. The Yale-Harvard boat race at New London distracted the love of many sportsmen to another direction, and the Brocton's tournament kept the Boston boys at home; but considering the intense weather and other attractions the attendance was good.

In the championship events American Association rules governed, omitting Rule 14. Gun below armpit handicapped many, yet after once started there was little opposition or complaint.

Prizes for the highest two averages were won by Sperry of Collinsville with 90 per cent., and Risley of Hartford, with 89⅞ per cent. Wood of Hartford took the prize of a year's subscription to FOREST AND STREAM for the highest score in the individual championship.

At 10 o'clock sharp the first event was called by the secretary. Following are the scores:

| | No. 1, 10 targets. | No. 2, same. | No. 3, 7 targets. |
|---|---|---|---|
| Sterry | 1111011111— 9 | 1110111111— 9 | 1111111—7 |
| Hebbard | 1111111111—10 | ..... | ..... |

## The Standard Gun Club

Of Baltimore, Md., gave an all day shoot on the Fourth. The feature of the day was the 5th event at 50 targets, known traps and angles, for the individual championship of the State, and for which the club donates a handsome silver cup to the winner. So far each year the cup has been won by a member of the Standard, and again this year the club added another laurel to its bright record in that Hawkins, the youngest member of the club, captured the valuable silver cup offered by the club and the individual championship of the State. Much credit is due young Hawkins, who is but 17 years of age, as he had some of the best shots in the State to compete with, and his score of 48 out of 50 was too much for the older heads. The following scores were made:

No. 1, 15 singles, entrance $1: Malone 10, Bond 9, Hawkins 9, Hall 9, Dixon 9, Bonday 8, Ducker 8, Storr 7, Claridge 7, Baughmann 7, Franklin 7.

No 2, 15 singles, entrance $1.50: Bond 14, Hawkins 14, Dixon 13, Franklin 13, Claridge 12, Baughmann 11, Bonday 11, Jack 11, Hall 9, Malone 8, Clements 8, Wilson 8, Beck 8.

No. 3, 20 singles, entrance $2: Bond 19, Bonday 17, Hall 17, Claridge 15, Malone 15, Dixon 13, Wilson 13, Franklin 13, Baughmann 13.

No. 4, 15 singles, entrance $1.50: Hall 14, Clements 14, Ducker 14, Dixon 13, Malone 12, Claridge 12, Bonday 12, Franklin 12, Baughman 11, Buckbie 9, Vance 8, Beck 8, Ober 7.

No. 5, championship race, 50 singles:

| | |
|---|---|
| Hawkins | 1111111111111111111111111111111111111100111111—48 |

H. E. LUPUS, Secretary.

## The Millerton Gun Club.

MILLERTON, N. Y., July 6.—The Millerton Gun Club celebrated "Independence Day" by giving a clay pigeon shoot, the afternoon of the 4th. Ten members of the Philmont Gun Club were present and participated in the sport. The shooting was under American Shooting Association rules, using 5 traps, and the rapid fire system. Six 10-target sweeps and one 15-target event was shot during the afternoon. A report of the several events follows:

No. 1, 10 targets, 50 cents entry:

| | | | |
|---|---|---|---|
| Vanderburg | 1110111011— 8 | W. Wilkinson | 0000100011— 3 |
| Riker | 0010111010— 5 | Powell | 1111011110— 8 |

## Trap at San Antonio.

MEDAL shoot of San Antonio Gun Club, July 1, 20 singles and 5 pairs: Rothwell 24, Thiele 18, Frank 10, Vernor 23, France 23, Cann 10, Wagenfuhr 19, Barr 19, Learn 18, Simpson 12, Seugg 14, Samuels 21, McVicker 19, Black 18, Epstein 17, Veith 18, Smith 17, Phillips 20, Chabot 19, Grossman 16, Vollbrecht 21, Shields 21, Biesenbach 19.

FOURTH OF JULY TOURNAMENT.

No. 1, 10 live pigeons, $5 entrance, 3 moneys: Veith 9, Dyer 10, Critzer 8, Chabot 7, Hunt 5, McClelland 7, Scott 8, Thiele 10, McCormack 8, Learn 6, Samuels 8. Thiele and Dyer divided first on a clean score, Veith came in for second, and Critzer, Scott and McCormack divided third.

No. 2, 15 targets: McCormack 12, Veith 14, Scott 10, Chabot 10, Critzer 12, Dyer 10, Scudder 6, Black 11, Faurote 10, Thiele 10, Vernor 7, Samuels 7, Miller 10, Ramsdorf 9, Learn 8, Witchell 7, the last three not in the sweepstakes. In this shoot Veith came in for first without a tie, Samuels for second, McCormack and Critzer divided third, and Black captured fourth.

No. 3, 5 pairs double targets: Vernor 6, Scott 6, Critzer 6, McCormack 6, Miller 5, Dyer 8, Ramsdorf 4, Chabot 6, Thiele 5, Pancoast 4, Learn 6, Black 6, McClelland 4, Scudder 2, Witchell 3.

No. 4: McClelland 6, Chrbot 5, Veith 4, Dyer 6, Thiele 5, McCormack 5, Miller 7, Pancoast 5, Scudder 4, Vernor 5, Tendick 6. Miller captured first on a clean score. McClelland and Dyer divided second, and Chabot, McCormack, Pancoast and Vernor carried off third money.

No. 5, merchandise prize shoot: Vernor 18, Witchell 21, Scott 22, Chabot 16, Prescott 16, Thiele 17, Paris 17, Rothwell 23, Simpson 16, McClelland 18, Smith 19, Ramsdorf 17, Epp 22, Phillips 13, Shields 14, Wagenfuhr 17, Frank 11, McCormack 20, Black 21, Vieth 11, Learn 13, Barr 19, France 17, Cann 18, Scudder 13, Pancoast 18, Kelley 19, Samuels 22, Volbrecht 13, Grossmann 15, Miller 25, Dyer 16, Critzer 22, Epstein 20, Newton 19, Drought 14, Biesenbach 19.

O. C. G.

## What They Think of the "Reckoner."

HARVEY MCMURCHY.—A boon for trap-shooters.

Harry Hartlove.—Can't get along without it.

Neaf Apgar.—It fills a want that has existed for years.

Chares H. Mowry.—Just what the boys need.

Charles Fehrenback.—It is indispensable.

Dr. John Hedden.—It does away with four-fifths of the work usually done in the cashier's office.

"Tee Kay" Keller.—The handiest book ever published.

J. Warren Smith.—I don't see how we got along for so many years without it.

H. L. Gates.—Very convenient and a great labor saver.

W. H. Davis.—I must have a copy, sure!

Ferd. V. Van Dyke.—The man who compiled the book is entitled to the thanks of all trapdom.

"Dutchy" Smith.—Send dot Clark veller a medal und told him vy didn't he vos got dot pook out sooner!

Tom Brantingham.—We won't figure any more

Col. Courtney.—It is a great book and fills an aching void.

## On Burden's Pond Grounds.

WESTERLY, R. I., July 9.—A number of the boys assembled on the Burden's Pond shooting grounds one day last week to enjoy a little sport with the targets. The day was pleasant and warm, although quite a breeze of wind was blowing across the traps, consequently making the "mud cakes" fly very unevenly, those going with the wind flying low and very fast, while those thrown in the opposite direction traveled much slower, keeping at a higher elevation, thus making it difficult to hit every one. The shooting commenced a few minutes after 3 o'clock P. M. and lasted until near sunset. At the time of starting in on the third event the wind had all died out, therefore the targets sailed through the air steadily and at the proper elevation, making them a great deal easier to get. Clark is not considered the best every day shot, but it happened to be one of his days, and so he managed to find them pretty regularly, the verdict of all the others being that he greatly outdid himself throughout the entire shoot. In the third event he shot against the score of 24 out of 25 made by J. M. Lewis, Jr., on last New Year's Day and broke 25 straight. Appended are the scores in full, 25 targets per man.

No. 1, unknown angles:

| | |
|---|---|
| M Chapman | 1001111011011101001111001—16 |
| A Clark | 1111100101011111111111111—21 |
| R Hoxie | 0111111111100111011011100—18 |
| S Chapman | 1111011011101100111111100—18 |
| J Dolan | 1011001011010100010111001—13 |
| H Sisson | 0110010101011011110000000—11 |
| S Rathbone | 0000000000010001000000110— 4 |
| J Gallagher | 1101100000010100111010000—10 |
| A Champlin | 0000110000000001000000100— 4 |
| F Pingley | 0010101000101101100000010— 9 |

No. 2, unknown angles: Chapman 19, Clark 22, Hoxie 17, Chapman 17, Dolan 15, Sisson 10, Rathbone 15, Champlin 13, Pingley 8.

No. 3, unknown angles:

| | |
|---|---|
| Chapman | 0010010111110101110011110—15 |
| Clark | 1111111111111111111111111—25 |
| Hoxie | 1001101110101111111111101—19 |
| Dolan | 1010111111001111110100111—19 |

About the best of it all was, at this point there were 25 loaded shells left, Chapman and Pingley agreeing to shoot 12 apiece, and the one breaking the fewest targets should pay for the whole, 50 cents, which resulted in the following:

Chapman.....111111111101—11 Pingley.....00011010101001—5

Vox.

## "Trap-Shooter's Ready Reckoner."

THERE has just come from the FOREST AND STREAM press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

## Greensburg Gun Club.

## Interstate at Chattanooga.

PITTSBURG, Pa.—*Editor Forest and Stream:* The September tournament of the Manufacturers' and Dealers' Association will be given at Chattanooga, Tenn., Sept. 19 and 20, in place of Greensboro, N. C.

ELMER E. SHANER, Manager I. M. & D. A.

# Answers to Correspondents.

**No notice taken of anonymous communications**

TODE, Providence, R. I.—We advise you to read "Big Reel's" article on surf fishing in our issue of April 3, 1890.

C. L. B., Highlands, N. C.—We cannot give you the address of makers of birch bark canoes, they are made by Indians in the Maine woods, but are not sold in New York. The canvas-covered canoes are much superior and little more expensive.

H. D. P., Fitchburg, Mass.—Is there any law to prevent any one fishing in a protected brook for trout if they stand on a bridge in the highway? Ans. In the lack of specific details which might modify the opinion, we should say that the law would protect the stream even against highway fishermen.

F. W. E., Buffalo, N. Y.—1. Are there any elk left in Colorado and New Mexico? 2. If so, where in both Colorado and New Mexico can they be hunted with any prospect of success? Ans. 1. Yes, a few in both States. 2. It is difficult to give localities. Estes Park used to be a good locality, and is easily accessible. There are a few elk in the Snake River country, Colorado, and in many other places in the main range. The Colorado law forbids killing elk except "when necessary for immediate use."

M. T. L., Minneapolis.—The cutting of a good jib is an art only acquired by long practice and a thorough knowledge of sail making. The jib should be full on the luff, rounding out a little under the stay when sheeted home. There is no rule we can give you for cutting a jib. The length of spinaker boom depends on many things besides main boom; it is limited by the clubs to the distance from mast to jibstay.

FOREST AND STREAM ROD AND GUN

**CORRESPONDENCE.**

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The editors are not responsible for the views of correspondents.

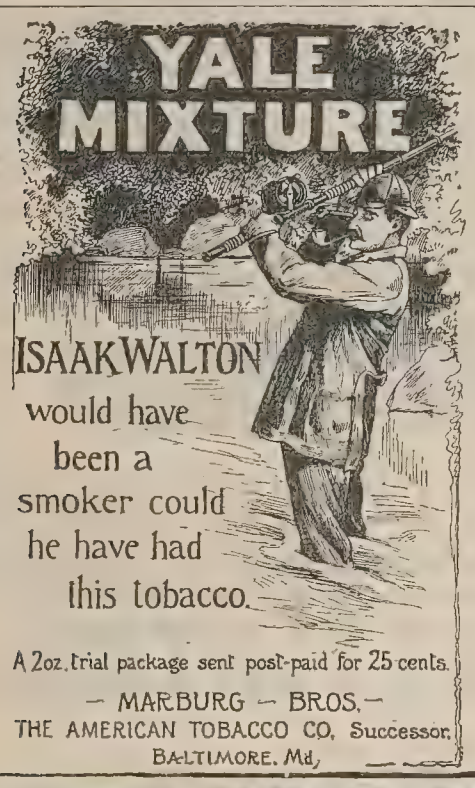
**SUBSCRIPTIONS.**

Subscriptions may begin at any time. Terms: For single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter money-order or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain.

Foreign Subscription and Sales Agents — London Davies & Co.; Brentano's; Sampson Low & Co. Paris Brentano's. Foreign terms: $5 per year $2.50 for six months.



**ADVERTISEMENTS.**

Inside pages, 30 cents per nonpareil line. Special rates for three, six and twelve months Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices $1.00 per line. Only advertisements of an approved character inserted.

BALTIMORE, Md.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

# Forest and Stream's Outdoor Scenes.

FROM ORIGINALS IN WATER COLOR AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

### AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

**Forest and Stream** *one year and the four pictures*, **$5.**
**Forest and Stream** 6 *months and any two pictures*, **$3.**

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

BASS FISHING AT BLOCK ISLAND.

JACKSNIPE COMING IN.

VIGILANT AND VALKYRIE.

## Mr. Grinnell's Indian Books.

## BLACKFOOT AND PAWNEE.

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author, and show Indian life from the Indian point of view.

# FISHERMEN, ATTENTION!

# $225 in Gold Given Away!

## THE NATCHAUG SILK CO.

**will give nine big cash prizes for the following catches of fish taken during the season 1894, viz: From the 1st day of April to the 1st day of November inclusive, with the NATCHAUG SILK FISHING LINE:**

FIRST PRIZE— $25 in Gold for the heaviest Muskallonge.
SECOND PRIZE— $25 in Gold for the heaviest small-mouth Bass.
THIRD PRIZE— $25 in Gold for the heaviest large-mouth Bass.
FOURTH PRIZE— $25 in Gold for the heaviest Lake Trout.
FIFTH PRIZE— $25 in Gold for the heaviest Brook or Mountain Trout caught in other waters than in the State of Maine.
SIXTH PRIZE— $25 in Gold for the greatest variety and largest number of fresh water fish caught in one day by one person.
SEVENTH PRIZE—$25 in Gold for the greatest weight of any kind of fresh water fish caught in one day by one person.
EIGHTH PRIZE— $25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.
NINTH PRIZE— (SPECIAL) $25 in Gold for the heaviest Brook Trout caught in the State of Maine.

As the Trout caught in the lakes of Maine are acknowledged to be genuine Brook Trout, on account of the size of these fish we bar them from our Fifth Prize, and offer this as a special prize for these waters.

A sample card of our Lines sent free on application.

## CONDITIONS:

All these fish must be caught with the Natchaug Silk Fishing Line in fresh water (except Prize 8) and by fair angling.

Competitors must forward to us their full name, P. O. address, together with the description and weight of fish caught, and name of dealer from whom line was purchased, together with the name of one reputable witness affixed. On November 7th, 1894, the award will be made, and the list of succes ful competitors announced in the FOREST AND STREAM and the *American Field.*

All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

THE NATCHAUG SILK CO., Willimantic, Conn.,
Or 213--215 Fifth Avenue, Chicago.

## Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

**Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.**

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

**Forest and Stream** *one year and the set of four pictures*, **$5.**
**Forest and Stream** *6 months and any two of the pictures*, **$3.**
**Price of the pictures alone, $1.50 each; $5 for the set.**

Remit by express money order or postal money order Make orders payable to

**FOREST AND STREAM PUB. CO., New York.**

### *MOUNTAIN CLIMBING.*

DURING the days of blazing heat that are now upon us, there is something peculiarly refreshing in the thought of snow-capped mountains. The dweller in the heated city streets, or he who lives in the midst of a torrid plain pictures to himself the huge mass whose gently rolling foothills rise near at hand and gradually melt into timbered slopes where the ascent is sharper. These in turn give place to bare walls of rock, and crowning the whole is the cap of white, which sends down by each ravine snowy fingers that clasp the mountain's crown with a grasp which is gentle but which never lets go. To live within sight of such a mountain is a privilege to be highly valued, but one which too often is but little appreciated. The joy of ascending such a mountain is hardly to be expressed in words.

It is only within a very short time that mountain climbing has become recognized in this country as an attractive recreation, and even in Europe its delights are comparatively new. We know that the soldiers of Hannibal, and again of the Great Napoleon, scaled the Alps, but we cannot imagine that in those days any one ever climbed for pleasure. Then such work was merely toil and toil of a peculiarly difficult—because unusual—sort. But within the past fifty years mountaineering in Europe has become a recognized pastime, and one which has a very large number of enthusiastic followers.

But there had been mountaineers long before this. To say nothing of many isolated cases during the Middle Ages, there was an early Swiss naturalist named Conrad Gesner, the author of many curious works on birds, mammals and plants, who had in him the true spirit of a mountaineer, for in 1541 he wrote to his friend Vogel:

"I have resolved for the future, so long as God grants me life, to ascend divers mountains every year, or at least one, in the season when vegetation is at its height, partly for botanical observation, partly for the worthy exercise of the body and recreation of the mind. What must be the pleasure, think you, what the delight of a mind rightly touched to gaze upon the huge mountain masses for one's show, and as it were, lift one's head into the clouds? The soul is strangely rapt with these astonishing heights, and carried off to the contemplation of the one Supreme Architect."

These are noble words, and had Gesner carried out his intentions, and written the book on mountaineering which he proposed, the sport which is now in such high favor in Europe would have had a longer history. Soon after this, political troubles in Switzerland interfered with Gesner's plans, and it was nearly three centuries later before mountaineering began to take rank as a diversion, which, if it has not now attained almost the standing of a science, has at least contributed much to scientific knowledge.

If mountaineering—as the word is here used—if Alpine climbing, is young in Europe, how much younger must it be in the United States? Until within a very few years it was not practiced at all, though mountain travel has long been common, and now and then hunters ascended lofty peaks in search of the game to be found chiefly there. Yet within a few years at least three Alpine clubs have been formed in the United States, of which two have done remarkably good work, while the third, as yet only in process of formation, is too young to have accomplished anything.

The two older clubs are the Appalachian, which has its headquarters in Boston, and the Sierra Club of San Francisco. The former publishes a journal, besides which its members have contributed many excellent articles and some volumes to the literature of their favorite pastime. The Sierra Club also issues a publication, and some photographs taken by its members are marvels of excellence and genuine treasures to persons interested in mountains, their forms and in kindred subjects.

In Oregon a new Alpine club has recently been formed under the style and title of the Mazamas. At first the name may appear trivial, yet after all it is very expressive. Mazama—the "white goat"—is a characteristic North American mammal and mountain dweller. No animal lives higher, and it reaches the peaks which it frequents by the exercise of the sturdy, persistent effort, which alone can bring success and triumph to the man who would attain similar heights. The new club has been formed for exploration among the superb snow cones which form such beautiful and striking features of the Cascade Range, and its members have within easy reach of them such peaks as Hood, Rainier, Adams, Jefferson, Baker, St. Helen, as well as many others, on whose summits the foot of man has not yet rested.

It is a good sign for America when the hardy sport of mountain climbing for its own sake has gained a foothold here, and we may hope that year by year it will grow in popularity as it should. There is no sport which calls for better qualities both of mind and body than this, and none which, in its ultimate effects on him or her who practices it, is more ennobling.

### *AN INCIDENT OF SKUNK RIVER.*

AN Iowa stream, bearing the homely appellation of Skunk River, has just been the scene of a distressing occurrence, which adds another casualty to the long and growing list of those attending the use of dynamite for fishing. The hazard inseparable from the handling of high explosives is so real and so constant, that recourse to dynamite as a means of taking fish would appear to be the last resort of men driven to desperation by hunger; and it would seem altogether superfluous to enact laws forbidding such a dangerous mode of fishing. There are such laws, however, in most of the States, but in spite of inherent peril and of legal prohibition, the dynamite fisherman pursues his "sport," and in nine cases out of ten that come to the public attention in the newspapers, publicity is gained not through an enforcement of the law, but because of the maiming or killing of the participants by a premature explosion. The Skunk River incident belongs to this class.

A bright young farmer named Tharp, of West Des Moines, repaired to the Skunk "for an afternoon's fishing and sport." He was accompanied by two ladies, one of whom he was about to marry. Young Tharp knew of a deep pool in the Skunk haunted by big fish, and intent upon their capture he equipped himself with a supply of dynamite cartridges. Donning a bathing costume he went about the "sport" in the usual style, throwing in a cartridge, and after its explosion swimming about the pool and gathering the fish which floated on the surface. Just how the ill-fated young dynamiter courted his death is not known with certainty, but the hypothesis suggested by the local paper is this:

His fishing had been successful, as was shown by a number of fish thrown upon the bank and floating upon the water. It is thought that he had prepared to make another haul and had thrown another cartridge into the water. There being no explosion he threw in another, and there was an answer, probably the explosion of the first charge. Seeing a large fish come to the surface, Tharp swam in after it, and undoubtedly received the shock of the explosion of the second cartridge, and was thus rendered helpless. The ladies say that he turned toward them, commenced spitting in a violent manner, had turned very pale and was struggling to gain the bank. He called for help, and the ladies, running here and there, could find nothing but a piece of grape vine about eight feet in length. They waded into the water, but the vine was too short to reach the distressed boy. He said a faint good-bye and sank, rose again, and a second time said farewell, and sank to rise no more.

It is added that Tharp was a young man of exemplary life, honored, respected and popular in the community, over which his untimely death has cast a gloom. Public opinion in that section may differ as to the importance of protecting the fish of the Skunk River from dynamite cartridges, but there will hardly be found any one who will not deplore the cruel and untimely taking off of such a citizen by his indulgence in unlawful practices. If the citizens of West Des Moines will not observe the fishing laws of the State as being reasonable statutes for the protection and preservation of the fish supply, they might at least heed them and compel obedience to them as merciful provisions for the protection and preservation of human life.

There is not one thing to be said in defense of dynamiting fish. It kills not only the fish sought for the immediate occasion, but all other fish as well—large and small—within the shock of the explosion; and when it reacts on the fisherman, it makes no discrimination between the young and the old, the just and the unjust. It ruins beyond reparation the fish supply, and is answerable for an amount of human injury and misery and for deaths outweighing ten thousand-fold all the benefit it ever has been or ever will be. It ought to be stamped out from Iowa and everywhere else. But it will continue, probably for generations, destroying the food resources of the waters, and adding to the hosts of the crippled, and swelling the death rate; and the newspapers will go on recording the killing by dynamite of examplary young men like Tharp and hoary-headed old sinners.

### *SNAP SHOTS.*

We often hear of the lost chances for a shot when the game approaches close to the hunter who has left his gun behind, and such an incident usually affords an unfailing subject of regret on the part of the narrator who recounts what a trophy he might have won. But of all such unimproved woods opportunities those are most to be regretted which fall to the lot of the camera hunter. The story a correspondent tells to-day of gliding in his canoe within twenty feet of a noble moose standing erect in the water thrills even in the reading. That was a chance to secure a picture of living game, beside which a like opportunity to kill the game would have been insignificant; it was, indeed, the chance of a lifetime—and a chance which was lost.

HENRY WARD BEECHER used to tell a story illustrating the abundance of wild pigeons, when he was living in Indianapolis in the Forties. A hunter came into town one day with six dozen wild pigeons, which he vainly endeavored to sell or to give away. At last he left them exposed in his cart in the public street, saying that some one might possibly come along and steal them; but on his return he found, much to his disgust, that another hunter had added eight dozen more to the pile. There are no supplies to create a glut of wild pigeons in these days. How the flocks have been lessened and destroyed by systematic, ingenious and business-like pursuit is hinted in the stories told by a pigeon netter in our shooting columns last week and to-day. When express agents and professional hunters league themselves to follow the movements of a migratory and gregarious land species with such unrelenting thoroughness, the supply must give out. These tales of a pigeon netter are mainly historical; the wild pigeon is the feathered counterpart of the buffalo.

# The Sportsman Tourist.

## OVER THE BORDER.

"I WOULD not make a trip around Lake Superior if some one were to pay my fare. I would be content to live the year through within sound of the carriages on Third street." Such was the reply of a gentleman in St. Paul to whom I had spoken of the charms of a voyage around this inland sea.

But I confess to a taste so different that I am ill-content to stay in the city unless I can see the country or the woods once a week. Accordingly, while others were bent for the sea shore, the lake side, and other scenes of the summer engagement, I was dreaming of a dryad mistress among the woods and waters of northern Minnesota, and set forth to see if I might realize my dream.

Our party consisted of three—Mr. John Wheeler, of Duluth, a young man who combines the intelligence and culture of the citizen with the woodcraft of the savage; Frank Mesoba, an Ojibbeway Indian guide, and the writer.

My journey by water extended from Tower, Minnesota, to Rat Portage, Ontario, some 250 miles, and about 90 miles of this was made in the canoe.

Though our voyage lay through a land of big game, we set not out with intent to kill, the only shooting implement in the outfit being a kodak.

At 6 o'clock on a bright July morning we boarded our frail craft at Camp Wakemup, a little Indian reservation. We started for a point where the Vermillion Lake empties into the river of the same name—Mr. Wheeler in the bow, Mesoba in the stern, and the writer between—and thus, with paddles alternately dipping in the lake and flashing in the sun, our birchen vessel glided over the sheen of waters "like a yellow leaf in autumn, like a yellow water lily."

A trip down the Vermillion River very properly begins with a portage—presage of much that is to follow, for the impassable portions of the river are frequent. The first ten miles is but a chain of lakes. But after that it assumes the general shape of a river. The shores are mostly low and marshy; a lynx's eye could hardly penetrate the denseness of the underwood. In places great bunches of wild hay nod like sheaves over the banks, and here and there is a garden where the water lilies display their "purity of stainless white" and unbosom a "heart of gold" as if unafraid to open themselves to the inspection of heaven.

Fields of wild rice often extend for miles on either side of the channel—the heaven-sent manna to those who sojourn in the American wilderness, for they gather in hundreds in the autumn, and running their canoes into the rice, bend it over the gunwale and thresh it into the bottom of the craft. This is a season of great mirth and match-making among the Indians.

These rice beds are also the feeding ground of great flocks of ducks; and here multitudes of them are shot every fall. But this is also a country of larger game—the moose, the bear and caribou are found. During our voyage we sighted two deer by the river brink. I wanted to photograph them, but ere I could get within range they withdrew into the undergrowth and were swallowed up as in a thick cloud. Here and there a broken blade of grass or a lilypad floating down the stream, elicited from Mesoba the word "Moose!" These monarchs of the forest, wading into the water to avoid the flies and feed upon the succulent roots, detach these vegetable fragments, and nothing of this kind escapes the instinctive vigilance of the Indian. They frequently catch the young moose alive and sell them to fanciers. In a short time they become as tame as pet lambs. I saw and photographed several of them. They are not unlike a young colt in appearance. Some time ago an old gentleman from Tennessee, who held a Government position on the Big Horn, a tributary of the Rainy River, was up looking after the homesteaders. His leading ambition was to kill a moose. Standing on the river bank one morning he discovered on the opposite shore what appeared to be a span of mules. "What a fine shot," he said to himself, "if they were only moose." And so tickled was he with the idea that he took his rifle and leveled it at them, laid it down again, feeling that his fancy was "all a dream, too pleasing sweet to be substantial." He stood and watched the animals turn into the woods, when it dawned upon him that in that wilderness he was far from the haunts of mules—save himself, the stupidest of all mules—for the animals that had paid him their respects were no other than two fine moose. Then was his Tennessee vocabulary too limited to express his self-disgust.

Here is one of Mesoba's exploits with a caribou: "One time I out with my wife I see it de caribou in de lake. I jump in my canoe and paddle out. I catch it de caribou by tail. Oh, dat caribou he swim hard. I hang on, but I not know what I can do next. At las' I take it my knife and stab it de caribou in de side. Dat caribou he not die for 'bout an hour, I guess. He swim all over de lake. My wife she's awful 'fraid I'll get drown."

Mesoba has a great bear dog: "Dat dog he find it fourteen bears for me las' year. When wind blow he smell it de wind, den run to de woods and go dat way in de snow (pawing with his hands). I come and pull it back de brush and look in, I see it de bear sleep in dere. Den I shoot. Dat dog he find it bear for me all de time." When we consider that bears were worth $50 each that year we don't wonder that Mesoba admired the ursine proclivities of his dog—Wabesheish (martin).

There are two splendid falls on the Vermillion, the lower one of which is exceedingly picturesque. One is surprised to find a river so quiet as this has been, loitering by its rice beds, now worked into such fury. But what wonder when we consider that a stream of such volume is forced down through a gorge whose sides are not more than eight or ten feet apart. But how fond is Nature of contrasts. Far up these granite walls, in the crevices of the rock, the little bluebells wave in the wind and nod over the tormented waters, tender as tears of pity on the stern face of Justice.

The portage on the Vermillion is a narrow and well-beaten footpath round the rapid, or fall. Often it winds tortuously up and down the hills, and is crossed by rotten logs and fallen trees. Over these we must toil with our canoe and luggage. But the carrying is not without its advantages, as it gives the canoeists a chance to straighten their limbs and bring another set of muscles into play—nor without its mental associations, for as we sweat under our burdens we remember that we are passing a trail that has been trodden by the feet of many generations who have long since gone

> "To the Islands of the Blessed,
> To the Kingdom of Ponemah,
> To the Land of the Hereafter."

The portage past, we launch again and slip away. When evening approaches, bringing thoughts of supper and camp, we drop in our trolling spoon and take out a couple of pickerel or pike, and when a suitable place presents itself on the shore, we land. In a few minutes the fire is blazing and the tent is spread. But what means that path through the underwood? We suspect, and with pail in hand follow it up a few rods, and lo! a clear spring, welling up in the midst of a mossy bed. Oh, how appetizing are the sylvan streams and the tonic airs, and how subtle the flavors of the wood nymphs! Here the simplest dish is a dainty, and one stops eating from a sense of prudence rather than from a feeling of sufficiency. The supper over, story follows story, for where else in the world are stories told as round the camp-fire? There men, cut off from other society, draw nearer to each other, and memory, lighting her torch, leads us again o'er the hills and valleys of the past, now covered with the purple of enchanting distance.

Of course we had a few bouts with the mosquitoes, and lost blood in the fray, albeit they were not as bad as I had seen them in other places, still one night they pushed the battle to the gates and beyond. I had been accustomed to think of the mosquito as a light-hearted little Frenchman, fond of the Provençal dance and fiddle playing, drawing his dagger on occasion, but without much malice aforethought; but I have changed my mind since I saw what befell this night at Vermillion, and henceforth I look upon him as an evil-designing man who lieth in wait for blood. A kind friend made me a complete covering of mosquito netting for my head, a kind of sack that had arm holes and fastened with an elastic cord around the chest. Clothed in this panoply, I looked out upon the enemy with that feeling of security enjoyed by one who looks out through the loopholes of a fortification upon a feeble antagonist. I even went forth to meet him as Goliath in his armor went out to meet David with his sling of pebbles. But to sustain the figure, he smote me between the joints of the harness. They entered at the arm holes of the aforesaid headgear. And even when in our tent, with the door covered with netting, they effected an entry in a way not easily found out, excepting by these resolute skirmishers, and about 4 o'clock in the morning we were compelled to surrender the tent without quarter.

At the lower end of the Vermillion we met three men journeying back to Tower. They had been in the woods three months, and eagerly inquired as to what had happened in the world of late. They had also lost track of the day of the week, and being informed that it was Friday they said: "We were not so far wrong after all, as we had agreed among ourselves it was Saturday."

Passing from the reedy river, we find ourselves on the beautiful waters of Sturgeon Lake. And to pass from the former to the latter is like turning from the dull and dusky visage of a squaw to the beauty of that face that still haunts one even in the remotest solitudes.

Here one beholds the forest in its pristine glory—the green trees creeping down to the water's brink and leaning over as if enchanted by the vision of their own reflected loveliness. The rounded hills rolling away from the lake and covered by the tapering tops of the balsam firs, look as if all the churches in Christendon were gathered into one immense cathedral, and this was the wilderness of spires and minarets, while the white birches gleam in the shade like silver pillars in a temple. The lake, set with green islands, is surrounded by a shore line of granite, bended into innumerable bays, pockets, peninsulas and points, that keep up a continued surprise of beauty as the canoe glides quietly along.

But there is something for the ear as well as for the eye. In calm mornings the birds warble their sweetest melodies, the sturgeon can be heard plunging in the still bays, and a call sent across the waters reveals the place where echo dwells, while in time of storm is heard the unceasing moan of the forest, and the thunder of the galloping waves, as they break in white rage against the granite bastions of the shore.

From Sturgeon Lake we pass into Capitogamoque, which is largely a continuation of the same scenery.

Though in August the birds are not numerous in these waters, yet the gull hovered around on bowed pinions—the plover tilted and scurried along the shore—the turkey-buzzard hung high in the heavens and the eagle occasionally swooped on his quarry.

One afternoon in Capitogamoque we noticed a column of smoke curling up from the trees on the shore, and thinking it might be Chief Wakemup, for whom we were on the lookout, we put in, and found three Indian women drying blueberries. They had two courts inclosed by sheets of birch bark—there was a scaffold in each court, covered with wild hay, on which were spread bushels of blueberries being dried by a slow fire under the scaffold. One of them, an old one, who had more loquacity than beauty, smoked her huge pipe and cracked her jokes in Ojibwa, making the woods ring with her laughter. Her daughter-in-law stood near by in the undergrowth with her little papoose bound on its washboard cradle. She was a comely young woman with a good face and figure. But alas for beauty when yoked with jealousy; for Mesoba, who knew something about their family affairs, remarked, as we came away: "Her man he not like it any man talk to his wife. He scold all the time. He take it his fist and hit her in the face." All of which goes to suggest that if jealous-minded men must marry, they ought to secure wives with face and form as ugly as their own minds, if that were possible. But whatever the squaw may think of marriage, the average Indian would hardly pronounce it a failure, for go into one of their wigwams and you find several able-bodied men, squatting on the floor, smoking pipes almost the size of walking sticks, or whittling, as a pastime, while all the women are industriously at work. When it is time to flit, she takes up the house and walks, while her lord and master saunters along with his gun and perhaps some other light utensil. Then while he enjoys his pipe, she rebuilds the dwelling. Some of the Indians think it effeminate in a man to assume these heavier burdens, and if he does, they stigmatize him as "an old squaw."

One thing that constantly offends the visitor is their dirty aspect. Living as they always do, by an abundance of water in this great soap age of ours, there is no reason why they should present such an unwashed appearance. I would that in our own day a new John the Baptist might take his stand by some Jordan in this American wilderness and preach not only repentance, but by all means baptism therewith and soap as well as water.

I shall not soon forget the scene of quiet beauty that lay around and above us as we camped one night on a point in Capitogamoque. We put up early in the afternoon because of the strong head wind and heavy sea on which our canoe was tossing like a mere chip. After supper followed the camp-fire conversation, while a bird in a tree hard by sang to us like "an embodied joy." Then spreading our tent for a wind-break, we made our bed to the leeward and crept under the blankets, with the waves lapping the rocks below and "the red rising moon" looking down upon us, benign as the face of a mother bending over her children to kiss them good-night.

> "And there as a child in the mother's arms,
> O'ercome with sleep and with love caressed,
> Full far removed from the world's alarms,
> We lay in the soft embrace of rest;
> While Nature sang her lullaby song
> And soothed us to sleep on her gentle breast."

From Capitogamoque we passed into Rainy Lake, where since this voyage gold has been discovered in such paying quantities as to cause quite an excitement. Even in the depth of winter there has been a large influx of fortune hunters into this inhospitable region. And it is safe to say that the woods will swarm with prospectors during the summer.

Rainy Lake empties into Rainy River, a noble stream flowing westward and forming the international boundary between the United States and Canada for eighty miles. Two miles down, at a magnificent fall, which lowers the river some 28ft., is situated the picturesque village of Fort Francis, an oasis of civilization in the heart of the wilderness, ninety miles from Tower, and 150 from Rat Portage, its next neighbor on either side. Here I bade good-by to my good canoemen, who turned again homeward while I tarried three days waiting for a boat. Fort Francis and the neighboring Indian settlement contain some 300 or 400 inhabitants, Indians, half-breeds and whites, for the two currents of blood have met and mingled freely. I presume these half-breeds, when among the whites, feel like Indians; and, when among the Indians, feel like whites. But though this is a backwoods town, it must not be supposed that the inhabitants are all backwoods people. It was my lot here to form a very pleasant acquaintance with Mr. Phair, brother of the Rev. Archdeacon Phair of Winnipeg, well known in the United States and Canada. Mr. Phair keeps a general store and does a large trade with the Indians in furs. Last year he secured fifteen silver fox skins, worth $100 apiece. He has never known a thoroughly black fox to be taken in these parts, and the general scarcity of these animals may be inferred from the fact that the Hudson Bay Company in London sold only seven the year before last, at $375 each. One of the Company's trading posts has long been at Fort Francis, and is still in operation. Some good crops of oats were growing in the vicinity of the village, but an army of worms, moving down over the farms, threatened to leave nothing but the mortgages.

As I walked forth one evening along a solitary road in the woods I heard a stir in the brush and was curious to know what it might be, but deeming discretion advisable till I should discover the nature of the game I reconnoitered for a space, while the little animal challenged me a dozen times by springing forward under the shrubbery and stamping on the ground. At length, disdaining me as a contemptible coward, he walked off, when, emerging from the cover, I perceived a skunk with tail nodding like Hector's plume over his back. Had I been less cautious I can easily imagine myself retreating with the agitation of Macbeth and exclaiming:

> "Could all old Neptune's oceans
> Wash the smell clean from these clothes."

As is well known, it was the policy of the McKenzie government in Canada to connect the east and northwest by a line of boats. A canal was then dug almost to completion at Fort Francis to overcome the fall and stands unfinished till this day, for a change of government, and the construction of the great Canadian Pacific Railway caused this old "Dawson Route" to be abandoned. But the people of the Fort are living in hope that it may be opened up yet.

After a wait of three days at Fort Francis I boarded a little steamer and started down the Rainy River. The Canadian shore is settled almost continuously, but farming is done on a small scale. Our accommodating captain, who had a barge in tow, being hailed by some of the settlers on shore, would swing his boat and barge, end for end, and land to receive, perhaps, a letter to mail or a kerosene can to be filled. He did it all in the most neighborly way without any of the "insolence of office."

The Minnesota side has but few settlers. Throughout almost the whole length of the river an unbroken woods runs down to the water brink.

Two Minnesota streams of considerable volume—the Big Fork and the Little Fork—give their tribute of water and logs to the Rainy River, for a good quantity of pine is cut every winter in these parts and sent across the Lake of the Woods to be sawed at Rat Portage.

Fine sturgeon abound in these waters, some of them weighing nearly 100lbs., and the stories told of their capture are in proportion. I shall not take the risk of repeating any of them. But suffice it to say, that when a party of exploiters drives one of these piscatorial giants into shoal water, and then one of the party, with either more courage or less experience than the others, gets in, takes the fish by the gills and tries to land him, there ensues a side-splitting comedy for the onlookers.

One day took us down the Rainy River and the next morning we found ourselves tossing on the Lake of the Woods. The sea ran high; we were in the trough of the waves; and our attempts at our toilet might have seemed highly comical were it not for those solemn admonitions from within that sent us back several times to our berth. The cook had the pots tied upon the stove to keep them in place. But when we reached the islands we found quiet water.

Roughly speaking, the Lake of the Woods is about

seventy miles square, the northern half of it being a wilderness of islands, according to some writers, numbering more than ten thousand. It might seem that when the earth was being formed there was found a surplus of this geographical feature, and they were thrown together in this remote corner to put them out of the way.

One day on the little steam tug, took us over the Lake of the Woods to Rat Portage. As we drew near the northern shore, we found the islands gay with campers and picnic parties, for many come here from Winnipeg to take a summer outing, and certainly a more delightful spot it would be hard to find, and the place is destined in the future to become a popular summer resort, where rest and recuperation will be found for the jaded nerves and brain.

The Lake of the Woods empties at its northwest corner, by several outlets, into the Winnipeg River, and here in picturesque gorges are found two beautiful falls from whose eddies the disciple of Walton, having crept down the rocks and dropped in his hook, has the exhilaration of landing many a fine fish. On one of these falls is located the electric light plant that illuminates the town, for Rat Portage, though so far north and solitary, has quite a metropolitan air about it, and is in immediate touch with the whole civilized world, being on the line of the great Canadian Pacific Railway.

We had now come about 240 miles by canoe and steamboats since we left the railway at Tower. Here, about 1 o'clock in the morning, we boarded the west-bound train, crossed the iron bridges over the streams just mentioned, roared through the tunnel in the rock, and sped on to the city of Winnipeg, and ninety miles further, over boundless prairie and through billowy fields of wheat to my destination.

The Province of Manitoba is peculiarly rich in the number and variety of its aquatic birds. In Glenboro I had the pleasure of meeting Mr. J. B. Mathers, who prepared the exhibit of birds and mammals for the World's Fair. Of the former he sent pairs of 266 different species or varieties and of the latter 52 pairs. Mr. Mathers assured me there are places in the Duck Mountains, about 300 miles from Winnipeg, where the deer have runways worn several feet deep going to their watering places, and during the deep snows of a recent winter the Indians made great havoc among them, taking nothing but the head and hide.

In closing, I would say, this trip over the border by paddle and portage gave me a taste of something for which I have often hungered, but I am not yet satiated, and many a time since then, in the craft of the mind—still lighter than the birchen vessel that bore us—propelled by the silent paddles of memory and fancy, have I found myself gliding again over these northern waters.

## The Effects of Solitude.

IF it be true that it is well for man to be much with nature, it is equally true that is not well for him to be too much alone with nature. No hermit is absolutely sane. No Western sheep herder ever passed beyond seven years at his solitary calling without becoming mentally affected, and in the West the class is notorious for "cranks." Surrounded by the tokens of man's handiwork and presence, under a roof and within communicating distance of other men, the case of the solitary man is different, yet even such environments will leave visible effect. The winter keepers of the Park show the marks of their calling. I have spoken of John Folsom as the most silent man in the world. At the Fountain we found John Schmidt, the winter keeper, quite the opposite of this. He was delighted to see us, and talked freely with us on all sorts of topics. He would sit and talk on and on, and while I presume he never knew the difference, his voice had a low, even monotone, no doubt the reflex voice of his monotonous, solitary life. I said solitary, but this should be qualified. Mr. Schmidt had two enormous house cats and a dog. The two cats were bitter enemies and fought on sight, but each loved their keeper as much as he did them. One of them would crawl up on his lap and put its paws around his neck, and he would sit and stroke it by the hour. For the dog we visitors had no affection because that animal had a habit of sitting up all night and barking at the wolves and foxes which every night came in about the hotel kitchen where we made our abode. Often the dog would come running in and barking full voice, and then we knew he had struck something bigger than a fox, and wondered what it was. Meantime we did not sleep.

Our little stop at the Fountain was very pleasant, the more so because John Schmidt was an efficient hand at getting up good and frequent meals. We enjoyed rude appetites and were all in perfect health except Holte, who practically fell out of the trip at this point. He had neglected to wear his glasses on the last day out and was now nearly blind as a result, besides being pretty well tired down by the long march. Holte was only a boy, barely 21, and though a good shoer he was too slight to stand the work as well as his mate, Larsen. Both were good cheerful boys and we could not have asked better. We let Holte go back in to the Post with one of the men from the Firehole station ahead of us, the others staying on for the trip through the geyser basins.

### Died Alone in the Snow.

The dangers of winter travel in this wild region were painfully brought to view for us during our stay at the Fountain Basin. Sergt. Moran and one man had just gotten in from Riverside station, the extreme westerly patrol station of the Park, distant 15 miles from the Fountain or Lower Geyser Basin. Moran was asking anxiously for news of his other man, Alex. Matthews, who had started for the Fountain two weeks before. Matthews had not been heard from at either end of the route, and the hard conclusion had to be accepted that he had lost the trail and died alone in the snow. Capt. Anderson, knowing well the risks of shoeing in the Park, has issued strict orders that no soldier shall go out alone and no sergeant in charge of a patrol station has authority to send out a man alone. Moran was very uneasy and explained that Matthews had insisted on going alone over to the Fountain after the mail. He had been over the trail before and laughed at the idea that he could not make the trip in safety. Moran went to the top of the hill with him, 4½ or 5 miles, and from there the trail was easier and should have been plain. Matthews had a lunch with him and some matches, but nothing else by way of supplies. He might possibly have gotten through two or three days and nights, not more. What probably happened is that he was caught in some sudden storm, which blotted out all landmarks and left him with no idea of the points of the compass. Wandering from the trail, frightened at the awful situation which faced him, he no doubt exerted every energy to keep up the highest possible speed, and so became heated up. When night came with its added horrors, he was forced to stop. Perhaps he built a fire, but he had no blankets, and worn out and discouraged as he was, he perhaps dozed by the fire. Then came the dreaded chilling through, the stupor, the rigor. The wolves would soon find him then. Private Matthews's bones, last witness of another of the hidden tragedies of the mountains, may perhaps some day be found by the searching parties which sixty days later had proved unsuccessful. His bones may be found to the left of his trail, down in the Madison Cañon, or may be to the right, in the lower mountains, or perhaps he may have wandered miles back into the inner ranges, where men never go. His actual fate may perhaps always be a mystery. Desertion from the army was out of the question for him, equipped as he was, indeed an impossibility, for he would have been obliged to pass by some station for supplies. Heavy snows had wiped out all trails at the time we saw Moran, and later, after the thawing and sinking of the snow, the raised trail of the *skis* could not be found where it was expected Matthews had gone. He no doubt lost his head early in the day and got entirely out of his course. At the time we left the Park he had not been heard from, and since then I have not learned other news. Private Matthews enlisted at Cleveland, O.

Moran wished to report to Capt. Anderson at once, of course, but the wire was down. On this account the man was sent in from Firehole Station, Holte accompanying him. They found the break near Norris Station, and the message reached the Post before they did. At the Fountain all we could do was to look sadly at the white mountains to the west, which held their secret tranquilly and coldly. Had it been two days instead of two weeks after the non-appearance of Matthews, something might have been done by searching, but as it was we all knew search was utterly useless, and so did not make up any party for it. Capt. Anderson duly sent out a search party on receipt of the news, but no one of the detail had any hope of success.

### Among the Geysers.

Billy and I spent a couple of days resting and seeing the geysers, and of course, being new in the Park, I took the keenest interest in the wonderful spectacles of that weird region. We put in a half day in hard work with the camera, and made views of the Fountain Geyser, the Paint Pots and several of the minor geysers. I had also a good view or two of the hotel, half buried as it was in the snow. I can remember very clearly that afternoon, when toward evening the clouds broke and gave us a hint of the glories of a mountain sunset. The white armies of the snow were marching in endless file across the wide valley, and the same winds which drove them made endless involutions of the mystic mist veils of the geysers, made tenfold more distinct by the contact with the frostful air of winter. Near by us the breath of the mighty Fountain Geyser had congealed in a thousand prankish forms upon the trees nearest to it. Away in the background the sun was struggling bravely with the opposing clouds, and to the right of where it was sinking, appeared the high front of Mt. Holmes, just cut in half by a white snow-bearing spirit of the storm. I do not know what other time or what other region could produce a scene parallel to this. It is one of the panels of the majestic panorama which in my dreams I still can see to-day.

### Off for the Upper Basin.

After seeing the main points of interest at the lower Firehole Basin, we concluded to visit the yet more wonderful scenes of the Upper Basin, and on a beautiful bright morning set out from the Fountain for that purpose, taking Larsen along with us. We made fine time with the *skis* till we reached the middle or Midway Basin, when the snow began to stick. We cared little for that, however, for the beauties about us compelled forgetfulness of physical exertion. Here we saw geysers and geysers and geysers, all sorts, all colors, all shapes. One of the most startling of the features of this district is the Prismatic Pool, a beautiful great pool, whose surface is bordered by a wide band of deposit which in regular and sharply defined lines shows almost every color of the rainbow. This prismatic ribbon extends quite around the pool, and is as evenly laid on as though by the hand of a skilled painter. It is well known that the different colored algæ form in different temperatures of the water, and this accounts for the different colors on many of the geyser terraces, but to find this regular parti-colored band showing the lines of color so vividly demarked is almost too startling for scientific theorizing. I like better to call it the alchemy of nature used in sport, the bubble-blowing of the Titans, the chemistry and the art of elves.

The great Excelsior Geyser, whose tremendous crater could swallow up a troop of horse and not feel it, was not playing, of course, for it has not been active for years, but all the interior of the vast crater was a blinding mass of white steam. Out of this crater ran a brook of boiling water, which fell into the Madison River after its course of a few yards. In its palmy days the old Excelsior when spouting threw out a boiling flood which raised the Madison a foot in height. Some years ago a trooper was fording the Madison when Excelsior was in action, and his horse was caught by the hot flood of water and so badly scalded that it died. Excelsior is the largest geyser in the world. What its future is to be the grumbling, hissing crater would not tell, but all students of the Park hope it will resume activity after the present business depression shall have passed.

### Wildfowl in Winter.

While at the Midway Basin I saw a flock of seven wild Canada geese flying down the Madison. In the Prismatic Pool I found the bones and feathers of a wild duck, which no doubt had been scalded to death. Wildfowl often light in the hot pools and are fatally scalded before they can escape. The foxes make quite a good thing out of this, and enjoy the luxury of game not only caught but cooked in advance.

### A Lovely Stream.

After we left the Midway Basin we followed up the valley of the Madison, which is here a lovely stream. We saw numbers of ducks in the river, and were near enough to have shot them, but not near enough to photograph successfully. All along the Madison there are little hot steam peanut roasters of geysers, busily engaged in making steam for the sake of the landscape, and at some of these the frost effects, where the steam had condensed and congealed upon the foliage of the surrounding trees, were so beautiful that we could not resist the temptation to unpack and use a camera. Especially good views appeared as we neared the Upper Basin, and I have one

view of the rapids on the Madison with snow masses and clouds of hot steam opposed to each other in the middle distance, which is one of the most prized landscapes in the series that I made.

### Summer In Winter.

At the lower end of the Upper Geyser Valley we quit the direct course and went wandering on foot among wildernesses of geysers, hot springs, steam vents and hot streams of water. The hot rivulets cut long labyrinths of channels through the deep snow, and among these we wandered for a long time, seeing so many wonderful things they fairly ceased to impress us. Here also we got some pictures. I was just busy making a shot at a tiny hot pool, the formation of whose edges interested me, when Billy and Larsen called me to come and see a porcupine which had just come down to the river's edge. I did not get a picture of the porcupine, but I got a very good one of the pool, *sans* color. If only we could photograph in colors, as presently we shall.

We found a tiny stream of water, ten feet down between banks of snow, and in the water, green in the midst of all the whiteness, flourished a bank of tender water plants. It is an odd land, this Park country, with its summer in winter. There is no other like it on the earth, and it should be kept forever as it is.

### A Snow-Shoeing Accident.

There is no habitation at the Upper Basin except the lunch station of the Park Association, a small building which is closed at the end of the season. We intended to pass the night here, and had brought along enough provisions to last us for that time. It was a little after noon when we got to this silent and as we supposed deserted building. Larsen was in advance, and as he opened the door he heard voices within. Knowing that no keeper was ever left here, and not knowing of any other party being so far up in the Park, he naturally suspected poachers, and went on in with a heart full of hope and a handful of revolver, expecting to make an important arrest. We found the occupants of the little building to be Sergt. Van Buskirk and two men, Brown and Kuhr, the detail of the Shoshone patrol station, the southernmost of the military outposts which patrol the Park, and one located beyond some of the wildest and roughest country, that near the Teton range. These men were on their way to the Post, but they looked in bad shape to finish the journey. They had just gotten in to the building, and it appeared doubtful whether they would ever all get out. They were all more or less snow-blind, and Brown had an ankle so badly sprained that he was really a pitiful object. His foot and leg were horribly swollen, and he was suffering acute pain. The others were in better shape, but none too good, for they had all had a sad time of it. They were out there three days from Shoshone station, and had spent two nights without blankets, huddling over a fire. Brown had sprained his ankle in a bad fall in running a hill, and the little party had really been in serious trouble. The others kept with Brown till the provisions ran out, and then at the last camp, eight or ten miles back, it became necessary for one or both to go ahead and leave Brown on the trail till food could be brought back to him. Brown did not like the idea of being left, and so summoned up courage enough to make the last stage of the journey in. As there was no possibility of his receiving care at the place where he now was, he had to face the thought of a still further journey on the following day, to the Firehole station, nine miles more of absolute misery.

### Public Ignorance of the Park Supervision.

Such are some of the incidents of the winter patrol of the Park. It is easy to sit a home and say how it ought to be done. The actual fact is that it is wonderfully well done, with a commanding officer whose equal for the task could perhaps not be found, and by men whose courage and fortitude could not be duplicated if asked of any other class. No one knows of this. No one knows anything about the Army. No one knows how the Park is watched either in summer or in winter, at what cost of privation, of hardship, of simple courage, at what expenditure of care, of vigilance, of energy and thoughtfulness. It is easy to sit at home and criticise this, but I hope that if any such self-appointed critic may happen to read something of this, he will in simple justice to himself take counsel of his ignorance hereafter and criticise no more that of which he knows so little. I have seen nowhere except in FOREST AND STREAM any fair statement of the facts, and I do not for a moment pretend to be able to set forth the facts in such way as will show the difficulties of the service asked. Perhaps the story of Burgess, of Brown, of poor Matthews, may give some idea of what one winter may bring of misfortunes to the men in the humbler ranks of the service—misfortunes felt keenly enough by those higher in authority. For Brown, it will serve to say that he managed to make the journey to the Firehole Station the next day, and that ended the trip for him. He never got any further all the winter, and was forced to wait until the snow was gone before he could travel the remaining forty miles to the Post. At the Fountain Van Buskirk got the mail for his detail. They had not had any letters since October and it now was March.

### Could Wax their Skis.

We now numbered six men at the Upper Basin, but we managed to get along very comfortably, finding an excellent place to cook coffee and wax *skis* on the big range in the abandoned kitchen. The fire we built in the front rooms started a number of leaks in the roof, which was badly strained by the great mass of snow resting on it.

It is not within the actual province of these articles to attempt description of the scenic wonders of the Park, for space alone would forbid it, but none the less Billy and I enjoyed thoroughly our unique privilege of seeing the greatest geyser basin of the world in the depth of winter. Thousands have stopped where we did and nave seen Old Faithful, the Lion and Lioness, the Giant and Giantess, the Castle, the Bee Hive, the dozens of others of notable geysers of this great group. Of all these the world already knows or should know, and all who have not seen them should do so. I am a bit ashamed of Americans who go to Europe before they go to the Yellowstone Park. Singularly enough, in Europe the Park has a more distinguished reputation than it has here, and a very large per cent. of the travelers who visit it are foreigners.

### Obliging Geysers.

When the geysers knew the FOREST AND STREAM party was in the valley they all put on their Sunday clothes and did their best to entertain us. Old Faithful, the Giantess, the Lioness, the Castle, and a lot of lesser lights, played long and well for our inspection and we gave them generous applause. The camera came into use once more, and we spent the afternoon very busily.

### The "Forest and Stream" Luck Held.

On the following morning we were all astir early, as we knew the shoeing would be better early in the day. Van Buskirk's party led ours by some hours. Billy went next, as he was anxious to get photographs of some Clark's crows, for which he had put out bait on a shed at the Fountain Hotel. I kept Larsen and stayed behind, hoping for a clear morning by which to get better opportunity to make pictures of the Geyser Valley. The FOREST AND STREAM luck held, and I was more than rewarded for the wait. I saw the Geyser Valley at sunrise of the clear winter morning. Ah! but that was a glorious sight, a strange and glorious sight! Never in my life can I hope to see the like again, for I will hardly take the winter trip again. What good fortune, then, that I am able to show my friends a portion at least of this rare spectacle. The FOREST AND STREAM luck held, and the best photographs I made in the Park I made right here. Remembering the expert advice quoted earlier, I went down to the lower end of the valley, so that when I looked back over the view I was facing the sun, which was just rising above the wooded mountain rim. The air was radiantly clear, and the snow was sparkling and dazzling in contrast to the somber black of the surrounding pines. All over the valley rose columns and sheets and veils of white steam, sharp and distinct in the brilliant light which shone through them from the east. I made my pictures with the camera turned squarely toward the sun, and I caught geyser after geyser, as sharp and keen as though they had been frozen, to say nothing of many beautiful cloud effects. I even got one picture which shows geysers in action and also shows the full disk of the sun, clean cut and round, on the unfogged plate. This singular photograph seems to me one of the most valuable of the lot, and I look on it as quite a triumph for the Eastman film, a roll of which I was using out of Billy's Smithsonian Institution supplies, having discarded the less successful film made by another firm. This free, unsolicited praise I can easily give as I look over the results of that fortunate morning's work.

After I had concluded my picture-making, Larsen and I pulled out for the Fountain. We overtook Van Buskirk's party still two or three miles out. Larsen went in with them, while I left the trail and went out alone to secure photographs of the Peat Fountain and Black Warrior Geyser, which two solitaries are at some distance from the main.

### It Looked Like Night Traveling.

We were having a delightful time at the geyser basins, and I could have enjoyed a month of study there, but we had to shorten our stay and prepare for the completion of our journey. We lightened our packs here still further, discarding every article not positively necessary. Our needful laundry work we did at one of the hot springs just at the foot of the hill. It was a beautiful washtub, about 15ft. across, but the water was too hot to bear one's hands in. While we washed one handkerchief in this boiling fluid, its predecessor in the process would be frozen stiff on the snow near by.

On account of the bad shoeing we had been having, we determined to travel at night, making our start for the journey not later than 1 o'clock in the morning. It is rather odd, snowshoeing at night in the mountains, and about this I will try to tell something in the following article.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

## Natural History.

### SIZE OF THE BEAR.

*Editor Forest and Stream:*

I have read in numerous periodicals of bear hunts where the size of the bear, especially of the grizzly, was greatly exaggerated; also the ferociousness of bruin. Whenever the hunters run on the bear it is just eager for a fight, and they have to shoot him in the head and heart a dozen times or so before he dies.

Any animal will fight when cornered. Just so with the bear. But give him an opportunity to get away and he takes it. That is one great trouble in hunting bear—they are too anxious to get away; but if wounded, or sometimes if you run on one when it is sleeping, you are liable to get yourself into a scuffle.

I have hunted and trapped for years in the Rocky Mountains and Coast Ranges, the home of the grizzly, just for the money that I made by it, and in all my experience I have never killed nor even seen a bear that I thought would weigh half as much as some I have read about, and I have never known any one who ever saw a bear weighed that tipped the scales at 1,500lbs.

Nine out of every ten bears that are reported as weighing all the way from 1,000lbs. up to 2,300lbs., were killed many miles from a pair of scales.

A naturalist may take a bone and tell what kind of an animal it was and tell about how large it was and what it weighs nearer than many people suppose; now not every hunter is a naturalist; but when they kill a bear they will say it weighs just so much, and it generally gets full weight if ever so small a bear.

The largest bear I ever killed, or rather helped to kill, was when my partner and I were hunting and trapping on the Yak River, in northwestern Montana, in the winter of 1889. We had had very good luck with beaver, marten and lynx and other land fur. Along toward spring we took a pack of grub and blankets on our backs, and went up a creek that empties in the Yak. We intended to hunt in that locality for bear; and as we always take the easiest way to hunt, we kill an elk, deer, or any kind of game we run across for bait, then wait for the bear to come. We had lots of bait up that creek, and killed some more on another creek. Then our grub was about out, and we had to go back and pack up enough to last us through the hunting. When we got through packing our grub, we began to see where there had been a bear taking the bait. A warm Chinook wind at that time did the work, for we were killing one now and then; we had traps and guns set for bear, also two good dogs apiece, so we were kept hustling taking care of the hides. I had not been up to the furthest bait for several days; when I had time to go, D. said that he would keep my company, as he wanted to raise a cache of traps he had made in the fall when trapping for beaver. We had got almost up to the bait when I saw a bear track; it was a whale. I told D. that most likely the old boy was handy around the bait, for the tracks were fresh. When we came in sight of the bait, the bear had either heard or smelt us, for we saw that he had been eating on the bait. We put the dogs on the track and followed after them as fast as we could travel, over wind-falls and through underbrush, with snowshoes. We have snowshoeing way into the spring in the mountains. We had not gone more than half a mile, when I heard one of the dogs howl. Then I knew that the bear was our meat. We went down to where the dogs were, and there was a bear that was the grandpa of all the bear either of us had ever seen. It was a bald-face grizzly. He was fighting the dogs. He would run after one, when one of the others would bite him on his heels. Is was laughable to see him. He did not know what kind of a jack-pot he was in. Finally he thought it was getting too warm for his rear end, so he sat up on his haunches. That was the opportunity we were waiting for. We both "turned loose" with our .40-90 Sharps, and the bear tumbled all in a heap. We skinned him and found where one of the bullets had broken his neck, and the other his shoulder.

I had never seen such an animal before for size. I asked D. what it would weigh. That was the first bear I ever wanted to weigh. D. said he had no idea, but we could try and pull him; we could just move him; he was lying on snow that was pretty solid. We had a stick through his gambrels, so we had a good pull at him. Both of us were over 6ft. tall and weighed over 200lbs., so we were not very weak. We talked about the weight of the bear, and we thought he would probably weigh 800lbs. His hide when stretched measured 10ft. 3in. from tip of nose to the tail, and was 8ft. 9in. wide. When we went down in the spring we showed the hide around, and old hunters said that it was the largest bear hide they had ever seen.

We killed 16 bears that spring, but none of them was as large, by one-third, as the big one. I do not believe that the big one would weigh at the very most 900lbs., and he was very fat. I think he had not been out very long, as it was in April when he was killed.

Now, my notion is that all these bears that weigh from 1,500lbs. up have been killed around a camp-fire. I would like to hear from any one who ever saw a bear weighed that tipped the scales at 1,500lbs.

A person who had never seen a bear running wild would say on seeing his first that it was the biggest thing ever wrapped up in hide. The first bear I ever saw looked as big as a mountain, but after I had killed him he shrunk down to a small black one. I could pack him all around, he was so small.

A.

### The Chance of a Lifetime.

KINEO, Me., July 7.—*Editor Forest and Stream:* I have just returned from the headwaters of the Penobscot, where I fished for four seasons. I do not intend to tell any fish stories; but simply to call attention to what I have concluded from personal observation is a monumental blunder on the part of illustrators and especially of taxidermists in the position given to the head of the moose. Last year and this year I saw seven moose standing quietly in the open and I took especial pains in each instance to note the position of the head. Instead of thrusting it forward as is invariably shown, neither of these moose held its head in any such position. Five of the seven were bulls, one of these a patriarch. All of their heads were erect; not so erect as a deer's, but far from the horizontal position usually shown. After the moose gets in motion he does thrust his head forward in the manner and attitude shown; but he does not do so when standing. The same may be said of the caribou. It is manifestly absurd to mount the head of any animal in any other position than that of rest, and taxidermists would do well to take due notice of the fact and govern themselves accordingly.

Last year while fishing at the outlet of a considerable stream where it emptied into a lake, my guide discovered a large moose browsing at the head of the lake a mile away. Rapidly reeling in my line, we started for the spot for a nearer view of his majesty. The wind was in our favor, the sun behind us, and the moose did not see us until we were about 100ft. from him. He squared around toward us standing out a few feet in the shallow water, with not even a bush beside or even in front of him. The impetus previously given carried the canoe slowly toward him until we were not more than 20ft. distant. I was in the bow of the canoe and if I had not known that there was really no danger of an attack on his part the situation would have been unpleasant, as we had nothing but a paddle and a 5oz. bamboo rod for protection. His eyes (for it was a fine bull moose with horns about half grown), fairly glittered; and he raised the hair on his back precisely as a dog does when about to charge a foe. My camera was in camp about 8 miles away owing to the fact that four of those miles were over a rather hard carry and we had no unnecessary impedimenta that day. Well, finally the moose concluded he had seen enough of us if we hadn't of him, and so he slowly lifted one hind leg and the other legs in succession, backing a few feet, then slowly turned toward the shore on one side, walked a few steps, trotted at an increasing rate and soon his ponderous body was crashing through a prostrate treetop like a locomotive. During all this time before he began to move he held his head in a graceful attitude. He was plump and his new coat shone as if he had been carefully groomed.

VINDEX.

### An Albino Martin.

NOTICING a statement in one of our papers that a white martin was nesting in the yard belonging to Louis Molter, baker, on Third avenue, Huntington, W. Va., I went around to ascertain the fact. I did not see the bird, but the lady in charge of the store said that the bird was a real martin and perfectly white. I could have seen it if I had had patience or time to wait for its appearance. I know myself of a half albino robin that stayed around my brother's house in Highland, N. Y. N. D. ELTING.

### The Trick of a Grouse Mother.

BOSTON, July 7.—In the woods about Winchester last Sunday I was picking berries, when I heard a squealing or crying that sounded like a puppy. Proceeding to investigate the cause I was startled by seeing a grouse flutter away as though her wing was broken. My first thought was to capture her and try and heal her broken wing. But the way she hobbled over stumps and rocks, up hill and down, plainly indicated that she was in the race to stay.

After sprinting about 50yds. after the wounded bird, with perspiration pouring down my face, she surprised me by sailing away over the treetops. Then I remembered all the stories I had read in my school days about the artful bird, and her clever tricks to entice one from the vicinity of her nest.

When I came back in a hour's time she went through the same performance, but I refrained from filling my part of the bill. I hunted around among the rocks and succeeded in capturing a tiny baby grouse about 2in. in length. The little fellow's cries soon brought the mother to the scene, but she kept at a safe distance from us. After admiring him a while I put him on the ground, when he was soon snugly hid beneath a big brown leaf.

The timidity of the grouse is much stronger than the parental love. Not so with our insectiverous birds, though. Coming upon the nest of a wood thrush recently I found young ones in it. The female sat so close that I stroked her feathers once or twice before she got off the young ones. Then both birds proceeded to drive me from the vicinity. They would charge at my head in a very vicious manner, and made a gallant attack in defense of their young. JAY PEE.

### Trout and Water-Snake.

DANVERS, Mass.—I noticed the experience of Mr. E. M. Brown with a trout-eating snake. I think the water-snake one of the worst enemies of the brook trout. While fishing a brook I came to a large dug-out hole near an old bridge where cattle drink. Looking into the water and examining the bottom covered with small stones, I saw a half-pound trout sunning himself. He saw me at the same time and consequently would not take my hook. A large water-snake suddenly made his appearance from under a stone, seized the fish by the throat and carried it four feet on to the bank, so with the assistance of air to kill it. I did not consider to watch the proceeding, as I should have done, but attacked the snake, which escaped to the water. The fish was not dangerously bitten, but was well scratched up where he was seized. I returned him to the water alive. J. W. B.

## Game Bag and Gun.

### MAINE DEER, MOOSE AND CARIBOU.

LOWELL, Me., July 10.—*Editor Forest and Stream:* I write to give your readers who are not already posted about the game in Maine, some idea of the amount of big game there is here. I traveled last winter from the southeastern coast to the Aroostook waters. There was little poaching excepting deer killing by the settlers. My travel was mostly among the lumber camps. Things among the lumber camps have greatly changed within the past five or six years, so that little poaching is done by them. I found no deer nor moose killed by them. I found where a man was chasing a moose; I followed him and got him and his moose, and had him fined $100 and costs. He appealed, but I have evidence that will hold him. He was a young man without any family and killed the moose just for the sport of it.

Deer never were more plenty in Maine than they are now. Anywhere from the Canada line to the east and southeastern coast they are plenty. The same section is quite well stocked with moose, but from the east branch of the Penobscot River to the eastern coast they are not plenty, though there are scattering ones all the way through. Last October I called for moose on one of our lakes one still night to the north of Katahdin Mountain and got four answers in four different directions. I was then with a party of sportsmen. My man got his big bull moose and a big bull caribou. We killed one deer and passed by them several times in easy range but let them alone, as we had no use for them.

Caribou I think are leaving for the north, as they are not so plenty as usual and not many have been killed. The further I go north the more signs I see of them.

I found in my last winter's travels through my old hunting grounds in the Aroostook that many club houses and camps have been built, for fishing and hunting purposes, and not many of them are occupied during the winter.

I have leased my camps at Nicatowis Lake for this season, so that I can go north for moose and other game with parties; and as I have more or less calls every year into our northern hunting grounds, I shall sell out my place at Nicatowis when I can find a good party to take it.

The Bangor & Aroostook Railroad opens up quite a country for sportsmen. The deer are very plenty about the lower lakes on the West Branch of the Penobscot River, and lots of sportsmen will probably visit them this fall; and I shall consider it dangerous for a man to travel in the woods, as there will be so many careless shooters there, and especially when the flask is taken along, as the contents often makes every moving thing look like a deer. At those lakes one can almost step off from the train into a boat or canoe. This will be quite a resort for winter fishing, as there are good trout lakes and streams scattered all through the country back from the main lakes.

A great deal of fault is being found with the present system of enforcing our fish and game laws in our eastern sections. The sportsmen are staying at home or going elsewhere, and many camps are closed in consequence. When in these hard times guides and parties who have put their last dollar into camps for the purpose of accommodating and entertaining sportsmen, have to close them on account of the illegal practices of some of the wardens, this is a matter that should be looked into and straightened out. We have too much law, too many game commissioners and too smart wardens. The appropriations given us by the State will not support them all, and they resort to illegal and unprincipled methods to get money. They will induce boys and poor men to break the law for the express purpose of obtaining money from them.

I have letters from reliable men stating that certain wardens have offered them sums of money or a portion of the fines if they would go to my camps and induce or hire me to violate the game laws; then the warden would arrest us both; and then let the man go free that hired me. Last year I paid wardens French and Carliss $63 for two deer's feet and a hide found on my land or premises at Nicatowis that I knew nothing about nor who carried them there. I took a receipt for the money and I shall try and find out if such transactions are legal. They were not satisfied with this, but told lots of false statements to newspaper reporters; and then they told some of their supposed friends that they were going back to the lake to kill a deer in September (close time) and take a part of it in the night into my possession, and the next day go there and find it and arrest me for it. But I went away about that time with a party a hundred miles away and they did not try their scheme. If we have any law for such transactions, something should be done to have it enforced, as I believe it is of more importance to protect our citizens and sportsmen than it is to protect our game, as by doing so we protect both, for such men are an injury to game protection, and the sooner they are looked after the better.

I believe our Fish and Game Commissioners are men that wish to do right, but there is trouble somewhere and it is believed to be with a party connected with them who seems to be running the business. J. DARLING.

### GAME PROTECTION IN 1874.

AS FOREST AND STREAM was started nearly a generation ago in the interest of game protection, it is interesting to review the efforts in that direction during the past twenty years and observe what has been accomplished. To summarize:

The year 1874 was the phenomenal year for protective club organization. In that year there was an all-pervading interest in game and its preservation, which amounted to enthusiasm, and the movement reached its climax. The necessity for special legislation which would check the prodigal and wanton waste of such of our fauna as were mainly pursued for food and sport impressed itself so universally that suggestion became conviction. In every State almost so-called sportsmen's

A BROOD OF CANADA GEESE.

Bred in confinement by Dr. M. M. Benschoter, Ohio.

clubs were promptly organized for the declared purpose of protecting the game and fish, and promoting propagation. It was like the old-time rally for the flag. The International Association and the National Game and Fish Protective Association were both foremost among the rest, and the most influential of all, because they embraced a moiety of available, intelligent information on these special subjects or objects. The powerful Illinois State Sportsmen's Association was also formed in 1874 and similar combinations affected in other progressive States. Even the Pacific Coast was conspicuous in the general movement. The Oregon Legislature passed an act making it unlawful "to kill or offer for sale any deer, moose, or elk during the months of February, March, April, May and June," and making it unlawful "to take or kill at any time elk or deer for the purpose of obtaining their horns and skins." This was a tight cinch on the skin hunters within its jurisdiction. In Congress Mr. Fort, of Illinois, introduced most opportunely a bill to check the destruction of our buffalo, which, if it had been passed, would have prevented their subsequent almost total extinction. The desperate Indian question of the day, however, made it expedient to exterminate the buffalo, so that the motion did not prevail. The American Fishcultural Association was an efficient and industrious factor in this direction, too, and went so far as to draft a code of co-operative laws upon which all States could systematically unite. This code was drawn on scientific principles, as primarily suggested by the International Association, to accord with the breeding seasons and habits of the several varieties of game specified and included within the provisions of the act.

There is no doubt that the impetus given to the subject of game protection in 1874 was most healthful and far-reaching in its effects, and, although protective measures such as were suggested were not adopted immediately, nor have yet been *en bloc*, they have nevertheless animated all subsequent action in behalf of the objects for which they were formulated, so that we have to thank the conservators of 1874 in great part for the quantum of sport which we enjoy to-day. Very much has been learned in the interval of twenty years, which enables our legislators to act intelligently (if they only would), so that, in spite of increasing population and spread of settlement, the proportion of game to population has not been reduced, to say the least. Our country is likely to bear as great a strain as those countries of Europe have done where there are even now mountain fastnesses and wild moors which afford, perhaps, as good shooting as our own ranges, while the fishing streams are even better cared for than ours.

CHARLES HALLOCK.

### A SHOT SPREADER FOR CHOKEBORES.

*Editor Forest and Stream:*

It is now pretty well admitted that the chokebore gun is superior to the cylindrical or open bore barrel for all-around shooting; but since there is nothing perfect under the sun, so the chokebore gun, too, has its demerits. It is not the best suited weapon for shooting game in covert or at close quarters. But a great number of shooters are not in a position to own two guns, one chokebore, the other with open bore barrels, and some sportsmen again have become so much accustomed and attached to that fowling-piece which they use principally at the trap to their chokebore gun, that they prefer to employ this also in preference to one shooting less close for the class of field shooting previously referred to, even then, when they are acquainted with the fact that in using such a gun at small game and at distances from 15 to 25yds. they are liable to miss many a bird clean, or if they kill them, to find them rendered unfit for the kitchen.

This sad experience would very likely not have occurred if the patterns had been of larger dimensions, if the shot could have covered a larger area of space. To achieve this last named result with a chokebore gun, sportsmen have all along endeavored to find suitable means for causing the chokebore barrel to spread the shot at close quarters, but they have found that they were confronted by a rather difficult task. While it is comparatively easy to produce a larger pattern, it is quite difficult to accomplish this with the same penetration as produced by the regularly loaded shell. Various methods for loading the shot so as to produce an enlarged pattern are known to the sportsmen and have been employed by them, but all of these methods have their faults; in some cases the patterns produced were extremely irregular, and in other instances they proved very tedious in execution.

Messrs. Winans and Simrock, of Newark, N. J., have recently introduced a new patented shot spreader, which requires no skill in its application, and which can be used in any length of a 12-bore shell with apparently the same effect, and although made at the present only of one size, for the 12-bore gun, can, as the inventors claim, also be employed in 10-bore shells. The American Testing Institution has been asked to subject these shot spreaders to a trial, and has done so. The result of this trial is set forth in the annexed table which will enable the reader to draw his own conclusion in regard to the real merits and usefulness of the spreader.

The figure 1 in the table stands for the regularly loaded shell, figure 2 for the shell provided with the spreader; the letter A stands for the diameter of the pattern in inches in the 30in. circle, letter B for the number of pellets counted within the skeleton of a pigeon placed within the center of the target.

Load, 3drs. E. C. powder; 1⅛oz. shot No. 8, 476 pellets; Smokeless shell:

| | 1. A. | B. | 2. A. | B. |
|---|---|---|---|---|
| 10yds. | 4in. | 270 pellets. | 10in. | 50 pellets. |
| 15yds. | 6in. | 180 " | 28in. | 20 " |
| 20yds. | 12in. | 60 " | 26in. | 18 " |

As will be noticed, the spreader proves most beneficial at distances from 15 to 25yds. It hardly scatters the shot sufficiently at such close quarters as 10yds. and at 30yds. the chokebore barrel with the regular load will begin to spread the shot enough for all practical purposes. But the results as established show that the spreader can be used to great advantage at all distances between 15 and 25yds., and that here it appears to do all what reasonably may be expected of such a convenient and inexpensive contrivance. ARMIN TENNER.

*The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

## NETTING WILD PIGEONS.

[*Concluded from page 28.*]

AFTER the young birds are hatched and while the parents are making the curd on which they feed them while growing, the old birds cease to be easily attracted by mere food in a state of nature. Often in the early summer nesting the beech nuts have sprouted, so as not to be of much service to them. On this account, where birds form a nesting where their maintenance depends on the beech nut crop, netters long ago came to the conclusion that they must develop some scheme for keeping up their average catch during the last two weeks of a nesting on beech mast. Fifteen years ago, in a nesting near Sheffield, Pa., it was remarked by many of us interested, that after the young were hatched the old birds seemed to quit their regular habit of feeding and living, and leaving everything we thought would hold them, would pull right away west over toward the Allegheny River, following the numerous creeks and runs to it. We were at our wits' end. The birds passed over our nice arrangements for their reception with other business on hand, and we neither could hail not halt them. We concluded to send some one of our friends down in that direction and try to discover where they were. A deputation of two were sent up to Corry, Pa., and thence we ran down the river slowly with a flatboat. For a long time we saw nothing; but finally we met some lower river men coming up who said that they had seen immense flocks of pigeons coming down to Tionesta Creek, where there were a number of worked-out oil and salt wells. We were not long in finding the attraction. The whole valley there was alive with pigeons. All the slopes of the hills were saturated with a brackish mineral water which caused the moss to grow as thick as turf, and this was the key to the secret. In a few moments we had made up our minds that we possessed a secret unknown to others of our craft.

My companion proposed staying right there, but when I showed him the wonderful difference between trying to get the birds to feed on our one little bed or two, when the whole country was full of the same stuff, and giving them some of it near home where none existed. I did not have to wink to let him know that I was developing a plan to halt them near their nesting. We returned to our fellow catchers that evening and told them all we had found out and answered all questions, but offered no advice. In a twinkling their nets were packed, and they were ready for the first train down there. It was over twenty miles in an air line from the nesting which extended from Wilcox to Smethport.

I went up to the top of the Alleghenies at Kane, Pa., taking my companion of the search with me. We chose a secluded place in the thickest timber and made preparation to feed the birds their favorite morsels. Five barrels of salt were brought from the station and quietly we worked and waited. On the second day's hunt for a location I had found a small deer lick near Coal Creek, and noticed a few pigeons hanging round it. Here was our opportunity. That evening I drew a plan and we talked it over. It seemed too good to be true, but we thought we could give them a mineral spring or two if nothing else would suit them. We sent for 10lbs. of ground sulphur and a pint of oil of anise. Our operations were begun by clearing out the alder brush and trimming small trees, until we had a place 60×100ft., which would give us the desired opportunity. The muck was 6ft. deep, so we put in a good floor of poles and brush to prevent a trip to China. We then cut and notched enough young trees to lay the walls of a house 24×28ft. in size and well chinked, open at the top and 4ft. high. We also built another pen the same size at the end of this, away from the bough house, and made a sliding door between the two, so that after we had struck on the bait pen we could enter and drive the birds through the large door into the keeping pen, then close the door for a chance to crate them or while killing them. We worked night and day and finally were ready for the bed which we constructed in the following manner: With a spade the black muck was turned up 8in. deep. When the water had soaked out of it poles were laid lengthwise and then salt and sulphur were sown together well and the whole was carefully raked down level. After repairing our nets and setting everything in order, we began operations by putting a dozen fine slick male birds into the bait pen and the same number of females into the other pen, so that their calling would attract any birds which might be in the neighborhood. In two days we had plenty of company. The birds were feeding the squabs and were full of curd, so we wanted to save all alive that we could and crate them. We took a good supply of food and water to the bough house and said adieu to the rest of the world. From the time we went back until we finally sprung the nets, some pigeons were always there.

On Monday morning we took a final test of everything and prepared to strike. The location and the day were all that we could wish and the woods were alive with the blue fellows. The birds seemed all to be perfectly mad to get at the prepared mud, and you could hear the "chick" they made in their efforts to swallow too large morsels. Half the hens we cropped had nothing in their crops but mud, water and curd. I had caught birds on snow, straw and leaves and at watering places, but I had this to learn. It beat the old mud bed where the net, birds and all went out of sight, and the birds were ruined for shipment and must be picked. These birds were clear and bright, and this way of catching them has since been adopted by all first-class netters, whether for trap or market.

Much has been said and done in the way of criticism of the art of netting birds for trap and market, and it is the conviction of the ordinary sportsman that to the net belongs the credit of the pigeon's extinction. Much more might be said on the same side, but this article may possibly explain another way in which their numbers have not been increased. While in many or all of the States where the pigeons used to nest, laws originated by both netters and hunters were passed prohibiting the use of gun or net within a mile of the place of nesting, yet there are many States not so protected where the gun reigns supreme. Now, no provision is made in any State for the roosting birds, and thereby hangs a tale. It may show you one of the causes of the decrease in numbers and the increased shyness in what pigeons we may now find in our land.

Seven years ago this month I was in the city of Cleveland, Ohio, anxiously waiting for news of a body of birds, which we had left on the Iron Mountain Railroad near Piedmont, Mo., where they had nested in January and February. When the birds left there a portion of them were ready to nest, but not a large enough number to pay a netter to follow them. The main body were through nesting for a while, having raised two broods in the winter and with the young birds had disappeared. After getting reports from the different cities that dead birds are sent to, and hearing from our fellow netters that they were in the same boat as ourselves and could get no news, I concluded to run over to Chicago. I was taking a trip through South Water street, when my heart was gladdened by the sight of a barrel containing wild pigeons. The birds I discovered to be shot birds and all apparently shot through the body. As a bird shot on the flight, will twice out of three times show an injury to the wing, I knew at once that these birds were shot sitting—probably at roost. The birds came from Parma, Ill. I made an arrangement with the broker, I was to go south and buy, or catch the birds and pack and ship all the birds sent from that section. He was to receive and sell them. Reaching the pretty little burgh I was soon busily engaged in dickering for a shop, barrels and ice. The landlord told me the farmers were shooting the birds at night in a large roosting they had formed out south of Windfield. My arrangements were perfected. I was to buy of no one except the merchants, and they were to sell to no one but me. We set a price and I was to take all they got.

I soon heard that Squire Allen, an old friend, was in town with a load of dead birds, and having visited him on a netting trip years before, it did not take long to arrange for a trip out to his home fifteen miles east. At supper time we had reached the Squire's house but had seen few birds. However, he promised me plenty of birds, only insisting that they must be shot, not caught. I was introduced to about a dozen stalwart young Suckers, who were variously armed and ready for the sport. Of course as a netter I tried to bribe them to stop shooting, and as I had some extra nets would let them catch on shares. They were out for fun and glory, and I had to forego netting and go with them. I was very glad I did so. The trip showed me a new phase in the bird's nature, which, though I had been a dozen years a netter and knew my business, I had never witnessed before. The birds fed all over, going fifty miles for acorns and corn, and only returning late in the evening to roost. We left the house at 8 o'clock and took a trail out to an "oak opening country" the Squire called it. The trees ranged from 8 to 16ft. high and were black and scrub oaks, and stood as thick as they could grow. As is generally the case with this sort of timber, they were covered with the dry leaves of the previous year and afforded good shelter to the birds in the cold nights. I found that it was a regularly organized body, who were out for meat. Each man was given a place in line and the force comprised eight men armed and six youths with grain sacks, which were intended to hold the dead.

We could hear the flocks of birds coming in all the time and settling down among their comrades, who were already at roost, and their incessant chattering showed their great numbers. The night was still young and dark as Erebus. In about a half-hour a volley of guns sounded a mile or two away on our left, and the leader saying, "Now, boys, come ahead; we'll get our share before them fellers take them all," we stole slowly along in line ten feet apart. No birds flushed, although we could hear their swish out of one shrub into another. We soon reached a small thicket from which so loud a noise came that a halt was called and "Aim level, one, two, thr e, fire," was quietly spoken by the leader. The deafening sound was quickly followed by the breaking out of a large body of birds which left the thicket, only to pitch down again on the ground somewhere else in the roosting. The sound of flapping wings and struggling birds in the brush was the signal to stack the guns against a tree, and with one or two lanterns and the sacks our search was commenced. "Don't touch the cold birds," I heard from my neighbor, "the hogs will get them to-morrow." We picked up all the warm birds, finding many cripples and killing them, and the boys counted sixty-nine birds out of that bunch brought to bag. We could hear the flocks coming in over our heads all the time we were seeking the dead. As soon as we were through, one sack of birds being full, was strung up in a tree out of reach of the pigs, and marking the spot we were soon on our way to another place.

All over the country we could hear a cannonade and flocks were continually settling down, ignoring the trees and tumbling into a bunch of grass when and where they could after being once disturbed. Of course, this shooting did more to frighten and drive away the birds than all the netting in the world. Noise is one thing pigeons can make if they like, but they do not seem to be suited unless everything around their roosting place is quiet. A succession of surprises such as the one described was the order of the night until midnight, when we met another party of neighbors, who had tramped through from the other side of the roost and who had bagged a large number of birds. Our sacks were heavy now and after telling the other men where to bring their birds next day we opened our lunch, and refreshed by a pipe were ready for the back track. F. E. S.

### A Combination Arm.

*Editor Forest and Stream:*

How many of your readers have gone on shooting trips into the mountains when it was inconvenient to take more than one gun, and for that reason have had to sacrifice either small or large game? I should like to give a description of my all-round gun, which after a very hard season's use has stood the test most admirably. It is a combination of the English ball and shotgun and the American three-barrel gun; and so far as I am aware it is the first gun of the kind made in America. It was built by D. Kirkwood, of Boston. The under barrel takes the .32-40 Winchester cartridge and the upper pair of 12-bore barrels are rifled for about 2½in. at the muzzle, and shoot shot and conical bullets. The gun is well balanced, weighs 7¾lbs. and has 28in. barrels. I have found the shot pattern perfectly satisfactory for all ordinary grouse and duck shooting. And the shooting with ball is accurate at 200yds. I have often shot series of bullets into an 8in. bullseye at 150yds., using alternate barrels, and have made groups of ten shots in a 12in. circle at 200yds., the majority being in an 8in. bullseye. There are two open leaf sights on the barrel for 50 and 100yds., which lie flush with the rib when not in use, and a Lyman rear sight, which is sunk in the tang, so as to be out of the way when down. This sight I use for the .32-40, and for the "paradox" barrels when shooting further than 100yds. For deer I have found 3¼ or 3½drs. of powder and a hollow pointed bullet of 530grs. or a solid one of 580grs. to kill cleanly without spoiling more meat than is usual. For elk I found this charge rather light, and I now use 4drs. of C. & H. No. 6 and the 580grs. solid bullet, although I am going to try a 650grs. bullet.

As I have said, it killed well without tearing the animal, I have shot a lot of woodchucks lately to see its effect on them. They were killed clean in every case, whether hit in front or behind, but none were mutilated.

In all the use I have given this gun I have never found that the barrels leaded badly with either shot or ball. It appears to me that there are great possibilities for such an arm. One can vary the size of the rifle or shot barrels to suit any particular ideas or purposes, and it is a satisfaction to feel that you are prepared for anything, from a snipe to a grizzly. W. E. C.

## STOP THE SALE OF GAME.

A PLATFORM PLANK.—*The sale of game should be forbidden at all times.*—FOREST AND STREAM, *Feb. 10.*

*Editor Forest and Stream:*

I am decidedly in favor of stopping the sale of game, yet I do not think that at the present day a bill to this purpose could be successfully carried out.

I am of the opinion that if the game wardens carefully attended to their business and allowed no game which is out of season to be sold in the markets, that this would do greatly toward increasing the game supply of this country.

Another thing which would stop much of the pot-hunting would be a bill forbidding the sale of game preserved on ice. This bill would save a great deal of unnecessary killing of game done by pot-hunters for the purpose of preserving until the season closes. This law would also leave the game sellers in the cities without their favorite excuse to the wardens, namely, that their game has been kept on ice and was not shot out of season.

I do not wish the readers of this article to believe that I think a law forbidding the sale of game would not be a great thing toward the preserving of it; but I do think that it is rather a selfish thing for American sportsmen to keep all people from having game to eat, except those who are favored by having sportsmen friends who send it to them. BANTY.

FLORIDA.—*Editor Forest and Stream:* That Yellowstone expedition was a big thing every way, and the FOREST AND STREAM deserves all the credit it has received. That "Stop the Sale of Game" platform is also a very good thing, and will have its influence, and if once adopted will do more toward the preservation of game than all the present laws on the statute books of all the States together. Now add, stop the sale of plumage; and the birds of plumage will soon again delight the eye of the traveler. W.

SAN LUIS POTOSI, Mexico.—*Editor Forest and Stream:* I am with you solid on the "no sale of game" plank. FOREST AND STREAM hit the spot that time—as it usually does. AZTEC.

DILLINGERSVILLE, Pa.—*Editor Forest and Stream:* I have lived in this part of Pennsylvania for the past 15 years, have always been a great lover of the dog and gun, and have, I believe, taken as much interest in the protection of game in this section as any other sportsman could have done in his own.

When I first moved here from Philadelphia I was able to find ruffed grouse and quail in fair numbers, but yearly I have seen these beautiful game birds passing rapidly from our section. From my own observation, I am convinced that the guns of the sportsmen who visit this part of the country have not caused the game to diminish, neither has the clearing up of the woodland, as protection during hard winters, of good cover and feed there is abundance. The market-hunter is the cause of our scarcity of game. These fellows will follow bevy after bevy for days, when there comes a deep snow, and at a good opportunity will kill all if possible to do so, as they sit huddled together.

The proper way of protecting our game birds is to stop the cause that makes them scarce. All the laws that have been passed will not help, nor the restocking county after county do any good either. This is just what the market-hunter wants. He will not be found in a district where there is no game. I know that the largest portion of game killed in this part of Pennsylvania is shipped by the hucksters and storekeepers. Now, then, suppose there was a law passed compelling all hucksters and storekeepers who handle game to pay a yearly license of $100. If the hucksters and game dealers could not make profit enough on the game they handle, is it not natural to suppose they would stop buying game? Then, if the market-hunter, who shoots and sells the game he kills to the huckster or storekeepers, could find no sale for this game, he would seek other employment. L. W. M.

PITTSBURGH, Pa.—Move up and let me on that "plank." You will have to get one of the California giants in order to get room for the crowd who will want to be accommodated. When we get this plank nailed down, and abolish all spring shooting, then we can toss up our hats and yell longer and louder than usual for the FOREST AND STREAM. Long may it flourish and grow, and may it and its army ere long see these two mottoes in execution—"No sale and no spring murder!" W. L. M.

### Quail in Northern New York.

TICONDEROGA, N. Y., July 7.—Last Thursday, just back of my place, I saw a quail. I think it is from the flock put north of Lamber's Point by Mr. Witherbee, of Port Henry. It is the first one ever seen in this part of the country. Fishing at this time is poor. S.

[We hope that any other observations of quail in northern New York may be reported to us. Many are interested in watching the success of stocking that country with the birds.]

DE FUNIAK SPRINGS, Fla., July 7.—There was a visitor here yesterday who created some little talk among the citizens. She is a woman of about 45 years of age, and says she has shot and killed over 100 deer since she has been married. She has also killed numerous other game, such as squirrels, turkey, etc. Her name is Woodham, and she resides in about four miles of De Funiak Springs.—*Jacksonville Times-Union.*

### A Day's Shooting in the Georgia Mountains.

MACON, Georgia.—Wishing to send home to our families a string of game, my shooting partner and I decided that next day we would try for a bag that would be a surprise to those at home, and give them an idea of the good times we are having away off up in the mountains.

Just after day of the morning following we were awakened by the drumming of the pheasant in the laurels above our camp, which was situated at the base of one of those many unnamed mountains of the Blue Ridge. Being unable to sleep longer with this tantalizing noise in our ears, we soon had our negro up making a pot of hot coffee to limber us up before starting out. We were soon out and away. Before we had gone 200yds. from camp, our old dog had up an old cock which we knocked down. The whir of wings and crack of our guns soon woke up the sleepy old mountains and after a circuit of about three miles we returned to camp with five pheasants and a woodcock that our dog had put up in a swampy place we crossed. After breakfast and a little time to get our wind from the early tramp, we were away for the wheat valley for the partridge. Wishing to have a limit to our bag we carried along an old countryman with a big split basket, agreeing to quit as soon as the basket was full. We were soon on the wheat fields at work in earnest. Our dogs, a pointer and an Irish setter, were soon hard at it, and the report of our guns would hardly die away among the echoes of the mountains above us, before the sound would be renewed again among the rocks. The sport lasted uninterrupted until noon, when our countryman announced that his basket could hold no more. Keeping to our resolve, hard as it was to do so, we left the birds scattered all around us in the field and made our way back to camp.

That afternoon on the road to the station could be seen a long, lank mountaineer with a string of five pheasants, one woodcock and seventy-three partridges, the result of our morning's work, on its way to our homes.

JOHNNIE.

### An Idaho Game Resort.

MR. K. E. HOPF, who was formerly known as a breeder of St. Bernards, has undertaken the hotel business in Idaho; and writes to us in enthusiastic terms of the game and fish attractions of Arangee, where is situated the house advertised by Mr. Hopf in our Sportsmen's Resort columns. Mr. Hopf has prepared a pamphlet for the sportsman tourist which he will send on request.

## Sea and River Fishing.

### WAS IT THE FOOL-KILLER'S CHANCE?

BALTIMORE, July 12.—In company with Mr. Fred Talbott, member of Congress from my district, I left Baltimore June 15 by the Baltimore & Ohio R.R. for a trout-fishing trip in West Virginia. At Washington we were joined by Mr. John D. Alderson, M. C. from the Third District of West Virginia, a man of large proportions physically and with more humor to the pound (he weighs 260) than any other man whom I have ever met. We reached the end of our railroad journey Saturday evening and had good, comfortable entertainment at the hotel. Through the kindness of the general manager of the lumber company in that region we were furnished with saddle horses and a mule to carry our supplies twelve miles over the mountains to the river where we were to fish and expected to capture scores of trout—I will not say "iridescent" and all that sort of thing. I will leave that to brother Starbuck, who can do it so much better. We got over eight miles on Sunday about noon and stopped at a ranch until Monday morning. It may be that our friend Alderson had something to do with our stopping over at this place Sunday. He was fixing up his "fences" for a renomination and of course we deferred to his desires. He was not just precisely after trout. However, we left early Monday morning, and our horses being fresh after a rest on Sunday, we made good time over the worst trail (bridle path, they call it) I have ever seen, until we got into the river valley. Here we left our horses.

Alderson and Talbott elected to fish up to where we expected to camp over night, three miles—West Virginia miles—and I with three others "packed" in over a trail which far surpassed that over which we had ridden. We reached our camp ground at 1 P. M. I went at once into the stream to get some trout for supper and breakfast next morning, as we did not have anything but dry salt pork in the larder. I did fairly well, and had fished nearly a mile when my creel became so heavy that I started back to camp. Before I had waded down the stream half way to camp I met Talbott, who with Alderson had fished up from the place where we left the horses. Talbott hailed me, "What luck, Col?"

"Well, my basket is getting so heavy it hurts my shoulder, and I find great inconvenience in holding it up to ease off the weight, cast my flies and keep my feet on these round boulders. I'm going back to camp. I have enough trout for supper and breakfast to-morrow, and have put back into the stream enough six and seven-inch trout to fill my creel."

"Where did you get them? How far up stream have you been? What flies have you on?" asked Talbott in quick succession.

I answered categorically, "I caught them out of the stream. I have not been above that bend in the river. I have a coachman for stretcher, queen-of-water for first and professor for second dropper."

"Have you changed your flies at any time?"

"No. The coachman is minus a body, and the professor has lost his tail; but the trout don't seem to know that a professor should have a tail and a coachman a body; and so long as the trout were indifferent to the make-up of the flies I did not waste time in removing them. I think they would rise at a piece of red or yellow rag."

Talbott went on up stream, and I waded down to camp. I say waded, for a peculiarity of the stream was that there was not any margin. I was compelled to wade, sometimes waist deep. I made an occasional cast and always got a rise, but I was handicapped with the weight of my creel, and indeed had all the trout I wanted. I was looking more to a secure footing than anything else. Occasionally I would get a good bath, where the stream ran like a mill race, and the boulders were round and treacherous. When I got back to camp I found Alderson propped up against a stump taking it easy. "Hello, Alderson! what is the matter with you?"

"I'm tired. What did you do above there?"

"Well, I have a right heavy basket; and I quit, fearing I would deplete the stream."

"Let me feel the weight of your creel. Oh, you cuss! you have a rock in the bottom of your basket." But he was soon satisfied that there was not a stone in my creel, and then he said: "Well, I give up to you. You can beat me catching trout, but I think I can beat you playing seven-up."

The men who carried our packs had made a camp for us under a large pine tree, built a camp-fire and made our bed out of rhododendron instead of hemlock boughs, and as I was wet to the armpits, without a change of clothing, I did not sleep during the night. The air was cold and I sat up the entire night, while Talbott kept up, with his nephew, a chorus of sonorous snoring. About 2 or 3 o'clock in the morning Alderson, who was much in the same condition with myself, was standing at the fire warming his back. He had been quiet for some minutes, an unusual condition for him, much to my surprise, when he said: "Col, I have been thinking of something."

"Well, I suppose you have been thinking, because you have not been talking. What have you been thinking?"

"Well, I have been thinking that if the 'fool-killer' should come around here just now what an immense funeral there would be right here in the woods."

"Where would he begin, John?"

"Well, he would kill that man Talbott first and then he would—he would go for me. If it had not been for Talbott and me we would not be here."

We packed back to where we had left our horses and rode to the railroad station. We were glad to get on the confines of civilization again and to hear the steam whistle. But we had a good time for about one day's fishing. We went 600 miles by railroad, 24 miles horseback, packed in 8 miles, and caught all the trout four men of our party and six of the natives could eat, and brought some home to our folks. We expect to go next season and will go prepared to have covering in the shape of a tent.

E. S. Y.

### ODD DAYS WITH THE TROUT.

*Editor Forest and Stream:*

How differently the same occupations are carried out by different individuals. Trout killing and trout fishing are apparently one and the same thing, yet there is a world of difference in them.

It was on a beautiful June morning that Freezy and I stood on the banks of Broad Brook, a large, rollicking woodland stream. This trip did not result very favorably as regards the number of trout caught, but the pleasant drive and the general results of the day repaid us in part for the poor luck with the rod. The early morning gave promise of a lovely day, and as we crossed the summit of the last hill a picture long to be remembered burst upon our view. The valley lay spread out before us, a mat of emerald green. Occasional glimpses of the stream were to be had as it wound in and out among the trees and meadows, glistening like a ribbon of silver in the morning sun. In front and to the right rose the hills, forming a dark background, and here and there a farmhouse nestled in the opens.

Broad Brook is formed by two streams called, respectively, the East and West brooks, which both end in an old millpond, which in reality is the source of Broad Brook. Halting at this pond, and driving our team under an old shed by the roadside, we were not encouraged to any great extent, when upon inquiry made to a passing lad we were informed that the place was "fished to death." This statement our subsequent experience proved was the truth. We tramped clear around that pond without a single rise. The only capture made was from a fine patch of strawberries discovered by Freezy.

Leaving the pond we drove down stream to Farmer Guiles, an old friend of my chum. We found no one at home, so taking the laws of hospitality in our own hands we put the horse in the barn, and making things snug and tight started in to try our luck. And the old proverbial luck it proved to be. Shoulder to shoulder we whipped that stream faithfully; and when at noon we gave it up in despair and emptied the creels for inspection, the imposing sight nearly took our breath—five small trout, three for chum, two for the scribe.

Now, while Freezy and I do not measure our happiness by the number of fish we catch, of course we derive a certain pleasure from the fact of possessing a well filled creel; and exhibit the same with pardonable pride. But when out with the rod if we fail to capture fish we always find plenty of enjoyment in the surroundings, the flowers and the varied landscape. This must have been one of those off days with the trout. Certainly they were there, for repeatedly we started them from beneath the bank, great lusty fellows, too. Broad Brook is a large stream; it is a long day's tramp to where it discharges the water into the Quinebaug River; and a little lawful protection would make it one of the finest trout streams in this section.

Selecting a nice shady spot by a bubbling spring, we tackled the lunch and reviewed the not very exciting events of the morning. Finishing the last sandwich, we sought the stream again; but it was of no use; our luck was but a second edition of the forenoon's work, and we left the stream at 3 o'clock with four more medium-sized trout. The only event of the day was when chum struck and hooked a large trout where the stream circles an old rock, and caused a deep hole beneath the bank; but Freezy was a trifle hasty and the trout tore loose and escaped—a noble fish. Chum swore he would weigh 8lbs., but knowing his imagination must have been somewhat heated from the struggle, I counted him out, and reckoned the fish at 2lbs.

The drive home was but a pleasant repetition of the morning; we both felt that we had passed a very enjoyable day in spite of our empty creels, for, once more to use that true saying of a departed devotee of the rod, "It is not all of fishing to fish." It is enough to wander of a lovely June day along the moss-carpeted banks of a pleasant trout stream, now pausing at some swirling eddy or foamy pool to draw forth a spotted victim, or anon stopping to listen to the trill and twitter of the songster of the wood or the garrulous chatter of the squirrels. This is the acme of happiness to the naturalist angler.

E. M. BROWN.

### A DAY WITH THE CHANNEL CAT.

BEATRICE, Nebraska.—A bright sun and light south wind makes visions of the river float through our mind and creates a longing to go fishing. That longing must be satisfied at all hazards; and forthwith the tackle room is visited. Which shall it be—the slender bamboo or the stouter lancewood? The lancewood is decided on, when Ed. comes in; and this is given to him and I take the little bamboo after all. It only weighs 5¼oz., and is rather light to handle bait with, but the lighter the tackle the more good sport the "cattie" will afford. With a good assortment of extra leaders and hooks in our box, we start for a riffle known of yore; and after catching enough frogs for a starter we wade out in the river.

The day is not yet old enough to drive the fish under the tree shades which fleck the laughing, bubbling water. Our back is turned to these; and the frog drifts among the swirls and eddies, which shows a sunken boulder in mid current. The river is peaceful to-day, and drones an indolent song as it hurries along, a silvery flood glinting with a thousand mirrors, which flash back the sunshine or invert the trees and elongate them until their proportions are gigantic. The pliant bamboo acts well to-day and drops the hook with its tempting bait in likely looking nooks; and at last after floating in a dejected way around the circling eddy edge it stops; the line straightens and the rod rainbows under the strain of a 2-pounder. Ha! He's found something about that frog which is vastly different from others he has eaten, and the worst of it is he can't let go of it! This new sensation scares him, and he will get away from that frog at all hazards! Away he goes up stream in frantic haste. The bamboo bows, then the reel sings merrily, and only stops when 75yds. of line are out. Now comes a twisting, whirling play that makes the water boil, then a sharp run across the rapid, now back for a snag pile under the cottonwood roots. The drag swings him back, and he shoots into a deeper place where the water rests a little; and there goes to sulking. Slowly but surely the reel coaxes him back into the rush of water; and he goes up in the air, shakes his head, and falls back with a splash. Now comes a sullen, dogged resistance that is more trying on nerves and tackle than his rush. He goes for bottom and stays there; won't break water under any circumstances; and comes in to net tail first and swimming against the stiffened line vigorously. This is kept up until, thoroughly tired out, he turns, shows the white gleam of belly, and submits to being towed within reach. If you miss him the first time with the net, then look out for another flurry and a short run out again; maybe more than one before you land him.

Talk about a catfish not being game!

As the sun comes higher we hunt the shadowed bank or the rock-girted pier, and strike them here, great blue-black, or golden yellow, fellows, who sometimes jump clear of the water in eager endeavor to snatch the spotted bait. A six-pounder soon keeps Ed busy and my bamboo surprises one here and there as I prospect the well-known feeding grounds.

Almost before we know it the sun puts our shadow north of us and we clamber up on the foot of the island, wet, tired and thoroughly happy, to eat our lunch and tell each other how this or that one came to net, "and if he had got an inch of slack he wouldn't now be in the basket, for the hook had torn a hole you could stick your thumb through. As we eat we watch the patches of shade and sunlight flit over the river's face, and the quiet hum of insect life mingles with the gurgle of the water as it swirls around the old snag, where balanced the turtles which frantically fanned the air and tumbled overboard when we appeared. The kingfisher's graven image tips the overhanging dead limb, waiting for a luckless minnow to rise and wake to life this feathered statue. The little green heron stalks with wise poise of head and step sedate among the tulles of the eddy's edge. A flight of swallows skim the surface and scoop up a drink while on the wing, and the trees flash back their color on all sides, a moving, living picture. For an hour or so we feel drowsy and just "no-account" for anything, so we watch the scene and smoke a peace pipe with nature, while we just lazy round watching the birds feed their hungry babies and the fussy old bumble bee fumble the thistle bloom.

As the day grows old we wake to action, and ere the sun sinks behind the western woods an even dozen shining trophies grace our string, all won in fair fight in the rapid's rushing swirl.

The trout is not more active nor the bass more gamy than these glistening channel catfish of the Western rivers; and to your split-bamboo you must add a fisher's science or the day will be a blank and the angler will return disappointed. I have taken 40lbs. in three hours in this same rapid. I have tossed a fly to trout from the Rockies to the Pacific, fought bass among the lilypads and heard the spoon jingle in the savage headshake of the salmon, and for rod and line fishing I want no gamier strike and fight than the channel cat in rapid water. They will take, in season, minnows, frogs, softshell crayfish, grasshoppers, helgramites, and, in clear water, a fly. Our river (the Big Blue) was on this occasion too roily to afford fly-fishing, but I have taken eighteen fish, from 1 to 9lbs. weight, with a large bass fly, in an afternoon. They bite best on clear days when there is little wind, and love the shadowed eddies which flank the rapids.

Many of them are taken here every season with set lines and by floating down stream with fifteen or twenty jigs tightly corked and buoying a short line with a single hook. A large fish affords an exciting chase when caught this way, and doubles many times before he is finally overhauled with the boat. If any fisherman of FOREST AND STREAM chances through Nebraska, then let him hunt a local fisher and have a go at these game fish among their native rapids, and once he catches the knack of finding them he must enjoy royal sport.

EL COMANCHO.

### A Lake Minnetonka Bass.

MINNEAPOLIS, Minn.—At Lake Minnetonka, Minn., Mr. Farrington, of Minneapolis, recently caught with light tackle, casting between Phelps Island Park and Wild Goose Island, a large-mouthed black bass that weighed full 6lbs. It measurad 21in. in length and 6in. in breadth. The fishing in the lake is excellent this year, and the shores swarm with small fish that give great promise of still better sport in after years.

C. P.

## ANGLING NOTES.

### Planting Lake Trout Fry.

FOR the past three weeks I have been fishing at Sunapee Lake, New Hampshire, where one may catch landlocked salmon with smelt bait, Sunapee saibling or golden trout with minnows and black bass with the fly. One day while fishing for black bass with Fish Commissioner Griffen he said that complaints had been made about the manner of planting lake trout fry in waters of the State, in that the fry were planted in water so deep that the tender fry were killed by pressure of the water. While this is utterly absurd and groundless, he had had a test made by placing a lot of fry in a wire cage and sinking them to a greater depth than the fry were ever planted, that is to 60ft., and after twenty-four hours the cage was raised and the fry found to be uninjured. If Fish Commissioners give heed to all the idle complaints made by people who know nothing about the matter complained of they will be old before their time.

The day that Commissioner Griffen and I were fly-fishing for bass there was a perfect ripple on the water for fly-casting, in fact it was for that reason that we started. We fished the shores and shoals in that "perfect fly-casting breeze" for hours without taking a single bass large enough to kill, and then just at sundown, when the water was perfectly calm and smooth as a mirror, we picked up a few good bass. We had fished some of the best water in the lake and I was casting trout flies with a 5½oz. rod and doing the neatest work I could, and could raise nothing but "T. S.'s" (too small) in the placid water, when we came to some rocks sticking above the water. By casting over and beyond the rocks I was able to take all the decent bass we got that day. Occasionally a rock which was a little below the surface would serve to shield the boats and occupants from the bass behind it, and a long cast would do the business for the fish, and all the time there was danger that the bass would do the business for the flies and leaders on so light a rod. One bass dived down into the rocks and apparently became fast, but by swinging the boat around in a circle be was drawn out to fight his way to the landing net.

It is the general belief here that the bass have not come on to the shores and shoals yet, but I am satisfied that the bass have spawned and retired to deeper water. I have found no bass with spawn, and last year at this time (the last of June), I found many bass had not spawned. As I have been here since June 19, and have found no large bass on the shores as in previous years, I am forced to think that owing to the early spring that the bass have spawned earlier than usual in Sunapee Lake, which is a particularly good thing for future bass fishing in the lake. There are some queer things about bass fishing in the lake, but they will be subject for notes in the future.

### Preserving Fish for Specimens,

A gentleman in British Columbia having promised me specimens of trout and salmon, regarding the identity of which there is some doubt, asked how they should be preserved, and as the fish will go to Prof. Garman at the Museum of Comparative Zoölogy, I asked him how he would have the fish sent in case alcohol was not to be obtained in the wild region where the fish in question are found. What he says may be of interest to others who desire to preserve fish for identification:

"Good alcohol, and enough of it, is the best preservative for general use. If, however, your friend cannot get it conveniently, he can put up specimens so that they can be identified by using plenty of salt. Salt inside the gills and mouth; salt inside the belly among the intestines and salt around each specimen has brought fishes in good shape from long distances. They must not be allowed to rest against one another. Moss or excelsior filled with salt may be used to separate the specimens. They should be laid carefully in the salt with fins moderately spread, and packed so they cannot move about or rub. They must not be taken out of the salt except to change to fresh salt for final shipment. Drying injures them and takes the color if kept out any length of time. Large and meaty fish are usually cut on the inside, so that the salt reaches all the flesh quickly. Along the tail small slits permit of rubbing in the salt. Small specimens in liquor are better sent in fruit jars. The mistake commonly made is in not using spirits enough for the quantity of flesh."

As I was writing this I received a box of trout caught in the Trinity River, Canada, by my friend, Mr. Edson Fitch, of Quebec. When Mr. Fitch returned from fishing his river he sent the fish from Quebec to me at my home in New York State. There they were repacked and sent on to me here at Sunapee Lake, and by a mistake were delivered at the cottage of the New Hampshire Fish Commission. Fortunately Commissioner Griffen discovered the box a few hours after it was left on the piazza and brought it to me. I repacked the fish in ice, as they had made their long journey in this way, and have sent them on to Prof. Garman, and if they arrive at their final destination in as good order as when I received them I shall have something to say about them later.

### From the Trinity.

Of the fishing on his river Mr. Fitch says: "I am sorry to say we had poor fishing. There has been no rain on the north shore of the St. Lawrence all the spring, and we never had a drop the fortnight I was there, consequently the river got very low, and the extreme hot weather put the water up to a temperature of 71°, so of course the salmon all lay in the bottom of deep pools, and no coaxing would get them to rise. We only killed 23 fish in the fortnight, but had some good trout fishing."

### From the Restigouche.

Mr. Archibald Mitchell, of Norwich, Conn., also writes me about his fishing in the Restigouche: "I have not a big score to report, but enough fish fell to my rod, more particularly the last two days, to make the trip a very enjoyable one without. They were all strong, fresh-run salmon, two of the fish had sea lice on them, and every one was as silvery as if taken in salt water, showing not a suspicion of the 'coppery tinge.' Every one was also a hard fighter, and nearly every one came for the fly in a way that 'makes glad the heart of any salmon fisherman,' exhibiting great eagerness to get it, making big boils on the water and in several instances throwing their heads and half of their bodies over the surface, going down with a splash.

"The Encyclopedia Britannica states that, 'A salmon very often misses the fly in his eagerness, and when he does the very worst thing the angler can do is to pull it away from him, as after such a miss it is not at all uncommon for a salmon to turn round hastily and make a second snatch at the fly which he rarely misses; but if the fly is whipped away from him he is frightened and disgusted, and goes down sulkily, refusing to rise again.

"There are some anglers who have a different theory and whip the fly away from the salmon as soon as he has missed it, believing that if he comes the second time he is apt to see it too well and not take it at all, but I have always found it the safer plan to follow the advice of the Encyclopedia, and on this trip had a practical demonstration that a salmon will not only come for a fly twice, but occasionally three times.

"Having made an outside cast with a good length of line, when the fly was fishing at an angle of about 45° to the current, a fish came eagerly for it, making a big boil in the water, but missed the fly; he turned around suddenly, came again as lustily as before, again missing, when to my surprise and delight he came for it a third time, but in a quieter manner, after the line had worked around to be almost straight with the current, and got securely hooked, making a grand and lively fight which lasted twenty-six minutes, and proved to be my largest fish, weighing 27½lbs. On account of their great strength and gameness, I was obliged to spend half an hour with two of the fish; the others were killed in times ranging from 11 to 26 minutes. The water was unusually low and clear for so early in the season when I arrived, and this condition lasted until June 1, when we had a good rain which gave us a rise of 18in., but it was five days after this before I got a fish. A second but smaller rise of water occurred three days before I left, and the fish coming at the same time gave me two good days, killing two on Tuesday and four on Wednesday."

Mr. Mitchell's score was follows:

| | |
|---|---|
| May 29, 1 salmon | 23lbs. |
| June 8, 2 salmon, 20½, 20 | 40½lbs. |
| " 12, 1 salmon | 23lbs. |
| " 14, 1 salmon | 18lbs. |
| " 15, 1 salmon | 24lbs. |
| " 19, 2 salmon, 25½, 25 | 50½lbs. |
| " 20, 4 salmon, 25½, 27½, 20, 23 | 96lbs. |
| | 275lbs. |

Average for 12 fish, $22^{11}_{12}$lbs.

A. N. CHENEY.

## CONCERNING IZAAK WALTON.

IZAAK WALTON is the patron saint of all fishermen and the man who gave fishing literature its first start in the world; his main line of thought being the fish line, if it did take all summer. He was a unique character even to the spelling of his name, which he changed when a boy, or he never would have risen above mediocrity, he argued. In doing the circular work on the grindstone in the shed while his father got up and sat down on the axe, he used to advance the theory that with proper bait the fish in the creek would bite at a hook, his father taking the opposite side of the question with great zeal and logic; and soon the youth began to attend school with great regularity whenever there was any school of fish in the creek to attend. He was seldom absent or tardy.

He became a great angler, and while he was humane to children, in his philosophy he nevertheless maintained that fish should be brought up by the rod no matter how they kick against it. He was the first scientific fisherman, and it was he who discovered that spitting on the bait is one of the main things to success; and was the first living exponent of that other piscatorial virtue, patience, and could wait, and cheerfully too, longer for a nibble than any.

There was no more entertaining story-teller around the corner grocery of evenings than Ike, and he could hold his hearers spellbound by his account of the day's fishing, his stories being often of the longest kind, as sometimes were the fish. There was nothing small about Izaak. If he came in with a trout weighing 2lbs. he never went around telling everybody he met that it weighed 1½lbs. He always maintained that fish was great brain food, and therefore stimulating to the imagination. By long and exasperating experience he could tell to an ounce just the weight of any great corn-fed fish that happened to get away by the breaking of a new strong linen line or the snapping of a heavy hook.

He is considered the father of most of the fish stories still extant and growing more extanter, and he is justly considered to be the first fish historian. He never had the heart to speak disparagingly of the smallest fish he caught; he had more respect for them, and would not take advantage of them and belittle them; and there are still many true anglers like him in regard to that.

If he happened to come back after a day's fishing with a creel full of beauties he never kept them covered up and refused to allow anybody the privilege of looking therein, but most generously permitted them to inspect the catch and envy him his good luck. If asked where he had caught them, like a true fisherman, he always politely answered, "Over yander," and his questioners knew that was about as close as they could get to the spot and seemed satisfied. If he came home without a single fish, because the turtles had run off with the string full of the biggest fish he ever caught, he didn't lie about it by saying that he hadn't caught any. He told the truth, and if he had not caught a chub he showed them conclusively that the wind was just a mite too much southeast by northeast, or westsouth by northsouth, as the case might have been, or that the worms had been digged out of the south side of the barn instead of the other side, where the moon hadn't been shining of late, and the twins in the celestial constellations were in apogee and playing smash with each other. You see he was a philosopher and could readily explain anything without referring to a book.

If he chanced to catch an extraordinary huge salmon which none of the villagers got an opportunity to see, and they would express a doubt about it, Ike would tell them he could take them right down and show them the very identical hole where it came out, and that of course would settle all questions, for the hole was still there.

He was the ideal fisherman. If he did not pull up a fish, a tin can, hoopskirt or an old boot, he would bring out some sentence of logic that you would hardly think lay on the bottom of the creek for the crawfish or the tadpoles to crawl under and get out of the sun. His "Compleat Angler" is very catching, and shows just how a fisherman can improve his time to advantage when he is not getting bites. You should take it along and read it between bites.

Izaak is the author of the following rare, ripe old saws with the teeth on:

"Never count your fish till they are on the string."

"A fish in the hand is worth six in the stream."

"If you get a mosquito bite, jerk."

"A fish is like your boy; if you give him too much line he will wear himself out."

"Don't jerk hard enough to land your fish over in the next county."

"It is plumb serious work to play a big fish."

"Put no suckers on unless the string is small."

"When you are not fishing mend your nets."

"When you're fishing with a fly in it, be particular of the kind of fly."

"Don't brag of your catch unless no one brags for you."

"If your neighbor has plenty of nibbles and you none, borrow some."

"'You don't get a chance to pull my leg,' said the chary bass."

"No fish, no trouble of cleaning."

"You can't spoon for a bass and a girl at the same time."

A. W. BELLAW.

## TEXAS TARPON.

SAN ANTONIO, Texas, July 9.—*Editor Forest and Stream:* "F. S. C. J." says in your issue of June 30 that he doubts the stories of Texas tarpon fishing. These are his own words:

> I have read with interest the attempts to boom Texas as a tarpon resort, which have appeared in FOREST AND STREAM occasionally the past season. I have seen no communication as yet to these resorts from one who has had experience in southwest Florida. These writers fall into the natural error of inferring that tarpon can be taken where the fish abound. There may be a thousand tarpon in sight, and twenty boats fishing with all proper appliances, and not a fish touch the bait. Especially must this be true of a place like Aransas Pass, described in the *Cosmopolitan* lately and in FOREST AND STREAM. Forty five feet of water rule out bottom fishing, and although a fish might be taken by trolling, the capture would be at very rare intervals.

In behalf of Texas I must contradict "F. S. C. J.'s" impressions. He could not have read the reports of your staff correspondent's trip very closely or he would have read the following·

> The home of the tarpon is in Aransas Pass. * * * The tides and winds cause strong outward and inward currents to prevail at all times, and in these seething waters the tarpon makes his home, his feeding and playground, and is to be found all the year around Here they spawn early in June, the young fish seeking the shallow grassy flats in the bay, where they remain until of sufficient size to keep out of the way of the big fish. In the month of July, while fishing for trout (weakfish), I have caught them 4 to 6in. long, and again in September I have caught several from 8 to 10in. long.

The fact is that the natural feeding and breeding grounds of the tarpon range for perhaps 200 miles down the coast, although they are easiest reached via the San Antonio & Aransas Pass Railroad to either Rockport, Aransas Pass or Corpus Christi.

Tarpon fishing in this vicinity has not reached the advanced stage of Florida fishing, and consequently it is hard to give exact figures. However, I give the results of last week's fishing as far as I have heard, and in each case I will guarantee both the fish and weight:

A party of six gentlemen from Dallas, Texas, landed six tarpon in one day, the largest weighing 147lbs

Messrs. Ben. L Peck and H. L. Kokernut landed a tarpon weighing 170lbs. and a jewfish weighing 124lbs.

J. T. McDarrell and T. C. McDonald landed two tarpon weighing 125 and 140lbs. each, and a jewfish weighing 129lbs. in one day.

Robert Bucklin, of Providence, R. I., landed a tarpon 5ft. 3in. long, weighing 98lbs.

That makes ten tarpon of which I have heard, and I doubt not that as many more were caught of which no report has been made, as the natives here consider them a nuisance.

By the way, "F. S. C. J." says, as quoted above: "Forty-five feet depth of water rules out bottom fishing, and although fish might be taken by trolling, the capture would be at very rare intervals." While above in speaking of the Florida fish he says, "The tarpon is a surface fish, and I doubt that he pays much attention to what lies on the bottom."

The fact remains that the tarpon fishing is excellent in Texas, and I will guarantee "F. S. C. J." all the sport he wants if he will pay me a visit. W. M. S.

### Bluefishing off Seabright.

THE manipulation of these veritable sea tigers, after the hook is well set, requires judgment, nerve and entire absence of "fish fright." They are determined in their frantic rushes and breaks to extricate themselves from the predicament they fully realize themselves in as soon as the prick of the barb is felt. An indispensable requisite to insure the boating of these fighters is a taut line from the time one is hooked until landed in the boat, and unless the angler (not rodster) is always on the alert, they are apt to get slack line, overrun it on the reel, and either part it or rid themselves of the hook.

The waters off Seabright are excellent for the indulgence of this invigorating sport. My trips there have been frequent, and with rare exceptions crowned with success. Week before last a friend and myself brought ashore 35 blues averaging 6lbs., and last week 29 fish running from 3 to 6lbs., having lost perhaps a third more on each occasion by their being insecurely hooked. This was not to be regretted in our case, as their true fighting qualities entitled them to regain their liberty after such a brave struggle for it. These chances are denied them when caught with the murderous hand lines.

A surf boat manned by two experienced men can be secured on the beach at Seabright by letter or interview, a day or two in anticipation of the trip. They provide the menhaden to chum with, and their charge for services, boat, etc., is moderate.

Should any of the readers of your very readable paper desire further details I will gladly give them. I have often read favorable fishing notes, but data as to whom to communicate with were lacking. I would suggest to any one contemplating a trial with the blues off Seabright to write to Clark Fisher, Seabright, N. J. It will meet with a prompt reply, and two more gentlemanly, obliging and careful boatmen than Fisher and his partner cannot be found where the blues run. C. T. P.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

*(Continued from Page 10.)*

THE dawn came, and with it came the same thundering "northwester," which meant another day of inactivity The sun shone brightly, the blue sky was studded with. little clouds, and the distant shore stretched along the horizon like a streak of violet. Before us broke the waves of the sea, still agitated by the fierce wind, while in a grove near by, that was sheltered from the unruly blasts, some minstrels of lovely plumage were twittering and singing with wondrous and plaintive sweetness.

"Sweet bird! thy bower is ever green,
Thy sky is ever clear;
Thou hast no sorrow in thy song,
No winter in thy year."

The day passed without any event occurring worth noticing, then another morning dawned with the same persistent northwester, which, like Banquo's ghost, was as dominant as if it would never down. After breakfast Ned, in desperation, again tried the outside battlement for a trout, but he soon came back without a fin and reported, "Too much sea, too much gale."

During the waning hours of the afternoon the wind showed less fierceness, a favorable indication that the sea god was about to rule for gentle zephyrs and seas of serene gentleness, which would doubtless give us a votive offering, a dome of surpassing beauty in *cirri* and satin, purple and gold.

About 4 o'clock Peter and Kenosh, who had been down at the fishing shanty in the little bay near the point, put in a hasty appearance and hurriedly began building a fire.

"What are you doing that for?" I asked.

"To get supper," Peter answered, somewhat surprised.

"Why it's only 4 o'clock, and we don't want supper now."

At this they ceased feeding the flames and returned from whence they came. In about fifteen minutes after their departure they came back in a great hurry with a firm determination on their faces that boded no good, and again began to build a fire.

Once more I hurried out, though Ned tried to persuade me to remain, and in a very emphatic manner told Peter not to prepare the meal until 6 o'clock.

"The fishermen have all gone to their supper," he snappishly replied.

"That makes no difference if they have; 6 o'clock is our supper hour, and we don't want it a moment sooner, and don't you forget it."

"Then I'll be blanked if I get it."

"Then I'll be blanked if we pay you or feed you."

"I don't care a d—n," says the red-handed revolutionist, and then he discontinued his efforts at kindling the fire and stalked away in great anger, while I returned to the tent.

After the lapse of a minute or two he presented himself at our tent with the flush of deep excitement still on him and nervously said:

"I have tried all I could to please you."

"Why don't you continue to do so?" I calmly came back.

"I've done my best."

"You are doing your best now to get up a quarrel."

"I don't want to quarrel."

"Why not respect our orders then?"

"I always have."

"But now you diregard them."

He made no reply to this, but sullenly walked away and sought the deep woods, there to pout and plan, Indian-like.

We concluded that rather than submit to the red-handed barbarian we would drive him out of camp and await the arrival of the tug and take passage on her to the Soo. It is strange, but we never employed a half-breed the second time but what he was sure to revolt at some trifle or other. Ned said it was the result of kind treatment, and that the only way to succeed with them was to avoid all familiarity and rule with an autocratic power. Ned, however, never practiced what he preached, for he invariably demoralized every Indian that accompanied him from pure kindness and excessive friendliness. I had cautioned him time and again about it, and its discontinuance was only made a necessity when the war songs were welling forth and the tomahawks sharpened.

About the time to commence preparations for supper, Kenosh, who had accompanied Peter to the forest, put in an appearance, and on requesting him to prepare our meal he went briskly and pleasantly about it. Soon after the fire was built Peter returned looking somewhat crestfallen, and seeing Kenosh employed as *chef* took his coat off and lent a willing hand in the preparation of the supper and that without our requesting it. The revolt was over, no more the drum provokes to arms, "the trumpets sleep while cheerful horns are blown."

"Buried was the bloody hatchet;
Buried was the dreadful war club;
Buried was all warlike weapons;
And the war-cry was forgotten,
Then was peace among the nations."

Another dawn came and the sun arose in brilliant form and chased away the shadows of the night. A light breeze, that tantalized the boatmen, making them think of toil at the oars, rippled the water, while overhead the sky was lovely in sapphire blue with banks of snowy clouds.

All being anxious for departure, the matutinal meal was soon served, the camp hastily dismantled, the boat loaded, and again we are aboard sailing over gentle seas that brightly sparkled, and in soft cadence murmured:

"And the raibow hangs on the poising wave,
And sweet is the color of cove and cave,
And sweet shall your welcome be."

It was an earnest study the boatmen made of the elements, for they dreaded the "cedar breeze," the oars—but happily, the wind not only held, but as the sun ascended it began to strengthen, and soon we were tossing a silvery curd from the bow that flashed in the glowing sun and then caressingly lost itself in our wake.

Peter, who was at the helm, felt as if he were in utter disgrace from the shameful part he had played in the revolt, but he was very humble and penitent, and also exceedingly polite; decidedly patronizing, I should say, to put it in a more favorable light. He, however, after a long silence, opened up the subject with Ned by saying that he was very sorry for the occurrence and would make an apology if he thought he were in error, intimating that if he were not I must be. Ned tumbled to his judicial chair and gave him an opinion on the subject that would have done honor to any jurist, and also at the same time lectured him in plain Saxon, that I opine he will long treasure for his own especial guidance hereafter. It covered him not only in deep confusion, but made him so contrite that he turned to and made a very humble apology for his defiant conduct. He further stated that in order to have a distinct understanding with anglers hereafter, he would have a set of rules that they would have to adhere to or else he would decline going with them.

Ned, who was always quick to give a *quid pro quo*, said he (Peter) could have what constitution and by-laws he desired, but that he would have a simple and unmistakable rule, and that was to employ no boatmen who would not implicitly obey his orders, and they would be reasonable, too.

This knocked out the wily half-breed as completely as if he had been struck by lightning, for he had all along been endeavoring to have us engage him for our next trip. He had overlooked this fact in his haste to be autocratic and had met with a resistance entirely unexpected. This was the last echo of the rebellion at Mamaise Point.

Ned suggested, as we neared Raissaines, that we land and make a visit to a new copper mine that had recently been opened at this fishing station, the oldest on the lake, having been in the Raissaine family for over forty-five years, descending from father to son. We were somewhat disappointed in not seeing the mines, for on landing were told they were about five miles inland, too far for us to tramp; but were further informed that a diamond drill only a half mile back was in operation endeavoring to trace the vein of this mine. This being a novelty to us we paid it a visit and were well pleased with the trip, as we received a fund of valuable information from the engineer in charge of the works.

He had gone with the drill some forty-five feet through solid rock and the various strata were plainly outlined in the inch core taken therefrom. The owners of the mine were very confident of its developing richly, but as I had seen so many abandoned mines on both shores of this lake, that at first were rich in promise, was exceedingly doubtful of the success of this venture.

Before we left Ned advised putting our rods together and trying for trout along some rocks just before we entered Pancake Bay. It used to be a capital place for sport, but I presumed that it had, like other choice spots, been depleted by the rapacity of the red-handed pot-hunter. As our larder was just then minus this delicious fish I thought the suggestion a good one and at once complied with it. Our rods ready for the combat we embark for the promised land, and after going about two miles reach it and commence the work of tempting the tinted beauties, with Ned in the stern, I in the bow and the boatman at the oars, the sails having been lowered. It was evidently a lovely place for complete concealment of a *fontinalis* or for romantic retreat of some nymph of the deep:

"For here are the blissful downs and dales,
And merrily, merrily carol the gales,
And the spangle dances in bight and bay."

Great blocks of massive stones covered the bottom in the wildest confusion, while crevices and chasms were as irregular as the rocks themselves. Here a gateway for a golden haired Naiad; there a cozy cover for a vermilion dyed beauty, and yonder a channel for a little rivulet that babbles and sparkles as it drops over mosses and lichens that cover the stony battlements and arches of the "grim-visaged" cliffs.

I expected every moment to see a flash of silver and a sudden commotion of the waters as the lures dropped, but the pleasing vision did not realize till I had about abandoned all hope. It then came just as we were about to round into the bay, but not from any collossal dweller in the granite gorges of the deep, but from an adolescent *habitué* who had not been fully taught the lessons of duplicity of the ambitious angler. It was a gratification, however, to even receive a response from one of this size, for though a disappointment in weight, its ravishing beauty fully balanced the account. Its avoirdupois was in ounces and barely escaped being a pounder by a few fractions. But oh! he was a pink of perfection, *le beau ideal*, looking as if he had come

"From that sapphire fount, the crisped brook,
Rolling in orient pearl and sands of gold,"

from whence he took his iridescent hues. I admit that I am and always have been deeply enthused with the loveliness of a Lake Superior *Salvelinus fontinalis*, for of all the fish that cleave the deep he is undoubtedly without a peer in both symmetry and tinting. The crimson of the clouds, the pink of the sea shell and the blush of the rose are no rarer than the enameled dyes which so enchantingly envelop this idol of the icy lake. Tintorete, Veronese and Turner, great color artists as they were, never possessed the talent of transferring to canvas the celestial colors of this matchless beauty, nor has any other artist of our day ever given us a faithful picture of this finny Adonis. As well try to imitate the ocean or the Alps, a cloud or a tree. You can feast your eyes upon the brook beauty with an infinite delight, but what purports to be his artistic *fac simile* will never create one thrill of admiring emotion from either angler or naturalist.

It was suggested to have this "dandy of the gleaming stars" as the dish *de résistance* for our lunch. It was a very rapid step from the lake to the frying pan, but the handsome dude made it all the same; for with this victim as a tempting offering we immediately ceased casting and went ashore for the feast.

The boatmen had a hard time in finding a place to serve the meal, as the shore was one complete mass of broken rocks and glistening boulders. A horizontal plane was out of the question, and whether the table was placed on an angle of forty-five I am not mathematician enough to state; but I do know that we had to keep constant vigil on the dishes to prevent them sliding off and going to pieces on the flinty rocks. As Ned was on the highest plane he left the principal work to me, and as I was in danger of either being scalded with hot tea or having the edibles in my lap, I never relaxed vigilance on the china. I of course ate at a great disadvantage, Ned getting two bites to my one, and as a consequence he arose from the table perfectly satisfied and smiling, while I, having what is called a "twenty minutes for refreshments" with the realization of less than ten, was *au contraire*. I was, however, duly impressed with this moral: Always take the elevated side of the table.

After the boatmen had satisfied their rapacious maws and had everything aboard, we pushed off, and throwing our sails to the breeze, which had perceptibly increased, it filled them as if it meant business, and once more the winged fabric cleaved through the restless seas.

We rounded into the radiant bay in fine form, and when the emerald of the mosses, the green of the ferns and the yellow of the tall primroses, that ran wantonly along the picturesque shore, had faded from view, we began to catch the wind in a very spirited manner that about doubled our headway, and made a bright mass of white water fairly hum as it rose and toppled and raced along the seas in beaded foam.

The day had charmingly developed and was now rejoicing in a bright sun that was beautifying everything upon which its ardent rays fell. The savage walls of ravine, crag and chasm were in a blaze of silver and haze of purple pale; the bending foliage on the receding hills blushed in many delicate hues; the waves ran in crests of sparkling foam, while overhead the fleeces precious with "the gold of heaven" indolently floated as if their mission were only to enhance the splendor of the sky.

It was six miles across the bay and four to Bachewauaung Lighthouse, where we proposed to camp for the evening. Ned, however, was anxious to make Maple Bay, but as the shore there was shallow the present course of the wind would give us a sea of heavy breakers in which to land. This, of course, not being desirable, we concluded to turn into the lovely bay and there remain for the night and leave the next morning, provided we had a favorable breeze. Having made the crossing of the unpoetically named bay—Pancake—we began to skim along the shore with a speed that promised soon to land us at our destination. The sea was now rising with its snowy plumes in grand style,

"And the crest
Of mounting wave is rimmed with gold!"

Since leaving in the early morning we had had the extremes of sailing weather. First, we had the circling ripples of the catspaw, and now we are plunging over liquid cliffs that bade fair to madden into tempests. Here beauty is so rapidly merged into terror that it requires the inclusion of several conditions to preserve it. As we have stated in substance beforo, you may be in ecstacies of delight over some admiring scene in gentle seas, and ere you have passed an hour you may be looking heavenward with a prayer upon your lips. Such is the great lake, and those who voyage upon it in frail crafts must be prepared to accept it with a good grace either in its savage fury or its unfurled calm.

We made harbor about 2 o'clock and in a twinkle almost our boatmen had our tents erected on a plateau overlooking the bay. We had hardly settled in our quarters before a party of anglers from a steam yacht *en route* for Aguawa called upon us and exchanged the usual courtesies. They stated that they intended fishing on the morrow in Harmony River that empties into this bay, and then they would depart for the Aguawa and fish its big pools, which are fully ten miles from its mouth. They had been there before, they stated, and had met with unexampled success, and expected it again. They were admirably equipped for the trip and each of them sported a splendid outing suit that made us green with envy. After our being in camp for a month the "spick and span" of our suits had faded, and with our sun-browed complexion and somewhat unkempt locks must have looked something like the "raggedy man." Ned said it was a clear case of gilt edge versus ragged edge. Poverty-stricken as we looked we offered them the loving cup, but they were not just then inclined to dally with the ruby wine or the fiery bourbon, and so after a fraternal chat, in which the accustomed romances of the rod and reel were exchanged they bade us an ardent adieu.

No sooner had their footsteps ceased to echo before our enthusiastic angler, the fine old gentleman from Kentucky, turned in with his mackinac and landed. We were delighted to see him and gave him a very cordial welcome. He stated that he had been wind-bound in Pancake Bay, and that on seeing us dash by with the radiant foam tossing from our prow he suggested to his boatmen to up sail and follow in our wake. They were not, however, in accord with his wishes at all, but insisted on waiting until the wind lulled with the declining sun. He was somewhat indignant at their refusal, but had to comply, as they held the trumps.

With the setting of the fiery orb, which went down in waving flame of scarlet, interwoven with bands of orange and edges of gold and violet, the air became quite cool, necessitating a rousing fire for comfort. Around this we all gathered with our camp chairs and whiled the hours away in delightful converse. Our Kentucky friend stated that the first four days of the trip he did not catch a single trout, so completely had the market-hunting half-breeds and Indians with their gill nets and set lines cleaned the coast of the trout. He had his best sport along the shore near the mouth of Gravel River. Here he caught some magnificent trout, several being 4-pounders. On his return he had very indifferent success, and was satisfied that the entire coast line, for fully 150 miles or more, beginning at Gros Cap, had been about stripped of its trout, and so limited the sport now that he had determined to hereafter abandon the North Shore as a piscatorial resort. He expressed a desire to try next season the magnificent pools on the famed Nipigon.

The North Shore trouting is rapidly on the wane and evidently has seen its best days, its ruin being hastened by the market purveyors, and the lax administration of the law by the Canadian Minister of Fisheries. All along the entire shore the statute is a dead letter, for as I have before observed, there is no concealment about its violation. A season or two more and a *Salvelinus fontinalis* will be as much a rarity here as that extinct bird, the dodo.

That evening the lighthous keeper told me, in an admiring way, that his boy had realized as much as $10 a day in netting trout in the bay early in the season. This I simply give as an example to illustrate the depletion that is constantly going on here in and out of season. It is really high time that attention is called for the protection of the trout on this coast, and those high in authority should at once move in the matter ere it be too late. There is something supremely beautiful and exalting in the faithful administration of a protective game law, and it assuredly should be something more than a mere cob-

web to catch flies and let the wasps and hornets break through.

The fire was now fast losing its diffusing warmth, a chilly wind had sprung up from the northwest, the glitter of the jeweled sky rapidly fading, and soon a heavy fog enveloped us in its misty vapors. Our neighbor, not liking the sudden atmospheric change, arose and bade us good night, and then we sought our tent to court the drowsy god, and with the lapping of the waves, which had a mournful sound, we fell asleep, and in happy dreams wandered along the silver sands of a babbling brook, where we "saw sweet faces, rounded arms and bosoms prest to little harps of gold," while they mused and whispered to each other, half in fear of our advent upon their isolated retreat. And so the dark, restful hours of the night wore pleasantly along till the gray of the dawn shone through a dense fog that had beaded every bush and spear of grass with its tiny globules. It was evident that our departure was to be delayed, for with the stiff breeze that was blowing and the dangerous coast to course it would be a foolhardy venture to advance. All night long the fog horn had sounded and in the early hours of the morn a steamer's whistle was heard, the shrill, sonorous noise of which was continued for a long time, much to the distraction of our auricular. ALEX. STARBUCK.

[TO BE CONTINUED.]

## BOSTON FISHERMEN.

BOSTON, Mass., July 14.—Bass fishing is a good deal the order of the day with many of the Boston dwellers at the beaches this summer, while many of the sojourners in the country have taken their rods in hand. This idea is a growing one, and the proprietor of a summer hotel is fortunate, if his place is close by even good pickerel fishing. Norway Lake, in Maine, seems to be more noted than ever this year for its black bass fishing. The supply is unlimited, almost, and the place easy of access. Then there are the many ponds in Bridgton, all well supplied with bass. Reports indicate that the fishing is better than ever this year in several of these ponds. The celebrated Winthrop ponds are not forgotten, by any means, and they are particularly easy of access, with the noted Belgrede Mills ponds. Scarcely a day passes but what some Boston merchant or business man packs his rod, with his other belongings, and it is aired at some of the above ponds. Some of the ponds in Massachusetts are also being industriously fished this season. Mr. Bullard is a new convert to bass fishing. He is summering at Falmouth, and the ponds there afford him, with his friends, a good deal of sport. On Saturday, a couple of weeks ago, they caught 19 black bass of the small-mouth variety, the largest weighing 2 and 2½lbs. This success was at Mere Pond, I believe.

Mr. Albert T. Sisson has recently made a new combination in black bass flies. It has a yellow body and wings, with red wing covers and black tail. It is reported to be aking well. He called the attention of Col. Charles E. Fuller, an enthusiast at bass fishing, to it, and Mr. Fuller tried it with good success. Mr. Sisson has since named the fly the Col. Fuller. The Colonel went to Belgrade Mills this year and had great success with the bass. He usually goes to a lake in New Hampshire (Great East Lake, I believe) with his friends Mr. Boynton and Mr. Griffin, where they have camps. They will go there later.

Some of the Boston salmon fishermen are having unusually good success this year. The fishing at the Restigouche is reported to be excellent this year. One fisherman is reported to have killed nineteen salmon, averaging in weight 23lbs. The fishing is also good at the Grand Cascapedia. Mr. Mitten has killed nineteen salmon there. Mr. A. H. Wood, ex-Gov. Russell and Col. Peabody are at the Miramichi. I have not yet heard that they are having great success. On the contrary, there is a report that the water is extremely low and the fishing poor. Mr. D. H. Blanchard is at his river, the Northeast Branch of the Miramichi. His friend Brown is with him. Mr. Richard O. Harding, so many years the friend of Mr. Blanchard, is rather out of heolth and scarcely equal to a salmon fishing trip. At present he is at Ossipee, N. H., for a good rest. Joseph Jefferson will not visit his salmon river this year.

The Megantic Club is pretty well peopled at this time with club members and their families. The ladies and children are more pleased with the surroundings than they could possibly be at the seashore. A large number more of the members, with invited guests, are to go in next month. Parties are regularly booked for their stay at the club camps. Several private cottages are to be built this year. Mr. L. Dana Chapman says that some very big catches of trout have been made at Massachusetts Bog, one of the best fishing grounds at the Megantic preserve. One man caught between 10:30 A. M. and 3 P. M. 302 trout. They were all taken with a fly. The new fire-places at the club camps are being built and guests this fall at the Megantic will have the pleasure of sitting by "roaring log fires."

Mr. M. C. Dizer has just returned from a visit to Lake St. John after landlocked salmon. The degree of his success I have not yet learned. It must have been good, for sportsmen of his ability seldom fish in vain. Mr. Jones will start for Buckfield, Me., on his vacation this week. He will fish all the streams in that section, and few are better acquainted with them, unless it be ex-Gov. John D. Long, who was born in the same town. Both are great lovers of the rod and line. SPECIAL.

### Central New York Waters.

ITHACA, N. Y.—Cortland county, whose wealth of brook trout streams is well known, has afforded the trout anglers unusually fine sport the present season, robust creels having been the rule. The recent heavy rain replenished many streams that ordinarily at this season are dry, and from some of these brooks some pretty good sized trout have been taken. Only recently from a small stream that runs through one corner of the lumber yard belonging to the Cortland Wagon Co., almost in the heart of the town, John Chamberlin took a half dozen trout running from 7 to 9in. in length. This catch was made before breakfast, and it is safe to say that Chamberlin, who is master of an airy and gentle line, has duplicated the feat on more than one occasion since.

Tompkins county has also afforded the trout angler a good degree of sport. Charles Clinton is probably the most inveterate devotee of this line of sport hereabouts, and his field of operations is in the main located in the southeastern part of the county where sparkle some very enticing trout streams.

The lake fishing so far has not been up to expectations, due in a measure, old anglers say, to the high water that has prevailed. In Cayuga Lake black bass are not at all active, and the bass anglers are simply awaiting the Queen of Luck to wink her other eye. Little York Lake, Dryden, Tully and Tisco lakes are affording good pickerel fishing, the fish, though, not averaging large in size.

In all the waters named better results are expected later on. M. CHILL.

## NEWS FROM THE FISHING WATERS.

MACON, Georgia.—We have black bass here and a good supply of brook trout in the mountainous part of the State. The shooting in portions of the State is good and game is plenty. B.

STEVENSVILLE, N. Y., July 12.—Fishing is excellent in Stevensville Lake. Two were caught yesterday that weighed 9lbs. 14oz. One caught to-day weighed 4lbs. 8oz. Several other large ones have been caught which have not been weighed.

BARNEGAT, N. J., July 9.—Weakfish are very plentiful and have been biting all day. Two men took 68 between 5 and 6 this P. M., average to boats to-day 25, with 40 boats out. H. G. ERRICKSON.

HARRISVILLE, N. Y., July 10.—One day last week Ernest Held of Syracuse, N. Y., caught in the river near here more trout than he could get into his fish basket, averaging nearly ¾lb. each, the largest weighing nearly 1½lbs. Yesterday Dr. Nearing and party, of Syracuse, caught nearly as many, the largest weighing over 1½lbs. Last Saturday H. E. Fox, of Adams, N. Y., caught 47 fine trout in Wolf Creek, not far from here. Fishing is good around Forest Home and fine catches are being made almost daily. W. E.

### Hudson River Salmon.

GAME Protector Kennedy takes no stock in the recent stories published in the Troy papers of the increase of salmon in the Hudson. On the contrary, he says he believes they are decreasing all the time. His belief is based on the following facts: That the water below the State dam at Troy is too warm in June, July and August for salmon to thrive; that there is no fishway in the dam now, so that the salmon can seek the cooler waters of the upper Hudson; that fishermen on the lower Hudson are not finding them in their nets as frequently, for they see scarcely five a month, where a couple of years back from five to seven were found in the nets each day.

Protector Kennedy has a theory for the successful propagation of salmon in the Hudson and says of it: "I would continue the stocking of the river and let the fishermen who earn their livelihood by the drawing of nets catch them without hindrance. You would then find them on exhibition in the local markets, the people and the fishermen would get in the habit of seeing them, and would believe there was such fish there. Now it is regarded as a fish story to say there are any of these fish in the Hudson River. Those that are caught are not reported, because the law makes it an offense. They are not thrown back, by any means.

"The 'drift net' fishermen go in pairs and share alike. They catch and keep everything and neither 'peaches' on the other because their interests are mutual. The seine fishers who generally employ ten or a dozen or twenty men to draw the seines always give orders to throw all salmon back. They dare not do otherwise, as they have a band of men with them who are generally of the tougher classes that will not or cannot get other work, and the Commission sent out a circular last year to the Hudson River fishermen, asking, among other things: 'Did you catch any salmon? if so, what did you do them?' The replies were that the fishermen either caught none or else all that were caught were thrown back into the river. The fishermen are not fools by any means. Now, if they were allowed to catch them, the stocking kept up and the fish given a chance to get over the State dam at Troy, the fishermen would show their catches, and finding it a profitable fish to have in the river, would unite with the Commission in trying to protect and propagate it. Then it would be time to enact a law. As it now is, only a few are caught and they are concealed. Why, I believe that if the fishermen were once convinced that salmon could be raised in the Hudson, they would help pay the cost of stocking the river, and as protectors their services would be invaluable. As it is now, they are decreasing every year, I think, and will soon be run out despite all our efforts."—*Albany Journal.*

### A Queer Catch.

TAUNTON STATION, Mass., July 7.—A unique catch was made here July 4 by Mr. Robert Sawyer of Waltham. While fishing for white perch in Taunton River more or less successfully, with a 9oz. split bamboo rod, Mr. Sawyer had a tremendous strike. After vainly endeavoring for some time to land his catch, which, by the way, put up a pretty strong fight, Bob turned to me and remarked, "I gotter whale." If this broke the spell or not I do not know, but at any rate his catch, as he spoke, landed himself by crawling upon shore. Robert had an enormous muskrat on the end of his line, firmly hooked about half way up the tail. It was probably caught as he was pulling up preparatory to making another cast.

Black bass and trout fishing is moderately good here. Pickerel have had to take it all winter. The unemployed in the factories have taken advantage of the hard times and have about ruined the fishing in most of the ponds here by fishing through the ice. Neither age nor sex were spared. A large number of the French population have been fishing every day since October last and are salting down pickerel, perch and bullheads in anticipation of no work and a hard winter before them. But after all, I would be no true sportsman to grudge them a bit to keep their families from starving, even at the expense of a little pleasure to myself. And I am sure all the fraternity will agree with me. P. W. P.

### Tarpon in Mexico.

SOMEBODY ought to try the tarpon fishing in Tampico, Mexico. The fish were feeding there in November, but I had no tackle for them. AZTEC.

### Sturgeon Bay Fishing.

MY wife and I have just returned from a glorious trip on Lake Michigan. Leaving Milwaukee at noon, we enjoyed a sail over the clean cold water, and were cooled by breezes that made us forget we came from a place where the thermometer said 98 in the shade. We ate and slept and read, and rested and got cool, enjoying every moment till noon next day, when we exchanged our floating home for one on the shore at Sturgeon Bay, a beautiful sheet of water connecting the waters of Green Bay and Lake Michigan.

After dinner we went trolling for pickerel, but they did not respond, so we went to an old wreck and caught a few rock bass, and then across the bay to catch perch—and we caught them; and would have caught them all day as fast as we could take them in; nice ones too, weighing half pound to a pound, and good enough for anybody to eat, but we thought half a bushel was enough, and quit at that, though there seemed to be as many in the water as when we began, but this was the best of the perch fishing, for we found they were so plenty and so common that we could not give them away; and it is no sport to catch fish that will not be used. The next afternoon we trolled some more, and my wife caught three goodly sized pickerel. The next morning I went out at 4 o'clock and trolled till 7, bringing in eight pickerel and a great appetite for breakfast. There is said to be great bass fishing at the other end of the bay, but we did not visit it. It was good enough where we were. We loafed and caught pickerel, and rested, and didn't care much for anything else; didn't even buy a paper every day to read about the great strike.

From Sturgeon Bay we took a steamer for Mackinac Island, touching at various places on both shores of Green Bay, and at Manistique on the north end of the lake, thence across to Beaver Island, a quaint old place is its beautiful bay, and a quainter lot are its 900 inhabitants, all fishing folks. Mrs. Gibson has kept the only hotel on the island for the last thirty five years; and knows all about frying fish. All strangers stopping at the island are asked what business brings them there, and are looked upon with suspicion till they give a satisfactory account of themselves. In all respects, these waters are enjoyable in the summer season. Bracing climate, beautiful scenery, good fishing and cheap transportation on staunch steamers that are scrupulously clean, and furnish good meals. The entire cost of living and traveling on these steamers does not exceed $4 per day, and a month's outing, starting from any of the Lake Michigan ports, making the entire tour of the lake (about 1,000 miles of sailing), stopping at various ports, costs less than $100. O. H. HAMPTON.

### Trout and New Jersey Streams.

BRIDGEPORT, Conn., July 6.—*Editor Forest and Stream:* There seems to be a prejudice against the introduction of the European brown trout. Our native trout may be preferable to the brown trout, but the repeated stocking of streams by the State Fish Commission with native trout has proven that they would be there until they were all caught and that they could not themselves keep up their supply, and gradually the trout would disappear.

I personally know of scores of fine trout streams in Passaic county, N. J., where all conditions are favorable to trout, yet there are no trout in them, and all that you could catch would be a few chub and minnows. Had the New Jersey Fish Commission stocked some of the streams with brown trout, I feel confident that the result would have been different, and that those streams would now still contain trout. Again, if there is so much prejudice against the brown trout, why do not our Fish Commissioners try the red-throated trout for our streams—that is, if the experiment has not already been tried? If they prove successful or not, they certainly should be given a trial.

Last April L. Smith, E. Folley, B. Summers and myself procured 1,000 brown trout fry from J. Annin, Jr., of Caledonia, N. Y., at our expense, which we turned into a brook leading into the Passaic River above Paterson, so if ever you hear of any of them being caught it will not be a mystery how they got there.

If J. H. S., of Wyalusing, Pa., should prefer trout to black bass let him try the yearling brown trout for his pond; these would thrive there in spite of the bullheads now in it—I have it from the best authority, not from one but from several former natives of Forfar, Scotland, that the Forfar Loch at one time contained pike, perch and eels, and by the breaking of a dam some Loch Leven brown trout got into Forfar Loch and since that time the pike which were once very numerous have become very scarce. There are records of 6-pound trout that were caught in this loch, and there are more trout there than other fish. E. H.

### Lake Winnepiseogee Bass.

WOLFEBORO, N. H., July 9 —This is my fourth season here, and I thought I would drop a line to inform your many readers that if they want good bass fishing this is the place to get it. My first season here was in 1888, when I remained for about two months, and during that time had some phenomenal catches, taking quite a number of 4-pound fish and a great many 3-pounders. I spent about the same time here again in 1889, and had just as good catches as in 1888. The management of the hotel in Kingswood Inn was so bad that I did not come again until 1893, when mine host Fred. S. McLaughlin became manager and made it as it is now, a first-class house. I am here again this season and find the fishing just as good. My first day's trial for this season was last Friday. I captured thirty that weighed from 1lb. to 3lbs. But what is the most remarkable thing about the fishing here is that you always get some, never coming in empty-handed. I have fished in Lake Wentworth seventy-five times and have never been "whitewashed." I have taken the small-mouth black bass from many lakes in New York and the Thousand Islands, also in Wisconsin; but I have yet to find them anywhere so gamy as in lakes Wentworth and Winnipiseogee. Wolfeboro village is on the latter, and Wentworth is about ten minutes' walk from the Kingswood Inn. D. H. F.

Owner of Fish pond (to man who is trespassing)—Don't you see that sign, "No fishing here?"

Angler—Yes, and I dispute it. Why, there is good fishing here. Look at this basketful. The man must have been mad who put that board up.—*Chips.*

### The Genessee Association.

A DETERMINED effort is being made by the Genessee Valley Fish and Bird Protective and Propagating Association to stop all illegal fishing in and about Rochester. To this end the following address to anglers has been given out:

*To Anglers:* If you discover any nets or other illegal devices in the waters in and around Rochester, please report to our secretary, Frank J. Amsden, under Powers Bank. It will be confidential.—WILLIAM S. KIMBALL, President Genessee Valley Fish and Bird Protective Association.

### A Tickle But Not a Trout.

MONROE COUNTY, Pa.—I read with interest in FOREST AND STREAM about trout tickling. I tried that once myself some years ago. While crossing Bask Cabin Run I saw a 10-inch trout run under a stone. Rolling my sleeves above the elbows, I got my hands gently under the stone, felt something, made a grab, and got a huge water snake. I have done no trout tickling since. H. T. F.

### An Appreciated Portrait.

*Editor Forest and Stream:*

The portrait of Mr. E. Hough, published in the last number of FOREST AND STREAM, does indeed fill "a long-felt want." Mr. Hough has exhibited an ability of a very high order in his peculiar line of "staff correspondent;" and the writer cannot help feeling that all the readers of FOREST AND STREAM are in sympathy with him in a desire to know more of the personality of the man who has with his inimitable gracefulness of style and inexhaustible fund of matter contributed so largely to the entertainment in your columns. If Mr. Hough would like to add a new feature to his already much varied experience in the hunting field I think I could arrange to give him a bear hunt in a Coahoma canebrake next fall or winter with our somewhat famous bear hunter, Mr. R. E. Bobo, of this county.

While on the subject of portraits permit me to express my gratification for the opportunity afforded for a nearer acquaintance with your genial and gifted correspondent "Kelpie," whose portrait was recently published in FOREST AND STREAM. And this leads me to the suggestion that the pictures of Jeems Mackerel and the other Kingfishers would find a worthy place in your pages, and add much to the interest felt by all of us who have for so long a time and so pleasantly participated in their camp gatherings and wanderings. COAHOMA.

### Their Reputation Carries It.

Two young gentlemen of this city returned the other day from Oak Orchard Creek with 25 black bass weighing 75lbs., caught in an entirely novel manner. According to their story, and they have up to this time borne a fair reputation for veracity, they rowed up and down the creek as close as possible to the bank on a moonlight night. The bass lay in the shallow water still closer to the shore and being frightened jumped fairly into the boat. In this way all the bass were taken. It is not an uncommon thing for fish to jump into boats at night. But a large catch in that way is not well authenticated from the inland waters of western New York. Anglers to whom the present story has been told receive it with a smile, but are unwilling to dispute its truth because of the excellent reputation of the two young men who made the catch.—*Rochester Express.*

## Camp-Fire Flickerings.

"That reminds me."

IN your issue of March 17 I read an article from the pen of Mr. G. Stanton, in which he describes the killing of two deer with one bullet. This "reminds me" of a story which I heard a few years ago up in the Adirondacks. A hunter there in the pursuit of game discovered a deer busily engaged in the occupation of rooting beechnuts. He took deliberate aim and fired. In the twinkling of an eye the deer sprang into the air, reversed ends and fell lifeless to the ground. The hunter approached, examined the carcass and was greatly surprised to find that the ball had passed twice through the animal, first through the body just forward of the hips, then through the neck.

This is the only instance I ever heard of where a deer after being hit by a bullet in one end, reversed in time to catch the ball in the other. EGBERT.

[But there was the dog that went under the railroad train; the car wheel took off the tip of his tail, and then he turned so quickly that the same wheel crushed his nose.]

## Fisheulture and Fish Protection.

### Set Lines in Round Lake.

SIOUX FALLS, S. D., July 13.—I have just been informed by angling acquaintances of this city, recently returned from Round Lake, Minn., that they found the lake full of set lines. This only confirms a belief that I have had for some time.

Formerly this lake, situated in the southwestern part of the State, ten miles from the town of Worthington, Minn., was one of the best waters for wall-eyed pike (pike-perch) in the Northwest, besides having an abundance of pickerel so-called and perch. For the last two years, however, this has not been the case, and while a fair string of pickerel and perch could be had, scarcely a wall-eye was hooked. It seems to call for some attention from the State Warden.

There is now in jail at Worthington, serving a sixty-day term, another of the Mitchell family of game law violators, this time for using a trot or set line in Lake Okobena last year. You may recall my account of the brother of the above being convicted for having prairie chickens in his butcher shop out of season. Both parties were caught in the act and arrested by Deputy Warden Twitchell. W. R. HALL.

### Warden Moyer Reappointed.

MR. ENOS MOYER has been reappointed Fish and Game Warden of Clinton and adjoining counties by the State Board of Fish Commissioners. Mr. Moyer has served the board in that capacity for the past five years. He makes a fearless official, and is the right man in the right place to enforce the fish and game laws of the State.—*Renovo (Pa.) Record.*

## PUBLISHER'S DEPARTMENT.

The Marlin Fire Arms Company announce a reduction in the price of their model of 1891, .22 and .32cal. repeating rifles.

We have received from L. Prang & Co., Boston, Mass., a lithograph entitled "Victorious Vigilant," from the painting by J. G. Tyler.

HAVE been buying FOREST AND STREAM of newsdealers for the past three or four years, and I must say it has done more toward making a true sportsman of me than anything I know of. W. H. M.

WINDSOR, N. C.—FOREST AND STREAM is the only thing I know of that improves all the time with no advance in price. A. S. R.

## The Kennel.

### FIXTURES.

DOG SHOWS.

Sept. 4 to 7.—Des Moines Kennel Club, at Des Moines, Iowa. M. Bruce, Sec'y.

Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.

Sept. 18 to 21.—Rhode Island State Fair Association, at Cranston, R. W. W. Dexter, Sec'y.

FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.

Nov. 5.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells Sec'y.

Nov. 23.—Eastern Field Trials Club, at Newton, N. C. W. A. Coster, Saratoga, N. Y., Sec'y.

### Swiss St. Bernards.

IN the summer of 1893 Mr. J. F. Smith, who stands at the head of smooth St. Bernard breeders in England, paid a visit to the Hospice St. Bernard, and his impressions as related by himself are not the least interesting part of the article on St. Bernards in Lee's "Modern Dogs." After giving an account of his travels and the dogs he saw on his way to the Hospice, Mr. Smith writes: "We reached the Hospice about 6:30 P.M., quite tired out, and were kindly received by one of the monks. We found it very cold here, and learned that the lake had been frozen over up to within a few days previously. The dogs, which were running in and out of the Hospice at will, had welcomed us on our arrival with a chorus of barks. After an excellent dinner of four courses, washed down with good wine, I turned out with an attendant who acted as keeper to have a look at the dogs. These were seven in number; one a white with a few orange flecks on him; some of the others had all white or half white faces; only two of them were really well marked, as we understand the phrase, and with a single exception all were smooth in their coats. This exception was a good-colored, small, rough-haired bitch. About one-half of the inmates of the kennel had dew claws, either single or double, and the remainder were without them. The monks think nothing of the rough-coated dogs, and impress upon visitors that the smooth are the true race. All the smooths were of a good type, especially a big, good-colored dog named Barry (I think twenty-

POODLE FRITZ.

First, Saratoga, 1894 Owned by Garden Kennels, Schenectady, N. Y.

five per cent. of the dogs in Switzerland are named Barry). Most of these dogs at the Hospice have dewlap and wrinkle to a greater or less extent. With the exception of Barry, all were on the small side and deficient in bone.

"When any strangers approach the Hospice the dogs bark, rush indoors and so give notice of the arrival. They then run out again and welcome the travelers by rushing up to them, wagging their tails and licking the hands of the visitors, and so escorting them to the Hospice. It will thus be seen that the dogs are very docile and quiet while loose and roaming about. At 8 P. M. the attendant called all the dogs together to be put up for the night. They stood in a row, and came up as he called them to be kenneled. Some of the kennels were loose boxes in the cow places on the ground floor or cellar of the Hospice, the others in a similar place under the Refuge. The Refuge is the building near the Hospice which was built for the inmates of the Hospice to resort to in case of fire, and the Hospice has been twice burned down. When the dogs are kenneled they become quite fierce, and bark savagely if a stranger approaches their kennels. Next day we were taken by one of the monks to see the library, museum and chapel. In the latter is a painting of Bernard de Menthon and his dog, which we are asked to believe is the actual progenitor of the present race of St. Bernards. It is, however, but a common-looking creature, smooth-coated, red in color, about the size of a pointer, and as unlike the modern race as possible. At this I could not be surprised, as the painting had been executed some hundreds of years after the founder of the monastery had died, which he did about 1301, and so of course the artist had to draw on his imagination as to what the original St. Bernard dog was like. In those days, and for long after, the Hospice dogs were merely watch dogs, used to protect the monks from the incursions of robbers, from which they suffered to a great extent in the early times of their existence.

"I am sorry to say the monks keep no register containing pedigrees of their dogs. I saw a photograph of a very fine St. Bernard dog named Hospice Pluto. This dog is now dead, but his portrait proved him to have an enormous head, with very heavy lips and dewlap. The monks considered this dog by far the best they have had for some years.

"I was happily successful in bringing back the photograph of this dog, also of another, a dog that had been sold by the monks for about £130 in English money ($650). The St. Bernards are still used in winter and bad weather in the duties which have made them historical. They are sent out to search the passes, on one side to the Cantin de Proz (Swiss side), from the Hospice to St. Remy (the Italian side) and back. After every fresh fall of snow the paths become obliterated, and many serious and fatal accidents are prevented by the intelligence and sense of the dogs, who by smell distinguish the proper roads. Here the monks told me that they found the long-coated dogs quite useless for work of this kind, as their jackets become matted with the snow; but worst of all it affects their feet, "balling" and freezing between the toes to such an extent as to cause lameness so severe as to quite incapacitate them from walking. Indeed, the sores arising therefrom are sometimes so serious as to cause death.

"The following morning we were awakened at 4 A. M. by the ringing of the Hospice bell. Snow and rain mingled together came down in torrents, and the air was very cold, but we had breakfast at 6 o'clock and then went to see the morgue. One of the monks took down a wooden shutter, and we looked through an open grated window and saw the bodies of travelers who had been found in the snow. We were told that the bodies were still fresh, though most of them had been there for years. About 8 o'clock the rain and snow abated so we commenced our return journey to Martigny."

Mr. Smith visited the principal kennels in Switzerland, but the account of these will do for another time, our immediate purpose being to show what an intelligent and well-known judge of the breed has to say about these dogs in their original *locale*. The account is by far the best we have yet seen, and is entirely modern and up to date. It completely upsets the stories that the dogs are no longer used in the rescue of travelers as many of us had been led to suppose. Another peculiarity pertaining to the Swiss dog, and one we do not remember any one having observed before, is their wildness and savageness when chained up. Mr. Smith represents them as docile and quiet with strangers when running loose, but when fastened up in their kennels the reverse was the case.

This trait we have noticed in most of the Swiss dogs imported to this country. Champion Hector was a good example. One could scarcely find a more unruly dog while on the chain or in kennel, seeming to lose all his lovable qualities. But take him out on the street and loose his chain, he was as amenable to command and docile as one could wish; not even a stray cat could tempt him to misbehave if called in, and that is a good deal to say of the old dog, for he had no tender feeling for a cat. Eiger, Roland, Gemma, etc., are others we could mention to prove this peculiar state which may possibly be traced to the use of the ancestors of these dogs as watch dogs.

### Much Ethics.

"From the center all round to the sea."

I QUOTE some extracts from an article bearing Mr. J. M. Avent's signature, and published recently in a contemporary.

Mr. Avent's long connection with field trial matters and the improvement of setters and pointers enables him to speak *ex cathedra*. As all the matters on which he touches may now be considered *res adjudicata*, it would really be an act of unwarrantable boldness to make any comment on such matters as are passed on finally by so eminent an authority and learned writer.

The fact that the excerpts are taken from the text, here and there, without their associated connections of words and phrases, does not mar their meaning in the least, though it does soften their hardness somewhat.

As he speaks sometimes in the plural number and therefore inferentially in the name of all field trial supporters, it would be pleasing to the public, I think, if the field trial men would signify whether or not Mr. Avent's position, in regard to being compelled to practice fraud, is their position.

Some phrases are quoted merely to present them as pure and concise diction which will beautify and enrich the field trial vocabulary.

As no attempt is made to prove or disprove anything from them, there can be no implication of garbling for a purpose The text abounds with similar expressions and it is difficult to injure any phrase by removing it from its neighbor. He says:

"I have not had time to read the many little slurs that my enemies have been making about me and my dogs."

What rot!

"They (the judges) might have made some mistake, but they are not such fools as he makes them out to be."

"His (Chevalier's) speed and range were only equaled by two dogs in the stake—Gleam's Pink and Count Gladstone; *he was handled perfectly*, and he outworked any of his competitors on game; his nose was good enough to handle his game almost to perfection in that hot, dry weather, *not making a mistake* during the trials." (Italics mine and used merely to bring out the full force of a modest statement.)

"But still I went on with all of the differing of opinions of the reporters, and I won every first in five different field trials except one."

"The full list of the winnings of Chevalier and Topsy's Rod is hard for many of my enemies to swallow, but they must smile and take their medicine, good or bad."

"In many cases the reporters jumped on me with all four feet, doing all they could for their pets."

"The reporters are more liable to make mistakes than the judges, for the reason that they stop to write notes often at a very important time; sometimes a brier accidentally gets under a horse's tail at the wrong time and attracts their attention, and sometimes an attractive lady appears on the field, and as they see so much dog it is a relief to see a good-looking lady, which they cannot be blamed for."

"Again, I came so near winning everything at all the different field trials under all different judges that the reporters should make some little mistake and encourage some of the

breeders by giving their dogs credit for everything and a little more than they deserve. With all of the above facts (?) which everybody who follows the trials knows, I do not blame the reporters. It is right for the good of field trials that they should do a little something to encourage some that are so badly defeated. Many of them have good dogs, but the trouble is well known that I outclassed them in every trial during the season so badly that if the reporters did not do something of that kind it would break up field trials."

"Some argue that the trials ought to rule such kennels as ours down to one entry in each stake. If that were the case you would soon see all the leading kennels with their best dogs entered in some friend's name, and shortly after the trials a notice would appear that the kennel had bought the dog back; so you see that would compel *us* to practice fraud (!!!???) to get to show our dogs."

Do other kennels by silence assent to that?

"Again, you see them trying to bring charges against me, charging me with raising a big row I was not in at all."

"The report is spread all over the country by a prominent man, whom I could mention, but will not, that I drew a revolver on the judges and abused them. That is a falsehood, and the judge will bear me out in it."

"Not *any part* of a row was I connected with, and *what little I did say in the heat of passion*," etc.

"They blowed and blowed and kept blowing, but when the time came for the cash to come up no cash was put up."

"The tiger is here to stay, at least one season longer anyway."

"They start another song, that because I am an owner and handle my own dog I should not be on the governing committee of the U. S. F. T. Club."

"I have submitted to things in silence for fear of injuring the interests of the club. I think Mr. P. T. Madison will not hesitate to say that I have helped him more than any other one member of the club, and never tried to take any advantage."

"If those who are trying all such little dodges to beat me would pay more attention to their dogs and get better dogs, they would come nearer defeating me than they will in this way. Let them get better dogs, quit all such little trickery, and come to the trials with something that can beat me squarely, then they will be more thought of."

"All of those little tricks, and stuffing such a dog as Topsy's Rod with salt pork do not injure my dog in the least."

"And no doubt the parties connected with it thought they would make me roar," etc.

"Mr. Moore need not think because I have been keeping silent for the past few months that I have been sleeping or dead."

That field trials should languish is surprising, considering all Mr. Avent has done and is doing for them. That his beneficial acts should result in making such a large number of enemies is most deplorable, but some of the greatest philanthropists have not been best appreciated till after they had joined the silent majority.

909 SECURITY BUILDING, Chicago.

## POINTS AND FLUSHES.

*[By a Staff Correspondent.]*

### The Selling Stake.

THE Southern Field Trials Club have arranged their trials for December, liberal prizes being offered considering the times and the somewhat meagre support extended by the public, as shown by the entries in the stakes arranged by other clubs.

A selling stake has been added to the other events of the Southern Club, and probably will add much to the interest of the club's trials.

It is difficult to forecast the results of a selling stake, since those arranged by the Eastern and Southern clubs respectively, will be the first ever run; at least the first ever run in this country.

It seems to me that the selling stake will fall far short of the beneficial results contemplated when it was adopted by the Eastern Field Trials Club. It was then thought that a selling stake would be well supported by amateurs, or men who owned that very useful class of dogs sometimes called "shooting dogs." As there was a limit to the price which an owner could ask, such restriction would keep out the high-priced dogs which had a reputation or a record or both, thus practically barring the best dogs or the most successful ones, and making a more uniform competition, in which the man who owned but one or two dogs would have a possible chance to win. At first thought such a theory sounds very plausible, as a good thing for the amateur, but as a matter of fact it is just as good for the professional. The latter has dozens of dogs which he will sell within the limitation of price. The amateur will have to compete on even terms with the the professional, and he is not necessarily a prophet who can foreshadow the result of the professional's success.

So long as a stake is a professional stake, field trial managers can not reasonably expect the general support of sportsmen.

### Some Suggestions.

It is strange, but some men become more offensive as winners than some others do as losers. There are many who are gentlemanly, whether they win or lose.

Is it not strange that a certain professional dog jockey, somewhat over famous for bright practices, should moralize about "honest judges," negligent and mendacious reporters, disinterested love of field trials and his own innocence? Perhaps he did it "in the heat of passion."

When a setter is "porkized" before running a heat with a pointer, that circumstance is sufficient ground for several columns of free advertising of the particular dog and the kennel to which he belongs, and is also ample justification for several hundred public vilifications and scurrilities of many "enemies."

Wisdom, honesty and culture seem to rest on the brow of the reporter who said that Mr. ——'s dog won well. For such as dare to say otherwise, there is no balm in Gilead.

The field trial goose is rapidly becoming eggless.

When a man many times consecutively wins all the money put up by several other somebodies, he is warranted in believing that he is a prime necessity, indispensable and therefore should be insolent.

The man who makes it his life work to run his dogs in trials and sells his dogs and others, and who devotes the rest of his time to abusing his many enemies who seem to be all the rest of the world, gets unutterably tiresome after a few years. It would seem strange if such a man had friends.

B. WATERS.

909 SECURITY BUILDING, Chicago.

The kennel note of the Irish setter Lady Alice owned by Mr. Jas. B. Blossom, whelping nine pups to his Bedford, merits more than passing notice. The mating of field performers with field performers is the only means whereby the Irish setter man may hope to gain a substantial footing among the field trial records. Bedford won first and Lady Alice third in the All-Age stake at the Irish Setter Field Trials at Lexington, N. C., in 1892, against 20 starters that included such dogs as Finglas, Coleraine, Henmore Shamrock, Currer Belle, Elcho's Maid, etc.

## DOG CHAT.

In a recent issue we drew attention to the fact that Mr. Walter Wellman had foresworn the Esquimaux dog in favor of the Belgian draught dogs. The outcome of his experiment is, no doubt, awaited with anxiety by many who are interested in his dash for the North Pole. We fear Mr. Wellman will find his canine help an unruly crew if they experience anything like the hardships depicted by G. B. in the English *Field*, who says: "Some interesting particulars about the power and frugality of these dogs (Esquimaux) are recorded by several of the explorers. Wrangel states that twelve dogs generally pulled some 1,300lbs. and that their daily food was half a dozen rotten herrings. Carl Petersen, in his account of the last Franklin expedition, says that 220lbs. were allotted to each man to pull and 110 lbs. to each dog; later on the burden of the dogs were increased, as the men could not manage their share. On another excursion, relates Carl Petersen, the men had to leave their sledges and the dogs in order to go back to the vessel, and it was eight days before the men could get back to fetch them. During all this time the dogs had hardly tasted food, but after a good feed they were quite ready to go on with the sledges. They were fed every second day with 2lbs. of seal flesh or leavings. According to what Hayes states, the Greenlanders feed their dogs in the same manner. Lieut. Hovgaard, in his account of the Vega expedition, says of the Tschuktsch dogs, that they during the night kept in the harness, rolled up in a heap, the head between the forepaws; they were soon so completely covered by the snow constantly blowing that the men almost had to dig them out in the morning. During a trip of twenty-two hours they were not seen to be fed a single time and what food they got was always of the poorest. Frontheim says about Dr. Nansen's dogs that it was often impossible for him, while *en route*, to find other food for them than frozen fish and some flour and water; during the night they slept in a ring and it often happened that they were frozen to one another, so that they could only with difficulty be separated; but they were always lively, content and willing."

A caller had mentioned that a neighbor had been obliged to shoot his dog because it had grown old and cross. After he had gone, Little Edith, who had been very quiet since the dog was spoken of, surprised her mother by asking, "Mamma, when do you think papa will shoot Aunt Sarah?"—*Tid-Bits.*

The newly imported collie Milton Ralph, that is now owned by Mr. Wm. McKey, of Chicago, is a sable, with white collar and blaze, etc. He is by Stacathro Ralph out of a Metchley Wonder bitch. Chesterford Park Kennels bred their bitch Chesterford Lily to him last week. He has won seven firsts at Scottish shows.

A person, even if he has been bitten by a dog, is far more likely to be killed by lightning than to die from hydrophobia. Both are the rarest of deaths, and the latter would be rarer still if there was less rubbish written in the daily papers about mad dogs.

### Not Innocents Abroad.

A numbers of exhibitors and visitors went from London by the 9 A. M., among them several dog lovers from the United States—Mr. Wilmerding, who looked at us curiously when we asked casually in the train if there had not been a discussion on cocker spaniels lately in the American press; Mr. Nelson, who keeps greyhounds and is traveling in Europe for the sake of his wife's health, smiled, and so did Mr. Drake, who was secretary of the Brooklyn show. Mr. Wilmerding admitted that there had been "quite a correspondence," but he thought he had come out on top. It was refreshing to hear our American friends speak in the highest terms of their kennel club, and of the president, Mr. August Belmont. Mr. J. Mortimer, from New York, was also in the train, and during the show busied himself about the benches and rings. Mr. Wilmerding has promised us his notes on the spaniel classes, and we tried to capture Mr. Mortimer for fox-terriers, but he laughingly declined, and guessed the idea would keep. We thought it would be interesting.—*Stock-Keeper, England.*

It seems the St. Bernard Aristocracy was purchased by the Chesterford Park Kennels of Maywood, Ill., and not by Mr. Anderson. This kennel has also bought the fox-terrier Black Rock (champion Dominie—Black Rock Belle), the latter by Vesuvian ex Richmond Rescue. Chesterford Lady, second at Louisville, was bred to Aristocracy last week. This kennel has, we are sorry to learn, lost that good young Irish setter bitch Jennie, third at Louisville, that we spoke so favorably of in our report of that show; also a collie bitch by Prince Wilkes. The symptoms pointed to arsenical poisoning, but the post mortem revealed no trace of it. The symptoms were so peculiar we give Mr. Elliott's description: "First, dullness and refusing food, then the saliva flowed constantly and very freely, and was very sticky, constant strings of it hanging from the mouth Finally the breath became very offensive. The whole of the membrane of the mouth and throat peeled off as though blistered, and bled from the slightest touch. They soon died after developing the offensive breath accompanied by severe and constant straining, passing nothing but a greenish mucus more or less tinged with blood. They had considerable thirst and toward the last seemed to suck the water up instead of lapping it. Four or five others in the kennel have shown similar symptoms in a mild form but they recovered. The 'vets' cannot form an opinion of what the trouble is."

Some time since we spoke of Maybrook Kennels' intended importation of some greyhounds. On July 14 two of them, Jim Boy and Lady Pembroke, arrived on the steamship Paris. At the time we wrote of the Maybrook Kennels' intention we were not at liberty to mention the bitch's name, but now we feel sure that greyhound enthusiasts will be pleased to hear that such a noted one as Lady Pembroke will be seen on our benches and in the field. She is said to be a beautiful bitch and arrived in excellent condition. She has won a number of prizes at English shows. Jim Boy is by Page Boy out of the noted show winner Park Lane Beauty, own sister to champion Annie Laurie II. The Herschel dog and bitch that this kennel is also importing will arrive very shortly. Mr. Bradbury has now a very strong kennel both for the bench and coursing field, and is now about to prepare his dogs for the fall meetings. As stated, he will probably go to Colorado to put the finishing touches to their preparation.

Owners of kennels whose dogs are confined in runs should now and then plow the ground over or have it dug up. Many breeders seem to forget that when a number of dogs have been raised in one spot the earth becomes stale, but the hot sun these days will very soon proclaim this fact to the olfactories, especially after a sharp shower. Fresh earth is in itself a good disinfectant, and were this point better attended to there would be less distemper in our large kennels. Plenty of shade and fresh water should be within reach of the dogs and young stock especially: these hot days puppies will not thrive where either is wanting.

Mr. Muss-Arnolt, the artist whose sketches and pictures of dogs are both artistic and true to nature, has been quite busy lately. While at Mr. J. O. Donner's place in New Jersey recently, he painted Pontiac, the well known race horse, and the English setter Tory Lieutenant that did some winning in the field trials two or three years ago, when owned by Mr. Hitchcock. Mr. Arnolt is now at work on a portrait of Ramapo, the suburban winner, and this week goes to Hempstead to paint the fox-terrier Blemton Victor II. It may be remarked in passing that Mr. J. O. Donner, so long and favorably known to our kennel world, bred Ramapo, his sire being Pontiac, now in Mr. Donner's stable.

Mr. George Booth of Hull, England, has placed his grand young St. Bernard Duke of Lincoln in the market. As this dog weighs 209lbs. and is exceptionally well made, we draw the attention of American breeders to the fact.

Mr. Wilmerding, in his report on spaniels at the Bicestor show for the *Stock-Keeper* (Eng.) does not take a very exalted view of the exhibits. He was disappointed in the type of cockers—"our dogs at home showing very much more quality, type and evenness, which, if I may judge from this small sample, are lacking here to a degree."

English beagle breeders have at last organized the Beagle Club. Viscount Gage is the president, and among the members are a number of well known exhibitors and sportsmen.

Mr. James Mortimer always had a soft spot in his heart for a bulldog; in fact, it may be termed a "blister" that never healed. Whether he has purchased King Orry, that beat Dockleaf in the walking match, for the Hempstead Kennel or on commission, we do not know, but this well-known black and white dog is bound for America. He is by Pagan out of Koorie, by Goliath out of Pundee; Pagan by Alaric out of Pundee, by Sahib out of Hebe. He is white, with black and brindle patches, and was whelped Jan. 25, 1889. He was bred by Mr. J. Tasker, of London. Though King Orry is not counted in the front rank, he has won a number of prizes at good shows. One critic tells us he has grand width in front, good skull and under jaw, eyes far apart, but showing the white, and a deep stop. His faults are said to be in body and height from the ground.

He has also purchased from Mr. Murrell, Hucknall Gipsy, Grosvenor Lass and Miss Mischief. Another purchase is a Manchester bitch, Surrey Gem, from Mr. F. North, which is said to possess great quality, but has never been shown. *Stock-Keeper* says of King Orry: "We doubt if a more judicious purchase for the other side has ever been made than this of King Orry, who excels pre-eminently in a quality most of his compeers are lacking in, viz., under jaw. We have heard good judges describe King Orry's as the best in the fancy."

In the dispersal of Mr. McKenna's noted Clumber spaniel kennel there should be an opportunity for American fanciers of this handsome breed to pick up some good stock. Mr. McKenna's action is traceable to the death of his crack bitch Nora Friar, who, after whelping nine pups to Pomfret Mac recently, died of blood poisoning. She had won forty prizes, among them being the Deakin cup for the best sporting dog at Manchester show last year, and was considered the best of her breed.

The premium list of the Rhode Island show is received just before going to press. A hurried glance shows St. Bernards, mastiffs, pointers, all setters and collies get $12 in challenge and $12 and $6 in open classes. Other breeds are given $10 in challenge and $10 and $5 in open. The list is a good one, if we except the provision for poodles, which should certainly be better attended to, as the two principal kennels would no doubt make a display if they received a little better classification. A. K. C rules are in force and entries close Sept. 3 with the R. I. State Fair Association, Providence, R. I. The entry fee being only $1.50 makes the prizes still more valuable according to the usual fee demanded.

We notice in our advertisement columns that Mr. Edwin Fiske is clearing out some of his spaniels; such cockers as champion I Say, King of Obo's, Realization, Fashion, Jay Kay, etc., are on the list. Among other offers we are glad to note that R. P. Keasbey has some well bred field and cocker pups for sale; Rinada Pointer Kennels has trained pointers; C. G. Brownell, trained Gordons; E. L. Avery, English setter pups; Grain office, Irish setter pups. At stud: R. P. Keasbey's field spaniel Echo.

### Old Timers.

The paragraph relating to Mr. George Raper's long term on the bench, as it were, has brought a mild protest from Mr. A. C. Bradbury, who does not think that Mr. Raper can give him any time in this respect. Mr. Bradbury exhibited fox-terriers thirty years ago at Nottingham, England, and has continued in the ring ever since, showing several other breeds as well. At one show at Nottingham he had thirty-two dogs, smooth and wire fox-terriers, pointers, spaniels, smooth sheep dogs and others. At his first show, thirty years ago, he exhibited two fox-terriers, and that they were not altogether after the order of first attempts is proved by the desire of Mr. Wootten, of Nottingham, so well known in the early dog show days, to buy the pair. We must, therefore, enroll Mr. Bradbury among the stayers. It would be interesting to hear of "our only German's" first experiences.

Mr. Samuel Jagger arrived in this city on the Majestic a couple of weeks since. He comes over on business and will remain probably about eight months. As stated some time since, he has sold his St. Bernards Lady Mignon and Councillor Joe, and a photograph of his new bitch, Frandley Stephanie, that we saw, shows a bitch that would do herself credit in any company. Mr. Jagger thinks Duke of Florence the coming St. Bernard dog in England.

The National Dog Show that is held at Birmingham, England, will take place this year Dec. 1 to 5. An effort was made by the committee to avoid having the dogs benched on Sunday, but the cattle show people are unwilling to alter dates on account of clashing with other cattle shows, and the judging day and private view day will remain the same as before. The surplus left from the last show after paying all expenses was only about $39. Last year there was an entry of 1,396, the highest ever received by the society.

Mr. Slingerland, general superintendent of the National Express Co., called at this office on Monday in regard to the transportation rates to Toronto show. He says his company is willing to do all that lies in their power to meet the dogmen in regard to increased privileges. He took the names of New York, Boston and Philadelphia exhibitors and handlers who would be likely to show, and if a number of dogs are promised, will run a special car to Toronto and from their to Providence in time for the Rhode Island show. The rate from New York is $3.70 per 100lbs., returning free, and dogs can be picked up along the way, so that it appears it would be more satisfactory to exhibitors if arrangements were made for this car, and then the exhibitors at, say Albany, would simply have to pay the Albany to Toronto rate, whereas if a car was secured from the railroad companies in New York there would be considerable difficulty in adjusting the rate on a fair basis for those who would send dogs from Albany, Rochester and other towns. Handlers and caretakers would have every opportunity to

attend to their dogs on the way and the dogs would be landed at the Fair grounds.

The bulldog Monkey Brand, about whose pedigree there seems to be some trouble, is not by Harper out of Ashton Belle. He is by Heathen, who was a son of Harper.

Whippet racing in England is becoming more popular every day, and Cardiff, Wales, has just brought off a stake with fifty-seven entries. Mr. Freeman Lloyd entered Alice Tatham we notice, the name, we presume, being a delicate compliment to Mr. J. A. Tatham, owner of the late *Canine World*, the man who did so much to bring whippet racing to the notice of a better class of people than we usually associate with the sport.

The Terra Cotta Kennels, of Hamilton, Ont., have increased their good string of greyhounds by the purchase of the bitch Chips that Mr. Usher brought over with Henmore King.

Mr. W. J. Higginson, the Rochester bull-terrier breeder, has been visiting Canada, and returned home last week with a puppy by champion Principio, ex Vesper Belle. This must be to supply the place of the one that "Uncle Dick" took away from him, and that he is now feeding with a discrimination due to his rash vow.

### Death of Dockleaf.

The news of the death of Dockleaf, the bulldog of his age, will come like a clap of thunder from a clear sky to the bulldog men the world over. This celebrated dog died July 5, at the Cardiff show, but the cause is not known. He was taken ill at 11 A. M. and died about 12:30 P. M. His owner, Mr. Sam Woodiwiss, will have the sympathies of all his fellow fanciers, for in addition to the sentimental value attached to such a dog his intrinsic worth was very great. There has, of course, been a great diversity of opinion as to Dockleaf's superlative merits, his principal detractors scoring him on account of his listlessness and unwillingless, or inability to move properly, but his front and head properties have always been considered about perfection according to *fin de siecle* fancy points. Mr. Woodiwiss bought Dockleaf about eighteen months ago, paying $1,250 for him, and this is supposed to have been the highest price ever paid for a dog of this breed; but his late owner has had more than this offered for him, for some of our American breeders have nibbled at him from time to time. Dockleaf was bred by Mr. Pybus-Sellon, was whelped in October, 1890, and was by Dandelion out of Damsel, by Datholite. He was two years old when he made his first appearance at the South London bulldog show and created a sensation by winning all before him under Mr. Frank Crowther. There was a good deal of criticism pro and con over the awards, chiefly directed to his faulty action, and this led to the memorable ten-mile pedestrian match with King Orry, in which it will be remembered Dockleaf was beaten out of sight; in fact, he only walked two miles.

In looking through the neat little book which the St. Bernard Club of America has issued containing the standard, constitution and by-laws, etc., a good deal of useful information at least to lovers of the "holy" breed, may be gleaned. In a modification of the standard in regard to markings adopted at the annual meeting of the club in 1889, we find the following: "Color and markings: * * * * The following white markings are *absolutely* necessary: nose band, white muzzle, blaze, chest, legs and tip of tail. A collar or spot on the nape are very desirable." The italics are ours, wishing to draw the attention of some of the St. Bernard Club judges to a fact that seems to have escaped their notice, if one may judge by some of the decisions lately made.

As a bench dog, however, he has scored right along the line with the exception of the two defeats he sustained under Mr. Berrie's peculiar judging at the late Bulldog Club show reported in these columns, and when, in his private match with His Lordship, now owned by Mr. Travers, of Newport; Mr. A. George placed the latter dog over him. Dockleaf was a nobby, dark brindled little dog, heavy for his size, but small as bulldogs now go; he was always under 45lbs. As he was still a young dog his death is all the more regrettable, and whether he has sired any stock showing merit we are not informed.

## KENNEL NOTES.

**Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.**

BRED.

☞ **Prepared Blanks sent free on application.**

*Elf—Tricotrin.* C. S. Wixom's (Covert, N. Y.) beagle bitch champion Elf (Little Ned—Spangle) to his champion Tricotrin (champion Royal Krueger—Midge), Jan. 1.

*Flora K.—Royal Krueger.* C. S. Wixom's (Covert, N. Y.) beagle bitch Flora K. (Lee—Topsy) to his champion Royal Krueger (champion Bannerman—Cora), Jan. 3.

*Velda—Sherry.* C. S. Wixom's (Covert, N. Y.) beagle bitch Velda (champion Royal Krueger—Baby W.) to his Sherry (Little Prince—champion Elf), Feb. 13.

*Breezy—Little Wonder.* C S. Wixom's (Covert, N.Y.) beagle bitch Breezy (champion Royal Krueger—Winnie K.) to his Little Wonder (champion Racer, Jr.—champion Ava W.), Feb. 25.

*Daisy Corbett—Royal Krueger.* C. S. Wixom's (Covert, N.Y.) beagle bitch Daisy Corbett (champion Racer, Jr.—champion Ava W.) to his champion Royal Krueger (champion Bannerman—Cora), Feb. 28.

*Donna W.—Sherry.* C. S. Wixom's (Covert, N. Y.) beagle bitch Donna W. (champion Royal Krueger—champion Myrtle) to his Sherry (Little Prince—champion Elf), March 7.

*Evangeline—Royal Krueger.* C. S. Wixom's (Covert, N. Y.) beagle bitch Evangeline (champion Racer, Jr.—champion Ava W.) to his champion Royal Krueger (champion Bannerman—Cora), March 9.

*Lilly—Sherry.* C. S. Wixom's (Covert, N.Y.) beagle bitch Lilly (Little Wonder—champion Ava W.) to his Sherry (Little Prince—champion Elf), March 12.

*Ava W.—Racer, Jr.* C. S. Wixom's (Covert, N Y.) beagle bitch champion Ava W. (champion Royal Krueger—Midge) to J. B. Lozier's champion Racer, Jr. (Racer—Vickey), March 17.

*Queechy—Sherry.* C. S. Wixom's (Covert, N.Y.) beagle bitch Queechy (champion Royal Krueger—Midge) to his Sherry (Little Prince—champion Elf), April 6.

*Dazzle—Sherry.* C. S. Wixom's (Covert, N. Y.) beagle bitch Dazzle (Little Wonder—Queechy) to his Sherry (Little Prince—champion Elf), April 25.

*Stub—Little Wonder.* C. S. Wixom's (Covert, N. Y.) beagle bitch Stub (champion Royal Krueger—Baby W.) to his Little Wonder (champion Racer, Jr.—champion Ava W.), May 5.

*Nellie—Royal Krueger.* C. S. Wixom's (Covert, N. Y.) beagle bitch Nellie (Rattler—Rose Bud) to his champion Royal Krueger (champion Bannerman—Cora), May 7.

*Queenie—Royal Krueger.* C. S. Wixom's (Covert, N.Y.) beagle bitch Queenie (Little Wonder—Nellie Little) to his champion Royal Krueger (champion Bannerman—Cora), May 18.

*Popsey—Little Wonder.* C S. Wixom's (Covert, N.Y.) beagle bitch Popsey (champion Royal Krueger—champion Elf) to his Little Wonder (champion Racer, Jr.—champion Ava W.), June 22.

*Velvet—Tricotrin.* C S. Wixom's (Covert, N. Y.) beagle bitch Velvet (Sherry—Velda) to his champion Tricotrin (champion Royal Krueger—Midge), June 28.

*Harmony—Hazelhurst.* C. S. Wixom's (Covert, N. Y.) greyhound bitch champion Harmony (champion Doubleshot—champion Clio) to his Hazelhurst (champion Balkis—champion Cassandra), June 1.

*Bessie W.—Usher.* C. S. Wixom's (Covert, N.Y.) collie bitch Bessie W. (Thistledown—Daisy) to his Usher (Wellsbourne Charlie—Roslyn Constance), May 25.

*Mollie L.—Royal Krueger* Mark Lewis's (Cannonsburg, Pa.) beagle bitch Mollie L (Don—Mollie) to C. S Wixom's champion Royal Krueger (champion Bannerman—Cora), April 10.

*Hia—Sherry.* C. D. Bernheimer's (New York) beagle bitch Hia to C. S. Wixom's Sherry (Little Prince—champion Elf), April 11.

*Kate—Little Wonder.* W. H. Walbridge's Peterboro, N. H.) beagle bitch Kate to C. S. Wixom's Little Wonder (champion Racer, Jr.—champion Ava W.), April 4.

*Actress—Royal Krueger.* J. C. Weeks's (Baltimore, Md.) beagle bitch Actress to C. S. Wixom's champion Royal Krueger (champion Bannerman—Cora), April 7.

*Breeze—Sherry.* F. K. Pidgeon's (Saugerties, N. Y.) beagle bitch Breeze (Stormy—Myrtle the Mouse) to C. S. Wixom's Sherry (Little Prince—champion Elf), April 20.

*Winnie K—Royal Krueger.* J. F. Stoddard's (Georgetown, N. Y.) beagle bitch Winnie K. (Rove—Bannergirl) to C. S. Wixom's champion Royal Krueger (champion Bannerman—Cora), May 13.

*Myrtle the Mouse—Little Wonder.* F. B Zimmer's (Gloversville, N. Y.) beagle bitch Myrtle the Mouse (Ramble—Blue Belle) to C. S. Wixom's Little Wonder (champion Racer, Jr.—champion Ava W.), May 22.

*Bellmont—Doc.* J. B. Blossom's (New York city) Gordon setter bitch champion Bellmont to W. S. Lee's Doc (champion Baumont—Bessie III.), May 30.

*Ruby—Heather York.* C. R. Griffin's Gordon setter bitch Ruby (Phil—champion Madge) to J. B. Blossom's Heather York (Heather Harold—champion Bellmont), May 11.

*Egalite—Grant's Roy,* J. B. Conde's (Clifton Heights) English setter bitch Egalite (Ted Llewellin—Nellie Belton) to J. W. Grant's Grant's Roy (Caloun's Nip—Hindale's Kate), June 25

*Nina Laverack—Dad Monarch.* M. J. Kelly's (Pawtucket, R. I.) English setter bitch Nina Laverack (Prince Napoleon—Nellie Laverack) to S. B. Allen's Dad Monarch (Roy Monarch—Blue Jennie), June 19.

*Cute Lady—Sir Douglas.* Jas. Gerard's lg bitch Cute Lady to Eberhart Pug Kennels' Sir Douglas, May 4

WHELPS

☞ **Prepared Blanks sent free on application.**

*Fernwood Lou.* J. S. Dronshal's Medina O.) rough St. Bernard bitch Fernwood Lou (Knight—Ursula III.), July 5, six (four dogs), by J. W. Fornop's Lawrence Garza (Alton—Judith)

### Show Beagles as Practical Field Dogs.

*Editor Forest and Stream:*

If Mr. Ellis wished to stir up the beagle men by his article on beagles and his experience with them, I think he will succeed. The fact that he has some mongrels that are good rabbit dogs, simply shows that the hound in them crops out in spite of the cross. Lots of good race horses are cross-bred or half-breeds; but still, when turfmen buy young stock they buy pure bred stock. The fact that Mr. Ellis got some beagle hounds that were gun-shy and timid proves nothing except as to those individual dogs. All racing-bred horses are not racers nor are all setters and pointers good hunters, and I can see no reason why all beagles should be hunters. Now, if Mr. Ellis should buy a hundred beagles and a hundred cur dogs, I doubt if there would be one cur that could trail rabbits where he would have twenty beagles that could and would; yet in his mind the virtues of that one cur would outweigh that of the twenty beagles.

I will admit too much stress is laid on show points by most beagle breeders, and the hound is becoming too light and weak; but if Mr. Ellis will attend a field trial I think he will not have such a poor opinion of field trial beagles afterward. At the Northwestern Trials last fall there was not a "duffer" or gun-shy dog. All the entries were dogs that a man could have a good day's sport with after rabbits.

I have hunted rabbits with all kinds of cross-bred dog—spaniels and foxhounds—and yet I have settled down to beagles, and never think of hunting rabbits with any other dog. They are all registered, blue-blooded dogs, too, from 12 to 15in. in height. Of course Mr. Ellis could not ask a 13-inch dog to run as fast as an 18-inch one, any more than he could ask a pony to haul as much as a Norman. Yet, if the smaller dog had as good trailing powers I suppose he would be satisfied. If he will come West next fall I will warrant he will see as good rabbit dogs at the Northwestern Trials as he has ever seen, and when he compares them, with their fine forms, ears, and head and eyes, with coarse mongrels, he could have no choice but thoroughbred beagles. AGAMAK.

OSHKOSH, Wis

*Editor Forest and Stream:*

In last week's issue I noticed "A Novice's Experience Rabbit Hunting." In reply I can say that Mr. Ellis has given a very good idea of rabbit hunting with beagles; they are very good dogs to look at, but when you put them in the bush they do not amount to much.

I shall never forget my experience with beagles. The first dog I ever owned was an imported English beagle, and a finer-looking dog I never saw. When I bought the dog I thought I was about made, so could hardly wait for the time to come when I could go out and try my new investment. After waiting for what I thought was ages I finally started, but when I came back I gave my fine imported beagle to a friend for a pet. Since then I have owned several beagles, but all they amounted to was to eat and bark at the cat.

My first experience I will try to relate. I started as soon as possible for the best hunting ground, and was sure I should come home loaded with game, but alas! all my expectations were cast to the winds.

The first thing I did was to start my dog on a track. Well, you should have seen that dog; he went as fast as his short legs would carry him for about ten rods, and then he was back again, and to start him on the track again was impossible. I walked all day long, and the only game I got was what I started myself out of the bush and shot before they got out of range.

In all my experience I never found a better all round dog than a foxhound. I have got a hound now that will run anything from a squirrel up to a deer. Last year seven deer were shot in front of him in four days.

I shall never forget the time when my friends wrote me and stated that they were coming to show me what a good dog was, so when they came they were all fixed for a good time. They had four beagles, one for each man. The next day we all started out. I took two other men with me, and my four friends went in another direction. The reason we separated was they were going to beat the record, and so did not want my dog to bother them. When we got back we began to count our game, and I never saw a more surprised set in my life than those four men. The four fellows and four beagles got three rabbits, and between us three and my dog, that was going to bother their dogs, we got twenty-one rabbits and three quail.

The next day they wanted to go again, but did not want to take the beagles, so they took my dog. When they came back they wanted to trade their four beagles with money to boot for my dog, but I said no, for if they thought he was a good one I thought I would keep him. There are more good rabbit dogs running loose in the streets than you can pick out of the best beagles in the world. F. B. ROBINSON.

PORT JEFFERSON, N. Y., July 11.

27. Schoodic, 3d Cup, St. Andrews.
30. Rochester, Club Sail, Charlotte, Lake Ontario.

"Do I sleep, do I dream?
Do I wonder and doubt?
Are things what they seem?
Or is visions about?
Is the centerboard sloop but a failure?
Or is shifting ballast played out?"

IT may seem flippant and unfeeling at a time like this to take other than a serious view of the recent occurrences on the Clyde, but as the whole round of excuses, good, bad and indifferent, have already been offered by others, and as we feel quite incapable of giving a reasonable and plausible explanation of the most unexpected results of Vigilant's racing, perhaps, for want of something better to say, we may be pardoned for looking at some points which cannot fail to be interesting to an impartial observer.

COMING after an unbroken series of victories extending back twenty-five years in the contests for the America's Cup, the defeat of Vigilant in seven successive races is, indeed, a serious matter, and one that concerns all American yachtsmen; but the manner in which that defeat has been received on this side is at least amusing, if not particularly edifying. The equanimity and fortitude with which Brother Jonathan has watched the defeat of his British cousins for many years has been truly admirable; English, Scotch and Irish have come in turn to be defeated, and when defeated to make excuses over conditions, courses, climate, rules and what not. In every case these grumblers have had the best of advice from their sympathetic conqueror, each has been adjured to bear his defeat like a man, and to go home and try again, it has been pointed out to him that he had more than a fair chance and that his misfortunes were due only to his own ignorance of designing or sailing. American yachtsmen have never failed to express the highest appreciation for men who, like Sir Richard Sutton, took defeat without a word, or, on the other hand, to condemn those who, justly or unjustly, found fault with any of the circumstances attending the racing.

At the present time, by some mischance which is not yet clearly explained or understood, Jonathan's turn has come to take the medicine, and he does it with a wry face; he not only does not like and should not take it, but he has reasons by the score to cover both points.

IT is no wonder that such a string of defeats should disturb even the more moderate of Vigilant's admirers, much less those who considered her invincible under any conditions; but, after all, they are only in the same position as the friends of Genesta in 1885 and of Thistle in 1887, to say nothing of Valkyrie last year. The plain fact is that there has been a serious miscalculation somewhere, and the best, as well as the right thing to do, is to admit the fact and try to find the true reasons.

The making of excuses is not a specially profitable occupation at any time, and in this case, as it happens, it has taken a particularly mean and obnoxious form in blaming those immediately connected with the defeated yacht. The story that Mr. George Gould has bought Vigilant and taken her abroad only for purposes of social advancement in England; and that, to this end, he is a party to the defeat of the yacht by the Prince of Wales' cutter, is only worthy of notice here because it has been quite generally published in American papers. Such a plot assumes as a starting point that Mr. Herreshoff and Capt. Haff are either the dupes or the tools of Mr. Gould, a proposition hardly worth discussing seriously.

The other excuses that Capt. Haff and Mr. Herreshoff are not sailing the yacht properly, that there are too many heads, that the crew is green and untrained, that the sails do not fit, that the English skipper and his crew outmaster the Americans, and that the courses are unfair to Vigilant, are less disreputable, but hardly nearer to the truth.

CAPT. HAFF is acknowledged as the foremost of American skippers; his work in Fanny, Titania and Volunteer, not to mention the uphill task of last year in Colonia have deservedly put him in the first place. If he is not capable of sailing Vigilant, then the question are arises 'Who is?" Judging from some of the recent criticisms, the same

public which exalted him after the Thistle-Volunteer races is now well nigh ready to saddle him with the blame for Vigilant's defeat; and after a few more races he may be no more a popular lion than the late "General" Coxey, and the more recent "President" Debs.

As to the designer of Vigilant, he is probably quite as good a sailor to-day as he was six months ago, and quite as competent to handle the wheel or to advise over alterations; in fact it is safe to say that his ideas as to the peculiar features of Vigilant's model have been materially revised and corrected since the yacht was launched, and especially since the last Cup race; and that to-day he is easily capable of beating her in a new boat or of improving her as she stands, should time permit. He certainly has not gone abroad to canvass for orders for Mr. Watson by setting up Vigilant to be beaten by Britannia.

As to the yacht herself, barring the possibility of undiscovered corrosion, which would only affect her durability, and not her speed, she is quite as good to-day as last season, possibly better by the drying of spars, the hull being no heavier. She had last year several suits of the finest sails ever made in this country, which has long prided itself on the superior sails of the Cup defenders, and she has them yet, some of them almost unused; and other new ones made this year. With them was sent across a liberal portion of her extra outfit of spars. There is a certain disadvantage in having such an immense outfit of sails and spars, as one is always tempted to shift one for another on the least provocation, often to the yacht's detriment; but this was quite as much the case last year with the faithful Hattie Palmer ever in attendance, as it is now when that valuable mascotte is far, far away. It is indeed quite possible that, with continued defeats, even old hands like Capt. Haff and Capt. Jeffrey may finally fall to monkeying with too many sails, but the yacht certainly cannot be said to have suffered in any way from a defective or insufficient outfit.

---

FOR local courses, such as must be sailed by clubs in their general regattas, the Clyde courses are by no means bad or unfair to the American type of yacht; in fact, after witnessing many races in home waters between the Cup racing class, we had looked for Vigilant to do some of her best work over them. While narrow, only two to four miles wide, the Clyde is deep and straight, with clear, open water, and the narrow, tortuous channels, the sandbars and the attendant fleet of the New York course are absent. The worst that can be said about the courses is that the winds are very light and fickle in summer, and the water smooth; but both of these conditions have on this side proved distinctly favorable to the American type and unfavorable to the British. Those who will take the trouble to follow the late races carefully will see that Vigilant and Britannia have been very close together at almost all times, and that while one or the other has sometimes been "hung up" in a calm spot, that there are no peculiarities of the courses which have hurt Vigilant and helped her opponent.

There has been none of that work which has been seen so often in the contests of the cutters and sloops in New York Bay, where the sloop, with her larger sails and livelier motions in a light air, has slipped out of the Narrows, perhaps at the turn of the ebb, leaving her deeper opponent becalmed inside while she sped away for the Southwest Spit; or off the Point of the Hook, where, working the tides inshore, with board partly up, the centerboard boat has crossed the strong flood and caught the outside breeze, carrying her over seven miles to the Lightship and another seven back, the cutter meanwhile being becalmed and tidebound inside the Hook. Such local features as this, which have made the New York Y. C. course so justly hated by foreign yachtsmen, are not found on the Clyde, or at least have not figured in one of the six races just sailed there.

WE have always opposed inside and purely local courses for a fair test of yachts in a match; but, in the particular case of Vigilant on the Clyde, we fail to see that the wide, shoal boat, with much the larger sail plan, has suffered any serious disadvantage on courses whose main objections are light winds and smooth water.

In the latter two races over the square course of the Royal Northern, we can readily see that Vigilant was at some disadvantage, owing to the very short legs sailed, the superior sail drill of the British crew standing in good stead where such frequent shifts of canvas are called for. It is on one of these races, however, that Vigilant has done her best work, picking up Britannia very fast on the windward legs.

The reports of the four races on the upper course, show that there was very little shifting of sails, and none calling for specially quick handling. Vigilant has been at a disadvantage at the start, as she will be on any course, and even would be with a time start to a certain extent; and she has been at a further disadvantage at times, when in close company with her nimble-heeled adversary, whose powers of rapid turning have been fully brought out under Captain Carter's skillful hand on the tiller. In the mere rounding of the regular marks, Vigilant was at no more disadvantage with Britannia on the Clyde than with Valkyrie at New York; and she certainly made quite as good turns of the mark as the other boat last fall. Had there been four boats in the races, it is quite possible that Vigilant might have suffered somewhat from lack of room in waters as narrow as the Clyde; but by singular luck her task of beating the English fleet has been simplified to a duel such as the Cup races. Such chances as she has had would obviously have been seriously marred had she been compelled to work for the line with three rivals instead of one, and to work clear of the lot afterward. On the whole, judging by the work of the various Cup challengers and defenders in the past, we should say that the Clyde courses in July were distinctly favorable to the shoaler and more heavily canvassed American type, rather than to the narrower, deeper cutter with a smaller rig.

---

To us, at least, there is something very funny in flattering comments on the personal skill of Captain John Carter and his crew which are indulged in by so many American papers, by way of excuse for Vigilant. Captain Carter came out to New York in 1885, sailing Genesta across the ocean, sailing her in all of her matches, and finally taking her home after a bad defeat. So much had been said and so little seen in those days of the skill of British racing skippers and crews, that Genesta and all connected with her attracted more attention and comment than any yacht which has followed her. From a personal acquaintance with Captain Carter at the time, and from close observation of the work of both skipper and crew in the races, we formed a high opinion of him as a skillful and intelligent sailor and a very fair sportsman, and of the crew as particularly alert and well drilled; an opinion, however, which was contrary to most of our contemporaries. It was conceded that Captain Carter could throw Genesta from one tack to the other in less time than had ever been done here, that the crew looked very trim and neat in their blue jerseys and red and black caps, that riding down the mainsail was a pretty sight, and that setting a spinaker flying from the fore hatch was a showy but useless trick; for the rest, the comparisons were entirely unfavorable. Captain Carter's maneuvers were generally condemned beside the skill of Puritan's Yankee skipper, and there was but one opinion as to the immense superiority over the men of Wivenhoe and the Colne, of the Jansens, Hansens, Olsens, Neilsens and Petersens who carried "Old Glory" to the fore in the successful defense of the America's Cup.

While Captain Carter has had the benefit of some nine years' experience since he sailed Genesta against Puritan, he was no less capable a sailorman then than now, nor is his crew, probably including some of the same men, so vastly superior to that of Genesta. As to Vigilant's crew, they are by no means the green lubbers that some of the papers would picture them, but on the contrary, the pick of the American fleet; men who have sailed with Captain Haff in Volunteer and Colonia, with Captain Hansen in Vigilant, with General Paine in Jubilee, and with Captain Terry in Grayling, the same Norwegians, "Sou'wegians," Danes and Fins that have contributed in no small degree to the defense of the Cup in former years. They fully deserved the praise which was given them when successful then, and they do not deserve the blame which is likely to fall to them now.

---

THAT there is a marked difference between the two skippers and the two crews is quite true, but it is not true that either one is altogether superior to the other. So far as our observation went Capt. Carter and his crew in 1884 were all that the typical British skipper and crew had been pictured, capable and efficient in every way; and that they failed here in some respects was due simply to the difference of methods. Quickness in tacking, as many will remember in the first Puritan-Genesta race, was of no account when the other boat did not follow, but went away at the start in a very light air in which Genesta hardly gathered headway; setting a spinaker flying in a fraction of a minute counted for nothing in a race of twenty miles to leeward and return; and so through all the petty details of the racing, everything was different from the English practice. We went into this question of American and English crews last year in connection with the Cup races, and need only summarize our conclusions, that the methods of the two countries are radically different, each having its advantages; the British crew being more thoroughly drilled to a set routine, while the American crew, though lacking in precision and exactness, is apt to show to even better advantage in certain emergencies. As to Vigilant, she has probably as good a crew as any of the Cup defenders—not a bad representative American yacht's crew, though made up of hardy Norse sailormen officered by skillful and competent Americans.

---

CAPTAIN CARTER'S first experience of American yachting was not an auspicious one; sailing into Newport the day before the Goelet cup race of 1885, he was invited by the committee to follow the race, and watched it all day from the bridge of the rolling Polynia, then owned by Vice-Com. Douglas. The day is an historic one among Newport races, the first meeting of Puritan and Priscilla, with a hard blow and a bad sea that disabled Bedouin and turned back Grayling and Gracie, showing for once and all the superiority of the newer and larger boats. Such ideas as Capt. Carter already had of the behavior of the centerboard sloop in this weather, based on the old boats of the Arrow and Fanny era, were quickly dispelled, and the task before him was disclosed in no encouraging light.

---

THE defeat of Vigilant in so many races and under such conditions was so unexpected by us that we have no satisfactory explanation to offer, but there are several points that are worth considering. In the first place, there is good reason to believe that both Valkyrie and her crew were under-estimated by Americans last year; that, as Captain Cranfield has always claimed, the reduction of weight on this side of the water and the alteration of trim made a different boat of her and gave a false idea of her speed, and consequently, through her, of Britannia. It is also quite probable that racing in new and strange waters put both skipper and crew at a certain disadvantage. The next point is that Britannia, however fast she may have been last year, is still faster this, going better, as many boats do in their second season, if not outbuilt; and being further improved by the adoption of the Herreshoff-Haff rig, with a longer masthead, shrouds to upper as well as lower cap and stays down the foreside of the mast; the latter feature by the way an invention of Captain Haff's, first tried on Colonia. Further than this, Britannia began the Clyde races in perfect form, not only having been in commission all winter and racing in the Mediterranean, but having sailed in the Thames, East Coast and Channel races for over a month, being worked up to that form which only comes through actual racing. Vigilant, on the other hand, was in the same condition as Genesta, Galatea and Thistle in the Cup races at New York, as good condition as skill and money could put her in, but still lacking that final form which comes only from racing. This disadvantage, and it is no small one, is inevitable in the case of an ocean passage, all the Cup challengers having suffered from it, having nothing to gauge their speed by after the necessary changes of the voyage, while their opponents were improving every day through the trial races. No doubt Vigilant has suffered in this respect, but it was known before she started that she must. Mr. Gould has been blamed by some for putting her into the races without more preparation, but the fact is that beyond a certain point, the only preparation which could help her was the actual racing, necessarily with the foreign fleet.

---

WHAT, in our opinion, has contributed to a marked degree to her defeat is that vague, indefinable influence which always operates against the man who fights away from home, and for he who battles in his own dooryard. It is not the mere lack of local knowledge, but the fact that one is among strangers, that the sympathies of the multitude are with the other side; that acts on even the most practical and unsentimental natures. Slight as it may be, the effect is double, for one side and against the other, and in our opinion this mere sentiment, of fighting on one's own hearthstone, has contributed in no small degree to the defense of the America's Cup, and to the defeat of the many bold and skillful men who have challenged for it. No doubt many will ridicule such an idea, but let them watch the operation of the same causes on a smaller scale, in the case of the home boat against the stranger in even local races, as between New York and Boston. So far as mere pilotage goes, Vigilant has availed herself of the best pilotage to be obtained on the Clyde, the old pilot Morris being aboard, as well as Capt. Diaper; but there is something more to the question than mere local knowledge of tides and winds.

---

THE one hope which is now held out is of the races in the "open," away from those "inside courses" which Americans have at last learned are so unfair; but to us there seems but little promise in this direction. We have no doubt that Vigilant is fast enough under certain conditions of a strong, true topsail breeze and reasonably smooth water to more than save her time from Britannia, but for every day of such racing there is an equally good chance of light weather, in which the Clyde performances may be repeated; or of a lower sail breeze and a bad sea. The performance of Vigilant in the windward work of the last Cup race, poor as it was generally considered, was a surprise to us, as under most adverse conditions she did relatively better with Valkyrie than we had expected in even moderately rough water. Judged from this race, when better canvassed and sailed than on that occasion, she should be a dangerous rival in a lower sail breeze and moderately rough water; but with any sort of a bad sea we should look to see Britannia still further ahead than in a drifting match; and for this reason we do not look to the more open courses to reverse the result of the Clyde races.

---

THERE is one phase of the matter which, as consistent advocates of the keel type for many years, cannot fail to be gratifying to us, that at last the keel has fairly beaten the centerboard in the largest class. Again and again has the superior speed of the keel type been proved in the smaller classes, by Kathleen, Saracen, Fancy, Minerva, Gloriana and Wasp, but each time the friends of the old centerboard sloop have fallen back on the fact that the modern compromise had beaten the keel boats in the largest class. Now, however, the keel boat has proved victorious over the latest and fastest of the centerboard type, and that in weather always considered as peculiarly favorable to the latter.

---

THE way in which the news was first heralded is in itself amusing; one heading ran like this:

# VIGILANT DOES WELL.

## Beats Britannia Boat for Boat.

### BUT LOSES ON ALLOWANCE.

It is all very well to talk about flukes and drifting matches, and to condemn the Clyde courses, but a study of the six races discloses some hard facts that cannot be explained or disposed of in this manner; stretches of five to ten miles in moderate breezes in which Vigilant, at first in the better berth, is finally passed and left astern by Britannia without shadow of a fluke; and positions without number in which, in previous races on this side, the American boat would soon have been to windward and ahead, but in which, in this case, she is left astern. The most encouraging work is in the stronger wind of the last races, on the windward legs; but against this there are many cases in which Vigilant has most unaccountably lost a good position; the only explanation being that, under these conditions, at least, Britannia is the faster. It is not so many years since the cry of flukes and inside courses was heard from the other side; the reply being that American yachts, at least, were built to sail in the average summer weather, and not in howling gales; and this from the very men who are now watching for the outside races and praying for a gale to help along the centerboard boat.

After the races last fall the superiority of Vigilant's model seemed beyond question; but, barring the obvious defect of too little draft, our choice has always been for Colonia as the best of the large Herreshoff boats, both in dimensions and model, of more moderate beam and easier form than Vigilant. The extreme flaring topside and full round bow of the latter have never commended themselves to us as either beautiful or advantageous, save as the former served to wing out the weight of the large ballast crew; and we doubt now whether Mr. Herreshoff will ever go to such extremes again. Whether finally successful or otherwise, Vigilant's performances abroad must tend to strengthen the American side, as showing to an extent never before realized, the strong points of the challenger and the weak ones of the defender. If any serious chance of defeat exists in the American type, it is better to discover it now than when too late in a future race for the Cup.

---

IN view of the controversy of last winter over the value of Vigilant's ballast crew, it is most interesting to note that thus far she has been sailed under those conditions which we contended would materially impair her speed, with a smaller crew and the equivalent weight stowed low down in the form of pig lead. If the evidence of seven straight races is worthy of consideration, this change has been hurtful in the extreme, and the result offers a convincing proof of the value of live ballast in a wide boat, even of the largest size. Thus far Vigilant has not been measured, and she has been at liberty to carry any reasonable size of crew, but as she must shortly go under the measurer's tape, her advisers will have to decide as to the number of men aboard at the time of measurement, and to restrict the crew to that limit. Under these conditions she is likely to carry some two tons less of Scandinavian bone and muscle than in the Cup races last fall.

---

IT is impossible to foretell with any chance of success the outcome of the remaining races of the season, but unless it shall appear later that Vigilant has been badly off her form in the Clyde races, the fault being discovered and remedied, we have little hope that she will make a much better showing in the future save on exceptional occasions. Whatever the result may be, however, it should not be forgotten that those in charge of the American yacht are engaged in a task which entitles them to the fullest sympathy of American yachtsmen, and that they are entitled to just as hearty praise in the event of defeat as when victorious in the past. The attempts to saddle on them the entire responsibility for defeat are unjust and cowardly in the extreme.

---

THE information that Lord Dunraven will replace Valkyrie with a new cutter next year, and that she will probably be a 70-footer, can hardly be classed as news, though just cabled to this country, Lord Dunraven having said as much last fall. The rumor that Lord Lonsdale will be his associate in the new venture is news, if true, so far as it goes. The fact that another challenge for 1895 is a certainty is far too important to be officially ignored on technical grounds and it is highly desirable that the New York Y. C. should take some early action in the matter. The good old days of forty years back, when wealthy gentlemen chased each other around in the same old boxes year after year, sailing six or eight miles an hour, with a mainsail three years old, and all the while imagined they were racing yachts, have passed away; and modern match sailing has become a purely scientific study, calling for the expenditure of unlimited skill and money. This being the case it is time that the conditions governing the more important matches should be made as perfect as possible, and that the haphazard methods of bygone days should be replaced by others more exact and systematic. One of the recognized essentials to a fair trial of two yachts is an equality of measurement, eliminating as far as possible all time allowance. This condition is found in many smaller classes, but has never existed in America or England in the classes best adapted for international competition, those of about 70ft. l.w.l. and larger.

While the Y. R. A. rule compels this equality in the classes up to 60 rating, about 65ft. l.w.l., the yachts above this size are not built to class, the rating of the four large cutters of last year being 140, 149, 151 and 161. On this side the same inequality has existed, the lengths of the modern Cup defenders varying from 80 to and 87ft., while the sail areas range from 8,000 to 11,000 sq.ft.

In the interest of designing on both sides it is in every way desirable that such international competition as that due to the visits of Valkyrie and Navahoe last year and Vigilant this year shall continue regularly, not at long intervals, but alternating from side to side every year or two with good results to both winners and losers. The first step toward such regular international racing is the establishment by both sides in conjunction of some standard class, thus doing away with that constant struggle to outbuild which has done so much harm in more ways than one, and which obscures the true value of each race. It is to the immediate advantage of both sides that some total limit of measurement should be decided on before another yacht is designed for international competition, and we believe that this might easily be done. The opportunity for the initiative is now presented to the New York Y. C.; it knows informally but positively that a challenge is ready for presentation as soon as the legal date arrives; and with Com. Morgan and other members of the club now in British waters, there is every opportunity for an informal suggestion of the matter to representative British racing men, or to the Y. R. A. It should be easily possible to arrange a conference of representatives of both par-

ties, to decide upon a maximum limit of measurement, either rating or sailing length, to govern future racing.

THE adoption of any standard size, a rating of 140, 150 or even of Vigilant's measurement, 175 rating, or of the equivalent sailing length of 98ft., would be a decided advance on the present chance methods; but we believe that still better results would follow from the choice of a lower figure, such as 75 rating or 75ft. sailing length, about the measurement of the first Valkyrie and the American 70-footers. The reduction in size from Vigilant to Titania and from Valkyrie II. to Valkyrie I. would be a material gain, and no more than commensurate with recent advances in speed and cost, especially the latter. A racing yacht of 70ft. waterline in 1895 would not only be a far larger, faster and more costly craft than any previous 70-footer, but she would be quite as large and fast, and much more costly than Puritan, of 81ft. She would be costly enough to suit the most extravagant ideas of what a gentleman's yacht should be, but at the same time she would be within the reach of one or two owners, and would not call for a syndicate of millionaires to run her for a single season.

There is no question that the syndicate, as opposed to the individual owner, is one of the undesirable features of modern racing; and one that is apt to militate against the successful defense of the America's Cup, in restricting the number of trial yachts built, should the expense increase, or even continue at the present high figure; and looking at the racing yacht of to-day as a mere toy, outbuilt and useless after the first season, we would even be glad to see the size limited to 60ft. rather than 70, as producing a yacht that is large and fast enough for all racing, and at the same time of less cost, thus calling out a larger number of trial boats.

We can foresee several objections which may be made, both the selection of any limit, and to the limit of the 70ft. class, but we believe that none of them are of serious moment; and that if the New York Y. C. is thoroughly awake to the best interests of the Cup defense and of yachting in general, it can so arrange matters that orders for 70ft. yachts to defend the Cup in 1895 may be placed with the designers in November. The real responsibility for the hurry in the cases of Mayflower, Volunteer and Valkyrie has rested with the holder and not the challenger; and, in the case of the next race, this hurry can easily be avoided by the action of the New York Y. C., and Mr. Herreshoff can be given as much time for the design and construction of a Cup defender as Mr. Watson will have over a challenger.

In thus limiting the measurement for international competition, we are of the opinion that both parties might well go still further, and, without attempting too much, place such a moderate limit on the minimum area of the midship section, or other easily regulated factor, as should at least stop matters where they now are, and prevent a still more dangerous extreme in yachts, which, on both sides, must first of all be capable of making the Atlantic passage.

ONE consequence of the short courses sailed in British waters is the very different form of reporting the races, as our readers will notice this week. Fairly accurate times may be taken every four or five miles, showing the position of each boat. It must be remembered, however, that times, save at start and finish, where they are taken on a permanent and accurate line, are not reliable within a margin of a quarter of a minute or so, and that the small gains and losses so carefully figured out on such leg are often misleading. The times at intermediate marks are usually taken from a vessel in motion, and at quite a distance, and often in a position where a true line cannot be drawn, so that too much reliance must not be placed on these figures.

THE suggestion has been made that the strengthening of Vigilant's hull for the ocean passage has had a detrimental effect on her speed, but it is stated by cable that the struts from the deck to the bilge stringers were all removed on her arrival at Glasgow, leaving the hull in the same condition as last season. In spite of reports to the contrary, no alterations of keel contour or outside ballast have been made since the Cup races.

## The Sinking of Valkyrie.

*From the Field.*

THE opening day of the Mudhook Regatta will be memorable in yachting story, the incidents which came out of it being in fact altogether without a parallel—at the outset a deplorable collision occurred between the Satanita and Valkyrie, which resulted in the sinking of the latter nine minutes afterward, and at the close of the day the most exciting finish imaginable resulted in the victory of the Prince of Wales's cutter Britannia, over the valorous American champion the Vigilant. The mishap to the Valkyrie naturally had a depressing effect on every one, but there was solace in the reflection that it had brought about no loss of life, although one poor fellow was sadly injured after the smash. It was something really inscrutable that nothing worse happened, seeing that Satanita ran stem on into the broadside of Valkyrie when tearing along with a tremendous head of speed on. The Greta, which was flagship, was lying just clear of the fleet at anchor, and, immediately before the start, the Valkyrie was coming on starboard tack with a clear line to skim close to the flagship and secure the highest weather berth possible. The Satanita, which was reaching in on port tack with Britannia in her wake was bent on standing on until she could stay on Valkyrie's weather quarter. A small craft, however, with four men in her, blocked Satanita's course, and in common humanity the helm was eased to clear them; this was barely accomplished as the bow wave of Satanita washed one of the men overboard, and the boat was no sooner cleared than Satanita's amateur helmsman found it physically impossible to get the vessel off. The skipper of Satanita helping at the tiller could not avoid the inevitable, and she smashed stem on into the Valkyrie, cutting in two her port side between rigging and runners to below the water line and about 6ft. into the deck. Satanita's bowsprit broke off and came back inboard, and the force of the collision drove Valkyrie right round until she gybed one way and Satanita the other, and ultimately drove Valkyrie broadside on to the Vanduara steam yacht, with the result that a lot of bulwarks of the latter were carried away and her large steam launch smashed up.

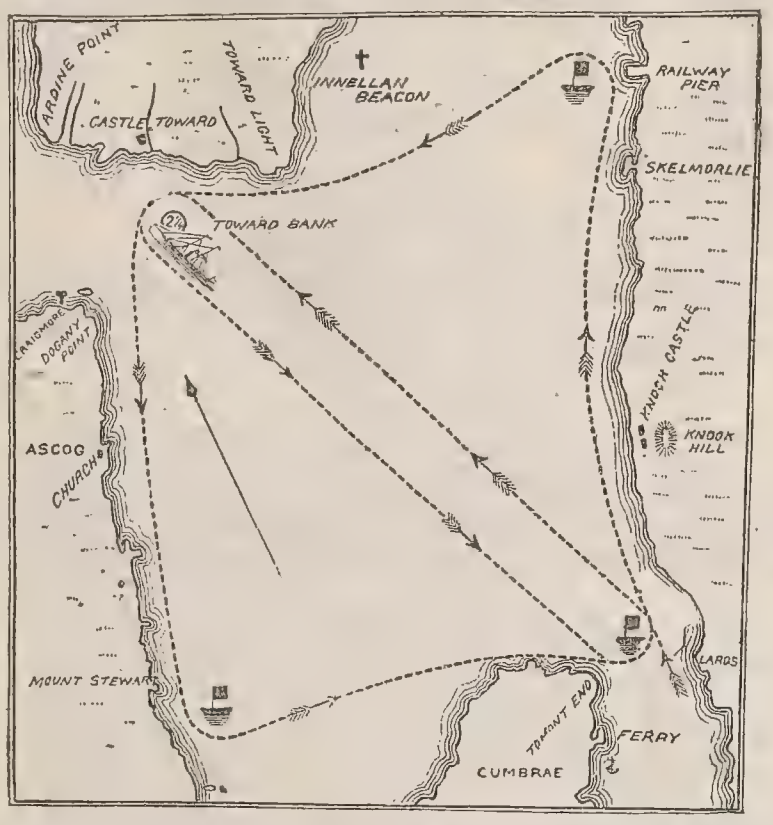
At the time of the collision a number of Valkyrie's men jumped overboard, fearing the probable falling of gear, while others got on Satanita. It was providential that the foredeck of the latter rose and thus eased the forestay, for, had the latter burst, as it was feared it would, the mast and everything would have fallen aft. The vessels remained locked and Satanita thus kept Valkyrie up, but when she blew back clear, Valkyrie at once began to take a port list, and directly after the stern rose in the air and Valkyrie went down head first. Lord Dunraven, who had guests on board, including two ladies, was late in leaving the vessel, but with so many yachts near, there was plenty of help at hand. Neither owner nor crew were able to save anything, and a good many valuables went down with Valkyrie. It may be said that just as she was settling down the topmast broke off, and at low water she was showing her masthead some ten feet. The vessel is lying on the fishing bank just inside the deep water of Holy Loch, yet is in about seventeen fathoms. A diver, however, undertook to go down yesterday. Satanita's damage is a great gaping chasm, coming from about ten inches above the copper upward, and back to about six frames on one side and three the other, while several deck beams are broken. Satanita lost no other spars than bowsprit, but her topmast was at one time bent like a bow through some of Valkyrie's gear hooking the backstays. It was 35s. before the starting gun that the collision occurred, and the match between Britannia and Vigilant commenced unperceived by many. In regard to the relative displays of the two boats, it is our opinion the Vigilant fully maintained her high reputation. It would not be right to say that Britannia won by a fluke. She was not more than 5m. astern at the outset when Vigilant ran into a comparative calm, and Britannia carried a gentle breeze up, and ran past her on the first round. Britannia made a great gain directly Vigilant's two spinakers did not fill; and the probability was that she would again have done so between the Cloch Lighthouse and Kilcreggan. Whether she would have gained enough to have saved her time is of course quite problematical. When, however, Britannia did get on terms and was running with the wind dead on the mast, she fairly went away from her opponent. Vigilant's was a fine display, each time beating down the Clyde by long boards. She is slow in stays and hangs when first full, but when set going she forereaches very fast and the centerboard grips her to windward. There was a positively startling difference in the amount of light stuff Vigilant spread to advantage on a run compared to Britannia, and the wonderful way her running spinaker and spinaker jib filled at the same time. Compared to the American, Britannia appears under-canvassed, and we were not a little puzzled to account for the Prince of Wales's cutter doing better in the light breezes than in the fresh. Probably Satanita would have made a bold bid for victory on the day; but judging on her previous essays the unfortunate Valkyrie would not have been at all formidable. It may be said that Valkyrie was the only boat which prepared for the fray with a reef in mainsail. There was a scene of the wildest excitement when Britannia sailed home in triumph, and the character of the rejoicings which followed will result in an addition to the national revenue.

## THE CLYDE AND IRISH RACES.

### Royal Northern Y. C., Wednesday, July 11.

AFTER the four races from off Hunter's Quay, recounted last week, the yachts went further down the Clyde for two days racing over the quadrangular course of the Royal Northern Y. C., starting off Craigmore Pier, near Rothesay, in the Isle of Bute. This course is of the sort so earnestly prayed for by some of the Clyde yachtsmen on the occasion of Thistle's defeat over a windward and leeward course, each of its four sides being about four and a half miles long, the two rounds making about thirty-six miles, after which the yachts sail once across diagonally and back, something over six miles each way. The first turn is off Mount Stewart, the second off Largs, the third off Wemyss Bay, the final stretch being from the start, near the Toward Bank, across to Largs and back.

The wind was, as usual, light from the south or up the Firth. When the gun fired at 10:30 neither was at the line, Vigilant finally crossing at 10:31:40 and Britannia, on her weather quarter, 15s. later. On the wind, with club topsails and large jibtopsails set, the two worked short tacks down the shore. Vigilant gaining, until at the Mount Stewart mark they were timed: Vigilant 11:18:20, Britannia 11:20:50.



They reached across to Largs with booms to port and rather less wind, Britannia overtaking Vigilant and passing her to windward, the times at the Largs mark being, Britannia 11:50:35, Vigilant 11:51:37.

After a jibe, spinakers were set to port and they ran for Wemyss Bay, Vigilant pressing Britannia hard and making up part of the loss in the first two miles on this leg. The times at Wemyss Bay Mark were: Britannia 1:00:54, Vigilant 1:01:10.

The wind had already gone to the westward before the mark was turned, and now it came from N.W., making a beat to the line, blowing fresher all time. Britannia now gained, finishing the first round with a lead of 2m. 15s. Britannia 1:45:45, Vigilant 1:48.

Reaching down to Mount Stewart, they were timed: Britannia 2:05:25, Vigilant 2:07:10.

The westering wind called for spinakers and booms squared as they ran for Largs, where the timing was: Britannia 2:42:46, Vigilant

2:44:41. The free reach to the Wemyss mark told well for Britannia, the times being: Britannia 3:15:17, Vigilant 3:19:32. The wind fell light and more to the south, making a close reach to the line. Britannia still gaining and finishing the second round with a lead of 6m. 40s., Britannia 4:20:15, Vigilant 4:26:55.

The pair now started across for Largs, the wind being very light. Britannia continued to gain on the free reach out and close reach back, the finish being timed: Britannia 6:39:58, Vigilant 7:01:19. The estimated allowance of Vigilant, she not having been measured, makes Britannia the winner by 24m. 21s., corrected time. Taken altogether, the race was most unsatisfactory; but at the same time there were many times when both yachts were together for some miles with a good breeze, offering every opportunity for comparison. Before this race Vigilant had been lightened of some three tons of lead, and after the finish further alterations were made in her ballast, and another mainsail bent.

### Royal Northern Y. C., Thursday, July 12.

The second day's racing of the Royal Northern Y. C. was over the same course, but with better weather conditions, the 50 miles being made in 5½ hours instead of over 8 hours. After coming light from the south early in the morning, the wind went to N.W. and blew fairly hard all day, with hard puffs throughout the last two legs. Starting with a free reach to Mount Stewart, Britannia to windward and Vigilant 3s. ahead, Britannia soon passed her and gained a minute and a quarter in the four miles, the times being: Britannia 10:54:40, Vigilant 10:55:59.

After a handsome jibe Britannia set her spinaker flying in good style and hurried on for Largs, but Vigilant cut the lead down to the even minute, the times being: Britannia 11:39:30, Vigilant 11:40:30.

It was a close race up the east shore for the Wemyss mark, and the wind headed on the way, both jamming for the mark. On the wind with a good breeze, Britannia gained fast, the times at Wemyss mark being: Britannia 12:09:57, Vigilant 12:13:34.

On the beat to the finish Britannia fared rather better than Vigilant in the matter of luck, but the latter made a small gain, the times at the starting line being: Britannia 12:48:10, Vigilant 12:52:08.

The leg to Mount Stewart was quickly run off, with booms eased to port, the times being: Britannia 1:08:19, Vigilant 1:12:18.

The run across to Largs proved bad for Vigilant, she striking a light streak of wind and losing some time, Britannia sailing very fast meanwhile. The times at Largs were: Britannia 1:36:03, Vigilant 1:43:05.

With sheets well in they reached up to the Wemyss mark, the wind hauling ahead for the next leg. The times at Wemyss were: Britannia 2:04:01, Vigilant 2:10:40.

When jammed on the wind for the beat across to the line, carrying clubtopsail and heeling well under the puffs that were now coming hard from the northwest, Vigilant showed at her best, and took two good minutes off Britannia, the finish of the second round being timed: Britannia, 2:28:30; Vigilant, 2:42:40.

The course now lay nearly to leeward, 6½ miles to the Largs mark, the times showing little difference: Britannia, 3:12:30; Vigilant, 3:16:30.

On the beat across Vigilant took another two minutes off Britannia, the finish being timed: Britannia, 4:00:30; Vigilant, 4:02:10. Britannia wins by 5m. 10s. corrected time.

After the race Vigilant was taken to Scott's yard, Gourock, where her topmast was shortened 4ft. 6in. and bowsprit and spinaker boom 4ft., thus reducing her rating and time allowance. The alterations were completed by Saturday, and she was towed over to Belfast, accompanied by a lighter which carried her extra gear. Thus far the yacht had been permitted to race without certificate of measurement, and several changes of ballast had been made in the effort to improve her.

### Royal Ulster Y. C., Belfast, July 16.

The course sailed by Vigilant in the races of Monday and Tuesday on the Irish coast was of the same nature as that of the Royal Northern, though located at the mouth of a broad bay on the Irish channel, Belfast Lough. Starting off Bangor at the south shore of the Lough, the first leg, to the Carrickfergus markboat, was about 4 miles, W.N.W. The second leg, of about 5½ miles, N.N.E., took the yachts to the Blackhead mark; then came a leg of the same length to the Briggs mark, S.S.E., and some three miles S.W. by W. to the line. Three rounds were sailed, with time allowance for 50 miles.

The morning was cloudy, with a strong threat of rain, and a fresh S.W. breeze was kicking up more of a sea than the Clyde had shown in any of the races there. The start was given at 11:00:00 A. M., Vigilant crossing at 11:00:15 to windward, but 3s. after Britannia. The close reach of 4 miles, in a strong breeze, showed a barely perceptible gain for Britannia, the times at Carrickfergus mark being: Britannia 11:24:58, Vigilant 11:25:18.

Spinaker booms were dropped and the balloons were set, but there was too much winds, and the big sails were at once taken in. Vigilant gained on the run, the times at Blackhead mark being: Vigilant, 11:50:30; Britannia, 11:50:51.

With a strong beam wind and a lumpy sea, the two reached for the Briggs mark, Vigilant still gaining a little, as the times show: Vigilant, 12:17:47; Britannia, 12:18:39.

In the beat to the line, three miles of short tacking, with rather less wind, but still all they wanted, Vigilant gained some 40 seconds, the end of the first round being timed: Vigilant, 12:37:24; Britannia, 12:38:55. Vigilant's gain in the hour and a half, some 17 miles, was 1m. 34s.

With the wind still S.W. the close reach to Carrickfergus cost Vigilant more than half her lead, the times being: Vigilant, 1:09:13; Britannia, 1:09:52.

This time Vigilant was able to set her big spinaker to advantage, the times showing a big gain in the 4½ miles: Vigilant 1:39:44, Britannia 1:42:28.

On the reach across the mouth of the Lough there was more wind, but freer than on the first round, Vigilant gaining a little, the times being at the Briggs mark: Vigilant 2:03:28, Britannia 2:06:35.

The wind was still working around, now making long and short legs to the line, Britannia gaining nearly a minute: Vigilant 2:23:54, Britannia 2:26:11.

The third round began with very little wind, now from N.W., followed by a calm. Both drifting for a time, Britannia took the lead at about 3:10:00, and a little later they turned the Carrickfergus mark thus: Britannia 3:19:11, Vigilant 3:21:20.

The course to Blackhead was now a broad reach with a N.W. wind of moderate strength, the positions being practically unaltered: Britannia 3:53:28, Vigilant 3:55:25.

Running free for the Briggs mark, Britannia held her own: Britannia 4:17:38, Vigilant 4:19:48.

The last 3 miles was a close reach with more wind, Vigilant gaining half a minute, the finish being timed: Britannia 4:39:12, Vigilant 4:40:45.

Britannia wins by 1m. 33s. elapsed time; Vigilant also allows her from 1½ to 2m., the exact amount being unknown.

### Royal Ulster Y. C., July 17.

Wall street was enjoying almost a Sunday quiet at noon on Tuesday when the shrill voices of the newsboys brought men out of their offices with the glad cry of "Extry! Vigilant wins!" and the news was confirmed by later particulars. The course was the same as on Monday, the day being rainy with a strong west wind and sea. Both crossed the line at 11:00:12, Britannia to windward, with working and jibtopsails set for a beat to Carrickfergus. Before the weather mark was reached Vigilant was ahead, the times being: Vigilant 11:24:40, Britannia 11:25:55.

The wind was abaft the beam on the second leg, and large jibtopsails were set, Vigilant gaining. The times at Blackhead were: Vigilant, 11:52:28; Britannia, 11:54:29.

The reach across showed a further gain for Vigilant, the times being: Vigilant, 12:13:04; Britannia, 12:15:57.

The short leg to the line was to windward, Vigilant only holding her own. The first round was timed: Vigilant, 12:31:37; Britannia, 12:34:23.

They went out to Carrickfergus once more against the wind, being timed: Vigilant 1:04-13, Britannia 1:06:05.

There was plenty of wind, and rain as well, on the reach to Blackhead, where they were timed: Vigilant 1:30:30, Britannia 1:35:00.

The third leg was also a reach, with a sea off the mouth of the Lough, Vigilant gaining over a minute, the boats being timed at the Briggs mark: Vigilant 1:50:05, Britannia 1:55:45.

After the three mile beat to the line, the second round ended with Vigilant in the same position, 5m. 30s. ahead of Britannia: Vigilant 2:10:49, Britannia 2:16:19.

The two started the round with a head wind and a sea, Vigilant apparently gaining, but before the Carickfergus mark was reached, Britannia broke the iron work about the jaws of her gaff, a shackle striking Capt. Carter in the head, but not injuring him seriously. She was compelled to give up, leaving Vigilant to sail the final round alone, which she did with housed topmast, finishing at 3:49:40.

## Vigilant's Racing.

*From the Field.*

THE interest which the visit of Vigilant has excited culminated on Thursday on the Clyde, when she made her maiden essay at racing in British waters in the regatta of the Mudhook Y. C.:

"Last week it was settled that her first race should be to-day (Saturday) in the match for the Queen's Cup under the burgee of the Royal Clyde Yacht Club; but so much disappointment was expressed by Clyde yachtsmen that Mr. Gould got his clipper ready for Thursday's race. There was a difficulty, however, about an amateur helmsman, but eventually it was agreed that Mr. Nat. Herreshoff, designer and builder of the yacht, should steer her, as he did in some of the American races. It can be taken for granted, therefore, that everything was got out of Vigilant, and that she was seen at her best on Thursday; and it can at the same time be said that Mr. W. G. Jameson left "nothing" in Britannia; indeed, his brilliant handling of Britannia after he got the lead aroused as much enthusiasm among the Scotch spectators as did the fine capabilities of Britannia herself. As far as can at present be judged, Vigilant is not as much superior to Navahoe as the Americans last season estimated her to be; but that she will win a large number of prizes here there can be no doubt. It was expected that Valkyrie, with her increased sail spread, would tackle her in light airs, and Britannia in a singing breeze, while Satanita was to be the leader in a hard reaching wind. All this speculation is, however, for the moment upset, as it is impossible to say when Valkyrie will be ready for racing again until she has been lifted and docked. Satanita may be ready by the time the Kingstown meeting takes place, and meantime there will be enough dual contests between Vigilant and Britannia to satisfy the most pronounced admirer of that style of contest. By the end of next week we shall have a pretty good insight into the capabilities of Vigilant, and know whether we must take a back seat in yacht racing in the presence of a Yankee contrivance in this country, just the same as we have to in New York Bay."

## Sea Cliff Y. C. Special Open.

SEA CLIFF, L. I.—L. I. SOUND.

*Saturday, July 14.*

COURSES from line off club house to and around horizontal striped buoy (spar) at east end of Execution Reef, to and around spar buoy off Matinicock Point, to and across line off club house, sixteen miles. Weather very squally, succeeded by fitful puffs; wind S.W. at start; tide at start last of ebb; start at 2:03:00:

Class A.

| | Length. | Elapsed. | Corrected. |

## Massachusetts, Savin Hill and Dorchester.

UNION REGATTA.

*Saturday, July 7.*

THE three Boston clubs, the Massachusetts, Savin Hill and Dorchester, all having stations adjoining on Dorchester Bay, sailed a union regatta on July 7 with a good fleet of starters. The day was fair and warm, with a fresh and squally S.W. wind, some of the yachts having reefs in. The times were:

FIRST CLASS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Harbinger, Wm. Daly, Jr. | 28.00 | 1 39 04 | 1 30 57 |

| Mirage, Carl Schindle | 16.11 | 1 33 00 | 1 18 20 |

SIXTH CLASS.

| | | | |
|---|---|---|---|
| Katydid, C. B. Pear | 13 04 | 1 33 09 | 1 13 39 |
| Laurel, W. S. Nickerson | 13.05 | 1 33 23 | 1 14 00 |
| Princess, E. D. Gay | 14.04 | 1 32 03 | 1 14 04 |
| Icurez, Walsh Bros. | 14.02 | 1 34 34 | 1 16 20 |
| Tantrum, F. D. Perkins | 14.08 | 1 34 05 | 1 16 39 |
| Seaweed, S. C. Higgins | 14.08 | 1 35 03 | 1 17 41 |
| Cutty Sark, M. M. Torrance | 13.06 | 1 41 07 | 1 22 02 |

Prize winners in their classes are: First, Harbinger and Beatrice; second, Harolde and Gipsy; knockabouts, Nike and Hullo; third, Raccoon and Alpine; fourth, Hazeldorn and Arab; fifth, Duck and Primrose; sixth, Katydid, Laurel and Primrose.

The judges were Com. Allan M. Davis, Mr. W. S. Crosby and Mr. Blanchard. The prizes were cash in all classes.

## Riverside Y. C. Annual Regatta.

COS COB—LONG ISLAND SOUND.

*Saturday, July 7.*

THE annual regatta of the Riverside Y. C. on July 7 brought out a good fleet of starters and resulted in a fine race, there being a moderate S.W. breeze and fine weather. Minerva, having no competitor, went up a class and won easily. The times were:

SCHOONERS—80FT. CLASS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Viator, W. G. Brokaw | 62.00 | 2 53 39 | 2 51 00 |

OPEN CATCOATS - 20FT. CLASS.

| | | | |
|---|---|---|---|
| Chippie, H. R. Hatfield | 17.75 | 3 17 03 | 3 17 03 |
| ——, E. A. Briggs | 18.00 | Did not finish. | |

The winners were Viator, Minerva, Eidolon, Vorant, Pyxie, Santa, Aimir, Kitty, Sirene, Chippie.

The regatta committee included C. T. Pierce Chas. Olmstead, and W. J. Selleck. The judges were W. J. Selleck, W. A. Hamilton and W. A. Huffington.

## Eastern Y. C. Annual Regatta.

MARBLEHEAD—MASSACHUSETTS BAY.

*Saturday, July 7.*

THE annual regatta of the Eastern Y. C., postponed from June 25, was sailed on July 7; this time in fair weather and a good S.S.W. breeze, shifting later to W. The entries were few in number, and the racing was practically a series of three duels—Mayflower and Marguerite, Barbara and Carmita, and Hawk and Fancy. The schooners and 46ft. class sailed the 32-mile triangle between Eastern Point, the E. Y. C turning buoy and Nahant; and the smaller boats sailed the 22½-mile triangle between Eastern Point and the E. Y. C. buoy; the start and finish for all being off Halfway Rock. Mr. Foster sailed Carmita, his fin-keel 46-footer, while Mr. Harry Howard sailed Barbara, the Fife 46-footer, also owned by Mr. Foster. Under these circumstances Barbara was not eligible for the Puritan cup, for the best corrected time over the long course, or she would have won it. The official times were:

FIRST CLASS—SCHOONERS.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Mayflower, W. A. Gardner | 89.06 | 5 07 20 | 5 07 20 |
| Marguerite, H. W. Lamb | 83.74 | 5 21 42 | 5 17 59 |

FIFTH CLASS—CUTTERS.

| | | | |
|---|---|---|---|
| Barbara, H. Howard | 52.86 | 5 13 31 | 5 11 43 |
| Carmita, C. H. W. Foster | 54.29 | 5 26 24 | 5 26 24 |
| Thelma, W. O. Gay | | Not timed. | |
| Gorilla, W. Roberts | | Did not finish. | |
| Flying Cloud, F. L. Moore | 41.97 | Did not finish. | |

SEVENTH CLASS—CUTTERS.

| | | | |
|---|---|---|---|
| Hawk, Gordon Dexter | 36.85 | 4 35 19 | 4 34 19 |
| Fancy, C. F. Lyman | 36.67 | Did not finish. | |
| Cirrus. —— | | Did not finish. | |

The Puritan cup was won by Mayflower. Times:

PURITAN CUP.

| | Elapsed. | Corrected. |
|---|---|---|
| Mayflower | 5 07 20 | 5 07 20 |
| Carmita | 5 26 24 | 5 07 22 |
| Marguerite | 5 21 42 | 5 17 39 |

The winners were: Mayflower, first prize, $100; Barbara, first prize $75; Carmita, second prize, $25, Hawk, first prize, $50.

## The Lake Y. R. A. Meet.

SODUS BAY—LAKE ONTARIO.

*July 3—7.*

THE Lake Yacht Racing Association of Lake Ontario, this year decided on a departure from the regular plan of a racing cruise around the lake, and arranged for a meet at a fixed rendezvous, with racing on four successive days. The place selected was Sodus Bay, on the New York shore of the lake and between Oswego and Rochester, the favorite rendezvous of the yachtsmen of these two cities. On July 3 the yachts came in from all quarters, Rochester, Oswego, Hamilton, Toronto and other lake ports. All reported bad weather on the lake, a succession of violent squalls, with rain and lightning being met between Rochester and Sodus. The open boat Nydia was capsized when seven miles out in the lake, but was righted and baled out by the crew of Velnette, her crew of four being rescued from a perilous position on the overturned hull.

The first race was sailed on July 4, the course being a triangle with five-mile sides, sailed twice round by the larger and once by the smaller yachts. At colors the stars and stripes were mastheaded on every yacht and duly saluted, after which the American yachts displayed the Canadian ensign, which was also saluted.

The wind was fresh from the west, with quite a sea on the lake, but the larger yachts carried clubtopsails. Three classes started, the first, 40ft. and 25ft. In the first class Oriole, schr., won, beating Vreda, cutter, by 4m. 20s. corrected time. The two New York sloops, Onward and Cinderella, made very poor work against the little Scotch cutter, Onward being over an hour astern and Cinderella dropping out on the first round.

In the 40ft. class Yama, Aggie and Dinah made a very close race, the former winning. Aggie leaked badly during the race and sailed for Oswego after the finish, where she was docked and repaired.

The 25ft. class had six starters—Nox, Sylvia, Salola, Euroclydon, Mona and Mirage, Nox winning, with Sylvia 1m. 23s astern.

On July 5 the course was laid out 4 miles to windward, the wind being strong N.W., two rounds, or 16 miles, being sailed. In the 46ft. class Condor started at the gun, and had been gone 17 minutes when Pappoose, owned by Com. John T. Mott, of Oswego, and sailed by Allan Ames, started in pursuit, overtaking Condor and leading by 6m. on the first round and by 21m. at the finish.

In the 35ft. class Cyprus lost her bowsprit at the start, leaving Vivia, Mr. George Gooderham's new Watson cutter Ripple, Alert and Vision. Viva finished at 1:42:20, Vision 2:06:55, and Alert 2:11:13, Ripple giving up.

In the 30ft. class the times: Vedette 1:59:27, Volante 2:20:12, Norma 2:20:16, Erma 2:40:23, Mona withdrew.

On July 6 there was a smooth sea and a light air from the west, shifting to east and back to west again. The same windward and leeward course was sailed. In the first class Oriole was timed at 2:54:08 and Vreda 3:02:04, the latter winning by 3m. 9s. Onward started, but withdrew. In the 40ft. class Yama won, with Dinah second and Aggie third. In the 25ft. class Salola won, with Sylvia second. Verta, Mona and Mirage sailed the course, but Nox and Euroclydon withdrew.

On July 7, the last day, there was a very strong N.W. wind blowing, and a triangular course of 3⅓ miles to a side was laid off. The fleet was timed:

| | Finish. | Elapsed. | Corrected. |
|---|---|---|---|
| Condor | 1 51 37 | 3 51 37 | 3 51 57 |
| Vivia | 1 29 21 | 3 19 23 | 3 18 06 |
| Vision | Withdrew. | | |
| Cyprus | 2 08 32 | 3 58 32 | 3 55 18 |
| Alert | 2 11 28 | 4 01 28 | 3 58 37 |
| Norma | 1 48 30 | 3 28 30 | 3 26 23 |
| Vedette | 1 49 24 | 3 29 24 | 3 29 29 |
| Erma | 2 18 45 | 3 58 45 | 3 55 38 |
| Volante | Withdrew. | | |

In the evening the yachtsmen all met at dinner, the prizes were awarded and speeches made. None of the yachts started home until the gale had abated on Sunday. The timing and records of the racing are very faulty, some of the yachts not being measured and no corrected times being made up.

## The 21ft. Class.

THIS new class is gradually working into shape, though there has been a general lack of preparation and necessity for alteration on the part of many of the boats which has kept down the number of entries in each race thus far held. For its special purpose the class is a very good one; but there is reason to fear that it will not be complete and satisfactory before the end of the season; and then that it may have disappeared altogether by next year. The race specially arranged by the Country Club for these little flyers was sailed on July 7, the course being: from the club house boat at anchorage in Pelham Bay, south by east, around Stepping Stone Lighthouse, 3 times around, 14 miles. The prizes offered by the Country Club were $75 to the first, $50 to the second and $25 to the third. With a puffy and variable W. N. W. wind, the course was to leeward and a beat back. Vaquero was over the line before the gun, but returned for a late start. She was soon at the head of the procession, and finally won. Blonde and Brunette leaked badly and also broke her spinaker boom when in second place, coming in fourth. The full times were:

| | Finished. | Elapsed. |
|---|---|---|
| Vaquero, H. B. Duryea | 3 20 12 | 3 05 12 |
| Dorothy, H. P. Whieney | 3 21 21 | 3 06 21 |
| Houri, W. B. Duncan, Jr. | 3 24 16 | 3 09 16 |
| Blonde & Brunette, H. B. Seeley | 3 27 23 | 3 12 23 |
| Minnetonka, George Work | 3 28 31 | 3 13 31 |
| Adelaide, W. P. Douglas | 3 31 26 | 3 16 26 |
| Flirt, W. G. Brokaw | Withdrew. | |
| Maysie, William Osborn | Fouled turning mark. | |

LARCHMONT Y. C. SERIES—SECOND RACE.

The second race of the series, for the Larchmont prizes, was sailed July 13, in a fresh S.W. breeze. Seven yachts started and four finished, Maysie losing her bowsprit when leading on the third leg, Minnetonka breaking he rudder, and Flirt and Hoodoo being overpowered.

The times were, start 1:10 P. M., Hempstead mark:

| | | | |
|---|---|---|---|
| Maysie | 1 39 28 | Adelaide | 1 41 31 |
| Houri | 1 40 20 | Flirt | 1 42 38 |
| Vaquero | 1 40 40 | | |
| Matinnicock: | | | |
| Maysie | 2 07 17 | Adelaide | 2 09 48 |
| Vaquero | 2 08 47 | Flirt | 2 10 38 |
| Houri | 2 08 48 | | |
| Hempstead: | | | |
| Vaquero | 3 10 26 | Adelaide | 3 22 00 |
| Houri | 3 11 26 | | |

| | Finish. | Elapsed. |
|---|---|---|
| Vaquero | 3 36 00 | 2 26 00 |
| Houri | 3 37 28 | 2 27 28 |
| Adelaide | 3 50 00 | 2 40 00 |
| Maysie | Disabled. | |
| Minnetonka | Disabled. | |
| Flirt | Withdrew. | |
| Hoodoo | Withdrew. | |

Maysie sailed very fast until she broke down. The new Blonde and Brunette was not ready, being on the ways for general repairs after two races.

## Schoodic Y. C. Cup Race.

CALAIS, ME.

*Wednesday, July 12.*

THE Schoodic Y. C. sailed a good race on July 11, the times being:

| | Start. | Finish. | Corrected. |
|---|---|---|---|
| St. Croix News | 11 47 40 | 2 24 50 | 2 23 39 |

| Little Dot | 11 48 45 | Time not taken. | |

## Rule Britannia.

NEW YORK, July 13.—*Editor Forest and Stream:* The pretty show that H. R. Nibs's yacht Britannia has made of our bronze mug defender has evidently created a class of opinionists who are sadly in need of that restraint which is only to be found in a well conducted lunatic asylum. The editorials in the *Times* and *Herald* of New York and the views of yachtsmen published in those papers reflect little credit on our sporting blood. When we licked Valkyrie we were rather harsh on the poor English for daring to offer excuses, and now that the shoe is on the other foot we seem to tumble over each other in our haste to get our excuses on record. Those who laughed at Mr. Carroll and derided Navahoe now know how it is themselves.

Let us be fair, and throw to Britannia a laurel unsullied by excuses, unsmirched by "ifs" and untarnished by the slightest suspicion of cavil.

*Le roi et mort, vive le roi!* and let us go to work and build something to beat him as soon as we can. CORINTHIAN.

## Milwaukee Y. C. Annual Regatta.

MILWAUKEE—LAKE MICHIGAN.

*Wednesday, July 4.*

THE Milwaukee Y. C. sailed a good race on July 4, the course being a 15-mile triangle on Green Bay, Wisconsin. The wind was fresh from northeast. The new yacht Valiant, designed and built by F. W. Martin for Com. E. C. Berryman, Lincoln Park Y. C., of Chicago, made the best time, elapsed and corrected, of the fleet and won the silver challenge cup in the 45ft. class. The yacht is a sister craft to Nelle, by the same designer, lately illustrated in the FOREST AND STREAM. The times were:

SCHOONER CLASS.

| | Elapsed. | Corrected. |
|---|---|---|
| Merlin, G. B. Y. C. | 2 01 45 | 1 54 45 |
| Hawthorne, C. Y. C. | 1 55 25 | 1 55 25 |
| Crusader, L. P. Y. C. | 1 56 00 | 1 56 00 |
| Toxteth, L. P. Y. C. | 2 03 13 | 2 02 13 |

45-FOOT CLASS.

| | | |

| Pinta, C. Y. C. | 2 04 33 | 2 03 29 |
| Sago, M. Y. C. | 2 19 34 | 2 17 34 |
| Ellida, C. Y. C. | 2 21 05 | 2 18 54 |
| Enola, C. Y. C. | Did not finish. | |

25-FOOT CLASS.

| | | |
|---|---|---|
| The B., C. Y. C. | 1 58 17 | 1 54 17 |
| Two Brothers, M. Y. C. | 2 03 54 | 2 03 54 |
| Doratheo, R. Y. C. | 2 12 00 | 2 12 00 |

Alma, M. Y. C.; Infanta, M. Y. C.; Skate, C. Y. C; Venus, R. Y. C.; Volunteer, R. Y. C.; Vera, R. Y. C.; Trave, Manitowoc Y. C., and N. D., C. Y. C., did not finish.

The judges were H. F. Balch, of Minneapolis, and Capt. John Joys and Capt. John Fitzgerald, of Chicago. The timers were Adolph Meinecke, Jr., Henry Rice, Samuel Doctor and Archie McLenigan.

## Southwark Y. C.

PHILADELPHIA—DELAWARE RIVER.

THE twentieth annual regatta was sailed on May 30. Course, Dickinson street wharf to the buoy at the upper end of Chester Island Bar and return to Salt Works wharf, distance 28 miles; weather clear, wind S.S.E., strong:

SECOND CLASS—TUCKUPS.

| | Length. | Start. | Finish. | Elapsed. |
|---|---|---|---|---|
| Can't Tell | 15.03 | 11 28 00 | . .. .. | . .. .. |

| Baby Ruth C. | 15.03 | 11 00 00 | 3 26 00 | 4 26 00 |

Regatta committee, Jas. Irwin, Robt. Marsh and Jos. P. Stephens. Judges, M. Krafft, Jas. Haines and J. O'Shea.

## Bay Head Y. C. Corinthian Race.

BAY HEAD, JULY 4.

CLUB course, from starting line off club dock around white flag at mouth of Beaver Dam, keeping it on port; thence around white flag off mouth of Metedeconk River, keeping it on starboard; thence around stakeboat about one mile up Metedeconk River, keeping it on port, twice over the course, distance 10 miles, weather fair, wind west.

| | Length. | Allowance. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Madge, J. N. S. Brewster | 18.06 | 40 44 | Disabled. | |
| Olympia, Harold Binney | 22.01 | 35 32 | Disabled. | |
| Nate, H. W. Hazard | 14.06 | 48 25 | Difabled. | |
| Lilla, J. M. Dickinson | 21.06 | 36 19 | 1 53 26 | 1 17 07 |
| Paulina, W. M. McCauley | 21.05 | 36 25 | 1 29 58 | 1 53 33 |
| Peggy, A. W. Howe | 19.00 | 39 56 | 2 09 41 | 1 29 45 |
| Vixen, Wm. Ernst | 22.03 | 35 20 | 1 54 19 | 1 18 59 |
| Gertie, Robert Large | 20.08 | 37 27 | 2 01 53 | 1 24 26 |

The race was started in a very light wind, which freshened to a three-reef breeze before the finish, but the boats would not reef, so only lost time in carrying more sail than they could stand. Regatta committee: W. M. McCawley, chairman; P. R. Freeman, J. C. Egbert. Judges: Louis Bennett, J. C. Egbert, A. G. Dale.

## Interlake Yacht Racing Association.

A MEETING of the I. L. Y. A. directors was held at the Beebe House, Put-in-Bay, July 7, all the directors being present: C. B. Lockwood, Sandusky Y. C.; G. W. Luetkemeyer, Cleveland Y. C.; Com. C. J. Lichtenberg, West End Y. C.; W. Ladd, Put-in-Bay Y. C.; Com. H. Kendall, Citizens' Yachting Association; H. Tracy, Ohio Y. C., and Com. Wm. Gates, Toledo Y. C.

The classification rule having been so thoroughly discussed at former meetings, very little was said on the subject. A vote resulted in adoption of classification by corrected length, four of the directors, viz, C. B. Lockwood, G. W. Luetkemeyer, Com. C. J. Lichtenberg, W. Ladd, voting "yes," and Com. H. C. Kendall, H. Tracy and Com. Wm. Gates "no."

The meeting to be held at Put-in-Bay on Aug. 7, 8 and 9 promises to be well attended.

The most friendly feeling existed among the directors, and all will no doubt use their utmost efforts to bring out a full fleet, and the race committee, composed of C. B. Lockwood, Com. Wm. Gates and Com. C. J. Lichtenberg assures a grand success, so far as the details of the race are concerned.

## YACHT NEWS NOTES.

The Larchmont and Eastern clubs are now on their annual cruises.

The annual cruise of the Atlantic Y. C. for 1894 was very successful, the fleet, after a rendezvous at Oyter Bay as the guest of the Seawanhaka Corinthian Y. C., on July 4, sailing to New Haven, New London and Shelter Island. The racing runs were participated in by a number of yachts, and were exciting and interesting.

Cleopatra, a handsome steel steam yacht designed by Mr. Watson and built last year by Ramage & Ferguson, of Leith, for Mr. John Lysaght, former owner of Semiramis, arrived in New York on July 5 after a passage of thirteen days from Cowes. She has been under charter for some time to Mr. Amzi L. Barber, former owner of Sapphire, who has purchased her of Mr. Lysaght. She is of 675 tons, 194ft. between perpendiculars, 185ft. l.w.l., 27ft. 6in. beam and 6ft. 6in. hold, with two decks, five bulkheads. Her engines are triple compound, 18, 29 and 47in×33in. She will be an important addition to the American steam yacht fleet.

On July 3 there was launched at the yard of Wood & Son, City Island, a new 25ft. yacht, built from designs by Mr. Gerard Beekman, to replace the famous old Mirth, raced so long and so successfully by Messrs. J. W. and Gerard Beekman, about Oyster Bay. The new yacht is a combination of keel and centerboard, the hull proper being under water nearly a counterpart of the old boat, but with long and full overhangs, the keel being carried down in a wooden fin which carries the lead keel, through which the centerboard works. The dimensions are: Length over all, 50ft., l.w.l. 35ft., beam 12ft., draft 5ft. The yacht is cutter-rigged, with a moderate sail plan. The interior is fitted up for day sailing, but with a movable trunk and companion, for racing. There is a large cockpit, with a small steering well aft. Messrs. Wood have done excellent work in the construction.

## MODEL YACHTING.

### Midget Y. C.

THE eighth race was sailed on Red's Pond, Marblehead. Weather clear. Wind light, northeasterly. Start at 2:45:

| CLASS 1. | Length. | CLASS 2. | Length. |
|---|---|---|---|
| T. O. T. E., John Giles | 2.08⅞ | Midget, E. Dixey | 2.08 |
| May, Robert Hampson | 2.08⅞ | Pappoose, J. Goodwin | 2.08⅞ |
| Ami, B. Vickery | 2.07½ | Una, E. Ferguson | 2.08⅛ |
| Hattie, Robert Williams | | Corncob, H. Nutting | 2.07⅞ |
| —— Frank Atkins | 2.08⅞ | Porpoise, A. Whitmore | 2.08¾ |
| Spindrift, A. Barr | 2.08⅞ | S. S., H Litchman | 2.08 |
| Scarecrow, W. Gilley | 2.08½ | | |

Winners: First leg, Class 1, T. O. T. E.: Class 2, S. S. Second leg, Class 1. Scarecrow; Class 2, to be sailed off. Third leg, Class 1, Scarecrow; Class 2, Pappoose.

## Canoeing.

### FIXTURES.

SEPTEMBER.

3. Holyoke, Ann., Holyoke, Mass. 15. Red Dragon, Fall Regatta, Delaware River.
3-5. Passaic River Meet.
5. Ianthe, An., Passaic River.

### Canoes and Canoe Sailing in 1894.

*From the Field.*

BOURNE End with a moderate breeze, however, proved to be quite open enough for the canoes which have mustered there for the cup and other races; out of the six canoes which have entered the races four have capsized, Battledore and Curlew at time of writing being the exceptions. Whizz and Stella capsized in the cup race, and, owing to having ordinary wells instead of watertight bucket wells, they shipped so much water as to be practically unmanageable even in those quiet waters and light wind. What the result would have been had the capsizes been in Sea Reach, or even on the Crouch, with a breeze and a sea, experts know very well, and novices had better not try the experiment except in good close company.

These capsizes in the cup race are not to be looked upon as accidents due to close and exciting contests with abnormal sail plans; the same canoes out a day or two before, for pleasure and trial spins, turned turtle on equally slight provocation. The wind was a light breeze with a few livening stiff puffs, and out of the five canoes out sailing, including the Yankee, all except the Battledore capsized. One sank; another was so filled as to be unmanageable and in need of assistance; the others were righted, but probably only owing to its being quite smooth water. Battledore, however, is a bulb keeler, hence her comparative superiority against the temptation to turn over, notwithstanding she is of the old type and but 31in. beam.

Of course, there was nothing very novel in the capsizing of a sailing canoe under the late rules, which limited depth, pinched the beam, denied the use of outside ballast and scouted sliding seats; but now the rules have been changed, it is no longer necessary to accept capsizing as part of a sailing canoe's unchangeable nature, nor to admire the feather-like bendings of the American canoe Yankee, which was "laid flat" five times in one hour's sailing at Teddington, and be it remembered that Yankee and Dragon are both new boats, and built under the new rules presumably "up to date," but without taking advantage of them from the seaworthy side. This type of crew-balanced surface flitter is in some parts of America called a "shy boat," and is the true cause of men, that is wise men, going off into canoe-yawls. We confess to a feeling deeply the reverse of pride at the performance of the canoes of 1894; they are a direct adverse advertisement of canoe sailing as a sport, unhappily exhibited before a number of expert boat sailors at Bourne End, and a direct stifler of the prospects of recruiting the ranks of canoe sailing. The bright reverse, however, clearly shone out in the easy, steady sailing of the bulb keel Battledore. Had she been beaten in the light winds it might have been so expected, but the bulb proved no stopper; and, probably, a new boat up to full beam and with bulb and slide, would have lost the fleet even in that smooth water, and how much more so on open and rough water?

We some time ago suggested a cure for the evil, an evil which not only has nearly killed canoe sailing, but is moving up into canoe-yawls and 1-rater classes. We would leave the classification and rating rules as they are, but suggest the universal institution of a racing black list and time penalty, the penalty to be cumulative, and to continue through the season. For every capsize in a race one minute shall be given to all competitors holding a clean certificate, and such acts of folly should be indorsed upon her certificate of rating.

Passing now to the new craft (the Dragon), of course, at present she is comparatively untried; but in the races she has been through she puts canoe design for sailing races "no forrader." She is a surface skimmer of nearly the Sorceress type—that is, she has all the principles; but, owing to class limit of beam, a sliding seat puts the crew out even beyond where Sorceress type beam would have put the crew, and which is probably an absolute advantage. She is from the drawing board of Mr. Linton Hope, the designer of that celebrated craft the Sorceress, 1-rater. She has a deep, narrow, twistable brass centerplate of carving-knife shape and sharpness. Intended to twist and cut to windward, it also cuts up towards the surface, as we predicted anent the Sorceress type, and thus almost, if not quite, causes a capsize.

She is too crank, quick-about and flitter-like to be really "sailed" on a wind. She would probably be far better if fitted with a bulb keel; but then she would be lowered in the water, her waterline increased, sail reduced and very little boat surviving above water. She is a beautiful piece of light workmanship and fitting—in every way a credit to her builder, Mr. Theo. Smith, of Oxford. Her speed was much hampered by two causes—her well and slide seat are quite 1ft. too far forward, maybe even more; her sail was battened, that its form was convex to the wind. Flat surface is bad enough, but convex!—well, not until steamboat men try boat-sailing.

The American canoe Yankee, we have described before on more than one occasion as of straight horizontal keel and hollow ends, and 16ft.×30in., and her performance on Bourne End Reach suggests no alteration of our previous ideas respecting her. If not designed specially for smooth lake and up-river reaching, she certainly is a most peculiarly design, in our opinion, for rough, open water sailing. The design, coupled with position of crew and form of rig, is about perfect for straight reaching in dead smooth water, or on long, undulating swells in a steady breeze, even of good strength, and under such conditions probably she would walk away from our turn-about type. But sailing is not reaching, and the Yankee is poor and uncertain in tacking; and, from her strong proclivities for turning turtle, the result of an attempt to tack in short breaking sea, such as is common on tidal waters below bridge and at Burnham, would probably be a sternboard and over.

We now find canoe sailing in 1894 in this position. We are credibly informed that, had it not been for the American challenge and the Royal Canoe Club's request for defenders, probably only one canoe would have appeared at Bourne End to sail over for the cup this season. Then, owing to the challenge being put in only three weeks' before the race, only one new canoe was built, and she had not time to be tuned up or tested in any way. No canoe has been built or altered fully up to the possibilities under the new rule on the bulb and sloop side, though Dragon has appeared fully up to date on the skimmer and una-rigged side. All have taken the sliding seat, but it has not cured the epidemic of carsizing. The Battledore alone comes out with the bulb and a sturdy suit of well-sitting sails, and she wins the cup, and does not capsize. Considering the recent strange event in regard to the International competition, it is very fortunate that patriotic attempts to defend the cups, by rushing the building of expensive boats at too close a time for any real trial before the race, and which would not be wanted afterwards, was confined to one. Had there been a couple of months' notice of challenge, probably five new canoes would have been expressly built for that one purpose. But we very much doubt if even one of them would have been built with any approach to a straight horizontal keel, a hollow bow and run, 30in. of beam and 16ft. waterline, for 0-3-rating, for up-river sailing or even for rough water-sailing on tidal waters.

### A. C. A. Membership.

### Mr. Howard in England.

*From the Field.*

THE American canoeist, Mr. Howard, intends to sail in the sailing race in the R. C. C. regatta, but whether he will obtain any competitors from among the best of his Bourne End competitors is very doubtful. At the time of writing we hear of only one other entry, and that is of a comparatively slow boat, by no means a cup winner. Sailing, as far as leading sailing men are concerned, practically ended at Bourne End, so far as up-river is concerned, but will be revived at Burnham-on-Crouch, on Aug. 16, etc., for canoe-yawls and ½-raters.

Mr. Howard, in a statement published in several papers, states that he intends to sail his canoe Yankee at Salcomba, in the British Canoe Association Cup race, but there are difficulties to be dealt with. In the first place that cup is only open to members of that association. Then it is a handicap race, and how the handicapper is to place the Yankee it is very difficult even to guess. The known performance of this canoe up-river is about as poor as can be; but then, that was in light weather, and much turning on confined waters. But Mr. Howard states that his canoe is intended for open water sailing, rather an afterthought we should say, seeing that the Yankee was specially built to race for the challenge cup at Bourne End, on the Upper Thames. He claims that "in America if we do not make six miles an hour we call it a slow race;" and further, "it is conceded that on a fair course my canoe is the fastest ever seen in England." Where will the handicap-maker find himself between these two stools—the actual known performances and the modest claims of the owner?

Yet one other slight difficulty exists, that is that the B. C. A. Cup is open to all sorts of crafts from canoes up to 1-raters. The B C. A. has no racing rules or definitions, and the conditions made by the donors of the cup appear to be open to the entry at least of ½-raters if not of 1-raters. Of course, it is impossible that the committee may elect to adopt the classification of the Royal C. C., but, in any case, the Yankee would have to go against canoe-yawls on possibly rough open water, and when all is done, we should have but the result of an arbitrary handicap, the sole object of which is to put poor performers on a level with the good and best.

The "fair open water racing," which Mr. Howard is now seeking to obtain, existed up to the time of his withdrawal from the challenge cup race, but was removed in consequence of his own act. Members had been specially got to come forward to defend the cup, and to create an International race, and one canoe was specially built, and others were brought out solely to meet the Yankee. Then half an hour before the race the Yankee's entry is withdrawn. The committee of the Royal C. C. then met, and, in the circumstances, determined that the club could not fairly ask its members to go to the expense and trouble of undertaking the defense of the special cup, which had been put on for an International race in August, at Burnham-at-Crouch, with, at least, the possibility of another withdrawal of the American entry. Thereupon the Burnham Cup was withdrawn from the programme. But if Mr. Howard wants salt water racing and not under handicap, there are still the canoe-yawl races at Burnham on August 16 and 17, and if six miles an hour is easy work for the Yankee he would have a rosy chance of leading the fleet, as we doubt, if any or many, canoe-yawls or half-raters would much exceed six knots at best.

### Canoe Racing at Victoria.

THE Queen's Birthday was celebrated at Victoria, B. C., by a carnival of sports in which the Victoria C. C. took part, there being some good races.

The first race was called for 16ft. canoes and under, course from the canoe club house round the outer buoy and return, a distance of one mile and a half, the entries being T. S. Gore, W. J. Holmes, C. A Godson and T. N Hibben. The canoes were lined up and at the word go Gore got away first, Godson following, while Holmes and Hibben were bow and bow as they went up the harbor toward Laurel Point. The breeze was somewhat light for Hibben's canoe, a decked lapstreak, and he fell behind the lighter craft that skimmed away in good style. At the buoy, Godson turned first, with a lead of some 300ft., Gore next and Holmes third. Coming back Gore went gradually to the front, and the canoes came home well bunched. Gore crept ahead and crossed the line a winner, Godson only a few lengths behind and Holmes a good third.

The second race, over the same course, for canoes 16ft. and under without centerboard, brought out H. B. Rogers, F. Mawdsley and A. Gore. Rogers's canoe carried a jigger and proved more than a match for the others. Rogers won handily, with A. Gore second.

The sailing and paddling race came next, and brought out nine entries: C. A. Godson, J. P. Hibben, T. N. Hibben, F. Mawdsley, T. S. Gore, A. Gore, W. J. H. Holmes, D. C. Kurtz, — Kurtz. This was a capital race. Young Arthur Gore made a great lead in the paddling, and was away ahead at the turn, but mistook the buoy and turned another a considerable distance further away, which threw him out of the race. C. A. Godson met with a spill and lost his chances of winning. Holmes sailed back winner on a spanking breeze that sprang up just at the right time, T. N. Hibben second and Mawdsley third.

The last event was the open race, for which there were eight entries, C. A. Godson, W. J. H. Holmes, A. J. Dallain, J. Fraser, T. S. Gore, H. B. Rogers and the two Hibbens. Holmes had everything just in trim as the word was given, and went ahead with a rush. Rogers, Gore and Godson in a bunch behind him. Holmes kept his lead all the way, but the race was a grand one, the flyers coming round the point well together and making a fine sight. Holmes crossed the line a winner, while Gore and Rogers raced almost evenly for second place till near the finish, when Gore forged ahead and won the position, with Rogers third.

There were also races for Indian crews in 30 and 40ft. canoes.

### Birch-Bark Canoes.

*Editor Forest and Stream:*

In the "Answers to Correspondents" column of July 14 you say you cannot give address of any makers of birch-bark canoes. The Micmac Indians of Nova Scotia make fine birch-bark canoes. If your correspondent will write to John Louie, Bear River, Nova Scotia, Louie will either make him a canoe or get some other Indian there to do so. The price usually asked for a fair-sized canoe is about $16. The birch barks as made by the Nova Scotia Indians stand rough usage well, as I know from experience. C. M. STARK.

## CANOE NEWS NOTES.

The Hoboken C. C. extends the courtesies of its club house, at Tenth street, Hoboken, to canoeists attending the A. C. A. meet.

The racing at the W. C. A. meet has resulted in a win for Milwaukee in the trophy race, she leading Glenwood in each heat. The two boats, after their meeting last year, have been put in perfect shape for the present races. The lines of Milwaukee, built by the St. Lawrence River Co., were published in the FOREST AND STREAM on Feb. 11, 1894.

## Rifle Range and Gallery.

### The Columbias Challenge.

SAN FRANCISCO, July 2.—The Columbia Pistol and Rifle Club of San Francisco was organized for the purpose of increasing general interest in, and the advancement of fine marksmanship. Its members are convinced that one of the most efficient means to this end is the holding of contests between teams representing different sections of our country. Therefore, actuated solely by this motive, the said club hereby issues this challenge: We will shoot any *bona fide* shooting club in America a 15 or 20 team telegraph all-round match, as follows: Each contestant to fire 20 shots with pistol (any contestant may use a revolver if he prefers), 20 shots with target or any rifle, and 20 shots with regulation Springfield rifle, 60 shots in all to each man. Conditions, the Standard American target to be used exclusively (the black may include the 7 ring), distance 50yds. for the pistol and 200yds. for the other arms, trigger pull for pistol at least 2lbs., for target rifle any pull, and for Springfield rifle at least 6lbs.; sights, open for pistol, any for the target rifle (barring telescope), and regulation for the Springfield rifle; position strictly off-hand, except that the usual Schuetzen palm rests may be used on target rifles only; pistol must be shot with one hand only and without any other support

All matches must be shot on an open range, with no shading of any kind over the range or target, except immediately over the shooter (the usual boundary fences of shooting ranges of course are not included in this restriction). The contest to be held in September, 1894. The stakes to be a silver cup suitably engraved and to be furnished by the losers Details as to the appointment of judges, etc., to be arranged by letter.

Should we get no answer to foregoing challenge then we stand ready to shoot a pistol match purely with 15 to 20 men, conditions as above, or, failing to get response to this, we will shoot a 20 or 25 team match with Springfield rifle, conditions as above.

DR. LEE O RODGERS, Pres.,
F. O. YOUNG, Sec'y,
Columbia Pistol and Rifle Club

### A Ricochet Score.

*Editor Forest and Stream:*

Being a reader of your paper and a lover of rifle shooting I read everything pertaining to that sport of sports with the greatest interest. Being at one time a member of a rifle club, and like all other riflemen anxious to try my sights and new proportions of powder and lead, I was using at the time a Remington-Hepburn .40-70, varying the load to suit the distance shot over, .50-285 for distances under 300yds., and .70-370 up to 500yds. Still I was not suited; my idea was that a bullet of 450grs. weight would be a material advantage. So I ordered some made. At the same time I moved my Vernier sight back on the butt of my rifle and repaired to the range full of confidence and expecting a clean score. But not in the way I eventually succeeded in getting it. As my turn to occupy the attention of the marker came (we were shooting over the 500yds. range at this time) I assumed a recumbent position, took aim and fired, when a wave off was the result. I tried again and still no hit. Assuming that I was over shooting I lowered my sight and kept raising until I could trace it by the dust raised by impact with the ground. Raising my sight still more, I succeeded in being credited with a 2. Still going up, I got a 3, then a close 4. Then I commenced my score of 7 shots. I fired 5 shots with the following result: 5, 3, 4, 5, 3. As the last shot was fired, one of the members who was looking through a telescope reported that he thought the shot was ricochet, and I told him I would fire another shot, and he said that it certainly struck the ground as near as he could tell 25 or 30yds. short. Still I was credited with a 4 close to the bull. We immediately adjourned to the target to investigate, and found the ground at 30yds. in front of the target badly torn up. The marker showed us the last shot hole and the bullet had keyholed, going apparently end over end, as upon examination we found enough holes of the same description to correspond with the number of shots fired by me, proving conclusively that I had made the remarkable score of 20 out of 25 at 500yds. by ricocheting on the target. Now, I tell this so if any brother riflemen have had a like experience I hope they will come forward and let us have the benefit of their experience.

S. F. C.

### Zettler Rifle Club.

THE bi-monthly shoot of the Zettler Club, at Wissel's Cypress Hills Park, on July 15, did not have its usual attendance; hot weather and the attraction of beach and mountain resorts brought the attendance down to the minimum. Ross distinguished himself by making three scores of 230 or better. The other members found it difficult to make their usual averages. The weather was clear and hot.

The competition for the five prizes on the man target was decidedly hot and interesting, and resulted in a tie score of 57 between Ross Plaisted, Holges, Engel and Krauss; this was somewhat of a disappointment to several of the members who felt sure of getting a division of the pot on scores of 54 and 55. The three best scores on the ring target were made by Ross. Plaisted was second and Engel third. Scores:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| F C Ross | 23 | 25 | 23 | 23 | 25 | 22 | 24 | 25 | 23 | 23—236 |
| | 24 | 23 | 24 | 22 | 25 | 22 | 23 | 23 | 21 | 24—231 |

J. R. BUCHANAN, Sec'y.

### North End Rifle Club.

EPHRATA, Pa., July 14.—The members of the North End Rifle Club enjoyed an old-fashioned shoot on their range at Ephrata last Friday afternoon, July 13, and succeeded in averaging fair scores at a distance of 200yds. Six members participated in the sport, and the target used was a standard American, the shooting being "standard rest." The following were the rest scores made, each shooter being allowed three scores of 10 shots each:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| W K Romig | 10 | 9 | 8 | 9 | 10 | 8 | 5 | 10 | 9 | 7—85 |
| W M Carpenter | 9 | 9 | 10 | 9 | 7 | 9 | 8 | 7 | 7 | 10—85 |
| D B Lefever | 6 | 10 | 10 | 10 | 7 | 8 | 9 | 8 | 9 | 7—85 |
| C S Wenger | 7 | 10 | 6 | 7 | 9 | 8 | 8 | 8 | 10 | 10—83 |
| L M West | 10 | 7 | 8 | 9 | 9 | 6 | 9 | 8 | 7 | 5—78 |
| J M Sheaffer | 8 | 5 | 9 | 7 | 7 | 7 | 6 | 6 | 9 | 5—69 |

Occasionally it was very windy, which prevented the very best shooting. The club will meet again on Friday, July 27, for regular practice. D. B. LEFEVER.

## Modern American Pistols and Revolvers.

THIS work, by Mr. A. C. Gould, is a companion volume to the standard work, "Modern American Rifles," by the same author. It is illustrated with many portraits of pistol and revolver shooters, as well as engravings of various arms and tools and selected targets, showing the possibilities of the little guns.

The letter press is authoritative. Both by education and practical experience Mr. Gould is preëminently fitted to be the chronicler of his chosen subject. He is one of the few Americans who have combined authorship to any great extent with the study of small arms. He has not only put on record the results of others' investigations, but he has also conducted numerous experiments in original fields upon his own responsibility. One of these experiments was the pocket revolver test, which is detailed at considerable length in the present volume.

In reading what Mr. Gould has written one is struck by the author's practical bent of mind. Inferential reasoning or speculation is studiously avoided and the reader in most cases is left to form his own deductions. The subjects he has chosen to investigate are all practical, and his effort is to place the facts of the case lucidly before his audience. He strives to right mistaken notions and effect needed reforms. His book is not only a perfect catalogue, but it gives a record of what has gone before and marks out a line of advance.

The author moves along smoothly and easily in the path he has chosen, and gives the impression that he is in a position to prove every statement he makes, by ocular demonstration. He asserts nothing that he cannot show to be true in the machine shop or on the range. His books are satisfactory, because accurate, and they are progressive and representative of the best achievement in the departments treated.

The first edition of "Modern American Pistols and Revolvers" was published in 1888. The objects of the author in presenting this second edition, as stated in his preface, are: "To demonstrate the accuracy of modern American pistols, revolvers, and ammunition to date; to record the best known work to the time of publication; to point out the propriety of classifying the several departments in shooting with these arms; to urge practical training among the national guard in America, where revolver shooting, which should be understood by all officers, members of the naval battalions, cavalry and artillery, has, until recently, been almost wholly neglected."

Mr. Gould gives an interesting *resumé* of the status of pistol shooting in his preface at the time the first edition was printed; he says:

"There was but little general knowledge of the capabilities of the pistol or the revolver. A general impression prevailed that there was little or no accuracy in the arms, or if they were accurate, those manipulating them skillfuly were specially gifted. The publication of the first edition showed the great accuracy and reliability of certain arms, and made it apparent that to become skillful in manipulating them was only a matter of practice. This stimulated many devotees of shooting to attempt to acquire a proficiency. As a result, at the time of writing there are expert pistol and revolver shots in various sections of the country; and as the shooting world has no national confines, this statement may be applied to many parts of the world.

"The expert amateur pistol and revolver shots of to-day are, in many instances, doing work superior to that of professionals a few years ago. To some extent, this is due to improvement in arms and ammunition, but chiefly to the knowledge that the arms possess great accuracy, are safe to shoot, and that it is within the reach of any one with normal health and vision to become a fine marksman.

"Pistol and revolver shooting has grown rapidly in popularity as a sport throughout the world; where there was one expert pistol shot a few years ago there are now many. There have been numerous styles of arms created and modes of shooting developed, and it has seemed to be important that a record of the work accomplished since 1888 be collected, added to that before presented, and recorded in a permanent form. It is thought that the matter published in this volume will show the capabilities of pistols and revolvers and the development of skill in shooting them."

The table of contents which follows gives a good idea of the book: Development of American Pistols and Revolvers. American Single-Shot Pistols. The Colt Revolver. American Revolvers—Smith & Wesson's Productions. Miscellaneous Revolvers—Revolvers Classified. Test of Military Revolvers by the United States Ordnance Board. Target Revolvers. Pocket Revolvers. Ammunition for Pistols and Revolvers. Reloading Ammunition for Pistols and Revolvers. Revolver Shooting Record in America. Some Performances with the Pistol. Pistol and Revolver Shooting at Long Range. Impressions Formed by Investigations. Rules for Pistol and Revolver Shooting.

"The first supply of single-shot pistols found in the United States," says the author, "were of foreign manufacture, being almost wholly of the dueling pattern." Next came the manufacture of home products, which for many years was confined to hand work. These weapons were necessarily expensive; for, besides the time and labor required to make them, they were often richly embellished, adding to their expense. * * * Besides the single-shot pistols of the dueling pattern were those of plainer finish for military work These pistols were of large caliber, generally shooting a spherical bullet; sometimes a bullet and several shot were employed. These pistols were often of smooth bore. Next came the manufacture of military rifled pistols by machinery, and later, with the advent of the metallic cartridge, the production of the cheap single-shot breechloading pistol of small caliber.

The introduction of the revolver which had such an apparent advantage over the single-shot pistol on account of its reserve shots almost drove the pistol into disuse. It also had the effect of lessening practicing with the pistol, which in the early days of this country was considered a gentleman's accomplishment. Fine shooting became a lost art, and the old time pistol shoot sank into oblivion. Speed in manipulating a revolver was apparently considered of more importance than extreme accuracy.

The first American revolvers were crude arms, their chief merits being the reserve fire and ability to fire rapidly. Improvements in the arm to increase its accuracy were slow. The change from percussion to rim-fire cartridges retarded improvement in accuracy; from rim-fire to center-fire cartridges had the same effect; and it can be safely said that American breech-loading pistols and revolvers were not brought to a high state of perfection until within a few years.

So much for the early history of the American pistol and revolver. The types of both had been developed during the period alluded to and recent improvements have been chiefly directed toward securing greater accuracy. This last period covers about ten years and it is with this that the book before us deals.

After his slight introduction the author begins a description of the products of such manufacturers as Smith & Wesson, Colt, Stevens and Remington. This matter occupies about one-third of the book, but is far from being the least interesting part. It is a compilation that covers the American field completely and contains much interesting information.

A chapter each is devoted to target revolvers. The author draws the line between these classes somewhat as follows: He would consider an arm a pocket revolver which did not exceed a maximum weight of 23 ounces; a maximum barrel length of four inches, and he would make .32 the minimum caliber. All exceeding this weight or length of barrel he would apparently class as target revolvers.

The chapter on ammunition for pistols and revolvers, and reloading ammunition, are particularly instructive. That on the "Revolver Shooting Record in America" is very interesting, describing, as it does the rise of Chevalier Paine and the Bennett Brothers and their wonderful performances at 50yds. and upward with the revolver.

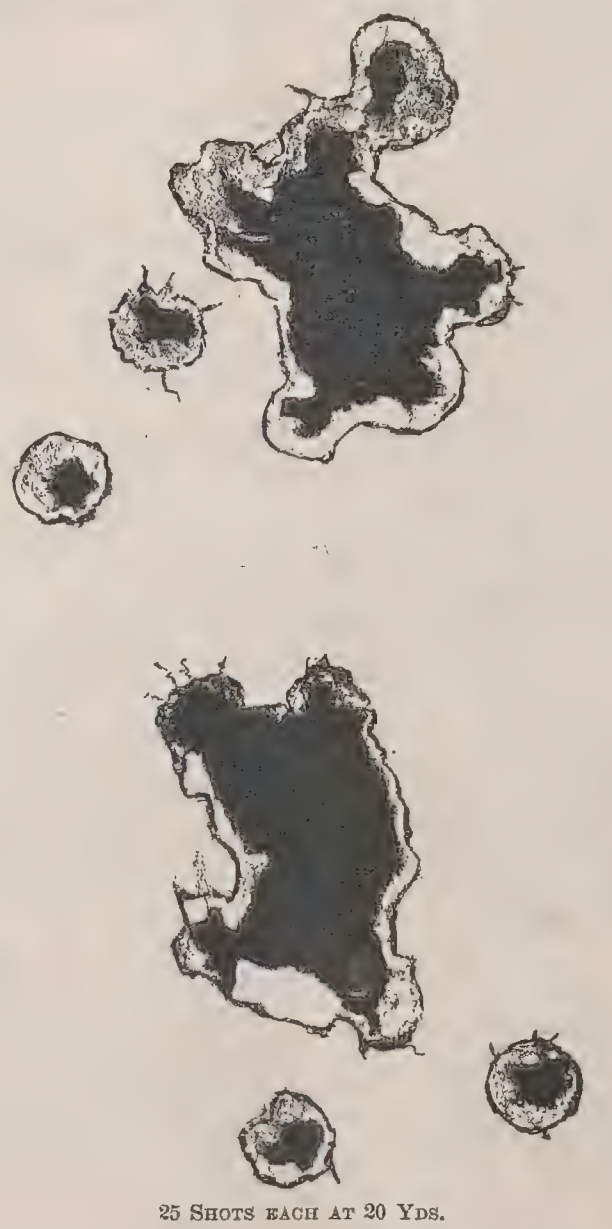
Mr. Gould has made most of his investigations at the great Massachusetts shooting ground, Walnut Hill, and if any fault could be found with his book, it would be that it is too sectional. It is true that much that is best in target work emanates from the neighborhood of Boston, and that Walnut Hill occupies a foremost position in our shooting annals, but the remainder of the country furnishes much that must not be overlooked. We think that the author could have profitably devoted space to gallery shooting, which is the only kind at the disposal of shooters in certain localities, and we do not believe with him (except in the case of the police force or the regular army) that practice with the revolver should be confined to service charges.

Sportsmen who practice at the target do not do so with the intention of acquiring skill to kill their fellow men or to kill large game animals. For the latter purpose they select some other weapon than a revolver, and the man who carries a revolver nowadays for purposes of self-defense has become very rare. Consequently there is no such necessity for shooting killing charges as Mr. Gould assumes.

Those who take up revolver shooting do so solely for the pleasure to be derived from the sport, in the same way that other men take up billiards or bowling. There is no more argument in favor of shooting heavy charges for these men than there is that the bowler or billiard player should handicap themselves with implements that only the strongest could use to advantage. Service charges in large caliber revolvers are unpleasant for most men to shoot in the open air, and impractical for use in galleries. The shooter should prepare his ammunition for the distance and purpose intended. If shooting in a gallery or at short range let him use the very lightest charge that will give accuracy, whether shooting pistol or revolver. A shot in the center of the black is worth as much for the skill of the shooter if propelled by 6grs. of powder as if by 60. The only comment that can be made is that the man shooting the big charge has unnecessarily handicapped himself. J. B. B.

---

At the bi-monthly shoot of the Zettler Club in Wissel's Cyress Hills Park on July 15, Fred C. Ross gave another exhibition of his wonderful shooting qualities in off-hand shooting. The following scores were made by him on this occasion: 236 224 231 230 223—1144, an average of 228.8.



## Revolver Scores With Nitros.

THE advantage of a smokeless powder over the ordinary black powder are nowhere more thoroughly appreciated than in a shooting gallery on a summer day.

In winter the difference in temperature of the inside and outside air generally serves to clear the ordinary gallery of smoke, but in summer there is no such difference of temperature and no smoke-dispelling currents of air. A few shots from a revolver will hide the

WITH A .38-44 S. & W. REVOLVER.
5 Shots at 20yds. and 6 Shots at 20yds.

25 SHOTS EACH AT 20 YDS.

target in inky gloom, and then there is nothing for the shooter to do but sit down and wait till the smoke clears away at its own sweet will.

Under the circumstances it is no wonder that revolver shooters in New York are on the lookout for a perfect smokeless powder adapted to their needs. Roundsman W. E. Petty has been particularly active in experimenting with the various brand upon the market, and has suffered unpleasant consequences more than once as a result of his investigations. He has done good shooting with several different nitros, however. Below are exhibited some of his best targets to date, made with American wood powder, No. 2 rifle. Mr. Petty used a .38cal. Smith & Wesson revolver with an 8in. barrel, loaded with 7grs. wood powder and primed with 2grs. Dupont powder. The range was 20yds. and the date July 4.

## Revolver Shooting in England.

IT was a very fine day on July 3 at the South London Rifle Club's weekly shoot. The scores for the revolver resulted as follows, Mr. Winans taking second prize, although his score equalled the winner's, on account of the order of the shots, the last six coming fourth in his score and third in Mr. Rand's for the championship, though both scores count alike:

| | 20yds. | 50yds. |
|---|---|---|
| F Rand | 7 6 6 7 7 7—40 | 6 6 7 7 4 6—36 |
| Walter Winans | 7 6 7 6 7 7—40 | 7 6 6 7 7 7—40 |
| Capt T W Heath | 7 6 5 7 6 7—38 | 7 7 6 6 7 6—39 |
| Clementi-Smith | 4 6 7 5 7 7—36 | 6 5 7 5 6 6—35 |
| Howe | 6 6 7 5 6 5—35 | 6 7 5 6 6 5—35 |

At the North London Rifle Club on July 4 the following scores were made. It was a perfect day for shooting, but many of the revolver members are waiting for Bisley and did not compete:

50yds. target:

| | | | |
|---|---|---|---|
| Andrews | 555455—29 | Ashley | 550555—25 |
| Rand | 544555—28 | Knapp | 444544—25 |
| Major Munday | 545545—28 | Capt Heath | 554344—25 |
| Clementi-Smith | 455554—28 | Ridgway | 445453—25 |
| C F Lowe | 455445—27 | Carter | 454334—23 |
| Capt Richardson | 345555—27 | | |

Leading scores for revolver championship of the club now stands:

| | 20yds. | 50yds. | Total. |
|---|---|---|---|
| Walter Winans | 41 41 40 40 40 39 | 30 29 | 300 |
| C F Lowe | 40 39 39 39 38 38 | 27 27 | 289 |
| Rand | 40 38 38 38 38 38 | 28 26 | 288 |
| Skilton | 40 39 39 39 38 38 | 27 27 | 287 |
| Capt Cowan | 38 38 38 38 37 36 | 27 26 | 278 |
| Major Munday | 39 37 36 36 36 35 | 28 26 | 273 |
| Capt Richardson | 38 36 35 34 34 34 | 27 25 | 263 |

| Andrews | 39 37 36 32 ,, ,, | 29 27 | 200 |

## Hartford Rifle Club.

HARTFORD, Conn., July 14.—Scores of the Hartford Rifle Club made at the regular bi-monthly shoot this afternoon, German ring target, 200yds. off-hand. Weather conditions were everything, from the brightest sun to the deepest gloom with a heavy storm, and wind from all directions, clearing later into the most perfect of shooting conditions, but too late to be taken full advantage of, as most of the members had left the range. Medal match, one entry:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| H M Pope | 23 | 23 | 22 | 21 | 19 | 22 | 25 | 20 | 16 | 23—213 |
| F K Rand | 23 | 22 | 17 | 18 | 22 | 22 | 20 | 22 | 17 | 25—208 |
| D S Seymour | 20 | 22 | 24 | 20 | 22 | 16 | 21 | 16 | 22 | 23—206 |
| W J Dunbar | 25 | 18 | 24 | 20 | 16 | 10 | 20 | 21 | 23 | 20—197 |
| H A Fox | 22 | 21 | 11 | 18 | 20 | 22 | 22 | 25 | 18 | 15—195 |

Re-entry match:

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Pope (Win. Pope barrel, .33-45-213) | 24 | 20 | 20 | 22 | 19 | 23 | 23 | 24 | 18 | 24—217 |
| | 21 | 24 | 24 | 22 | 18 | 23 | 19 | 21 | 22 | 22—216 |
| | 25 | 24 | 22 | 21 | 24 | 24 | 23 | 24 | 24 | 23—234 |
| Seymour (Bal. Pope barrel, 33-45-213) | 24 | 24 | 21 | 19 | 24 | 19 | 24 | 24 | 25 | 20—226 |
| Fox (Win. 32-40-165) | 21 | 21 | 22 | 19 | 20 | 24 | 18 | 22 | 24 | 18—198 |
| | 24 | 21 | 20 | 19 | 18 | 21 | 19 | 21 | 15 | 18—196 |

| | 21 | 24 | 18 | 23 | 22 | 18 | 19 | 14 | 10 | 20—189 |

H. M. POPE, Sec'y

## New York Schuetzen Corps.

THE New York Schuetzen Corps held its monthly practice shoot in the Union Hill Schuetzen Park on Friday of last week. The weather was fine, but decidedly hot. B. Walther carried off the honors on the ring and bullseye target, making the good score of 222 on the ring and having the most flags (5) on the point target. On the man target B. Zettler was first with 57. Scores:

Ring target, 10 shots, possible 250: B. Walther 222, Joe Schmitt 203, Fr. Schmidt 201, John G. Thoelke 197, Fr. Facompré 195, Ph. Feigel 194, B. Zettler 191, Aug. J. Christen 187, W. Wessel 183, J. Bunz 182, C. Grosch 176, John Hainhorst 176, H. Hauschen 167, J. C. Bonn 164, H. Strate 165, G. Wehrenberg 161, H. B. Michaelsen 161, H. W. Werselee 158, H. Offermann 156, J. D. Wilkens 156, H. Meyn 151.

Man target, 3 shots, possible 60: B. Zettler 57, J. G. Thoelke 56, C. Grosch 53, F. Schmidt 52, H. Strate 51 and Ph. Feigel 51.

Bullseye target: B. Walther 5, C. Grosch 3, F. Hagersheat, J. G. Thoelke, A. Brunke, J. Bunz, John Hainhors and Aug. J. Christen 2 each, H. Krobel, H. Strate, Ph. Feigel, B. Kumm, F. Facompré, J. F. Cordes, Curd Meyer, E. Kuhlmann, H. Peters, A. H. Sievers, H. Decker, B. Zettler, A. Walta, H. Buthfer and H. F. Meyer 1 each.

## Greenville Rifle Club.

THE weekly gallery shoot of the Greenville Rifle Club was held at its headquarters on Friday night.

In the competition for class prizes the following members won in their respective classes: First class, Robidoux first, Purkess second; second class, Agneau first, Lutz second; third class, Daniels first, E. Wuestner, Jr., second. Scores: First class, Purkess 240; J. Boag 238, Scheeline 233, Collins 236, Robidoux 240, C Boag 232; second class, Agneau 231, Lutz 232, Charlock 211; third class, E. Wuestner, Jr. 214, Becker 215, Daniels 218, F. Wuestner 203.

## Schlicht Rifle Club.

WEST NEW YORK, N. J., July 11.—The weekly gallery shoot of the Schlicht Club was held at headquarters this evening. Geo. Dorr won the champion medal; Gus Meyer the first class, and M. Daus the third class. Scores: Geo. Schlicht 241, Geo. Dorr 241, Wm. Schlicht 236, Aug. Meyer 236, Jacob Schlicht 235, M. Daus 232, Chas Meyer 230, Geo. Richert 224, A. Deubline 224, Geo. Lantenberger 222, Jacob Diehl 219, Fred Lambrix 217, John Dedrick 217, P. Man 215, Conrad Schlicht 213, Capt. Krobatsch 210.

## RIFLE NOTES.

At the weekly practice shoot of the New York Rifle Club in Armbruster's Park, Greenville, N. J., on Saturday of last week, Dr. Chadbourne, with his .25-10 Stevens, made an average of 8.5 on the standard American target, in a series of 50 shots. B. Zettler, who was present, was requested by the Doctor to try his rifle. After a few preliminary shots Mr. Zettler made the following 10-shot score off-hand: 9 9 10 7 9 10 8 10 10 10—92. To say that Zettler was pleased with his effort hardly expresses the situation, and the Doctor, well, we all know how one feels when a brother shooter makes a fine score with our pet rifle.

Gus Zimmerman cabled the Zettler Bros. last week to forward a fresh supply of ammunition without delay. Report says Zimmerman continues to add new trophies to his stock of winnings in his journey through Germany. He says that Europe will be well represented at the great international festival in New York in 1895. Where the great shoot is to be located continues to be a matter of much interest to the shooting fraternity of New York. Long Island seems to have the call at the present time.

The New York City Corps held its annual festival at Brummer's Park on Tuesday of this week. The scores will appear in our next issue.

A team from the Portchester (N. Y.) Rifle Club will visit the Greenville (N. J.) Rifle Club at Greenville to-day and engage in a friendly match with the Greenville Club.

The New York Central Corps will hold its shoot in the Union Hill Park on Tuesday of next week.

The South New England Bund held its annual shoot in Meriden on Monday and Tuesday of last week. A letter received by us from one of the members of the organization says: "The Meriden shoot came off on Monday and Tuesday. I did not know of it in time to notify you. It was a fizzle. It was so well advertised that they sent one programme to each society in the Bund." This explanation should relieve the burden resting upon Mr. Dorrier's mind as to why he was slighted when the notices were distributed.

---

ARMBRUSTER'S Greenville Schuetzen Park, most thoroughly equipped for rifle shooting. Range open for practice every Saturday.—*Adv.*

# Trap-Shooting.

**All ties divided unless otherwise reported.**

**If you want your shoot to be announced here send in notice like the following:**

## FIXTURES.

July 18-19.—Interstate Manufacturers' and Dealers' Associations's seventh tournament, under the auspices of the Kentucky Gun Club, at Louisville, Ky. The Kentucky Gun Club will add from $200 to $400.

July 18-19.—Dr. Wallade's bluerock target and live bird tournament, at Newport, Mich.

July 19.—Hartford Gun Club tournament, Hartford, Conn. Open to all.

July 24-26.—Lafayette (Ind.) Gun Club tournament.

July 25.—Central New York Trap-Shooters' League, fourth tournament, at Syracuse

July 26.—New England Shooting Association championship tournament, under the auspices of the Willimantic Rod and Gun Club, at Willimantic, Conn.

Aug. 7-9.—Memphis (Tenn.) Gun Club tournament.

Aug. 8.—W. H. Kearfott's semi-annual bluerock target tournamen at Kearneysville, Jefferson county, W. Va.

Aug. 8-10.—Missouri State Amateur Association, at Richmond, Mo.; $300 added.

Aug. 13-18.—John Parker's fourth international tournament, blue rock targets and live birds, at Des-chree-shos-ka Island, near Detroit, Mich.

Aug. 15-16.—Richmond (Me.) State shoot. C. O. Rowe, Sec'y.

Aug. 21-23.—Hot Springs (S. D.) Gun Club's tournament; $250 added.

Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wopsononock Park, Altoona.

Aug. 22-24.—Central Illinois Sportsmen's Association annual tournament, at Bunker Hill, Ill.

Aug. 23.—New England Shooting Association championship tournament, under the auspices of the Atlantic Trap Shooting Association at Lynn, Mass.

Aug. 29.—Central New York Trap-Shooters' League, fifth tournament, at Auburn.

Sept. 3.—Endeavor Gun Club's annual shoot, Marion, N. J. E. Holister, Sec'y, Jersey City Heights, N. J.

Sept. 19 20.—Interstate Manufacturers' and Dealers' Association's tournament, under the auspices of the Chattanooga Gun Club, at Chattanooga, Tenn.

Sept. 25-27.—Rochester (N. Y.) Rod and Gun Club tournament, with Central New York League team shoot, at Rochester. J. B. Mullan, Sec'y.

Sept. 26.—Central New York Trap-Shooters' League, sixth tournament, at Rochester.
Oct. 3-5.—West Newburgh (N. Y.) Gun and Rifle Association tournament. Last day live birds. W. C. Gibbs, Sec'y.
Oct. 10-11.—Interstate Manufacturers' and Dealers' Association tournament, under auspices of the Palmetto Gun Club, at Charleston, S. C.
Oct. 22-24.—Emerald Gun Club tournament, at Dexter Park. Targets and live birds. Dr. G. V. Hudson, Sec'y, 9 Madison street, New York.
Oct. 24.—Central New York Trap-Shooters' League, seventh tournament, at Utica.
Nov. 28.—Central New York Trap-Shooters' League, eighth tournament, at Syracuse.

1895.

April 3-5.—Interstate Manufacturers' and Dealers' Association's third annual grand American handicap at live birds, at New York.
May.—Knoxville (Tenn.) Gun Club's fourteenth annual tournament; $1,500 added to the purses.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

Residents of New Jersey are asking why the State Sportsmen's Association does not awaken and arrange a tournament. For several years the organization has been in a comatose state so far as trap-shooting is concerned, and it is fully time that it came to life. President Heritage says he has called several meetings, but in each instance it has been impossible to get a quorum for the transaction of business. If the members of the present organization do not evince sufficient interest to attend meetings, it would be a good plan to try and get a quorum of non-members and effect a reorganization. And no better plan could be adopted than to reorganize on the same plan as that under which the New York Association is formed, the game and fish protective portion of the work being effected at a winter meeting and the trap-shooting interests being catered to and fostered at a tournament and meeting held in the summer. By adopting this plan the different interests are kept distinct from one another. Let President Heritage call a meeting of the New Jersey Association for the purpose of effecting a reorganization on the above lines and we guarantee that he will be able to muster a quorum.

Robert Boyle is confident that he can put out 100 birds that will be too fast for any expert so far as making a high score is concerned. He is willing to wager a reasonable amount that no man can kill 95 out of 100 birds of his handling. And judging from the caliber of the birds Mr. Boyle put out for John Ryan in the latter's last match against T. W. Morfey we are inclined to think he would win.

During the New York State shoot, at Utica, Frank Denison, of Syracuse, claimed to be willing to back an "unknown" for a live bird match against "anybody" for from $500 to $1,000 a side. If Mr. Denison will correspond with the trap editor of this journal a match may result, as we know of several men who are willing to shoot hard and straight for either of the above amounts.

Samuel Castle, the veteran of the Newark Gun Club, shot at twenty-five birds during last club day, and killed them all. He is back in his old form once more. Members of the Newark Club would like to see a live bird match or a series of matches between Mr. Castle and "Uncle Dan" Lefever of Syracuse. What say you, "Uncle Dan?" Mr. Castle is ready for the fray at any time.

"Wopsy" Mountain will be the Mecca for sportsmen next month, when will be held the annual tournament of the Pennsylvania State Sportsmen's Association. And, by the way, it is about time for the programmes to materalize. Br'er Banks, where are they? Send along a few copies so we can give you and "Wopsy" a few "boom" notes.

In our account of the New York State shoot we inadvertently gave to Mr. J. G. Knowlton the credit along with "Papa" Dexter of presiding over the tent of the Oneida County Sportsmen's Association. Mr. Knowlton, however, was chief dispenser of hospitality in the tent of the Whitesboro Gun Club.

Now that Greensboro has decided not to engineer a tournament this fall it would be good policy for the Charlotte (N C.) Gun Club to hold one of say three days duration. About $150 added to the purses each day ought to draw a good attendance.

The Newark Gun Club will invite the Parkway Gun Club of Brooklyn to visit Erb's "Old Stone House" grounds on the second Thursday in August to shoot a friendly team match.

The Endeavor Gun Club, of Jersey City, will hold a shoot on Al Heritage's Marion grounds to-day. This club will hold an open-to-all tournament on Sept. 3 (Labor Day).

Thomas W. Morfey, of Paterson, is matched to shoot against Mr. R. Halstead, of Elizabeth, 100 live birds each for $100 a side, the shoot to take place in the early fall.

Don't forget that big shoot of the Memphis (Tenn.) Gun Club in August. The Memphis sportsmen propose to spread themselves in entertaining visitors.

The Northerners who go to the Chattanooga (Tenn.) tournament will have an opportunity to take a trip up Lookout Mountain.

There is a prospect for a two or three days' tournament at Paterson this fall, with live birds as the targets for the final day.

Samuel Castle, of Newark, claims to have killed 76 woodcock since the opening of the season.

C. H. TOWNSEND.

### Butte Rod and Gun Club.

BUTTE, Montana, July 10.—Since the State shoot at Helena last month the attendance at the weekly club shoots has somewhat fallen away, but the enthusiasm among the few faithful continues unabated, and now that the weather has warmed up and their joints are thoroughly unlimbered, they are praying for another tournament. The shooting has improved with the weather as the appended scores will show.

Last season Mr. Jacobs was one of the most enthusiastic cranks in the club, but durirg the winter was out of form and in an evil hour he made a match at 100 birds with Rueger, who at that time was just coming out, and Rueger beat him badly with a very low score. It was a long time before he heard the last of it, and it was a long time also before he took up the gun again. But on June 24 he faced the traps for the first time this season, and he had his revenge for he knocked out 25 straight with a nonchalant air that was truly refreshing. In the medal shoot on June 24 Rueger and Jacobs tied and the same fatality followed Jacobs, for Rueger beat him in the shoot off.

In the medal shoot July 1 Cowan missed his first and then run the string out without losing another. He broke 97 out of the last 102 birds shot at. The Scott gun seems to be the favorite in our club, there being no less than six high grade guns of that make. Below are the scores.

*June 24.*—Twenty-five single bluerocks, unknown angles:

### Eureka Gun Club.

CHICAGO, Ill., July 14.—*Editor Forest and Stream:* We will shoot a fifteen-man team race with the Garfield Gun Club, of Chicago, at our grounds, Seventy-ninth street and Vincennes avenue, on Saturday, July 21. All shooters are invited. The same club has challenged us to shoot them a five-man team race for the cup emblematic of the State championship, which we now hold, date to be announced later. We expect also other clubs will have representatives present to shoot for this cup and that a large crowd will be in attendance at both.

No. 1, known traps and unknown angles:

### Putney Gun Club.

PUTNEY, Vt., July 10.—The Putney Gun Club celebrated the Fourth by an afternoon shoot on the club grounds. Attendance was not large, but there was lots of enthusiasm. Matches 1 to 4 were sweeps at 5 singles, 3 unknown traps, and matches 5 to 8 were team matches, thus putting good shots and poor shots on an equal footing. Below is the score:

No. 1: Ayer 3, F. M. Robertson 0, B. Robertson 2, Stowell 0, Lyon 2, F. E. Robertson 2, Bailey 5.

No. 2: Ayer 4, F. M. Robertson 2, B. Robertson 3, Stowell 2, Lyon 2, F. E. Robertson 4, Bailey 4, Ward 2.

No. 3: B Robertson 1, F. M. Robertson 3, F. E Robertson 0, Ward 2, Young 2, Ayer 5, Lyon 3, Stowell 2, Willard 2, Bailey 1.

No. 4: B. Robertson 1, F. M. Robertson 3, F. Robertson 1, Ward 2, Young 4, Ayer 4, Lyon 4, Stowell 1, Willard 1, Bailey 3.

No. 5, team match, 5 singles, unknown traps and angles;

| | | | |
|---|---|---|---|
| Ayer | 011110—4 | Bailey | 111001—4 |
| Lyon | 010111—4 | Willard | 011001—3 |
| B Robertson | 101010—3 | Young | 001000—1 |
| F M Robertson | 010010—2 | F E Robertson | 010101—3 |
| Ward | 011101—4—17 | Stowell | 000100—1—12 |

No. 6, 10 singles, unknown traps and angles:

| | | | |
|---|---|---|---|
| Ayer | 1011110111—8 | Bailey | 1101011010—6 |
| Lyon | 0111101111—8 | B Robertson | 0110010100—4 |
| Young | 1101011010—6 | F E Robertson | 0111110000—5 |
| Willard | 1011010000—4 | F M Robertson | 1001001111—6 |
| Stowell | 1001011100—5—31 | Ward | 0111001010—5—26 |

No. 7, 10 singles, unknown traps and angles:

| | | | |
|---|---|---|---|
| Stowell | 0001010100— 3 | B Robertson | 0100000011— 3 |
| Ayer | 1111111111—10 | Bailey | 0111101111— 8 |
| Lyon | 1011110100— 7 | F M Robertson | 0101101011— 6 |
| Willard | 0000001100— 2 | Ward | 1001100010— 4 |
| Young | 1000101000— 3—25 | F E Robertson | 0100101000— 3—24 |

No. 8, 10 singles:

| | | | |
|---|---|---|---|
| Stowell | 1000000001—2 | B Robertson | 1001000010—3 |
| Ayer | 1110101111—8 | Bailey | 1111100110—7 |
| Lyon | 1010010101—5 | F M Robertson | 1011100111—7 |
| Willard | 1000011001—4 | Ward | 0100001111—5 |
| Young | 0110001111—6—25 | F E Robertson | 0101010011—5—27 |

A. J. AYER.

### Paterson Wins from Morristown.

AN extremely hot day was Tuesday, July 10, the day on which was decided the final match of the series between the Paterson and Morristown gun clubs. The match was originally scheduled for June 26, but was postponed at the request of the Morristown Club, who claimed inability to get together a team. Last Tuesday the Paterson Club was out in force at Willard's Park and fully expected to see the Morristowns meander along with a record-breaking team in order to win this, the deciding match of the series. They were doomed to disappointment again, however, as the only shooters to appear to battle for Morristown were Messrs. Class, Timmons and Leonard. It was expected to shoot five or six men to a team, so in order to get the affair under way the Morristowns were allowed to "repeat," Class shooting for J. E. Wheaton and Timmons for Abe Wheaton.

The match started about 3 P. M., the trap editor of FOREST AND STREAM being pressed into service as referee, the official scorer being Frank Stokes, of the Paterson Rifle Club. The birds were not a first-class lot by any means, but were of the mixed order, that makes difficult shooting. A run of half a dozen "duffers" would be followed by as many "hummers," and vice versa, the result being that considerable thinking had to be done in order to bring the birds to grass. Timmons and George had the hardest birds of the lot. The scores of the team race follow:

| Paterson. | | Morristown. | |
|---|---|---|---|
| Morfey | 2222222202—9 | Class | 1011111101—8 |
| Wright | 1220212222—9 | Leonard | 020•011122—6 |
| Hopper | 0122121211—9 | J Wheaton | 1021101110—7 |
| George | 012122•110—7 | Timmons | 1211011101—8 |
| Morgan | 2221221201—9—43 | A Wheaton | 0111111112—9—38 |

This gave the series to the Paterson Club with two matches won, one lost and one a tie.

The following sweeps were shot previous to the match, at 7 birds, $5 entry, 2 moneys:

| | No. 1. | No. 2. |
|---|---|---|
| Class | 2112121—7 | 1200001—3 |
| Morfey | 1222102—6 | 2222222—7 |
| Hopper | 0121221—6 | 10110•1—5 |
| George | 1211121—7 | 11•1221—6 |
| Wright | 122•122—6 | 1222021—6 |
| Timmons | 0101012—4 | 2122021—6 |
| Morgan | | 2122120—6 |

C. H. TOWNSEND.

### Rochester Rod and Gun Club.

ROCHESTER, N. Y., July 11.—The Rochester Rod and Gun Club will hold a three-days' tournament on its new grounds Sept. 25, 26 and 27. On the second day the contest between the teams comprising the Central New York Trap-Shooters' League will take place.

JOHN B. MULLAN, Sec'y.

### Townshend Rod and Gun Club.

TOWNSHEND, Vt.—The tournament of this gun club here on the Fourth was participated in by members and visitors. M. F. Roberts came from Ruperts, H. C. Warren from Boston, W. E. Ayer from Putney. The scores were shot under Association rules:

| | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. |

Badge matches open to New England only. American Association rules to govern. Shooting commences at 10 o'clock.

## Central Gun Club's Second Annual.

DULUTH, Minn.—*Editor Forest and Stream:* The second annual tournament of the Central Gun Club was held on their club grounds, located at Spirit Lake, July 4 and 5. Among the arrivals on the first train at the grounds were W. H. Skinner, of Chicago; R. Merrill, of Milwaukee; B. F. Shurmeier and Mr. Turner, of St. Paul; Joe Genevey and B. Hayes, Jr., of Minneapolis; C. W. Cool of Winona, and others, besides some fifteen members of the local club, and a large crowd of spectators, many ladies among them, one of whom took part in the shoot under the name of "Jones," and she did some excellent work. The two days of the tournament were perfect ones for trap-shooting, there being just enough breeze and showers to carry away the excessive heat, and from the time the first squad stepped to the score the entire programme was carried out with a smoothness rarely met with at any shoot. The first day's scores were not as good as was expected, especially from the outsiders; but this is accounted for by the way in which the targets were thrown, which was as low and swift as the American Shooting Association would allow, and the background being only partly sky, made them hard to find. However, when the first day's shoot closed it found the prizes pretty equally divided, and the averages of those who were expected to shoot through were bunched, necessitating some hard work on the second day for place.

The second day did not show up as large a list of entries, but most of those entered did so for average prizes, of which there was a long list of merchandise and cash, and much better scores were made, as the number of straight scores will show. The management, which was conducted by the local club members, was highly complimented by the visiting sportsmen on the way in which every detail was looked after by some one who was competent to perform the duty, especially in the cashier's and entry clerk's office, which could not be improved upon anywhere. Much assistance was rendered the managers, too, by the shooters themselves on their promptness in entering and coming to score, for which they return thanks. The tournament was a grand success financially and socially, so much so the latter that it seemed more like a social gathering of sportsmen than a spirited contest. The averages of the shooting through the two days are as follows: Merrill 88.4, Skinner 85.2, Moore 80.7, Day 80., Hamline 79.2, Genevey 77.6, Sachem 74., Bert 73.2, Nelson 71.2. Leroy 63.6, Metcalf 62., Tanner 59.6, McDonald 59.2, Myers 58.4, Owens 56.4, Cool 55.2, Pastoret 51.8

After the tournament the club held its regular weekly medal shoot. The warm work of the 4th and 5th seemed to have done them some good, as some good scores were made. In Class A Nelson won from Dodge; in Class B, Metcalf from McDonald; in Class C, Little from Black, and Day won the Hulberg medal from Dodge.

After the medal shoot there was a prize shoot for a rocker valued at $8, and a cane valued at $5, each member allowed a certain number of targets, handicapped according to his average during the tournamene, and resulted as per the following score, Metcalf winning rocker and Myers the cane.

Following are the scores of the tournament, the medal shoots and prize shoots in detail:

No. 1, 10 known singles, 5 merchandise prizes, entrance 50 cents: Bert 8, Jones 5, Owens 6, Lat 6, Clarke 7, Genevey 7, Pastoret 1, Myers 4, Hamline 6, Metcalf 6, Leroy 6, Nelson 8, Pearson 8, Cool 4, Wojeck 8, Moore 9, Warren 3, Skinner 9, McDonald 9, Williamson 6, Hubberd 2, Sachem 9, Merrill 8, Tanner 7.

No. 2, sweep, 20 known singles, entrance $2: Wojeck 19, Pearson 13, Bert 15, Cool 10, Jones 5, McDonald 15, Myers 13, Metcalf 13, Sachem 14, Clarke 12, Leroy 15, Nelson 13, Tanner 16, Moore 16, Pastoret 9, Genevey 15, Hamline 17, Owens 12, Williamson 11, Skinner 18, Lat 19, Hubberd 16, Merrill 19, Larsen 6.

No. 3, 20 unknown singles, 6 merchandise prizes, entrance 75 cents: Nelson 14, Metcalf 16, Sachem 14, Hamline 14, Pastoret 10, Skinner 18, Owens 9, Moore 15, Williamson 6, Lat 11, Pearson 8, Warren 12, Cool 11, Leroy 12, Bert 14, Genevey 14, Wojeck 14, McDonald 10, Myers 8, Clarke 8, Merrill 17, Hubberd 8, Tanner 10.

No. 4, sweep, 10 known singles, entrance $1:

| | | | |
|---|---|---|---|
| Hamline | 1110111111— 9 | Skinner | 1011111101— 8 |
| Tanner | 0110010111— 6 | Leroy | 1110011110— 7 |
| Lat | 1101111101— 8 | Pastoret | 1001011100— 5 |

Consolation shoot with bird allowance at 50 known singles: Metcalf 50, Day 39, Mendenhall 39, Myers 42, Pastoret 34, Waite 14, Nelson 36, Pearson 37, Williamson 41, McDonald 38.

## Live Birds and Targets at White Plains.

THE following scores were made at a shoot on the grounds of the White Plains (N. Y.) Gun Club, G. L. Miller and L. C. Platt being pitted against J. H. Carpenter and E. F. Ward, each man shooting at 25 live birds:

| | |
|---|---|
| Miller | 1011111101110111111111010•—19 |
| Platt | 111•0111•11111111111•11011—20—39 |
| Carpenter | 001•01010•1110010010101111—12 |
| Ward | 1111111•111111111111011111—23—35 |

Sweepstakes, $2 entry, No. 1 at 5 birds, No. 2 at 5 birds, then miss and out:

| | No. 1. | No. 2. | Tie. |
|---|---|---|---|
| C Pawlins | 11111—5 | 00001—1 | 11 |
| W J Ward | 10011—3 | 11011—4 | 11 |
| G Thompson | 00111—3 | ..... | .. |

## "Trap-Shooter's Ready Reckoner."

THERE has just come from the FOREST AND STREAM press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

## Newark Gun Club Winners.

A HOT and sultry atmosphere greeted the members of the Newark Gun Club on Thursday, July 12, when the usual "few" assembled at Erb's "Old Stone House" grounds to indulge in their usual monthly practice at live birds. Previous to the shoot a meeting was held, the first of the year. The principal object of the meeting was to award the cash prizes won by the members during the year ending June 1. The members are each one rated at a given standard, and are given one point for each bird killed above their rating. At each competition each member pays $1 into the prize fund and at the end of the year the aggregate sum is divided pro rata according to the number of points gained. The rating of each man and the number of points gained at each shoot are best shown by the following table:

| | Rating. | June. | July. | Aug. | Sept. | Oct. | Nov. | Dec. | Jan. | Feb. | March. | April. | May. | Total. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| W H Greene | 7 | 0 | 2 | 3 | 2 | 3 | 1 | 1 | 3 | 1 | 4 | .. | .. | 19 |
| C M Hedden | 7 | 2 | 3 | 3 | 1 | 3 | .. | 2 | 0 | 2 | 0 | .. | 2 | 18 |
| S Castle | 7 | 0 | .. | 1 | 3 | 2 | .. | 1 | .. | 3 | .. | 1 | 3 | 14 |
| P J Zeglio | 7 | .. | 0 | .. | 2 | .. | 3 | 1 | .. | 3 | 1 | 2 | 0 | 12 |
| J Erb | 7 | 1 | 0 | 2 | 3 | 0 | 1 | .. | 1 | 0 | .. | 2 | 0 | 11 |
| F Walters | 7 | 2 | 2 | 2 | .. | .. | .. | .. | 2 | 1 | 2 | .. | .. | 11 |
| F V Van Dyke | 7 | .. | .. | 3 | .. | .. | .. | .. | .. | 3 | .. | .. | .. | 6 |
| T C Wright | 7 | .. | 3 | .. | .. | .. | 0 | .. | .. | 1 | .. | .. | .. | 5 |
| T W Morfey | 7 | 0 | 1 | .. | .. | .. | 0 | .. | 2 | 1 | .. | 1 | .. | 5 |
| R H Breintnall | 7 | 0 | 2 | .. | .. | 1 | .. | .. | 2 | .. | .. | .. | .. | 5 |
| C Smith | 7 | .. | .. | .. | .. | .. | .. | .. | .. | 1 | 2 | .. | .. | 3 |
| M F Lindsley | 7 | .. | .. | .. | .. | .. | 0 | 1 | .. | .. | .. | .. | .. | 1 |
| G L Freche | 7 | 0 | 1 | 0 | .. | .. | .. | .. | .. | .. | 1 | .. | .. | 2 |
| G Raynor | 6 | .. | .. | .. | .. | .. | .. | .. | .. | 1 | .. | .. | .. | 1 |
| R Roach | 7 | 0 | 0 | .. | .. | .. | .. | .. | .. | .. | .. | .. | .. | 0 |

The above distribution being completed the resignation of Secretary Fletcher Walters was taken up and accepted regretfully, as Mr. Walters had proved to be the right man in the right place, during the year he had performed the duties of secretary, and his books were a model of neatness and accuracy. Pressure of other business, however, prevented him from continuing in the position. The club voted him a vote of thanks for his faithful work. Mr. W. H. Green was unanimously elected to fill the office of secretary for the ensuing year.

Acting on a suggestion from Mr. Jacob Pentz, who presided over the meeting, it was resolved to extend to the Parkway Gun Club, of Brooklyn, an invitation to visit Erb's grounds on the second Thursday in August, for the purpose of shooting a friendly team match with the Newark Club, each club to pay for its own birds.

The above business being completed the party got down to the solid business of the day. The opening event were "Jersey" sweeps at 4 birds per man, $3 entry, birds included, two moneys. The results:

| | No. 1. | No. 2. | | No. 1. | No. 2. |
|---|---|---|---|---|---|
| Castle | 2121—4 | 1111—4 | Cline | 1001—2 | 000•—0 |
| Henry | 1110—3 | 1112—4 | Hedden | | 1110—3 |
| Van Dyke | 10r2—3 | 2211—4 | Lenthauser | | 1010—2 |
| Hollis | 1212—4 | 1111—4 | | | |

Then came the club event at 10 live birds, 28yds. rise, for point prizes:

| | Rating. | | Gain. | | Rating. | | Gain. |
|---|---|---|---|---|---|---|---|
| S Castle | 7 | 1121211211—10 | 3 | G Cline | 7 | 1011210121— 8 | 1 |
| C Hedden | 7 | 1212112121—10 | 3 | *C Henry | . | 1111111101— 9 | . |
| W H Green | 7 | 1201110101— 7 | 0 | *Le'thaus'r | . | 2001101122— 7 | . |
| F VanDyke | 7 | 1121222121—10 | 3 | | | | |

* Not members.

The final event was at 7 birds, $5 entry, 2 moneys:

| | | | |
|---|---|---|---|
| Castle | 1121111—7 | Green | 1211110—6 |
| Van Dyke | 1221111—7 | Cline | 2101200—4 |
| Henry | 1111112—7 | | |

C. H. TOWNSEND.

## Princeton Scores.

PRINCETON, N. J.—The Princeton Gun Club's hustlers served up to that club a Fourth of July tournament of nine Empire target and live bird events, more than forty useful and valuable merchandise prizes, and an elegant collation, served free to all the hungry shooters and their friends from 12 to 2 P. M.

The out of town contingent was less numerous than usual, but made up in quality for what it lacked in numbers.

The ubiquitous Winchester Arms Co.'s rustler, Van Dyke, was very much in evidence, a little outclassed here, but at Utica O. K. Those two old cronies, Mr. Kirk of Lawrenceville, and McCardle of Trenton, N. J., were also welcomed to a share of the shoot and the swag. We hope they'll come again often. The live birds were a duffer lot largely, and the shooting at targets away below average, but everything went, and everybody was happy. A shoot, a celebration and a success, a sissing trio, and we had it all.

Handicap target match, 5 traps, 16yds.: Tiffany shot at scratch, 12 birds, and broke 6; Rule at 16 and broke 9; Wesley 19 and broke 9; Skirm at 17, broke 6.

Match at 5 birds, rapid firing, and 5 birds, walking match: Phillips 6, Hoff 3, Skirm 5, Van Dyke 8, Hawkins 4, Tiffany 3.

Boys' race (17 and 70 years), between Master Geo. Rule and Dr. W. L. Hankins; Rule at 16, Hankins at 18yds., 5 traps, known angle, 20 birds each:

Hankins...0010001100001000110l— 7 Rule.....0101011011101101l010—12

Match at 25 targets, 3 traps, unknown angles:

| | |
|---|---|
| Phillips | 1111111111011111010101111—21 |
| Skirm | 1110100001100100101001110—13 |
| Tiffany | 1001101111101001110110110—17 |

Walking match, one man up, unknown trap:

| | | | |
|---|---|---|---|
| Van D | 01010—2 | Stout | 00101—2 |
| Rule | 00110—2 | Phillips | 11101—4 |
| Cubberly | 10100—2 | Aiken | 10010—2 |
| Mershon | 00011—2 | | |

Matches at live birds, 2 ground traps, 28yds. rise:

| | 1st match. | 2d match. |

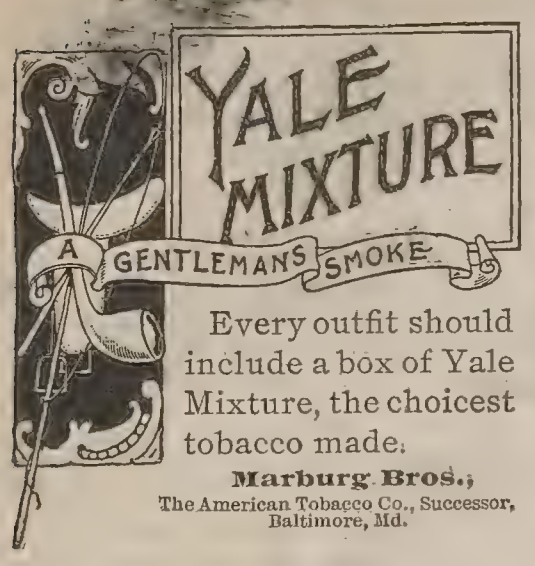
S. WILKINSON.



# Answers to Correspondents.

**No notice taken of anonymous communications**

H. C. B., Staten Island.—Rating is the measurement of the Yacht Racing Association of Great Britain; the sail area and waterline are multiplied together and the product divided by 6,000. A waterline of 35ft. with 1,700 sq. ft. of sail would give about 10-rating. Dacotah is of about these proportions.

G. M. B., Lakefield, Ont.—If I take from Canada into the United States an English-made gun and rifle (which have both been in use for years) shall I have to pay duty on them, and if so at what rate? Ans. If the writer is a foreigner visiting this country for the purpose of traveling or for hunting purposes he can bring his guns with him and they will be admitted free of duty as a part of his personal effects.

A. V. T., Branchville, N. J.—There is a rather shallow pond of about an acre in this vicinity that abounds in carp. The owner, who is not a fisherman, tells me that he cannot catch them. I know nothing about this fish. Will you kindly give me information in regard to bait, tackle, etc., to be used in angling for them? Ans. Dough balls made by mixing white bread crumb paste with cotton are commonly used. Wasp larvæ, grains of wheat or barley or worms are also good bait. It is a good plan to prepare the spot one wishes to fish beforehand by "ground baiting." For tackle use a quill float with light sinker on bottom. The fish is allowed to rise toward the surface before striking.

Every outfit should include a box of Yale Mixture, the choicest tobacco made.

**Marburg Bros.,**
The American Tobacco Co., Successor,
Baltimore, Md.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

**ABBEY & IMBRIE,**

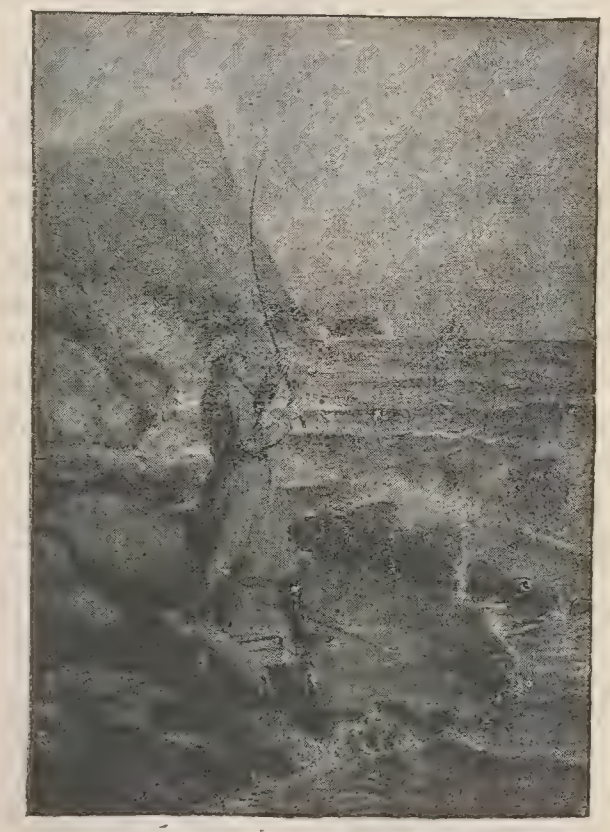
# Forest and Stream's Outdoor Scenes.

FROM ORIGINALS IN WATER COLOR AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

HE'S GOT THEM.

JACKSNIPE COMING IN.

## AS PREMIUMS.



We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

**Forest and Stream** *one year and the four pictures*, **$5.**
**Forest and Stream** 6 *months and any two pictures*, **$3.**

If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

## Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

**Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.**

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14 x 19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

**Forest and Stream** *one year and the set of four pictures*, **$5.**
**Forest and Stream** *6 months and any two of the pictures*, **$3.**
Price of the pictures alone, $1.50 each; $5 for the set.

Remit by express money order or postal money order Make orders payable to

**FOREST AND STREAM PUB. CO., New York.**

*No. 80,781.*

IF you will examine your revolver you will see that it is numbered, probably way up in the tens of thousands. Every revolver turned out by reputable houses has its individual number. When a revolver is sold the manufacturers invoice it by this number, and thus they can tell when it left the factory and where it went to. This system made a vast deal of trouble for a New York lawyer the other day and led to his indictment for perjury.

The trial of a case in one of the courts of this city on April 24 last had wound up with a shooting affray between the parties in interest, and the supposed assailant in the disgraceful affair was put on trial in the present month, charged with assault with intent to kill. In behalf of the defendant Lawyer M. J. Stein testified that on the occasion of the affray of April 24 he had wrested a revolver from the hands of some one who was in the act of firing it at the defendant. The revolver, a Smith & Wesson, was produced in evidence, and Judge Martine, before whom the case was being tried, recorded its number, which was 80,781.

The District Attorney thereupon telegraphed to the manufacturers to learn on what date revolver No. 80,781 had left their works. They consulted their books and found that it had been shipped to Messrs. Schoverling, Daly & Gales, of this city, on June 16, which was over seven weeks later than the date, April 24, when Mr. Stein testified he had seized it in a New York court room. This statement of the manufacturers was corroborated by the records of the consignees here, who had received revolver No. 80,871 on June 18. The shipping clerk of the makers and the receiving clerk of the receivers appeared in court; and together they made out a very black case against Mr. Stein, who nevertheless stoutly asseverated that he had taken a revolver in the scuffle of April 24, had locked it up in his safe, and believed it to be the one produced in court. On the testimony of the clerks an indictment for perjury was found against him. It was testimony that could not be impeached; the evidence supplied by the manufacturers' system of numbering their arms was impregnable. The revolver which Mr. Stein produced in court and swore that he had had in his possession in New York city on April 24, he could not have had, for it had not left the factory of the makers in Springfield until June 16.

Nevertheless, and this is the most satisfactory part of the story, Mr. Stein was not guilty of perjury. He was simply mistaken as to the identity of the revolver seized on April 24 and the one shown in court on July 2. He found no difficulty in showing by ample testimony of witnesses that he actually had taken a revolver from a person in the court room on April 24, and he finally made himself believe, and the District Attorney believed with him, that the arm No. 80,781 had been substituted for it by some third party, without his knowledge. The indictment was therefore dismissed, and Mr. Stein went forth from the court room, as the presiding judge declared, without a stain upon his honor as a man or as a lawyer.

Let us trust that No. 80,781 may never inflict upon any other a more lasting injury than it brought upon its first victim.

### *MAY THE PRESIDENT GO SPRING-SHOOTING?*

CONSIDERED from the standpoint of right sportsmanship is it permissible for the President of the United States to go shore bird and duck shooting in the spring of the year? The question is suggested by the notes of a Virginia correspondent, who writes of his own spring-shooting at Currituck, and recalls that President Cleveland visited the same waters for bay bird shooting last May. It is a question which will be answered promptly and decidedly in the negative by one class of shooters, and quite as promptly and vehemently in approval by another class. This means that spring-shooting is a practice as to the merits of which the sentiment of sportsmen is by no means uniform, and the most that can be said is that Mr. Cleveland as a spring shooter is a good sportsman in the estimation of those who believe in spring-shooting, and an unworthy sportsman in the eyes of those who condemn it.

The signs of the times, however, are not difficult to read. They indicate a growing sentiment against spring-shooting, a strengthened conviction of the unwisdom of killing migratory species of game on the way to its breeding grounds. They point to a time when spring shooting shall be discountenanced. In their excursions for game in the early months of the year, President Cleveland and President Harrison before him have done as sportsmen in good standing that which their successors twenty-five years from now may not do and preserve a standing in the craft.

There remains another question which has just been raised in certain quarters, in connection with this May shooting trip of President Cleveland. It does not have to do with the sportsmanship of shooting at certain times and seasons, but with the propriety of shooting at all. May the President of the United States shoot birds for sport? That is an interesting consideration; it would be perhaps worth while to discuss it; and we shall.

### *THE HEALING OF THE FORESTS.*

THE story, which a contributor to our Sportsman Tourist pages so charmingly tells of his flight to a wilderness lake for rest and upbuilding, will be read by thousands with increased interest because in it they will find a faithful reflection of their own experiences. A fortnight or a month in camp will many a time do what medicine and prescribed regimen are powerless to effect. The mountains and the woods and the lakes are for healing and for strength. They give the change of scene, the diversion of the mind, the pure air for the lungs and the required physical exertion, which go to make the new man. If any one would discover the secret of the popularity and permanence and dignity of the open air wild-wood recreations of fishing and shooting, he may find it here. They are pursuits which have an abiding place in the esteem and practice of mankind, because generation after generation has proved their worth.

The resources of nature as a healer are not more efficient in their application than abundant in their supply. The blessed influences of the woods are generous beyond measure, and not to be exhausted by the spending. There is store for all who will have new life for the taking. He robs no fellow man, who breathes the balsam; he takes from another no joy of bird song, who listens to the hermet thrush; the outlook from the mountain brow is not less in expanse and in inspiration, though ten thousand look upon it; the glory of sunrise over the hills or of sunset beyond the lake is not dimmed because another beholds it. Here in the woods each may have the using of that which belongs to him and to all others as well, and by his using no one shall be made poorer.

Would that a like principle of inexhaustible plenitude governed the supply of game and fish; for, after all, it is the trout or the bass, the grouse or the deer, that lures men into the woods. One might say, indeed, that the stock of fish and game would be in no danger of impairment if each one who took of them would take only his fair share, leaving to others their own. The store, made good by nature, would be all sufficient, under a rightly devised and honestly respected system of protection. It is this phase of protection that gives to the subject its true importance. This is why no one may regard protection from the narrow standpoint of his own personal selfish interest only, nor when in the woods may be inconsiderate of the woods rights and privileges and blessings which belong to others. He does rob another who takes more than his reasonable share of the fish; and he shows himself an ingrate who kills game to waste. That which is certainly not to be lessened by the using, use without stint, and in so doing you shall work no man injury. That which must be enjoyed sparingly, do not squander in recklessness nor destroy in wanton waste. You are not the first seeking to benefit by the gifts of nature, nor are you the last.

### *SNAP SHOTS.*

THE Senate Committee on Game Laws, authorized by the New York Legislature to hold sessions throughout the State looking to a modification of the existing game law, consists of Senators H. J. Donaldson (chairman) of Ballston, John L. Childs of Floral Park, L. I., and Charles L. Guy of New York. The committee contemplates sitting in the neighborhood of Geneva in the first or second week of August: at Schroon Lake in the Adirondacks about August 15, and at Saratoga probably on August 28. Due notice of such meetings will be given through the newspapers, and the committee will be very glad to receive suggestions relative to the modification of the present game law at any of the meetings in question. Further information may be obtained by addressing the clerk of the committee, Mr. C. H. Burns, 27 Pine st., New York.

In emulation of Dowe, who claims to have invented a bullet-proof coat, two Americans have come forward with materials said to possess the same quality. As war equipments are not just now in lively demand in this country, we recommend the inventors of impenetrable fabrics to turn their attention to the perfection of a shot and bullet-proof blanket for cows and horses. There ought to be an extensive market for such a protector among the farmers who have so long suffered loss of live stock at the hands of louts and ruffians masquerading as sportsmen.

Secretary Banks of the Pennsylvania State Sportsmen's Association expresses the opinion that Pennsylvania might profitably follow New York and provide for game protection and trap-shooting as two separate though allied interests. Of course it might; and so might all the other State societies which are now attempting in vain to combine both interests in one annual convention.

It is instructive to note that the writer who is impelled "to advise his fellow sportsmen to put a final veto on the old-time plan of taking a male cook or attempting the task of doing the cooking by turns," and adds, "Take your wife or wives with you," judiciously employs a pseudonym.

As soon as we can secure a photograph of the "Nessmuk" Memorial, which has been set up in the village cemetery of Wellsboro, we shall present an illustration of it, and make a final report on the memorial enterprise.

Dr. James A. Henshall is now stationed at Tampa, Fla., where he is engaged in making a thorough investigation of the fish fauna of those waters.

# The Sportsman Tourist.

## A QUERY.

I WONDER why I sit all day and dream
On moss-grown rock, down by the sunlit stream?
Why now I idly drop a baited hook
Into the stillest pool along the brook?

Why is it that the droning of the bees,
The softest whisperings of the summer breeze,
Are sweeter music now than once I found
In the deep baying of a clear-tongued hound?

Why do I leave the newly-budded rose,
The shady dell where fragrant violet grows,
The meadows green, with daisies overcast,
To tread the withered rowen of the past?

And when the still stars twinkle o'er the earth
I leave the firelit circle and its mirth,
To pass in silence like a tale twice told,
I wonder if I, too, am growing cold. SHOSHONE.

## THE PRESCRIPTION.

IT was not an unpleasant dose to take. The most that could be said of it was that it was inconvenient just at this time. But as the matter depended upon my doing as the doctor directed there was nothing left but for me to comply. He said he would not be responsible for my life if I did not.

He wrote the prescription as he sat by my side the day after I was confined to the bed. He had been sitting there for some time listening to my complaints of a "want of sleep," "palpitation of the heart," "a gone feeling," and I do not know how many other ailments, when he said, "I guess I can cure you." At the same time he put his hand in his pocket and took out a physician's pad. On this he wrote the "prescription," as he called it, and folding it carefully, handed to my wife saying as he did so: "Let him take this; it will do him good." He then reached for his hat and hurried from the room, my wife following him to the door as he went out.

"Now, dearie," said she, returning and unfolding the paper, "I guess we have something that will do you good. The doctor says you will be all right before long. We will have it made up at once. Brand will be in from school directly and we will send him to the druggist."

Meanwhile she was adjusting her eyeglasses, while I was watching her with all the anxiety of a sick and nervous man. As I saw a smile of mingled disappointment and pleasure pass over her face I was led to say, "What is it? More expensive drugs, I suppose. I am sick of their stuff."

"Why, no," said she, "but the funniest prescription I ever heard of. It says:

℞ Go to the Adirondacks or the woods of Maine at the earliest possible moment and remain there for two weeks.

"Why, I cannot do that," said I; "and especially since we have increased our business. Who will do the buying if I leave, and what will become of the new department?"

"Well," replied Sarah, "who takes care of it now? And who has been doing the buying for the past ten days? And if you had to be here for three months, how would they get along then?"

There was no resisting the force of this argument. I saw at once that my wife had made up her mind. Brand came in just at this moment; and she said to him, "Brand, the doctor has ordered your father to go to the Adirondacks or the woods of Maine. Don't you wan't to go with him?"

"I just do," replied my son. "I want to try my new rod. And I will take Samuels's book with me and study the birds. I tell you, pap, we will have a good time. Let us camp out. Come, what do you say?"

"Well, we will see," said I. "Let me try and think a little while."

And as I thought the thing seemed feasible. Scarcely an hour had passed before I found myself making plans; and by bedtime I had determined to go when I could. In my mind I saw a little island of not more than an acre in extent and in a retired lake. I knew the place. I had been there. It was accessible—only six hours from half-civilized life, and by boat at that. Yes, we would go there at the beginning of the week if I could travel.

I slept better that night than I had for some time, and the next morning I felt better still. During the day I had my rod and my book of flies brought to me. How good they looked! Then before Brand went to school he came in, and with all the enthusiasm of youth wanted me to make out a list of what we would require. He seemed to take it for granted that I would go. And to my objections about care, he said he would be seventeen next month, and if a fellow as old as that could not take care of his father, he was not good for much.

All this seemed to make me feel better; and when the the boy returned at noon, much to my own astonishment, and his too, I think, I had the list made out.

It was now the second week in May. The spring had been early and vegetation of every kind was advanced. I knew what this meant. It meant black flies and mosquitoes in abundance. But we are not apt to think of these pests in all their venom and the discomfort they can cause us, after a year's freedom from their bites and stings. And hence we are so ready to go a second or a third time into a neighborhood we had almost vowed we never would visit again.

So Tuesday found us off with all our traps; and Wednesday morning's sun looked down on two boats with two guides, making their way across a lake, and then up a narrow stream into a smaller lake. The guides were to build a bark shanty and then return in one of the boats, leaving the other with us. The arrangement was that one of the guides should come every other day to see how we fared, and bring us letters and a loaf of fresh bread.

What a lovely morning that was. It seemed to me I enjoyed it as I never had enjoyed a morning in my life. I had nothing to do but to sit quietly tucked up in the bow of the boat and delight myself in the fragrance of the hemlocks and the singing of the birds. Never had the hemlocks smelled so sweet, nor the trees looked so green, nor the water so clear. Then the melancholy note of the loon appeared to have melody in it, and the hermit thrush and white-throated sparrows seemed to surpass themselves in song.

I had nothing to do but to look, and look I did. We had hardly left the landing before I caught sight of a loon. Half way across the lake two ducks flew past us. Then an eagle winged his slow flight far overhead, and as we entered the stream a kingfisher sprung his rattte upon us as he jumped from a dead branch and skirted the shores of the lake with wings almost touching the surface. We could hear partridges drumming as we made our way up, and varieties of fly-catchers and warblers were continually flitting from side to side of the stream.

But after we had crossed the lake we skirted the shore for some distance, then threaded our way up stream (giving the black flies that swarmed in thousands a chance to feast), then passed over a short carry, then the lake, and before noon I found myself reclining in a bed of hemlock twigs beneath a spreading beach, while the guides were preparing a dinner that made me feel hungry before it was cooked.

After dinner the guides passed over to the mainland, and while they were peeling bark to cover the shanty Brand cleared the place where it was to stand and broke hemlock twigs to make a soft and fragrant flooring. Before 3 o'clock the whole thing was finished and a supply of wood piled up alongside that seemed to me sufficient to last for a fortnight.

This home was built with its front toward the east, and in such a position as not only to secure a good view of the mountains, but also so as to catch any stray breeze that might blow up or down the lakes. This was very necessary, as the smoke of our smudges would pass in front of our home and thus help to keep off the mosquitoes and black-flies. However, we never suffered much from these pests while we were on the island or in the boat. It was only when we landed on the mainland that we seemed enveloped in them.

Before 4 o'clock the guides left us. When they had gone, Brand said "it was lonesome." Perhaps he felt his responsibility more than he did before, for now he had his father on his hands and no one to help him. However, had he known it, every moment this responsibility was lessening as his father drew in the air of health and felt new life coming into his veins.

We now busied ourselves in arranging our mosquito nets. One was on my side and the other on Brand's. Our boxes of provisions were placed in the center, close against the back of the shanty. They hid our faces from each other while we slept.

By 5 o'clock the shadows began to lengthen on the lake, and before 6 the hermit thrushes and white-throats commenced their evening song, though they sang occasionally—some of them—nearly all the day long. The loons also began to call and some large birds on the other side that we could not make out. Later the night hawks came swooping around and calling to each other, and far and near we could hear their booming sound as they came with a rush to the earth. Still later we noticed several bats dodging around in front of the shanty; and when the daylight had almost fled the owls commenced their hooting.

But before all this there was a tea to get and smudges to be renewed and "light wood to have handy." It was all done, though, and that cheerfully. To be sure I was not able to do much, but I could direct Brand; and no man ever had a more willing pupil.

We were all through by half past seven, and a little later were sitting in the moonlight where we could see the lake for nearly half its length. We saw several fish break water, or at least thought we did, but two or three loons kept up such a diving and coming up that it was impossible to tell. And then a muskrat or a mink came swimming along the shore only a few rods in front of us to disturb the quiet waters. Brand—boy-like—wanted to shoot at him with his pistol, but I persuaded him not to. I told him we would have more birds and animals around us if they thought we had no firearms. And so it proved. I imagine that the wild company we had on and around our island was very much owing to this. There was one morning when we saw a doe deer on the mainland, that we were sure would wade across to our home. She walked down to the water twice and wet her feet, stretching out her neck to us and moving her ears. The wind was blowing at the time toward her. When she turned we concluded that she must have smelled the smoke of our camp-fire or the trout we were frying. But more of our wild neighbors bye and bye.

A soon as it got damp we returned to the shanty. A good fire was warming this inside, and it looked bright and cheerful in there, as Brand said. It was so. And he found it so comfortable that before many minutes he was fast asleep. As for myself, I soon followed him, and knew nothing until some time past midnight. Then I felt cold, and called to Brand to make up the fire. It was almost out. I could just see a few red coals as an occasional breath of air fanned the ashes. He was awake in a moment. His first exclamation was, "Why, father, it is not daylight yet," and then, "Yes, pap. How are you feeling?"

The boy seemed much relieved when I told him I had slept well, and when the fire burned up would take another nap. I did so, and so did he. Had it not been for one of our loon friends, that came along just before sunrise, I do not know but I would have slept nearly half the morning. His doleful howls (I can compare it to nothing else) awoke me and I called Brand at once.

The birds were now in full chorus—hermit thrushes, with their soft, varied and flute-like notes answering each other far and near; then white-throats, now pitching their song in a high key and now in a low one. Occasionally we could hear the wild and varied notes of the winter wren, and wood pewees and fly-catchers, and several sandpipers that ran along the shore or made their circling and stiffened flight as they passed from one place to another.

Brand listened for some time to all this bird music. He had never heard it before in just such a wild place. He said he missed the robins and brown thrashers, and orioles and wood robins, and I do not know how many more, that prefer civilization to a Northern wilderness.

While we were listening a partridge drummed just in the rear of our shanty. "Why, that beats all," said he, "I know the very old log he is standing on; there must be a nest around here." And no doubt there was, but Brand never found it, nor had he yet learned how fond *Bonasa umbellus* is of raising a brood in retirement and in a place he can call his own.

But now the slanting beams of the rising sun are shining into our home. I feel better than I did yesterday and even want some breakfast. I want some trout, but I cannot have them yet, only because I cannot go for them. I solace myself by saying, "Keep on with your improvement and you will be all right before long."

We had a good breakfast and I enjoyed it. I even felt able to make the coffee, while Brand boiled me two of the fresh eggs we had brought along. Before noon we went out for a row; I thought it best to wait until the air had become pretty well warmed before we tried that. Brand did the rowing and I took my rod. For some distance we skirted the shore and from time to time I cast the fly. I was not quite equal to this yet, and a few casts were sufficient to satisfy me. Had we caught anything, or had I had a rise the case might have been different, but we saw no signs of trout. However, the air was invigorating, and the scenery beautiful, and the birds delightful. It seemed to me that nothing on earth could be finer.

Brand landed several times to look after nests that he saw, or some very pink laurel, but he was always driven off by the black flies. The only place that we seemed able to escape tnese pests was either in our boat on the lake or at our island home.

Noon found us at the shanty again without a fish, and me hungry as usual. Two more eggs with bread and tea and canned tongue satisfied me. Then a good sleep, and by 3 o'clock we were ready for another excursion. This time we took another way up toward the head of the lake. I did not attempt to fish until we came to a place where we had caught trout in my well days. It was at the mouth of a small stream that ran into the lake through a thicket of alders. The water was shallow in front of these and it occurred to me that just at this season of the year the fish might be lying there where they had been sunning themselves during the warmer hours of the day.

"Now, Brand," said I, "don't go too near those alders, but swing the boat around and I will make a cast." For one of his age Brand was quite an expert in handling a boat. I had taught him much myself and he had learned more at school. So around I came and away went my flies to within a few feet of the alders. I had a rise at the first cast, and then the next moment was fast to a fish. He was no small one either. I knew this by the effort he made to run under the alders and then, when I turned him, by the wide circle that followed the line as he made his way into the lake. And this without so much as showing us his back fin or his tail. Of course Brand was all excitement, and I must say his father shared in it.

"Don't lose him, pap," said Brand, "I want some trout to-night."

"And you are going to have some, too, if I know anything about it."

Several times the fish made his way toward the boat, as though he meant to run under it, but a skillful stroke of the oar sent her round and he found himself swimming very wide of his mark. But this could not continue very long. My game was tiring, and if it was not, I was. I don't know that I have ever felt more weary when I had landed a fish (not even a salmon) than I did when that trout was in the boat. He was not so very large either, only 14in. I had caught them larger in this very place.

But I was tired now and only too glad to let Brand try his hand. He could cast a fly, and for a boy do it very well too. On his third cast he hooked a fish—not so large as mine, but nearly 12in.—and this was followed by four that would weigh nearly ½lb. each. Then our luck ceased. I tried again and so did Brand, but with no more rises.

We were ready for home now. The sight of the fish helped,to make me hungry. For tea we had my large fish and one of the smaller ones. I cooked them myself. There was none left of them when we were through, and Brand insisted upon it that he could have eaten more. The others were dressed and laid aside for breakfast.

And now the shadows had long since lengthened on the lakes and the birds had sung their vespers. The night hawks had been through their evolutions and the last prolonged note of the loon had died away on the distant hills. It only remained for the bats to come around and the owls to get through their hooting and then the day would be over. But I must confess the owls did a good deal of hooting all night, and occasionally a white-throated sparrow would be heard lisping his wooing song. May be this was because we were approaching the time of the moon's third quarter, when there was light almost until the morning.

When night had settled down and stillness reigned supreme, Brand made up the fire and we crawled under our nets. I was feeling better. Yes, I was improving. There was no doubt about it. I could eat and I could sleep, and I could do these without either "drops" or "tonic." And more than this, I could plan what we would do on the morrow. We would get up early and start for our fishing place, and see if we could not get some more trout. This was our plan when we said good-night to each other. But the best plans sometimes fail, and especially with fishermen.

What time of night it was when I woke up I could not tell. I only knew that it was unusually dark. There was no moon shining, and only the barest glimmer of fire appeared where there had been such a bright blaze when we went to sleep. Then the stillness seemed unusual. I could not understand it, and thought at first that I must be dreaming. But no. Here was the net over me; and I could hear Brand breathing only a few feet away. I called him. It was such a relief to feel that he was there, and when he answered so promptly, "What is it, father?" I was sure of my present existence.

He soon had the fire blazing up again. By its light my watch told me it was half-past 3. But there was no sign of moon or stars to be seen in the heavens. We heard something splash in the water as the fire blazed up, and a loon from far away saluted us with his dismal note. When we lay down again I told my son that I thought we would have rain before morning. The air had a heavy feeling and there was that peculiar stillness that seemed to predict a storm.

I was not surprised then, when waking some two hours later, I heard no birds singing. Some of our island thrushes did attempt it, and so did a white-throat, but they seemed to stop very far short of their full song. And then a flycatcher made a feeble attempt, but he was

no more successful. Soon I heard the quiet rain. It had just commenced. I did not wake Brand. I knew he would find the day long enough without my calling him very early, so I turned over and slept again, and the next time I awoke it was broad daylight and the rain was dripping from the trees all around us.

Brand awoke at nearly the same time. As he looked from under our cover he remarked, "I guess I will have to read about birds to-day, and we will play cribbage."

But a breakfast was to be prepared now, and I must not leave the shelter of our shanty. Brand knew this and said, "Pap, I guess I will have to make the coffee this morning, and I will have a chance to show my skill on cooking trout. How glad I am that we have them."

But not so fast. We have not got them yet.

When Brand went to look for his fish they were not there. We had left them on a tin plate in a fissure of a large rock close to the shanty near the shore. Such a thing as birds or animals disturbing them had never occurred to us. But they were gone, and all Brand could find was the tracks of some animal in the sand near the rock, and these almost obliterated by the rain that had fallen.

I was sorry for Brand even more than I was for myself. But there was no help for it, and he took his disappointment well. Said he, "Father, you have one fresh egg left. You can eat that and I will fry some pork." This was our breakfast. It was cooked outside in the rain, and we ate it under cover. We both did well, however. I had the two last slices of bread toasted, while Brand contented himself with plenty of ship biscuit soaked in coffee.

But now how should we spend the day. The rain continued. It seemed to increase from the time it began, and by 9 o'clock there was a steady downpour. I was afraid more than once that it would put out our fire. It would have done so had we not kept plenty of wood on.

It was a "tedious" day, so an old friend of mine used to say. I read to my boy some and he read to me. Then we would stop and talk for a while and plan, and tell each other what we meant to do when the rain ceased. We had great interest in watching a thrush that seemed to have his home under a little beech tree, and a bedraggled Canada warbler that appeared to feel very badly because, with all his pluming, he could not improve his appearance.

But the most of our attention was given to the "drummer." We caught sight of him several times as he came out a few yards away at one side of the shanty. He was very wary about showing himself and we had to be careful if we expected to see him at all. His peeping place was from under a little spruce. Here he would take a glance at our shanty and then retire. Poor fellow, he looked as though he might have fallen into the lake. His tail and ruffles were in a most dilapidated state. Drumming was out of the question, even had he wanted to.

I wrote a letter home and told my wife of my improved health; and our home and our plans. I do not think I ever wrote her as long a letter since the days of our "engagement." Maybe I never had time to, but I am afraid the rain had something to do with the length of this one.

There was no let up in the storm at noon. It was the same old downpour and drip, drip, drip. A rainy day in the country is bad enough, but a rainy day in camp is indescribable.

The dinner was cooked in the rain, or I should say, the tea was made—for the dinner consisted of simply tea—canned tongue, ship-biscuit and ginger snaps for Brand. Of course, we did not expect our guide; he was not to come if it rained, and without question it had done so.

It was after 2 o'clock before there seemed any cessation in the storm. From 6 o'clock in the morning until 2 in the afternoon is a long time to sit inside a shanty and look out at the dripping trees. But all things have an end. Gradually the rain held up; then there was a light place in the clouds, then a ripple on the lake coming from the west, then we heard the loons calling and a bird of some kind called over from the other shore. As the sky lightened more birds began to call. Then, at last, as the sun came out in his full splendor, the woods seemed alive again with bird life. Meanwhile Brand had bailed out the boat and wiped the seats dry, and I was invited to go for a row and take my rod along. Brand would take his too. "We would go up to the old place and see if we could not get some trout for supper."

How lovely it was after the rain. Everything was so fresh and the air so clear that we could see cliffs and rocks on the mountain we had never seen before. Then Brand "felt in the humor of rowing." He said "He wanted to stretch his arms," and it was not more than twenty minutes before he added, "Now, pap, get ready for a cast."

I was on time and the first effort brought me a half-pounder. Then a second one, a little larger, followed it, and so on until I had six. Then Brand must try and I sat down at the oars. I had strength to keep the boat still. He caught three, one of them larger than any of mine, while the two others were smaller. But here our luck ceased, though we tried for a good while. Indeed, the shades of night were settling upon the lake before we left the alders.

However, we were not long in going home, nor was it very late before we were regaling ourselves upon trout, ship's bread, canned peaches and tea.

There was a dampness in the air this evening that did not allow of our sitting in the usual place by the lake. I was improving and I meant to run no risks. So we kept inside our shelter and played cribbage for an hour or more.

S.

[TO BE CONCLUDED NEXT WEEK.]

### Exportation of American Elk.

COMMENTING on our note in issue of June 30 respecting the capture of living elk, a correspondent writes from England:

"I have been offered a herd of live elk—young ones recently captured in the States. I am not at liberty to mention names. I do not require any live elk, but seeing in your paper lately that elk are being exterminated I thought it important to let you know that live elk are being sent out of the country, which will help to exterminate them. Ought this not to be looked after?"

"No, Maude, dear, the taxidermist is not a collector of taxes, although he does work a skin game."—*Philadelphia Record.*

## DOWN THE FLORIDA COAST.

HAVING heard that a private sailing yacht, owned by a gentleman of Clear Water Harbor, could be hired, we made up a party for cruising down the Gulf of Mexico. The boat is a two-masted schooner, carrying mainsail, foresail, topstaysail and jib. When her canvas is all spread she is a picture. She is 70ft. long, and has a fine cabin with ample accommodations for ten persons, nicely lighted and ventilated. In fact, she is a remarkably well-appointed boat. The terms were so much per day, we to provision her and board the crew, which consisted of captain, mate and cook. Then began the work of preparation. If you could have seen the quantity of bread, biscuits, boiled hams, chicken, cakes, cookies, doughnuts, pork and beans, jellies, jams and preserves that were put on board, to say nothing of the raw material stowed away, one might conclude that we were anticipating sailing around the world.

It was a beautiful morning in April. I shall long remember that morning; the sky was as blue as a robin's egg, and the air as soft and balmy as a June day and full of the fragrance of the sea and pines. Truly it was charming. We put up sail and started down the bay to go out the pass into the gulf proper, five miles away. All along are the piers and pavilions of the families who have winter homes on the bluff, and there were congregated men, women and children, all waving handkerchiefs and wishing us God-speed. Several boats acted as escort for some distance. As long as we could sight home, we could see the waving of handkerchiefs. Soon we were through the pass into the sea, and our introduction was a dead calm. We rocked and rocked, and tossed from side to side, sails flapping, not a breath of wind. We noticed that the crew watched us somewhat curiously. After a time the captain said, "Well, she's coming now." I asked, "What?" He replied, "The wind; don't you see it?" When I told him I did not, he called my attention to a dark line across the water miles away, saying, "She'll be here right quick." And sure enough "she" was. The sails filled, and as it was a fair wind we were soon sailing in fine style. The captain remarked, "Well, I reckon you ladies are pretty good sailors." Upon asking why, we were told that the ladies usually "fed the fishes" when encountering a dead swell. We were assured we need have no further fear of seasickness.

Going on board so late in the morning, the cook had prepared dinner without any instructions, so when we went down we were a little amused at the bill of fare, which consisted of boiled pork, cabbage, potatoes, onions, beats, tomatoes, corn-bread, coffee, etc. We were too hungry to be fastidious; we added a dessert, and felt that we had dined well. After that we helped the cook plan the meals, and they were good, every one of them, each and every one can verify this statement, because every one was ready to test them. There were nine in the party.

We sailed sixty miles that day, and just as the sun was sinking into the sea we started through the pass leading into Sarasota Bay, where we were to anchor for the night. At the supper table we heard a peculiar grating sound, then a thump, a thud, and a bump. The doctor said, "We've struck." We all rushed on deck; and sure enough we had gone aground. Of course, the first question was: "How long will we have to stay here, captain?" "Can't tell," he answered; "hope to get off on the next high tide." "And when will that be?" "To-morrow, I reckon." And that was all we could find out.

Then we fell to speculating. "One said, "It was high tide when we came in here. I don't see how we are going to get off on the next one; it won't be high enough." "What then? Captain said we would have to wait until the new moon. How long would that be? The calendar was consulted, and we found it would be in six days. Well, we discussed the matter pro and con; and all were agreed it was a good plan to stay. And we retired happy and content, as we knew we were safely anchored anyhow.

The next morning our men went fishing and the ladies amused themselves in various ways, the crew meanwhile working to get the boat in a position to be able to take advantage of the tide. Much to our relief, at noon the following day we were once more afloat. That night we anchored off Captiva Island, in Charlotte Harbor, where the captain said we would find some fine shells. We rowed over, landed and started up the beach. As we were walking one of our party called our attention to a peculiar footprint in the sand, which he said was that of an Indian moccasin. A little further on he showed us the track of a wildcat. I wandered on searching for shells and looking up suddenly I could not see a single person in sight. I cannot describe the sensation that came over me for a moment. I do not think it was fear, but the fact that I was more than a thousand miles from home, on an uninhabited island, except for an occasional Indian camp, the boundless sea, the deepening twilight shadows, no sound save that of the surf rolling at my feet; altogether it was an experience I would not have asked to have of long duration. Somehow I felt so helpless—such an aloneness. I was not afraid of Indians or wildcats, but it was a moment of oppressive solemnity. However, the party soon came around the point, and as we knew how soon the darkness shuts down in Florida we hastened back to the Ardell.

We were always up betimes in the morning, and I venture to say we saw the sun rise more times while we were on that cruise than we will in many a year. The crew were always on deck at "sun up," and the walking, washing decks and rattling of ropes and sails made sleep impossible. We sailed all the next day, and at night anchored near Senibel Island Lighthouse. Here our anglers found fine Spanish mackerel fishing, catching many 24in. long. We went over to the lighthouse to call. The houses for the keeper and assistant are built upon piers 12ft. high to protect them from the high sea, which sometimes washes over the entire island. They said they were "mighty glad to see folks; putty lonesome living there." They told me their nearest neighbor was eight miles away, and they were obliged to go twenty-five miles for a physician and provisions, and all by a small boat.

We had heard that Marco on the Gulf was an important point, so set sail for there. We could not make it the first day, so for the first time we anchored outside. We started early the next morning, and when the captain sai Marco, we asked where. All we could see was a pier with a small building attached to it, and in the distance a house. We inquired if that was all of Marco. "Yes," was the answer, "except the cocoanut grove." We took to our rowboats at once, and soon had the pleasure of standing under a "sure enough" cocoanut tree. This was a wonderful sight to us. The trees stand in rows 25ft. apart and are from 30 to 40ft. high, and as they belong to the palm family, the foliage is of that character. The branches are not unlike our ferns, only many of them are 15ft. long, and they grow in rows around the trunk of the tree. They are exceedingly graceful as they wave to and fro in midair. The tops of the trees meet overhead and form a charming archway. It was certainly a delightful treat. We saw the nuts in all stages of growth, from the blossom to those full grown. We visited the house, and here we found as cultivated a lady as one will often meet, and a well furnished and well kept home. I noticed among other things a piano. We also found a beautiful and daintily dressed baby boy ten days old. Our call was very pleasant, and we all wished we could express ourselves in as good English and as choice language as did this mother with her eight little children, 'way down on this almost forsaken Florida coast. We found here some fine venison, which was very acceptable.

After leaving Marco we sailed down among the Ten Thousand Islands. When we reached there we exclaimed fairy land at last. I cannot describe this. It is among the things you feel, and the language that would express it does not seem to have been put into words. The entire bay, as far as the eye can reach, is dotted with beautiful green islands of all sizes and shapes. We would sail along toward what seemed to be mainland; and as we neared the shore, without a moment's warning we would come upon another opening—an avenue we called it, fringed with trees on each side, their branches interlaced and interwoven, forming a perfect bower. One could row for hours, in and out, from one avenue to another, the water as smooth as glass and as blue as the sky above. we exhausted all the adjectives at command, and still the half was not said.

These islands are formed by mangrove trees, and the formation is something wonderful. A mangrove seed is like a cigar in shape and color; it floats upon the water and sends down a root; and this grows and floats about until it finds something to fasten to—a bit of coral reef, anything that will afford anchorage. Then it sends up a shoot, and as it grows it sends down roots from its branches. You will see these roots hanging down from the branches of the trees many feet long, looking like our wild grapevine. These swing around until they are of sufficient length to reach the water, and in turn fasten themselves to something and send up another tree. This forms a complete network, and soon the sand begins to accumulate, and all sorts of floating debris, such as seaweed, lodges there; barnacles fasten on the roots in the water—and, behold! an island is born. The bushes grow very rapidly and soon become large trees, whose foliage is very dense, and whose falling leaves add to the accumulation. One has only to watch the processes of nature in the formation of those islands, to understand more easily how much of Florida is made land.

After feasting our eyes on this beautiful picture, we set sail for home. We had had what the captain called fair winds going down; but now our course was northwest, and the wind was blowing strongly from the same directon. We started at noon from Boca-Grande Pass to make Stump Pass, twenty miles. The wind had been blowing from the northwest all the previous night and was still blowing, so we found a very heavy sea outside and were compelled to beat up against the wind. We would go out five miles, tack in; go eight miles and only gain three or four.

The waves kept getting higher and higher, and the wind blew harder and harder; but we thought we would soon be inside. Finally, as night was fast coming on, I said, "Captain, are we not almost to Stump Pass?" "I can't go in Stump Pass," was the reply, "it is a narrow channel, and this wind would send us on the breaker bars sure." "Well," I asked, "what are you going to do?" "The only thing I can do—sail. It is so rough I cannot anchor outside, and I cannot get in." In the meantime darkness was fast coming on, and we were ploughing and plunging about, the water dashing over the deck. The prospect of keeping up that rail fence business all night in such a sea, and not getting anywhere was not altogether cheering, and to add to the might-be of the occasion, we saw a black cloud lying low in the west, out from which the lightning flashed continuously. The wind howled, the ropes rattled, the waves pounded up against the sides of the boat, with force enough (it seemed to us) to break her in pieces. The outlook was that we had a wild night before us; and we began wondering if there was any way out. Finally one suggested going back to Boca Grande Pass. A council was held. The captain said he would turn about if we so elected; and as there was nothing to gain except time, and that was of no account to us, we instructed him to set sail for Boca Grande.

It was worth the whole trip to have experienced that sail. It was grand beyond description. We were going with the wind now, and we seemed to fly through the water, dashing it in all directions. The waves were high and long, and as far as the eye could reach, each one was crested with phosphorescent light. The whole sea was brilliantly illuminated.

Soon we espied a light and exclaimed, "Boca Grande Lighthouse!" We felt we had found a friend, although it was fifteen miles away. As we neared the pass I noticed that the captain looked anxious, and gave his commands in a quick, sharp manner, very unlike his usual way. It took us some time to get inside; and how we did plunge and roll going through the pass. After we were safely anchored, the captain told us the only real danger was in going through the pass, but in such a night and such a sea it was hard to distinguish between the breakers on the bar and the waves, and he added, "I found it business to get inside." We had been from 12 o'clock until 7:30 in the evening running twenty miles, and we had come back in two hours and ten minutes. Pretty fast sailing, we thought.

We sailed out of the pass the next morning after our little adventure, and as the fishing was fine in Lemon Bay, to which Stump Pass is the entrance, we concluded to spend the afternoon and night there. After dinner our fishermen went fishing and returned at nightfall laden with oysters, clams, fish-snipe, etc.; so we voted that quite a profitable afternoon.

The following day the captain told us that not far awa

was an island where a man lived who was 114 years old, had known Napoleon, and was wonderfully interesting. His wife was old, but she did not know her age. They lived entirely alone on this island, twenty miles from anybody; and the captain could sail us near and anchor for the night. We reached there at 4 P. M., and immediately rowed over.

The old lady came down the beach to meet us, exclaiming, "I am glad, oh I am so glad to see you," and invited us to the house. This was a rude affair, with two small rooms, without plaster or paint, but very comfortable when compared with the "shack" house she had lived in until a few months previous to our visit. To our great regret when we asked where her husband was, she said, "Oh, my old man he's gone tar-a-pin [meaning terrapin] fishing. He's got tar-a-pin on the brain, my old man has." I could but think, notwithstanding her almost complete isolation, that she had "caught on" to some of the modern slang. Soon after we were seated she brought in a plate and filled it with bananas, which she passed, insisting on each taking one. She said she always "liked to treat folks nice that came to see her." Upon thanking her, her reply was, "You are very welcome, m'am, indeed you *are* welcome." I could but think this true hospitality. Upon asking her if she lived entirely alone when her husband was away, she said, "All but the chickens; they are a mighty lot of company daytimes, but they go to bed right early—then I ain't got nobody." When I asked her how she managed to get enough to eat she told me she had plenty clams, oysters, fish, etc. "Do you ever make clam chowder?" I asked. "Yes, m'am." "How do you make it?" "Well, m'am, I take a little pork, slice it, and put in the kettle with the clams and water. Sliced potatoes, if I have them. Onions is good in chowder: put some in if I've got 'em. Tomato is mighty nice; don't have that much, though. I like black pepper, too; always put it in if I've got it." "But," I said, "Mrs. Gomez, how do you make chowder without these things?" "Why, leave 'em out." I imagine her chowder consists many times of pork, clams and water.

She walked a long way on the beach with us on our way to our boats, and she remarked to me, "Well, m'am, if I had a dollar for every time I've been down to this beach, why I'd have a million of 'em." "What makes you come down so often?" I inquired, "Lonesome, m'am, *so* lonesome I can't stay in the house."

As we rowed away from the shore, it was pitiful to look back at her, standing there alone, her head bent forward, her eyes fixed on our receding boats, her figure outlined against the sky, and the wind blowing her scanty garments about her. It was a picture of desolation, and affected us all deeply. After we were back it occurred to us, why did we not ask her over to take supper? Every man was on his feet instantly, saying. "I'll go and fetch her over." She seemed so happy and delighted! At the table one of the gentlemen was talking to me about how lonely it must be for them, and remarked, "But I suppose they don't mind it; they get used to it." I did not know she had heard the remark, but she made answer, "Never *do* get used to it, sir." When it came time for her to go home, she wanted to stay longer; said she didn't feel in any hurry, if we didn't.

The next morning as we sailed away, we saw her standing watching us, and as long as we could see her through our glass, her eyes were seaward. Somehow we felt we were breaking the link between her and civilization. We have wondered many times if her "old man" ever came back. He has a little old boat with a rag of a sail, and he goes out miles in the ocean all alone. I think with her, "he's getting too old to go by himself." She said "he had kind of queer spells, and she had to give him a heap of Jamaica ginger to rouse him up." We talked about what will become of them when one dies—with not a soul within twenty miles—and we all echoed the thought, "Oh, solitude where are they charms?" As we sailed up to the pier at St. James City, in Charlotte Harbor, we saw a fine tarpon that a gentleman had just landed. It weighed 100lbs. One of our party, a gentleman from Kentucky, who has a winter home in Clearwater, and who has been very ambitious to land a tarpon with rod and reel (and who, by the way, had as fine a tarpon outfit as he could buy), could not withstand the temptation to try his skill and his new rod, so he decided to leave us and put in a few days fishing. We sailed as near Punta Rassa as we could get, and then rowed him over there and left him.

For days after our return we were expecting a telegram hourly from Tom saying he had landed his fish, but instead one morning he put in an appearance, and the fish he had promised himself to get before he left the west coast was still in the deep sea. Tom is a good fisherman and he was not discouraged, so he spent a day in getting his tackle in order and providing enough for the sharks, who were more friendly than the tarpon, and did not hesitate to take bait, hook, line and the whole business. When all was ready he said he would catch a tarpon in Clearwater Bay before he went home. Well, he fished from early morning until sundown, until one morning he went out and at 11 o'clock A. M. landed with his rod and reel a magnificent one weighing 130lbs. The next day his brother caught one, and upon reaching shore he threw his line, with the tarpon, on the sand while he pulled up his boat; and much to his surprise and disgust the fish flopped over, broke the snood and flopped into the water again. The bay is full of tarpon, but there is some trouble in getting them, because the sharks are so plentiful.

To resume my story. One day one of our ladies thought she would try her hand fishing, and accordingly put out a trolling line. Directly I heard her call, "Come, quick, and help. I have a fish." Two or three ran and helped her pull, and when it came in sight she found she had a shark.

The rest of our trip was uneventful, and we came home as rapidly as wind and tide would permit, landing safely in Clearwater Harbor on the morning of the thirteenth day. We all felt that our trip had been one of genuine pleasure; and we will long remember cruising down the West Florida coast. H. N. C.

BATTLE CREEK, Mich.

[Our issue of July 8, 1893, contained a capital portrait of John Gomez and his wife, and a picture of their thatched house. The photographs were sent us by "Tarpon" and illustrated his story of a cruise to the Ten Thousand Islands. According to "Tarpon," Gomez reckons his years from 1781.]

## WATCHING A GROUSE DRUM.

EARLY in one October I had the only opportunity which has ever presented itself in my twenty years of experience in forest and field of studying the method employed by the cock partridge in producing that peculiar sound known among sportsmen as drumming.

I was out with my gun looking for quail quite early in the morning, and was working toward a small wooded swamp where I knew the birds found a safe shelter at roosting time, as well as from the gun when flushed by dog, for no hunter, no matter how ardent, would have the temerity to brave the suckholes and wild brier vines. Hearing the call of a quail I stopped to listen and locate him positively. I stood facing a stone wall, distant about six rods, on each side of which grew hazel bushes. Suddenly out of those on the opposite side sprang a fine old cock partridge and dropped on the wall directly in front of me, tail spread, ruff standing out and crest raised—the picture of alertness. What a chance for an artist. I hardly breathed. Between us was a small alder bush, tall and slim. This was the only shelter, yet the bird did not seem to notice me, for after standing a moment he began preening himself, seeming to enjoy the rays of the sun, which shone warm and bright.

I stood and watched him thus for probably ten minutes; and was considering whether to let him go altogether or flush and try a shot, when he stopped, shook himself, stretched one wing and leg, then the other, took a look all around, and slightly raising his feathers, as a sitting hen when disturbed, raised his wings a little above a horizontal line and brought them down against his body, increasing the time until it ended in a flutter, as it seemed. This I watched him repeat; the third time I moved slightly; he spotted me and moved also. But I stopped him not 10ft. from where he stood; and when I heard him giving his last flutter I felt like a murderer.

I am perfectly satisfied on one point, however, that the "mysterious noise," as some term it, is produced by striking the wings against the body. As many will admit, who have had the opportunity to observe, the sound is more pronounced and distinct at a distance than very near it, where it has a muffled fluttering sound.

Many theories are advanced on the subject, among them one to the effect that the bird stands on a hollow log and strikes it with his wings, thus producing the sound from the log. I inclose a clipping from a daily paper, which speaks of this method quite positively. But in the instance of which I write there was no possibility of my making a mistake, as the bird was in plain sight all of the time and stood on a stone wall; consequently the sound must have come from striking the body, as I have said. ## IN WASHINGTON WILDS.

OUR long-time correspondent, "Forked Deer," of California, sends us the following extracts from a letter written to him by a friend who is homesteading in Washington. They give some notion of the incidents which amid such surroundings break up the monotony of existence, dispel *ennui* and make life worth the living:

Some two months ago a man who was working for me got his fingers jammed one day so that he could not work, so he went home, some two miles, on the river where his claim is. He has a wife and two small children, the youngest a girl two and a half years old. They have lost several chickens, always taken in the daytime; his wife had seen the animal and thought it to be a wildcat. Well, this day, when the man got home, he took the bucket and started to the river for water, some 50yds. away. His bird dog followed him. When half way, the dog began to growl and whine; and there right beside the path lay a cougar. George halloed and the cougar sprang at the dog, but missed it and ran, George after it, the dog barking. It went down the river some 50yds., and then climbed a small hemlock about 30ft. and sat snapping and growling at them. George called to his wife to bring his rifle. When she brought it there was but one cartridge, so she went back to the house and got some more. Then George put a ball through the cougar's head that brought it down. To make sure George put two more balls into it; and they dragged it to the house. It was a female and had had kittens, but had lost them. Very likely the male had killed them. George went to a near neighbor to get a young fellow to help him skin it. While he was gone, his wife was looking at it and saw some of the muscles twitch. She thought it was going to come to life again, so she took an axe and just chopped its head to pieces. It was a very large cougar, measuring 7ft. from tip to tip. They have lost no more chickens. It is a wonder that it had not taken the little girl, for she often went some way from the house.

A cougar was seen about a mile and a half from me the other day. A man met it in the road; it stood and looked at him; the man took his pistol and fired two shots at it, when it jumped on a log and trotted off, and did not appear to be in any hurry about it either. I had been over the road myself not more than a half hour before with a rifle, and I would have been pleased to say good morning to the gentleman.

---

Two weeks ago I took a puppy and started out to pick some whortleberries half a mile from the house, where I knew there were plenty. When I got on to the ground, I sat down on to a log and began to pick. They were hanging thick on all sides, the red and the black. After a moment or two I heard the cracking of limbs and brush a little way off in the timber. I thought the natives must be around. Soon there was snarling and growling; it sounded as if there might be a large family of them, and they were coming my way. I had no gun, so I got up on a big log and kept still. Soon I saw what all the racket was. Two bears were quarreling and fighting over a few berries. One approached within 20yds. of where I was, and I had a chance of seeing a bear pick berries. He would sit up and reach around a bunch of bushes that had berries on, and then with his paws he would scrape them into his mouth, leaves and all. I suppose the leaves helped to fill up. At last he got a scent that did not suit him, took a turn and looked squarely at me; blew his nose; took another good smell that satisfied him; gave one snort, and broke for the tall timber. The other bear was quickly alarmed, and away they went, leaving me to finish my picking in peace.

I saw, the other morning, something that amused me. There were some roots burning and I threw on some rotten wood. It made a thick smoke, and while I was looking at it I saw a water ousel flying straight toward me with that peculiar flight of theirs which they always have when they are going to alight—it seems as if it was the last inch it could possibly fly, although they are very strong of wing. Well, he lit on a root not ten feet away from me, looked at me and walked down the root into the thick smoke, and there shook out his feathers the same as a bird does when bathing. He stayed until I thought he must smother; then he walked out and winked and blinked so queerly that it made me laugh; then went in again. He went through this performance four times, then flew away to the creek. Perhaps some others have seen the same thing, but I never heard of anything like it before. C. B. R.

### Winter Home of the Barren Ground Caribou.

BY J. B. TYRRELL, M.A., F.G.S., F.G.S.A.

AMONG the few large animals still found in great numbers on this continent, the barren-ground caribou (*Rangifer grœnlandicus, Linn.*) is probably the most interesting and important. It is the principal occupant of the great lonely wastes that extend southward from the shores of the Arctic Sea, not only in America but also in Europe and Asia. The Indians who people the northern part of Canada, including the Chipewyans, Yellow-knives and Dog-ribs, subsist very largely on its flesh, while its light warm skin with its thick covering of light gray hair furnishes them with beds and winter clothing, and the tanned hides, sewed with the sinews from the back, supply them with footgear and comfortable tents. In fact all their necessities, except their ammunition, tea and tobacco, and a small amount of summer clothing, are supplied by the caribou.

In size the barren ground caribou is much smaller than the woodland species, an adult female shot by the writer near Lake Athabasca being about as large as the common Virginia deer of this vicinity, and weighing about 150lbs.; while an adult male of the woodland species, obtained in the rocky country east of Lake Winnipeg, the head of which is now in the Museum of the Geological Survey, weighed between 300 and 400lbs.

The horns are very large and irregular, very few of them being alike, and all being apparently unsuited to travel through the thick woods. The males are said to shed their horns in November, while the females retain theirs throughout the winter and shed them early in the following spring.

Their winter coat of long hair is shed early in July, and by August or the beginning of September the hide is in excellent condition, and the hair is soft and not too long, so that at this season the Indians endeavor to kill a sufficient number to furnish themselves with clothing for the winter. Later in the year the hair becomes harder and more brittle, and the hide is said to be riddled with holes made by the larvæ of a bot fly.

In summer these deer live on the great rocky wilderness that extends from a short distance north of Athabasca and Reindeer lakes, between Great Slave Lake and Hudson's Bay, to the Arctic Ocean. In the autumn they collect together in large bands and move southward into the wooded country where they spend the winter, leaving again for the barrens in the early spring.

During the present year the writer spent the summer in one of their favorite wintering grounds in the hitherto unexplored region north of Churchill River and southeast of Lake Athabasca. Almost all of the deer were at the time away to the north, but a few stragglers had remained behind.

Our party entered the country by ascending the Caribou River, a stream about as large as the Rideau, flowing into Churchill River 225 miles north of Battleford. On the first of July it was found to be at its extreme high water level. Its banks were overhung with willows, and its bed was quicksand, so that we could neither track nor pole, but were obliged to ascend it with the paddle against a heavy and constant current. The river flows in a wide valley, with high granite ridges at some distance back.

As the river is ascended, poplar, white spruce, and all underbrush gradually disappear, and the country becomes generally wooded with Banksian pine, with black spruce in the wet places, and great stony tracts devoid of timber of any kind. We have now reached the winter home of the caribou which in this region stretches northward from about Lat. 56° 45'. It consists of long, almost bare hills of Archæan rocks, separated by wide valleys, the bottoms of which are filled with sand and ridges of boulders. In these valleys lie many small lakes, on the shore of one of which, near the head of Caribou River, the Hudson's Bay Company established a small trading post last autumn, and traded with the Indians throughout the winter, but in spite of the fact that meat is abundant the Indians are not going back there this winter and the post has been abandoned.

The Indians report that the deer collect on the frozen surface of these lakes during the day in immense herds, and are readily killed as long as the desire remains to shoot them, or till the whole herd is exterminated. My informant stated that last winter the hunters killed from one to three hundred apiece.—*Proceedings of the Canadian Institute.*

---

### A Tame Partridge.

NORTH BATIMORE, O., July 16.—I have a female partridge (commonly called here pheasant) that was caught during a blinding snow storm on Feb. 3, 1894. The snow was more than one foot deep, and when the partridge lit it buried itself in the snow. An oil pumper saw it light, and going to the place pushed his hand around in the snow and caught it without much struggle. He brought it home and kept it in the house for a few days, when I bought it of him. It was placed in a wire cage six feet square, and kept in the yard until about four weeks ago, when it accidentally got out. Instead of leaving, as we supposed it would, it stays about the yard and in the orchard, where we have eight pet deer. It is quite tame, does not offer to leave or fly away, and will submit to being caught. It is very fond of small grain of any kind and will feed with the chickens. We have always been told that partridges could not be tamed, but that is a mistaken idea. We judge it to be one or two years old; it is sound, healthy, of full regulation size, and is becoming very tame. D. E. P

### Geysers at Norris Basin.

A PRESS dispatch dated July 22, from the Mammoth Hot Springs, Yellowstone National Park, announces renewed geyser activity at Norris Geyser Basin. It says:

"A telegram received here from a reliable source says a shock resembling an earthquake was felt at Norris Geyser Basin at 3 o'clock yesterday morning. The new crater geyser, which had been quiet for some time, broke out with terrific force, throwing rocks weighing 25lbs. to the height of 200ft. Steam rose 500ft., accompanied by a roar equalling the combined exhaust of a thousand locomotives, which could be heard for ten miles. Every geyser in the Norris Basin played for hours. The new crater now surpasses any geyser in action in the Park."

### Sea Gulls Nesting in Trees.

CALAIS, Me., July 14.—Mr. J. H. Wilmott of Muskoka, Canada, asks if it is a common thing for sea gulls to alight upon trees. I would say that they do down this way, and several kinds breed upon the thick trees about the island of Grand Manan, so the people tell me. The large black-back gull (*Larus marinus*) and *L. argentatus* formerly had nests upon the ground, but they were so often robbed of their eggs that for many years they have had their nests upon the trees. Foxes were put upon the island and they have dispersed all the ground-laying birds. The Bonaparte gull (*Larus philadelphia*) is said always to breed upon the trees, but not about the Bay of Fundy.

GEO. A. BOARDMAN.

### A Bobolink Picnic.

WE saw a pretty sight yesterday morning as we were driving near a crystal spring that gushes out from under a great brown rock. A flock of bobolinks were having a picnic. Some were strutting about like crows on parade; some scratching for worms like chickens, some bathing. There were a dozen or more of them, and to have seen them there no one would have dreamed that they were the leaders of the whole bird-orchestra of all that grassy meadow side.

ANNIE A. PRESTON.

CONNECTICUT.

### Sea Gulls in Trees.

INDIAN ROCK, Me.—It is quite common for sea gulls to light on dead trees around the Rangeley Lakes. One pair have nested on a dead tree, the top being broken off. I think it was used for several years. Young partridges are very plenty this season.

C. T. R.

## Camp-Fire Flickerings.

"That reminds me."

### Five Minutes of Green Funk.

I WAS reading one of "M. Quad's" rattlesnake stories about an army sergeant, who woke up with a rattler coiled beside him; and who was so scared that he lost his mind and died from the effect of the fright; and it brought to mind two snake stories, neither of them quite so far-reaching in their effects. I am constrained to say that I don't believe that about the big sergeant dying. I once tramped on a poisonous snake with my bare feet, and with both feet at that, and was neither scared to death nor bitten. But great Scott! the jump I made. I have always been considered abnormally quick; and my escape must have been owing partly to my quickness and partly to the fact that the snake, being trampled upon, couldn't get himself unlimbered in time.

But one morning I left camp before any one else was awake and went over the shoulder of a hill toward a side cañon to look for deer. Stepping quietly among the underbrush and grasses and flowers and leaves, I was suddenly halted, nay, petrified, by a soft, indescribable whirr somewhere beneath or around me. It was a snake and I could not see him nor locate him. I stood there, I said five minutes, but I suppose in reality it was not more than five seconds, in the coldest, deadliest fear I know anything about. I had to go somewhere; the sound ceased; obviously it was safer to go back and back I went. I got up on a log and cocked my Winchester and looked carefully for the cause of my scare. Then I got a rock and tossed it in there, but nothing moved or sounded again; so I went back to camp. I had sort of lost my hankering after deer. I am a nervous, timed creature, prone to alarm, but after that fifteen minutes (for now that I begin to recall the sensation I am of opinion that I stood there fifteen minutes instead of five seconds) upon the side of the cañon I seemed to think I had never been scared before.

A perfectly truthful man once told me that he knew the following to have occurred: An officer had his arm shot off at the battle of Gettysburg; and when he regained consciousness after a fainting spell, a very large rattlesnake was sleeping upon his bosom. He simply swooned off again; and after a while when they began to collect the wounded, another officer found the two of them sleeping there, and killed the snake with a skillful sword-cut, and the wounded man recovered with the loss of his arm, but with as much sand in his craw as he ever had.

Snakes travel a good deal on their reputation. They scare birds and small animals so they become helpless. We all know this to be a fact. And then when they get in a tight place with a man, they try to run a bluff on him. A lawyer in our town once met a rattlesnake down in the Ozarks, and began to experiment, or rather to let the snake experiment, to see if there was anything in the snake charming theory. He said that the snake's eyes got brighter and brighter and his scales became glistening and his body seemed to swell up a little thicker and the whole outfit became so engrossing that he finally ran away from the snake in a dead scare and didn't get over it for a good while after. He told me that it was his belief that if he had kept company with that snake much longer he would have lost his wits.

A 6ft. blacksnake once ran a bluff on me. I kept trying to kill him with stones; and he just kept right on toward his hole as slowly as if I was throwing the other way, and I saw him disappear unharmed, very much to my chagrin. A while after that I went back there and he was out again, and when he saw me he up with his head about 8in. off the ground and came right for me. It was a cool bluff and it would have worked three times out of four too; only this time I was good and mad and I picked up a bit of a stick about an inch thick and a foot long and I met him half way and hit him a crack over his neck that knocked the fight and everything else out of him as completely as if I had hit him with a baseball bat.

GEORGE KENNEDY.

### A Close Shooter.

WILLIE, who was wise at sixteen years of age, was the proud possessor of his first gun. His friend Eddie was assisting him to admire it. Both knew all about guns.

Said Eddie, "I don't believe that gun will kill a rabbit as close as ten steps."

"I know it will," said Willie, "because papa said it was bored purposely for close shooting."

B. WATERS.

## Game Bag and Gun.

### BIG GAME IN CHICAGO'S SUBURBS.

*Time*—November, 1893. *Persons*—Nephew, niece, his wife and uncle. *Game*—Deer, bear, wildcats, rabbits, grouse, etc. *Place*—The camp as per caption above.

AND this is no libel upon that big city's fair fame, but is indubitable proof of its varied and unrivalled attractions, as will be admitted by those who read this article to its close.

Of all the months that drop from the fruit tree of time, what one is comparable with November for outdoor hunting and camping. It is the mother of those marvels called Indian summer days. All above is gold-dust in atmospheric solution, and, immersed in this rare elixir for a few days, all the acidity of one's nature is extracted and only the honey-dew of "peace on earth and good will to men" remains. It is a time for day-dreaming and for close approach to nature's heart.

There were three of us who took part in the joys and experiences herein described. A man whose brow had faced time's frosts and snows until they had lodgement in his locks, and a husband and wife whose faces were aglow with the light of life's forenoon.

By the courtesy of Mr. C. E. Robbins of Chicago, we occupied one of the buildings of one of his then unoccupied lumber camps on the banks of the Big Eagle River, a rushing, rollicking, noisy stream, clear, pure and delicious as it is healthful. By noon we have all our traps in place, beds snugly made (they are ticks filled with wild hay, both of which were secured from A. Baker, the guide and hunter of this region, and who conveyed us thither), and were ready for dinner. One hour more and we conclude to visit a lake a mile south. It is a lake, lovely as some gem in an ocean of green, a crystal set about with the fadeless green of pine and cedar trees. Abundant sign of deer is seen in a foot path around the lake, and gives us much hope of further conquests. We have brought axe, nails and boards to improvise a float of logs to enable us to fish on the lake, but after several hours of labor find our logs too much water-soaked, and our first attempt to fish is a failure. On returning, we think we may secure a deer, but instead we bowl over two fine rabbits, and we have meat if we didn't get fish for our first night in camp. And that supper, together with the subsequent breakfasts, dinners and suppers impels the writer to advise his fellow sportsmen to put a final veto on the old-time plan of taking a male cook or attempting the task of doing the cooking "by turns." Take your wife or wives with you. Generally speaking they, too, are true lovers of nature's charms, and more keenly alert to her beauties and subtleties, and carry with them, as at home, woman's mystic spell to make all joy more delightful, all beauty yet more entrancing and all comfort more restful.

Supper over the pupil must have instruction.

*Nephew*—Uncle, now that we are on the ground you must give us directions as to still-hunting deer.

*Uncle*—All right. That is an easy task, but the doing is only acquired after many, many failures. A deer's danger signals are not his eyes but his ears and nose. Novices seldom get sight of these shy creatures simply because they hear them long before they see them. For long distances a deer will hear the breaking of a twig, a low cough, a sneeze, the swish of a bush, which will send these vigilant listeners off in a twinkling, and the hunter knows nothing of their presence. These woods are now dry—exceedingly dry, and hence it is next to impossible to approach a deer unheard. You have seen that the little oak trees have borne an immense crop of acorns. Deer are gluttons for acorns. In a few hours they will load their stomachs with this food, and then they are ready to seek seclusion in a dense copse or swamp and snooze all day. If food was not so abundant they would be up an hour or two both morning and evening. As it is our only hope is a shot very early or late.

*Nephew*—But that is not specially encouraging. Are they not often driven from cover in the day time?

*Uncle*—Only when there are many hunters about, and even when aroused they seek dense copses or swamps in which to hide. The only hunters here are a small band of Indians and they are hunting west of us, so Mr. Baker, the hunter, informed me. The country, as you see, is generally very open, the timber having most of it been removed, so my advice is to confine yourself to watching runways at early dawn and twilight. If the underbrush was not as dry as tinder you could sneak through the swamps or dense spots for snap shots, but until it rains heavily it is almost a hopeless task. We will all go out in the morning if niece has the endurance, and do some prospecting.

My niece thought that she would enjoy this new and exciting experience, "I'll shorten my skirts, put on extra leggins and be glad to join you."

We decided to go down the stream on its right bank. The morning broke with not a ribbon of a cloud in the sky, with a nameless but delicious elixir in every inhalation of the crisp, pure air. Nephew and niece were jubilant and hopeful, for in the sands along the stream many tracks of deer, great and small, aroused their enthusiasm; but only once were we greeted by any other indication of game, and that was the *whoof-whoof* of some deer whose keen scent had detected us, and he snorted an adieu to us. The evening's tramp gave us rabbits only.

For a week the days which dropped from the hand of time were of gold, and we had chubs, grouse and rabbits for our larder, but no venison. In vain did my nephew tramp or sit in silence near runways. I, too, essayed the watch at the crossings along the stream.

One evening I had sat until I had grown chilled, and stepped out from my hiding place to start from camp, when I heard the breaking of some twigs to the right and across the stream, and instantly I prepared for a shot. Soon I saw a head and two great ears emerge from the brush. Then two or three steps forward and a halt. Meanwhile my gun was kept to shoulder ready for discharge. I must let it get well over the stream or have it to lug across if I kill. When it is midstream I move only a mite to avoid a bush, and before I can touch the trigger the doe springs and my ball strikes her midway instead of the shoulder. I leap back to give a second shot as she mounts the high bank. I stand ready, but she does not come. She has dashed along under the bank and disappeared. It is now too dark to trace her, and I wait for the morning. Three roving hunters are camped near and they see the deer fall, and load it in their wagon and hurriedly leave. This we learned from Mr. Baker, who saw the deer in their wagon as they passed his hotel about daylight she following morning. This was my only shot at deer.

My nephew's first shot was in the roadway about the fourth morning. My niece and I were trailing a few yards behind him in a logging road before it was yet light under the trees when his rifle rang out. We heard the deer's strides as it dashed off through the underbrush to the right. It was too dark for anything but a chance aim at the disappearing white flag, but the young man had had his first shot, and displayed the quickness and alertness of the true hunter, though no evidence could be found that he had drawn blood.

His second must be told by himself: "I was on my way to a crossing, or runway, above the first dam, and had started before day to reach the ground as soon as it was light enough to shoot. Just as I reached the top of the high hill this side of the dam, and in the dusk of the dawn, two deer bolted off, one to the left and the other to the right. It was in such an open space that I had no thought of game and was unprepared for them. As quick as possible I fired twice at the larger one to my right, but I scored a miss. If I had been on my guard as I came to the top of the hill I could easily have taken them by surprise instead of being taken unawares."

"And this reminds me," said I, "that I have not impressed upon your mind sufficiently the importance of a few don'ts.

"Don't reach the brow of any hill without great quiet, care and caution. Deer are more wise. As they approach such a place they invariably stop and carefully survey the surroundings, unless in flight.

"Don't hunt with the wind, but against it, or at least at right angles with it. Remember a deer's scent is only equalled in keenness by his hearing.

"Don't shoot on a level with a deer running straight-away, but aim at his legs. The tendency is to shoot too high. If it is running across your path don't aim at its body, but two to four feet in advance.

"Don't shoot too quick at a deer that has not detected you. Take time to think a little, and if he is running or walking, whistle or bleat sharply, and be prepared to shoot when he halts.

"Don't walk too much. All beginners wear themselves out in vain tramping. Find where deer are using from 'signs' and haunt these places, and be lazy about it.

"Don't look too far away as you peer through the woods. Patiently, repeatedly and critically scan every bush, fallen treetop and brush patch nearest to you. One is ever inclined to keep his vision on distant points and entirely overlook a deer in plain sight."

The third shot of my nephew was provoking. He had been hunting all day with the rifle, and without result. On our way to camp in the twilight he said to us, "You remain in the road and I'll take your shotgun and go along the stream and kill a rabbit." Soon we heard the report of the gun and with it a loud call for the rifle. I ran down to where he stood and he said, "O, if I had only had my rifle. It's just my luck. Why, a great big doe stood broadside to me, but too far away for this rabbit load. She was away over there at that bend in the stream."

The third shot was about 9 A. M. My niece and I were in the road near the stream and my nephew was to the right and on the high bank or hill above us. I heard what I thought were deer crashing through the thick brush along the stream, and as I did so my niece cried out, "There is a deer! There is a deer! away over on the hills across the stream."

I mounted a stump, and just then the loud roar of the rifle—once, twice, three times—rang out on the still air. A stalwart buck with splendid horns stood out in plain view on some bare rocks that formed the crest of the hill far across the valley. It was too far away for effective shooting, even for these modern guns, and the buck seemed to know this, for he only ran away after he had taken a calm survey of the situation.

Yes, this hunt was practically in Chicago's suburbs. One of the iron fingers of that giant hand of commerce, the C. M. & St. P. Railway, points to the north star and penetrates the heart of the lumber and iron regions of Wisconsin and Michigan. Enter a sleeper at early bed time in the Union Depot, and sleeping, one knows neither time nor distance. When the porter calls you to consciousness you are yet in Chicago in feeling, but really you are in a country rich in every charm and resource so dear to all lovers of nature's wild aspects. Crystalline lakes, limpid, icy brooks, rushing cataracts and complaining rapids, waters specially brewed and distilled in resinous woods and cedar swamps as a tonic for exhausted systems; airs filtered through a thousand pines and hemlocks, that are far better to vitalize the sluggish blood than nostrums or drugs.

Wausaukee was the station where we left the train, and, taking car on a railway logging road for twelve miles, we were met by the team of Mr. Baker and driven to camp. The latter is a safe, truthful, conscientious, painstaking guide and thoroughly capable. This is said more for the benefit of sportsmen than for Mr. B., as such men are too scarce in hunting regions. His address is Wausaukee, Wis.

CAREY.

## QUAIL PACKING.

SEATTLE, Wash., July 13.—After several weeks of delay, occasioned by floods and strikes, I am in receipt of "our paper" up to date. It may take a vacation, or several of them on the trip from New York to the Pacific, but it gets here just the same, and then I am dead to the world until I have read it from cover to cover, "ads" and all.

There are several things I want to "chip in" on, and I will begin with the subject of quail bunching. Five or six years ago I was on a quail hunt on the Medicine Creek near Curtis, Neb., and killed quail until, like our German friend, "I had my satisfy." The valley is covered there with a thick growth of willow shoots about waist deep or a little more, a feature common to Western prairie streams, and here the quail were thick in the thickest sense of the word. I was hunting without a dog, as usual, but I flushed more quail than ten men could have killed. I hunted six days in a little strip of willows less than a mile long and perhaps averaging 700 to 1,000ft. wide, and there were apparently as many birds when I quit as when I started; and I used 38 shells every day on single birds on the wing; and my average score runs about 26 dead quail to the belt of shells. Local guns were popping away all the time, but as they were mostly muzzle-loaders in the hands of farmers and boys, no "hog" scores were made, though I think they were responsible for a good many wounded birds, which served to feed the numerous "bob cats" (common wildcats) which infest the vicinity. At any rate, I found plenty of evidence that the cats were "pot-hunting" with a vengeance.

I found the birds in twos, threes, covey bunches, and two or three covey bunches, and in one particular thicket of perhaps 300 or 400ft. square, the woods, or rather the tulle-like willows, were literally full of them.

I think that 3,000 quail would be a low figure to place as the number of birds on that one-mile range. In those willow thickets, which fringe the Platte, Republican, Driftwood, Willow, Prairie Dog and Frenchman rivers and creeks, like tulle-patches, I think is to be found the solution of the quail supply of that country for all time, as the birds breed there and the dense willows give them both food and shelter from all kinds of enemies. In all of these places I have noticed the tendency of the birds to flock, and have frequently flushed a bunch of several hundred, which rose as an ordinary covey does, either in a bunch or in scattering, irregular numbers from a space of perhaps an acre of ground. They do not run much after lighting, as reports indicate in the case of the Texas quail, but when you watch a bunch "down" in a willow patch you can almost always find them very close to the place marked. In the cornfields in eastern Nebraska they almost always "light running," and many travel a quarter of a mile before taking wing again, therefore I argue thus:

If little hunted in a grassy or short, thick cover, Bob White congregates in large flocks and depends on his coat matching his cover for safety and concealment. If much hunted and living in a grain country where thick cover is scarce, he hustles about with only his own family to look out for, flushes easily and "roads it" for safety when he strikes ground. My quail hunting covers fifteen years, and territory from Illinois to the Pacific, on both Bob White and the mountain or California quail, and this is my own view of the question, which I hope may throw a little light in some dark place. EL COMANCHO.

## BAY BIRDS AT MARTIN'S POINT.

FOUR reports sounded out over the water and five of the fattest, plumpest black-head ducks you ever saw lay fluttering on the water. "By Jove, Captain, that was one of the finest shots I ever saw. Only five in the flock and every one of them bagged at 65yds. with No. 8 shot."

"Really I should have compromised on one duck," said Jasper.

This does not begin like bay bird shooting, but the captain never allows ducks to bite him, even if he is hunting yellow-legs, robin-snipe or any other of the bay bird family. But one never knows at Martin's Point what he will get a pop at next. It is safe to carry in one's shooting coat a few BBs for sandhill cranes, No. 4s for ducks, No. 6s for curlew and No. 8s for willet, yellow-leg, doewitch, doebird, martin, grass plover, golden plover, beetlehead, blackbreasts, or whatever other kinds come your way. We have the whole family and we have recently learned by experience that the little ox-eye, the very smallest of the hosts which visit our meadows by the million, makes the finest potpie. A couple of shots will bag 50 or 75, which makes a very decent pie for two.

We had just retrieved our five ducks when about thirty doewitchers swooped down among our decoys, which are of the tin variety. "Your first shot, Captain, and I will take them as they rise." Now, the Captain had been a fine shot at Manassas and Bull Run, about thirty years ago, but he took deliberate aim, and with that nonchalant air of a man who feels perfectly sure he can do it every time, blazed away. Jasper followed with both barrels. The smoke cleared, but nothing had suffered save the decoys.

We had hardly recovered from the bitter disappointment at our clean miss, when three large winter yellow-legs hovered over our decoys, singing their well-known note, *tweedle-dee, tweedle-dee, tweedle-dee.* They dropped dead as three reports rang out on the air, for there was blood in the Captain's eye now; and there were signs of great determination about the eye of Jasper, for he has the reputation at Norfolk of being quite a shot. He likes to recall the different shots when we gather around the hearthstone at night, tell of good and bad work of the dog, and run our horses at an impossible speed. But he went to bed very early on this May the 21st, 1894.

I have rather an elastic conscience, I think, but I never allow myself to exaggerate the bag killed on any occasion; and in recording this one I confess I feel meaner and less inclined to do much spring shooting than I ever did before. I never yet took a friend to Martin's Point who was not crazy to go again. I am glad to say, however, that we are not obliged to shoot many of these birds in spring, for they return to our place the first of July and stay until Nov. 15, and when they return in summer they are as plump and fat as a butterball. I think that for the table our doewitcher (the proper local name being grayback), grass plover, summer yellow-leg and golden plover, are equal to any bird in the world. They are truly delicious at Currituck. While the Captain and Jasper were popping away about as fast as they could load and shoot, Will was down at the other end of the flats, and the smell of powder in that locality was very strong. You should have seen his bag. He was in a little fresh water pond, where robin snipe were wont to feed, and they are a beautiful bird to shoot over decoys. I dropped six with one barrel on this trip, while a bunch of about forty hovered just outside of the decoys. The other barrel I had not had time to load from the last shot.

President Cleveland was down there on May 13; he spent one day among the bay birds there and expressed himself as much pleased. He hopes to visit us again in August.

Our bag for the day was 240 bay birds, 10 blackheads and 3 ruddy ducks. J. B. WHITE.

## THE PENNSYLVANIA ASSOCIATION.

ALTOONA, Pa., July 19.—*Editor Forest and Stream:* In your issue of July 7 I notice "D. P. F.'s" letter regarding the consideration of the question of game protection by the State Association, and also note your editorial comment on the same.

The Association has many staunch game protectionists, similar to "D. P. F.," in its ranks, every one of whom is desirous of seeing the question of better game protection for the State argued earnestly and fully. It is impossible that this can be done during the few hours set apart for that purpose at the annual meeting of the Association. The election of officers for the ensuing year, the choice of the location for the next year's tournament, the reading of the reports of the retiring treasurer and secretary, and the consideration of whatever minor business there might be before the meeting, would make business enough for any meeting to consider on a warm night in a hotel parlor; at least, that is my impression of the case, judging from last year's meeting at the Commonwealth Hotel in Harrisburg.

Our president, N. A. Hughes, of Williamsport, Pa., is fully alive to the exigencies of the case and is considering what will be the best course to pursue. There is no doubt that before any final decision in regard to a new game law for this State is arrived at there will be a great amount of talking done. Covering as the State does a wide territory, wild and rugged in its western portions, in a high state of agriculture east of the Alleghenies, Pennsylvania's game interests are about as diversified as it is possible to imagine. Hence the difficulty attached to the passage of a uniform game law. In Virginia, Florida, and I believe in New York, as well as in many other States, sectional laws are in force, overcoming the difficulty attendant on such conditions as we have in this State. Our constitution, however, forbids sectional laws, whether wisely or not does not enter into this question. The fact remains that what the Northwest wants is in some cases distasteful to the Southeast; then comes the "kick."

It is necessary, therefore, that ample time for discussion on this subject should be provided; this, as "D. P. F." says, cannot be done at a single short night session. The New York State Association's system appears to meet the case satisfactorily and could very properly be adopted by the State Association in Pennsylvania.

In organizing the State Association the promoters had a two-fold object in view; this object is well set forth in Article II., of the Constitution, which runs as follows: "This association is formed for the protection and propagation of game birds and animals and for the enforcement of our game laws, and for the promotion of kindly intercourse and generous emulation among sportsmen at the trap." The annual tournament, which promotes this "kindly intercourse and generous emulation among sportsmen at the trap," has done all that was expected of it. By its aid the Association has not only been kept from falling to pieces, but has grown and thriven until now it is a homogenous whole, formed of game and fish protection associations, etc., well able to take care of itself and to look after its own interests—the better "protection and propagation of game birds and animals, etc."

The propagation of game birds is a question that deserves special attention at the hands of our Legislature next year. If I make no mistake, D. P. F.'s own association, the Tremont Fish and Game Protection Association, has been the means of turning out a large quantity of game, both furred and feathered, for which there is absolutely no protection provided under our existing game laws. It stands to reason, however, that to be entirely successful, the efforts of this latter association should be protected by legislation, and this protection can only be obtained by the united efforts and earnest work of the sportsmen of this State, and by a spirit of mutual concession on the part of those self same sportsmen.

EDWARD BANKS, Secretary,
Pa. State Sportsmen's Association.

### Changing Conditions in Maryland.

A Maryland correspondent writes: It is evident that so long as personal wants are considered paramount to the real needs of the time, game legislation is a farce, and that is what is the matter in this State. If you have a political pull you get a game law to suit your ideas, if you have not the necessary influence you get nothing, no matter if you are asking for a measure that is of importance to the State at large. I will venture the assertion that if some one with a pull should ask a law authorizing woodcock to be killed in March and April, and Bob White in July and August, he could get it. I am adverse to the importation of the English ideas in connection with our game supply; but those of the fraternity who have money will have shooting; and the tide is setting strong toward preserves; once this system becomes rooted in this country and Americanized, the day of sportsmen of moderate means is surely done. I can see in my own locality the tendency from year to year to narrow the limits of free shooting; the farmers are posting their land from even their own neighbors, and are trapping and snaring such game as they can find on their farms to sell, claiming that no law can prohibit them from so doing. They say that as they are not expert enough to kill game with a gun, and can get it no other way, the shooter shall not rob the land owner of his share; and that share they will have, and get any way they can, and at any time of the year they want it or can sell it. Here is where the cold storage man gets in his work. If the sale of game could be stopped, even to the extent of storing it during the close season, the beneficial effects would soon be seen.

### Cranberry Lake Deer and Trout.

CRANBERRY LAKE, St. Lawrence County, N. Y., July 16.—Sportsmen who mean business should give Cranberry Lake a trial. Last Sunday afternoon I watched for two hours a deer feeding in total indifference to my presence at Silver Lake just at back of Mr. Bishop's pasture lot. This evening a family just arrived from New York city report that after entering the woods a mile above Clifton they met three deer, one of which, an old buck, stood and "peaked" at the carriage for five minutes, until right of way was demanded. Again at Tooly, further in the woods, two more deer were seen. Sunday at Sternberg's Inlet a party of young men from Brooklyn, on their way into camp at Brandy Brook, saw three deer feeding and numerous tracks at other places.

Senator Charles H. Russell and his nephew, Russell Stearns, brought in on Saturday evening 12lbs. of speckled trout, all of good size. Another gentleman from New York, nineteen years an habitué of this lake, brought in this evening 10lbs.; both gentlemen are blaming the fine weather for their poor luck. The writer while boating around Joe Indian Island this morning surprised two pair of loons who were billing and cooing in their own sardonic way; also one gull and one crane, and numerous wild duck.

If you come this way thank the Lord if you get here alive, and ask no questions, for Governor Flower has ridden over the same woods road, too, and is now moving heaven and earth to impress upon our State Legislature the desirability, nay the necessity, of improving our State highways. W. H. H.

### Stop the Sale of Game.

A PLATFORM PLANK.—*The sale of game should be forbidden at all times.*—FOREST AND STREAM, *Feb. 10.*

SILVER CITY, Tintic Mining District, Utah, July 14.—Put me down as one who is in favor of your new platform plank to put a stop to the sale of game, and why not add another to prohibit spring shooting?

I would be highly pleased to sign a petition, too, to old Father Time asking for a lease of life for a hundred years to come for our friend Hough. Those Yellowstone letters are the best thing we have had for many a day. I confidently believe that he and Billy Hofer could go to the North Pole and take a photo of the man on duty there to grease the axle at that end, but then we could not spare him so long. Both my wife and I enjoy his letters hugely, and are putting on flesh laughing at his adventures and expedients. It is to be hoped he may take another hunting trip to Texas this fall. C. H. B.

### The German Emperor's Game Bag.

DURING the period from 1872 to 1893 the German Emperor killed 1 whale, 2 aurochs (European buffalo), 3 reindeers, 7 moose, 3 bears, 709 stags and 57 does of red deer, 944 stags and 40 does of fallow deer, 1,703 wild boars, 121 chamois, 413 roebucks, 16 red foxes, 11,066 hares, 7,387 pheasants, 407 partridges, 29 capercailzies, 4 black cocks, 56 ducks, 2 woodcocks, 638 rabbits, 694 herons and 559 miscellaneous game; total, 24,860 pieces.

In the course of the present year the Emperor has killed 30 stags (red deer), 14 stags (fallow deer), 2 wild boars, 56 roebucks, 1 fox, 400 hares, 8 capercailzies; total, 512 pieces. Grand total, 25,372 pieces. ARMIN TENNER.

### Relating to Bears.

DUNBARTON, N. H.—In a letter received from C. R. Peavey of Oxbow, Me., who last year was so successful in finding moose, Peavey says: "Game promises well for next season. Had good luck trapping last spring; caught fifteen bears. You had better come up and stay awhile at my camp about snow time." C. M. STARK.

### Massachusetts Quail.

DANVERS, Mass.—There seem to be many quail nesting about here this summer. With the proper observance of the prohibitory law for 1894 there had ought to be some good shooting next year. J. W. B.

### Horicon Marsh Ducks.

HORICON, Wis., July 16 —Everything on Horicon Marsh looks favorable for this fall. We have the biggest crop of ducks this season we have had in years. J. M. Y.

### Quail in Northern New York.

I NOTICE a "quail record" at Ticonderoga, N. Y. I shot one last fall at Willsborough, Essex county, N. Y. A male, in good condition. J. M. H.

## *Answers to Correspondents.*

### No notice taken of anonymous communications

C. D. S.—Will you kindly inquire, through your Natural History column, if any of your correspondents can furnish any facts relative to carnivorous propensities of our red squirrels? Ans. Its carnivorous habits are well known; the red squirrel is usually regarded as a pest because it preys on the birds.

J. W. B., Danvers, Mass.—1. Is there any law in Vermont that prevents the hunting of game birds with a dog? 2. My gunpowder hardens in lumps while standing in the tin kegs. What causes it, and does it hurt it any? It is kept in a warm, dry store. 3. Will you publish in the FOREST AND STREAM at an early date the general fish and game laws of the United States? Ans. 1. No. 2. Caused by dampness; will not hurt it. 3. No, they are given in the *Game Laws in Brief*, as revised to date.

W. R. R.—Under the A. S. A. rules is a man compelled to use only one hand in gathering his bird, or can he use both if he wishes? Ans. He may use both. Rule 9 as to gathering birds reads: A bird to be scored dead must be gathered within bounds before another bird is shot at, and within three minutes' time, by a dog or shooter, or person appointed by the shooter for that purpose. No extraneous means shall be allowed to assist in gathering. If the gatherer cannot locate the bird, he may appeal to the referee to locate it for him. All birds challenged must show flesh-shot marks, to be scored "dead birds."

## PUBLISHER'S DEPARTMENT.

The much talked-of aluminum pleasure boat is at last a reality. The Illinois Pure Aluminum Company announce in our advertising columns that they have one ready for the market.

We have received from Reuben Wood's Sons, Syracuse, N. Y., a dose of "Wood's Specific." This consists of a prescription 11ft. long, which recommends as a simple cure for all ills to go a-fishing. Incidentally "Drs." Wood find opportunity to call attention to various specialties in their line of fishing tackle.

# Sea and River Fishing.

## ANGLING IN TASMANIA.

LECHERON, Battery Point, Hobart, Tasmania.—*Editor Forest and Stream:* Tasmania, being a singularly well-watered country, drained by numerous rivers and streams or creeks, the waters of which flow over rocky and pebbly beds and of the purest description, is peculiarly adapted to salmon and trout. A great number of the rivers and creeks have been stocked with brown trout and California trout, and recently the Loch Leven trout has been introduced into our lakes.

The California trout turned into the creeks we have found do not thrive, and are better adapted for the lakes; but the brown trout have done remarkably well and have attained larger dimensions than in any other country in the world where they have been introduced. I have had some excellent sport with this fish. On one occasion, with a friend of mine, I camped out on this river one night and started to fish at daylight on Christmas. We fished up stream till late in the afternoon, and took over four dozen between us, averaging 1lb.

I am sorry to say that there is one serious enemy to the trout—*i. e.*, a large black cormorant, which devours them in an alarming manner. At one time the Government offered a bonus for the destruction of this bird, but I regret to say that it did not keep it up long enough.

The center of our island colony is one great plateau, with an average elevation above sea level of 2,000ft., and is bordered with bold and rocky mountains, rising to an altitude of 4,700ft. A description of the scenery in these wild parts is beyond my powers. On this plateau are four or five large lakes, the largest being some ninety odd miles in circumference and ten broad, and about twenty fathoms deep. Some very large salmon and trout have been taken with a spinner in one lake, notably the Great Lake.

Sir Robert Hamilton, our late Governor, who was a great fisherman, on a trip to this lake, captured eighteen fish, averaging 12lbs.; and last year a party of three or four gentlemen caught over 400lbs. weight of fish between them, some of the fish running as high as 18lbs.

I must not omit the fact that there is to be had good snipe and duck shooting in the vicinity of the lakes. Any American sportsmen arriving in Tasmania will find obliging and courteous gentlemen who know these lakes well and would be happy to give them any information they require as regards a trip. It is necessary to take out a license for salmon or trout fishing. As Tasmania is as little known by its own inhabitants as it is by the people of the neighboring colonies, it is easy to imagine that it is so little known to Americans, but I am glad to state the colony is now taking steps toward advertising one of the most charming islands in the world, with a temperate climate and everywhere abounding in magnificent scenery.

For the past three summers there have been a great number of visitors to Tasmania from all the colonies, but not one-half of them visit the more beautiful and wilder parts, simply for the reason that there is no communication to them and no accommodation when they get there. If it were not the case we would have a much larger influx of visitors and thereby derive a great benefit.

Of the indigenous river fishes of Tasmania, one is the bream or golden bream, a fish usually to be found in the brackish waters of tidal rivers at their entrance to the sea. With this fish I have had some excellent sport.

Not far from my home, on the northeast coast, is situated the Scamander, which is a fine, broad, deep river as far as the salt water reaches, some six or eight miles from the mouth, and there I have had some fine days fishing. The best bait for bream is a small mud crab found in thousands on the mud flats when the tide is out. When they are biting well catches of seven or eight dozen can be made, some of the fish weighing 4lbs. In this river are to be found several other species of fish, such as the native salmon and mullet. The former is a fish more like a mackerel than anything else I know of, but larger. The best way to catch these is by spinning for them out of a boat. V. M.

## WHY HE WAS GLUM.

ASBURY PARK, N. J.—It was Brower—Brower, the immaculate fisherman, with whom I have fished night and day, through wet and dry, and at all seasons when fish were biting good and when they bit not. I have fed him from my lunch basket, skinned his eels, and dug up half an acre of ground by moonlight looking for bait. But the die is cast, for the chain of friendship is no stronger than its weakest link, and my weakness shows when the other fellow is getting all the fish.

That is the cause of our coldness. I met him last Friday night just at dark, trudging homeward, armed with rod and reel, and carrying his huge fish basket, which seemed to be enormously heavy, for his shoulder had assumed a decided sag. The instant he recognized me, he showed extreme embarrassment, and tried to avoid me by turning down a street leading directly away from his home, simultaneously starting to whistle in his shrillest tone a selection from the "Mikado." "Brower," I sang out, "which way have you been and where are you going?" No response. "Brower," I shouted, "I want you to stand and deliver." Seeing that escape was impossible, he faced about, keeping his basket on the side opposite from me, and viewing with apparent alarm my near approach. "Well, what luck?" I asked, "why don't you out with it?"

"Been out gathering mushrooms," he ejaculated, "and they are heavy, too. Guess I'll set my basket down." And suiting the action to the word he deposited the basket on the sidewalk, instantly plumped himself down on one of the lids, and closing himself like a jackknife placed his feet on the other lid with an I'll-stay-here-all-night expression in his eye.

"Brower," I said, softly, "people don't gather mushrooms with rod and reel; neither do they when on that mission wear a bait box pinned to their side. If you have something you're ashamed of, why didn't you leave it or bury it where it was?"

All this while I had been working my knee to a firm position against the handle of his basket; and with a sudden lurch I sent him and basket both on their side; and as he scrambled to his feet a fine black bass fell from his coat tail pocket, while from each compartment of the basket heads and tails of bass began protruding. Instantly the truth dawned upon me—he had been to Sunset Lake, and he had good evidence of his skill. "Brower!" I said, "is this right? Is it brotherly?" At the same time I took count of his fish—four, six, eight—"when you know that these same fish have been hugged in anticipation during the past long winter. How Seger, Hamilton, Edge, Savage, Scott and myself have gloated over what sport we should have, and now you in one fell swoop clean out the lake [ten, twelve]? Is it right, I ask, that you should go without taking me along? I wish to remind you that at your suggestion in the past I have slipped out of bed early in the morning, leaving a hurried [fourteen, sixteen] note to my wife to the effect that I had taken an early train to the city, and gone to your house, put up your clothesline and helped you carry the water, and while you sipped your coffee, split up the billets of wood too large for you to handle, and all that Mrs. B. might let you down easy [eighteen, nineteen]. Twice when you have fallen overboard [twenty] I have loaned you my dry clothes and stood out in the sun with your wet ones on until they dried. Yes, I know you performed a kind office for me once [twenty-two], when old Ramsey chased us out of his pear orchard with his bulldog and followed us clear across the old peat bog, swearing he would lamb seven kinds of fire out of us if he could catch us. You led the way manfully, so it was easier for me as you cut a beautiful swath through vines and briers [twenty-four, twenty-five]; and when we were out your face resembled a Chinese puzzle that had played in hard luck, so thoroughly had the briers decorated it [and two are twenty-seven]."

Through all the talk he had answered only in monosyllables, and there seemed to be an air of dejection pervading his spirit.

"Will you tell me what the trouble is now?" I remarked. "You should be as happy, as doubtless you are proud. No, thank you, I generally catch my own fish."

"My boy," he said, "I have been foolish," at the same time laying his hand on my shoulder and resuming all his old-time frankness, "it is my first experience with melancholia, but it was so aggravating, and I was so sure of him."

"Say no more," I interposed. "It's a case of the big fish of the day getting away, I imagine."

"That's it, that's it, and I did want one more so much," and picking up his basket he trundled off in the darkness, and as he turned the corner I heard him grumble, "Why must a fellow now and then get disappointed?"

LEONARD HULIT.

## LAKE MINNEWASKA.

HERE are some particulars of a fishing point, sent in response to the inquiry of a correspondent, J. J. B., in a recent issue:

OMAHA, Neb.—I am a perfect stranger to you, but I am always interested in persons who want information that I can give, and I can tell you where you can go and have perfect, utter rest. If you want it, royal good fishing and the best vacation you and your sisters ever had. From Buffalo preferred, you take Western Transit Co.'s steamer (or any other line) at Buffalo, for Sault Ste. Marie, connecting there with the L. M. & L. S. T. Co.'s steamer. Touching at Marquette, Ashland, etc.; steaming past the wonderful Pictured Rocks, you reach finally the city of Duluth. If you are all tired out with business cares and city life, when you leave Buffalo, you will scarcely know yourself when you reach Duluth. Your appetite for the delicious Lake Superior whitefish and trout will be something awful, but you will get all you can eat.

Do not, however, stop at Duluth. Take the Northern Pacific Railroad for Glenwood, Minnesota. At Glenwood (Pope county) is Lake Minnewaska—Snowy Water—one of the most beautiful of the thousands of beautiful lakes for which Minnesota is famous, nine miles long, three miles wide, bordered with the loveliest woods and surrounded by a beautiful country, which is full of the most delightful drives, or a capital place for a cycler.

This lovely lake has a hard white sand beach and bottom. Away out, about quarter of a mile, it is very deep; but from the edge of the water the bottom is a very gentle slope until it suddenly drops. I have waded out (I cannot swim) until the water was level with my chin, and I was a long way from shore. This lake is full of fish—pike, perch, bass, pickerel, cat, and I do not know what other kinds.

You can imagine what the bathing is in a lake like this. The water is beautifully clear and the white sand bottom is what gives the lake its name. On the east shore of this lake the Y. M. C. A., of Minnesota, have forty acres of land, beautifully situated. Here, during the month of August, they have their summer school. They have, I think, a dozen or more cottages, which they rent. These cottages are, of course, not elaborate—just a neat little cottage—a place to sleep or sit when it rains, but rarely used under any other circumstances by the majority of campers. Mattresses are furnished, and I believe you can carry your own blankets and sheets, or rent, just as you please, but I am not sure. You can, if you wish, do your own cooking. But there is a large dining hall where people who don't want to be bothered with cooking, can find abundant and well-cooked meals. Boats—five cents an hour—cheap enough, surely—lots of them, big and little—oars or paddle. Drinking water—a lovely spring near the lake, pure and cold and health-giving.

This lovely place is one and one-half miles from the railroad station at Glenwood, by stage. This stage visits the camp every day, bringing mail, if you have it addressed in care of the Y. M. C. A. Camp, or you can row to Glenwood if you prefer.

Now, you may not be a Y. M. C. A. man, and you may think you would not enjoy your vacation with them. Let me tell you the young men of the Y. M. C. A., of Minnesota, who bring their wives and sisters and friends to this summer camp are as fine a lot of young men as you will find anywhere. Jolly, happy, helpful, good company—you could not find a better place to take your sisters, for they will find the wives and sisters of these young men. You will all have good company, good boating, fishing, driving cycling, good and abundant food, well-cooked.

They have meetings, but you need not attend if you do not wish, and you will be treated just as well. The summer I was there, there was a gentleman who came entirely for rest. He was all tired out. He never attended a meeting. He was up and away early in the morning—fished all day, and returned at night. He was welcomed.

It is liberty hall, and the pursuit of rest, health and happiness reigns supreme. It is one of the chief considerations, and you get all three. I spent two weeks there—I was completely tired out and thin when I went there (to visit my sister), I was up every morning at 4 A. M., fished (from a boat) until breakfast, after breakfast rowed until dinner time, after dinner we generally lay around in hammocks until 3:30 or 4, when we went into the water for an hour or more. Then a good run on the beach on coming out of the water, then supper; then everybody went rowing until bed-time. This was my programme for two weeks, and in that two weeks I gained 10lbs. of flesh, a fresh flow of spirits which (alas) has had to last me ever since.

You can have any amount of fun, even in a Y. M. C. A. camp. You can go in July if you wish, and stay as long as you wish. You won't find much style, as these people go there to rest and have a good time and they leave their good clothes and jewelry at home, except a traveling dress. It is the cleanest place I ever saw. You can't get dirty in the pure white sand of the beach. It is clean, healthful, restful, quiet, lovely.

I cannot tell you terms, but if you will write to William Francis, Secretary Y. M. C. A., Minneapolis, he can tell you all about it.

You may think I am very enthusistic—so will you be if you try it. I am not interested at all in the Y. M. C. A. camp, but I am interested because I believe I know of just the place you want to go. F. N. W.

## BLACK BASS IN KANKAKEE.

KANKAKEE, Ill.—The coroner of Kankakee county is quite an expert fisherman, and knows every hole and spot in the Kankakee River within ten miles of this beautifully situated city, where one can tempt the bass; so it was with pleasure I agreed to go with him for a couple of hours' sport. We started early in the morning, going about five miles down the river to "Little Canada."

It is an ideal spot for bass. Willman soon had on his waders and was out as far as he could wade comfortably, and near a hole where he knew the bass made their headquarters, while I had to content myself with a pair of hip boots which would not allow me to get quite near enough. The current ran so swift that it was hard to throw my minnow so it would float near the desired spot, while Willman was where he could reach them nicely. Soon he had a nice ¾lb. bass on his hook which went through more evolutions than you could see at a country dance on the Fourth of July. The fisherman's eyes would sparkle and I could see him grow six months younger with every bite. I asked him if he enjoyed it better than eating mince pie. His emphatic acquiescence seemed to express his feelings fully. He soon had half a dozen nice bass on his string, while I had not a bite. I told him to catch a dozen as soon as he could, so I might have a chance; and he did catch exactly 12 without moving 20ft. Then I moved down to another hole and at the first cast caught a nice one. My yell of delight to Willman apprising him of my good fortune probably scared all the fish in the river, as neither of us could get another. We were well pleased with our catch of a baker's dozen, running ½ to ¾lb., although Willman caught the dozen. Only two weeks before Willman's eight-years-old son had caught five bass in the same place. He is a "chip off the old block," and enjoys fishing as well as his father. Some ten days later Willman caught six bass where he had caught his dozen.

If any one wants to get up that "tired feeling," also an appetite, let him carry a lunch, pair of hip boots, coat and rod on a bicycle, also carry a minnow bucket in one hand half full of water, leaving only one hand to steer by; and ride five miles up hill and down on roads far from smooth, and face a strong head wind all the way home, coming home without a fish—the worst part of it.

Several rainy days there have been some good strings of small rock bass taken off the dam and some good 3 and 4lbs. bass and pickerel up the river two or three miles among the islands.

In the spring there is generally good fishing at the dam, some large fish being caught. Last spring Mr. Willman caught, early one morning, two catfish that weighed exactly 8lbs. each—must have been twins. He had considerable sport with one of them, his victim being C. H. Smith, who was then superintendent of the I. I. & I. Ry. Mr. Smith seeing the fish, wanted to go with Mr. Willman in the afternoon and try his skill. Mr. Willman slipped the head of one of the catfish into his pocket, intending to slip it on to Smith's line if opportunity offered. They had fished for some time, but with no success until Mr. Smith said he believed he would go to his buggy a couple of rods away and get some new bait. Willman told him that would be a good plan. This gave him the desired opportunity and he slipped the head on to the hook. When Smith returned he noticed that something was on his line and thought he had one sure. Willman told him to "play" him, as he thought it was a big one by the size of the nose, which kept bobbing up in the water. Smith was all excitement for a few minutes until he pulled it out of the water. Then the "audible" smile from Willman, with a remark that he had pulled the head right off opened his eyes to the sell.

The best fishing for bass is reported to be east of here about three or four miles, near Waldron, in season.

A READER.

### Mak-saw-ba Bass.

CHICAGO, July 16.—I have been fishing in the Mak-saw-ba Club waters. Considering the earliness of the season the fishing is good, as we (A. D. Wiggins and myself) caught thirty-two black bass, nine wall-eyed pike and five pickerel. The bass ran from a pound to 4½lbs., and were nice pan fish at that. The pike and pickerel run larger and are delicious when baked by Mrs. Pease, the superintendent's wife. If one got no fish it would well repay him to go to Mak-saw-ba and eat one of the good dinners prepared by her. Superintendent I. N. Pease is as nice a man as one meets in a long time, courteous and ever trying to please his guests.

We fished only two days, as the wind was not promising. Mr. Card was down two days and caught twenty-two and twenty-four bass. Mr. Kinney came down Wednesday and in two days caught sixty-four fish, mostly bass and wall-eyes.

I would not be without FOREST AND STREAM for twice the price of subscription, as I welcome its coming with happy anticipations of the good things to follow.

A. H. RICH.

## FEEDING HABITS OF TROUT.

SEATTLE, Wash.—I have caught a large number of brook trout, or what are locally called brook trout, and have had several surprises in doing so this season. First I found that, in brooks which empty into the Sound, these trout take a fly better right on the beach below high tide mark than they do up in the woods. I caught 33 trout, ranging from 6 to 13in., in one brook about 6 or 8ft. wide, between tides on the same day. I started when the water had gone down about 4ft. (perpendicular), and quit when it came in again to about the same point. They were all taken with flies and bit at any fly offered. To test this I changed my whole string of flies three or four times. I used the governor, coachman, brown and gray hackles, scarlet-ibis, miller and white-moth, also several other flies which I do not remember now. They took them all alike. While dressing them I examined the contents of the stomachs and found only one fly common in all. This was a dark fly, and on comparison I found the artificial governor a very close counterfeit. Two or three individuals had one or more other flies in addition to a good feed of the dark one. Several fish had from one to three or four shrimp, and all had in the stomach a few of the grubs known locally as "periwinkles." One little fellow measuring 4in. had a frog, which when laid on the table and straightened out registered 5in. in length! He was a mighty "fat" trout when he got hold of my coachman, and he had the frog stowed away shipshape and doubled up as they pose on the mud at the edge of the spring, ready to leap. The next day I whipped the same stream back in the woods about half a mile from the beach, and got 6 fish all day.

Now, why were well-fed trout down on the open beach eating all sorts of stuff, when they had only to run above high tide mark to reach an ideal stream with gravel, riffles, pools, shade and an abundance of the flies which leave a good taste in a trout's mouth?

Two days afterward I caught the same species, in good condition, in the open bay (salt water) with a spinner worked with a rod from the steamboat wharf. They were jumping to fly and rushing at a minnow which seemed to be the young of what is locally known as salmon trout; but they took a spinner greedily, and on opening six individuals I found that not a single stomach contained other food than shrimps.

Last week I fished a stream near Seattle where in several years' experience I could never get a rise to anything except a governor and a brown-hackle. These two flies did not tempt them at all this time; but they took a gray-hackle and a white-miller just as greedily as they have always taken the governor and brown-hackle at this time and under the same conditions in former years. Why is this thus?

Can Judge Greene or some of our readers who are authority on these fishy things give us a reason, or explain why these facts are facts among the erratic denizens of the brook? I have always supposed the trout to be a strictly fresh-water fish of well-developed and very particular appetite; yet I find him up to all sorts of things unbecoming to a citizen of his reputation. Let us have the search light turned on him and see if we can find him out.

I inclose a water color drawing of the fish I speak of, made from life with the object of positive identification. I cannot settle on his real name from the many aliases he travels under on this coast, and so send you his picture from life; color and form are as near as I can reproduce it, though it lacks that peculiar metallic luster of the living fish which eludes the brush and defies reproduction. What and who is he? EL COMANCHO.

[The fish shown is the *Salmo irideus*, rainbow trout, also called California trout, and as here, brook trout. The species is known to go to sea, but for the most part is found in the upper portions of the stream. Eastern brook trout in streams flowing into the sea also visit salt water. Some of the Long Island trout are noted for the richer flavor acquired by such visits.]

## BOSTON AND MAINE.

BOSTON, July 21.—The hot weather has been against the Boston fishermen of late. There has been some going down the harbor and codfishing, while perch fishing begins to be the order of the day, and some good strings are daily taken off Beachmont and Swampscott. In the streams the water is remarkably low, and the New England lakes and ponds are beginning to suffer from the dry weather. The brooks around the Cape and about Barnstable Bay are still yielding a few strings of trout. A couple of Boston gentlemen stopping at a Falmouth seaside hotel, went out the other day with a result of 52 trout, which were served on the hotel table the next morning. They do not give the name of the brook and object to the publishing of their names.

The State of Maine country boy is interested in hunting and fishing. Well he may be, for the opportunity is all around him. Master Frank Moody, who is at present with his grandmother at Hebron, Maine, is a good deal of a fisherman for a boy, and also a good shot with either shotgun or rifle. He is a graduate of the Edward Little High scool at Auburn, Maine. This introduction is made only to prevent the impression that he may be something of a backwoodsman. It may also be added here that at Hebron is the academy where ex-Governor Long, Hon. Hannibal Hamlin, afterward vice-president, and many another man who has made a national fame received the rudiments of his education and fitted for college. Both gentlemen were always great lovers of the line and rod, and both have fished the very streams that Master Frank mentions below. His Aunt Emma, who lives in Boston, is a successful angler, and has a record of an 8lbs. trout at Richardson Lake. She has recently returned from her annual fishing trip to the Rangeley waters, and Master Frank writes her the following letter:

DEAR AUNT EMMA: I am glad that you had good luck at the lakes. I thought of you lots, and wondered in what ponds you were fishing. I had quite good luck at Sumner the other day, catching 125 trout in fishing less than ten hours. Two of them weighed over half a pound. They probably seem small to you, but are large for the brooks in Sumner. I went down on the Cushman Brook Commencement Day and caught twelve trout. They were all over 7in. long, and two were 9 and 10in. long.

You can't guess what Madie saw the other day. I was feeding my chickens, so lost the sight. Elwell, the hired man, came running in and got Madie. They ran out into the field, and there, feeding in our oats, was a deer—a big one! Dan Paul, the other hired man, held the dog, and Madie got up to within less than three rods of the deer. Just think of it! Couldn't any one almost have shot it with an air rifle? It was not frightened. It walked off, and they followed it almost half an hour. By and by it came to the wire fence, and then it doubled up and slipped over it so neatly that they hardly knew it was gone. It then disappeared down into Ike Bearce's pasture.

Master Frank's chagrin at his sister seeing the deer and he being left behind, would be almost pathetic to those who know the boy's great love for the inhabitants of the forests. He climbed a tall oak last autumn and caught in his hands a couple of gray squirrels. He came down with them, notwithstanding the pain and bleeding of his hands from their bites. He made a box cage for them. Soon they became very tame and he made pets of them. But, alas! they never fully forgot their native oaks, and took the first opportunity to make their escape.

F. E. Stanley, of Newton, Mass., was born in Kingfield, Me. He does not forget the trout streams in that section, fished so many times in his boyhood. The other day he paid a short visit to the farm of his brother Isaac, three miles from Kingfield village, and under the brow of Mount Abram. In the morning Frank asked Isaac if there were any trout in the brook. It rises up in the mountain and makes the watershed on that side. Isaac admitted that this season they had caught about the room full where they were sitting. They fitted up their lines and started. The brook was fairly high; there has been an abundance of rain in that part of the country this season. They fished up the stream a short distance, starting in at the point where the horses are watered. In less than an hour they had more than twenty beauties, weighing a quarter of a pound and upwards. Noticing that the brook was cold, and that the trout were unusually hard, Frank, who is a good deal of a scientist and investigator, tried the water with a thermometer and found it to register fifty-four, though the weather has been extremely hot at times. The brook is fed by springs in the mountain side. Though the book is not specially protected, yet Mr. Isaac Stanley feels that at least the lion's share of the trout there belongs to himself and his friends, since the land belongs to him.

Mr. E. C. Stevens, with Stillman F. Kelley, is spending his vacation in Middlebury, Vt. He is not there without line and rod, by any means. He writes me, under date of July 20: "Here I am in my native element, enjoying pretty good fishing. I landed a five-pound pickerel from Lake Dunmore, Salisbury, on Tuesday. Yesterday I caught eight pickerel in Otter Creek, weighing from two to four pounds. I am trying for a big one. They catch them here as large as 12 to 15lbs., but I fear I am rather late in the season."

Mr. Charley S. Keyo starts for the Mountain View House, Rangeley Lakes, this week. SPECIAL.

## ANGLING NOTES.

### The Law on Netting Trout.

A LADY, the wife of a well known angler, writes me for information as to the year it became illegal to catch trout with a net. "I learn from the 'old time' fishers that many used to be taken here that way. I have been asked to write a chapter for a small history of the village of Salem, Washington county, N. Y., on the subject of fishing. I suppose this is because my husband is so fond of that sport. White Creek has been noted for many years for the fine trout that make their home in its waters, and I thought I would like to note the contrast between fishing with net and scientific fly-fishing, if I could fix upon the year that it became illegal to use the net."

A request from a lady is a command. I searched the Session Laws and became so interested in what I found in the musty old laws that I nearly missed my train home. Somewhat to my surprise I found that the first trout law in the State of New York, unless there was a law passed between 1801 and 1812, for which years the printed laws were missing, relating specifically to trout and the manner of taking them in certain waters, was passed to cover the very waters in Washington county about which my correspondent inquires. This law was adopted in 1819, and provided that it should not be lawful to take any trout in the Battenkill or any of its tributary streams, in the county of Washington, in any other manner than with hook and line, and the fine was fixed at $25.

I think I recently referred to the fishing in the Battenkill, although I may have mentioned it by its Indian name of Ondawa. White Creek is a tributary of the Battenkill. I fished the main stream in Vermont from Manchester down to about the Washington county line for nine or ten years in succession, and always found fair fly-fishing, and in Washington county it was even better, and perhaps the very reasonable and just law passed by our law makers in 1819 had something to do with educating the people to this end. However that may be, our forefathers knew how to frame a good fish law.

### Another Old Law.

I found another law, passed in 1813, which read: "That it shall not be lawful to draw any seine, set any net, make any weir or other obstruction in the following rivers, running into Lake Ontario, viz.: The Big Salmon River or Creek, or within one hundred rods of the mouth thereof; Oswego River, Grass River, Racket River, St. Regis River, Wood Creek, Fish Creek, and the different branches which empty into said streams, whereby the salmon may be diverted from pursuing their usual course up said river, creek or streams, and every person offending therein shall, for every offense, forfeit $25, besides the salmon he may take by such nets, seines, weirs, etc."

A similar law was passed in 1801, except that a less number of rivers and creeks were mentioned. Sec. VI., of the law of 1813 provided: "That it shall not be lawful for any person to take any salmon in the waters (naming the waters of Sec. I.) by net, hook, spear or any other device whatsoever, in the months of October or November in any year." This is good evidence that salmon were taken with hook and line in waters more than forty miles from tide water. I am too fast; here is evidence in the laws that I have quoted, that salmon were taken with hook and line in the waters mentioned in the act, and when it is remembered that salmon to get to the waters of Oneida county, N. Y., had to ascend the St. Lawrence and so through Lake Ontario, it will be seen that those who feared that salmon would not rise to the fly in the upper waters of the Hudson, have raised fears that are groundless if we reason by analogy. Furthermore, now that the U. S. Fish Commission has located its salmon and whitefish hatching station on the St. Lawrence River, it is interesting to know of the streams that were once salmon rivers, although it is quite probable that in some of them the salmon fishing cannot be restored.

### Salmon and Fishways Long Ago.

In view of the effort being made to open the Hudson River with fishways to permit the ascent of the salmon, it is of interest to read how our law-makers regarded fishways nearly one hundred years ago. The following law was passed in April, 1801:

"And be it further enacted, that the owner or owners of mill or other dams, which were on the 28th day of March, one thousand eight hundred, made across any river or creek running into lakes Ontario, Erie or Champlain, so as to prevent the usual course of the salmon from going up the said rivers or creeks, shall on or before the first day of October next so alter such dams by making a slope thereto not exceeding forty-five degrees and planked in such smooth manner that salmon may easily pass over into the waters above the dam, or by removing the obstructions of such dam in any other manner so that salmon may freely pass into the waters above such dams; under a penalty of two hundred dollars, to be recovered and applied as aforesaid, and in case such dam shall not be so altered within the time mentioned such dam shall be adjudged a public nuisance." The idea of what constituted a fishway in 1801 was rather crude, but our law-makers of that time meant well and they were determined evidently that salmon should not be impeded on their way to their spawning beds.

To-day a law declaring a dam furnishing water power a nuisance would be a very harsh measure, but fish have rights that are not respected by the owners of dams, and the United States Supreme Court has so declared in an opinion which virtually obliges every dam owner to build a fishway in such dams as may impede the free movement up and down the streams containing fish used as food. Fishways may be built in the Hudson which will give the salmon every right to which they are entitled, without interfering with the water power or taking from the owners of dams any right to which they are entitled as owners or manufacturers or employers. I have found very recently that when the fishway question was explained to mill owners and they understood it fully they have offered no objection to them.

### Chub or Fall Fish.

I suppose that every fisherman is acquainted with the chub, fall fish, silver chub, or conical trout, as it is called in New England because of its fancied resemblance to the brook trout. It is a fish that rises to the fly, takes a spoon, or bait, and is a fair fighter when hooked. Its flesh is white, but soft, and as we have so many better fish for the table, the poor chub is despised and rejected. I have caught many chub in many waters, and must confess that I never tasted one until a day or two ago, and then by mistake. I was fly-fishing for black bass in Sunapee Lake, N. H., where the water is very cold and pure, and caught a chub of about a pound in weight, and was just about to throw it back into the water when Dr. Quackenboss stopped me by saying that one of the family preferred chub to bass when cooked. When the chub was cooked with the bass by a strange chance the chub fell to me. I saw at once that the fish on my plate was not a bass, but I did not known what it was, as I had forgotten his chubship. Being taught to eat what was set before me, I proceeded on those lines until I spotted the fine bones of the chub, and apologized to the lady of the family for having appropriated her fish through the error of the carver. I found the flesh very good, a trifle sweet, but much firmer than I would have believed it possible to be. I cannot say that I am absolutely in love with the fish for the table, but fresh from cold water it is sweet and good, and if it were called something besides chub it would be relished by people who now turn up their noses at chub. I am glad to find that a fish so game as the chub on the hook has fair table qualities. A. N. CHENEY.

### Another Florida Tarpon Ground.

GROVE CITY, Fla., July 17.—Lemon Bay, Florida, stretching 12 or 14 miles along the Gulf coast, just northeast of Punta Gorda, is a great feeding ground for almost all varieties of fish from the Gulf. Your readers have probably heard little about it, as it is only a few months since the Gasparilla Hotel was finished and accommodations provided for guests. I moved here from Chicago last September and shall stay here and raise fruit. I am not an expert angler, but I have made frequent trips across the bay, three-fourths of a mile, to Stump Pass, where the waters of the Gulf enter the bay, and am always rewarded for my row with a fine string of channel bass, sheepshead, ladyfish, mangrove snapper, cavalli, sea trout, Spanish mackerel, grouper and flounders. There is no long waiting for a strike here, and no little part of the enjoyment is in the variety of the game—at one moment reeling in a 3lbs. snapper and five minutes afterward playing a 20lbs. channel bass. I started in, however, to tell you a big fish story, and will not dwell on the minnows longer.

As the tarpon is not an edible fish, there is little inducement for the residents here to fish for them. I have seen a few killed, and have often watched them swimming in the water, so I knew there was a chance for as good sport as your correspondent had at Fort Myers; in fact, reading that article in one of your May numbers started me in my first seeking for tarpon. Last Monday, having secured the assistance of Mr. Rigby, we started out bright and early, with all the necessary tackle for a day of it. I am not proud of the result, and shall not dwell on the details, as I had three runs in less than as many hours, and lost all three fish. But I at last found something on my hook that stayed there—in fact, we went sailing off to the Gulf as though harnessed to a pair of porpoises. After 46 minutes of excitement we landed a sea bass or jewfish weighing 293lbs., length 6ft. 6in. For myself and my neighbors we prefer our catch to the three tarpon we did not get; but I don't give up that I can't kill a tarpon, and you shall hear of my next try at it.

In addition to fish, turtle, oysters and clams, we have excellent hunting here in season, and a climate that cannot be beaten anywhere. The hotel will be open next season, and expert fishermen looking for tarpon can find them by hundreds in Lemon Bay. J. S.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 54.)

AT the breakfast hour the boy from the lighthouse, with the vacant expression which he never laid aside, went down to the shore, and taking his boat started out to lift his herring nets, while the girl with the shining dark tresses, from the same place, came along and proffered us a delicious dish of huckleberries. Ned, not to be outdone in liberality, gave her several pieces of silver, which made her eyes sparkle and her lips wreathe in sunny smiles. She was a wily diplomat, securing more for her berries than if ordered at a stated price.

We kept close in camp till noon, when the fog lifted and the sun came out, displaying the little steam tug Annie Clarke way beyond the island opposite, where she had been lost shortly after the fog came down. She immediately, on discovering her whereabouts, made for the harbor down the bay by taking the channel that led around the island.

Being confident that she had some mail aboard for us, we dispatched a messenger from the lighthouse to her landing, some two miles down the bay. He went in a light rowboat and soon returned with an ample mail for us of both letters and papers. This enabled us to pleasantly pass the hours of the afternoen.

The next morning, when we looped back the front of our tent after another night of heavy fog and battling waves, the sky was disclosed wreathed in clouds of snowy satin, while the wind, which was favorable, gave us a beautiful sea of dancing waves, just the thing for a delightful sail.

We took immediate advantage of the situation and were off, plowing the waves with the the milk-white foam rolling from the bow in rich and shifting tints. Every one was in the most cheerful humor as we went gaily bowling over the rolling surges. Even Peter had somewhat recovered his spirits and felt as if he had again been taken into our confidence. It was, however, the voyage home that made us all so light-hearted, for we had at last grown somewhat weary with our long stay on the coast. The wild seas, the rugged shores, the dense forests and the mountain ranges began to be familiar objects and though we still reverenced their grandeur and beauty, were sighing for civilization with its comforts, and refining influences, and the very dear friends we had left behind. The grand vision in prospective to Ned was his wife and children, to Kenosh a similar picture in his neat little helpmeet and prattling juveniles, to Peter his wedding, which was to come off at the Soo on his arrival, and to me—well, it don't matter—for as Bobby Burns says:

"I'll be merry and free,
I'll be sad for nae-body;
If nae-body cares for me
I'll care for nae-body."

We were headed for Maple Bay, some fifteen miles distant, where we intended to fish the big reef that had so oft afforded us good sport, and if we were disappointed in our ardent hopes, would remain there that night, break camp the next morning and away for Gros Cap, there for another night and then for the Soo. This was the time-table, and if you keep us company you will see whether we fail in it or not.

We had a lovely sail over; the lucent waves flashed in crystal foam and rippled along the sides in charming cadence, while the sails in harmony joined in a merry tune with the sea fairly laughing as it gave us a dipping gunwale. It was deliciously gleeful, this dallying with wind and wave, and though our play-fellows were wild at times we would smile when the snowy plumes came swiftly along with a familiar air:

"With chafe and change of surges chiming,
The clashing channel rocked and rang;
Large music, wave to wild wave timing,
And all the choral waters sang."

After about three hours of luxurious sailing we rounded into the bay, and then working along a wood-crowned and indented shore for about half a mile, were opposite our camping grounds, and then down dropped the sails. It being very shoal here it took some time and care to work toward the shore. We, however, soon got hard aground, and not till the boatmen jumped overboard and cleaned out a chaunel for us did we land. We were at our old quarters, and a fine camping place it was indeed. The Indians and half-breeds from Goulais Bay always came here in the fall and spring to get their supply of fish. Near the lake we counted seven big reels, on which they repaired and untangled their gill nets. They were very rude affairs, but fully answered the purpose for which they were intended.

On clearing away a place for our tents, we turned over some large stones, unearthing a regular nursery of big black ants. What a commotion they made when their nests were uncovered. Hither and thither they frenziedly ran, taking their large white eggs with them, and not one of them that we noticed deserted its *ovum*. So much in sympathy were we with this interesting colony that we pitched our tents elsewhere rather than further disturb them.

It is said there are at least a thousand species of them, no two of which have the same habits. Sir John Lubbock says: "When we see a community of ants working together in perfect harmony, it is impossible not to ask ourselves how far they are mere exquisite automatons, how far they are conscious beings. When we watch an ant hill tenanted by thousands of industrious inhabitants, excavating chambers, forming tunnels, making roads, guarding their homes, gathering food, feeding the young, tending their domestic animals, each one fulfilling its duties industriously and without confusion, it is difficult altogether to deny to them the gift of reason; and all our recent observations tend to confirm the opinion that their mental powers differ from those of men not so much in kind as in degree."

We have digressed a little from the subject proper, but the history of the ever industrious ant is always interesting, and a few lines here I hope is not amiss.

It was nearly 3 o'clock when we had our quarters perfected and the dinner dispatched. In the meantime the wind had lulled and the lake became almost a glassy surface. It was a change such as the wand of any Prospero might have caused, so suddenly did it transport us from fierce winds to gentle zephyrs. Ned said it would militate against the angle, for the reef we were to fish was quite shallow, and with a placid sea and bright sun our every movement would be fully observed. We, however, were eager to begin the work of beguilement, and so took to the boat and were rowed to the center of the bay where the reef was located.

Although we had bright skies and quiet waters, the weather was perfectly delicious, having a soft balm in the air—the aroma of the wild balsam—that was exceedingly exhilarating. Every one was in the best spirits. The boatmen chatted in their foreign tongue, Ned sang rollicking sea songs, while I kept up the hurrah of applause, edging in something when I could get a chance that I thought would add to the mirthful festivities that pervaded the boat from bow to stern.

When we neared the reef Ned commenced delivering his flies, hoping, he said, to find some of the dandy tribe sporting around the ragged edges of the extensive reef. I held my flies in abeyance until we were well on the reef and then I sent two first-class flies, a Montreal and a Henshall, in search of the hidden beauties. Ned was endeavoring to coax them with a tinseled-ibis and white-moth, leaving his own creations in retirement. With willing hearts and hands we worked for a long time without a rise, until finally Ned struck a novel lead in warbling a few impromptu verses much to the delight of all. He would cast and then sing a verse, ending it by the time the flutter of the flies was over. I subjoin his original song, which he calls "Tempting," as near as me mory will permit:

*First Cast.*
Stealthily I come for you,
With a rod and line for you;
And a red and white fly for you;
Brilliant beauty, you.

*Second Cast.*
By the dark chasm I cast for you,
And then there's a flutter for you;
Then I lift and drop them for you;
Dazzling beauty, you.

*Third Cast.*
The feathery lure will not bring you;
The downy drop not arouse you;
Pray tell me where I'll find you?
Peerless beauty, you.

*Fourth Cast.*
Red, white and blue I've sent to you;
Will nothing but a worm do you?
You haughty and greedy thing, you;
Rainbow beauty, you.

*Fifth Cast.*
Ah! you have come at last, have you?
Now, fight for your life, will you?
Ah! into the net I have you;
Captured beauty, you.

If the songster had not soon caught his trout, which was a noble one over 3lbs., he would doubtless have spun out his jingle to an unlimited length, something akin to the "Battle of the Nile." The boatmen were wild with delight at Ned's amusing antics and gabbled and laughed so heartily that it became infectious. Kenosh, as soon as he subsided, got off his old chestnut "No fliee on him" and then they both roared again. I suggested to Kenosh a new version on the "fliee" by substituting microbe, as the other was getting entirely too ancient for further application.

"What a microbe?" he quickly inquired.

"A microbe is a microbe," I answered seriously, by way of pleasantry.

At it the two went again with chatter and laughter, until Peter, who could speak English very well, turned to me and said, with a smile on his lips:

"We thought it something else."

"First knock down for Peter," chimed in Ned, and then the laugh was on me. To relieve the boatmen of any suspense and to regain my standing in the court of Momus, I explained to their confusion that a "microbe is of the genus bacterian, and is supposed to be an animal organism of the lowest grade."

"What are you giving the boys?" said Ned. It is a contemptible and malignant insect so blanked small that it takes a microscope to find the impish thing. That's what it is."

"Oh," said the boys, with a broad grin at Ned's explanation, and then the bacterian subject was instantly dropped, for at that particular moment I had a glorious response to a cast and hung the inquisitive intermeddler.

You all know how gallantly the trout battle, and I have explicitly stated this more than once in this letter, but this particular one seemed to have a new method of warfare, for he made for one especial point, which was a cluster of rocks with many cavernous chambers, and one of these he frenziedly try to reach. The water was so clear and the reef so shallow that we saw his every movement.

"Hold him away," said Ned, "for if he gets in one of those yawning openings he is gone sure."

I did securely hold him with my little Chubb rod that never did better service than just then. The stricken trout, now rendered desperate, would suddenly swerve, but only a few feet, and then again as suddenly struggle to reach his rocky lair. Oh, but he fought frantically and heroically, and home never seemed so near and yet so far away, as did that little cavern from whence he had sprung for the delusive fly. Twice was the tip of that little invincible bamboo on a parallel with the butt, yet the strain endangered it not. Never did I have more confidence in it, and never did it behave more handsomely. Thomas A. Chubb, you are an artist in the creation of a rod, and no angler who has ever had such a rod as this in his hand under the same circumstances could do less than make a public acknowledgment of its merits as I do here. It is the rod of rods, and can be depended upon not only for hard and active service, but for its exceedingly fine action in delivery and recovery.

Well, to abridge the fight, will simply state that the trout at last fell a victim to the rod and rodster, and when the scales were placed in his lacerated jaw he pulled the indicator down to the 3-pound notch. A more beautiful prize could not be coveted. He was perfection in symmetry, blazing in celestial hues, every spot a radiant jewel, every bar purity itself in gold and crimson, silver and vermilion, with a deep shading that as it advances blushes and finally loses itself amid the dazzling and delicate tints that form its robe of beauty.

Here were two lovely captives, and if no more came to our industrious efforts we would be supremely content. We continued the casting, however, till it was time to return for the evening meal, but no rewards coming we headed to the shore where, on arriving, we were greeted with clouds of flies and mosquitoes that were buzzing and humming in anything but falsetto notes. The warm sun of the afternoon had been exceedingly favorable for their raids, but it was little gore they extracted from us, as our liquid preventive was as an unimpenetrable wall of adamant to them. This was not all, for after supper when we were around the camp-fire it seemed to draw from every bush and shrub a very army of ephemera, while many insects of grotesque shape were flying and darting about on all sides with resonant sounds from

"More hideous foes than fancy can devise,
With helmet heads and dragon scales adorned."

We could outline many of them with positive distinctness. Noticeable were the owlet moths in their somber colors, numbers of which singed their wings and in the fire perished. Then a host of flies and midgets would frequently dash in our faces as the light attracted them, and by way of variety a few beetles of the raptorial and tiger class, out sight-seeing, would venture within the bounds of the flaming circle, as would also a species called the lantern flies, which have very luminous bodies, while a step or two in the shade would develop a vast army of fireflies that beautified the night with their flashing radiance, as did some small, bright-colored bugs called "tree hoppers," belonging to the same luminous family. Nearly every morning, when shaking our blankets, we would see numerous little agile creatures spring and jump away. These are called springtails and are degraded, nerve-winged insects, unable to fly.

There is no end to insect life here, which comes quickly in the spring when the sun warms the face of nature. As the season is short some of the small flies appear in swarms while the snow is yet on the ground. Many of these insects, strange as it may seem, hybernate under the snow. No wonder the northern latitudes are so numerously populated with innumerable insects that make life a misery. Even in Alaska the Indians, when coursing a river, have frequently to make a smudge in their canoes for protection against the insectivorous horde.

We concluded, after we had arranged for an early start in the morning, weather permitting, of course, to seek our beds within the inclosure of the netting as the best method of defeating the bloody intentions of these piratical pests who seek the silent hours of darkness to do their sanguinary work.

We slept delightfully that night, indifferent to the noisy war songs of the vampirish tribe, who beat and beat in vain against the delicate woven texture which to us was a perfect fortification. ALEX. STARBUCK.

[TO BE CONCLUDED NEXT WEEK.]

### Landlocked Salmon in Dan Hole Ponds.

MR. JOSEPH MURPHY, the well-know comedian, recently made a find that will interest every disciple of Izaak Walton. For the past seven summers Mr. and Mrs. Murphy have spent the season at the Carroll House in Ossipee, N. H. The town of Ossipee lies five hours' ride from Boston on the B. & M. R. R. and affords the first glimpse the tourist gets of the mountains on his way through the White Mountain region. Ossipee is dotted with lakes of all sizes up to ten miles in length. Two of the wildest and most unfrequented of these are two bodies of water known as Dan Hole Ponds. They are high up among the Ossipee Mountains and fed by cold springs and one small mountain brook. The outlet is high and the larger lake is 150ft. deep in many places.

About twelve years ago the State stocked these ponds with 50,000 landlocked salmon fry. Nothing has been done about them since, except by the mountaineers of the region. They have blown them up with dynamite, speared them on the spawning beds and salted them down by the barrel, besides going "trout fishing" in the brook where they have taken four and six-inch salmon by the hundreds. In all the twelve years not a single salmon has been caught with hook and line. The natives had fished in vain, and had told others, "They won't bite."

The difficulty was that they did not use the right tackle nor fish during the salmon season. After listening to the stories of the natives for six summers Mr. Murphy determined to try his own luck at fishing in the Dan Hole Ponds. In company with Mr. Hure, proprietor of the Carroll House, he went down to the ponds and began trolling. Almost at the first cast he landed a landlocked salmon weighing 8½lbs. and soon after one that tipped the scales at 14lbs. Two days later he captured his largest salmon, which weighed 15¼lbs. and measured 33in. in length. A day or two later he took another 11½lbs. in weight.

Mr. Murphy has fished from Maine to the Golden Gate, and from New Orleans to the Canadian lakes, and he says that these were the gamiest fish that he ever took. Before he could make another visit the salmon had gone down into deep water. Mr. Murphy had a very pleasant letter from Joe Jefferson, of Buzzard's Bay, in regard to his "find." Mr. Jefferson wrote that the largest landlocked salmon that he ever took weighed but 6lbs. It is more than probable that Mr. Jefferson will visit Dan Hole Ponds next May and try his hand in this new fishing ground.

The State Fish Commissioners met here July 15 to investigate the ponds and arrange about protecting the brook and spawning beds.

Mr. Murphy has painted the four salmon in oil, life size, and they may be seen in the office of the Carroll House, at Ossipee. Many inquiries have been received in regard to the ponds and much interest shown by fishermen who have heard of this new fishing ground.

EDWIN O. GROVER.

### Tim Pond.

EUSTIS, Me., July 19.—I was at Tim Pond fifteen years ago and had fine fishing. As they have had so many visitors since then I supposed the fish must have gone, like those of other waters; but to my surprise it is as good as ever. My friend Tracy and I caught, between 6 and 8 o'clock on the 17th, 170, and on the 18th (6 to 8) 130 from one boat. Let me add that all but twenty-five were returned to the water. They ran in weight from 4 to 8oz.

A. B. CARPENTER.

## NEWS FROM THE FISHING WATERS.

RICH LAKE, Newcomb, Essex County, N. Y., July 17.—While trolling on Rich Lake to-day I caught a pickerel which weighed 12lbs. and measured 3ft. It is the largest fish caught in the lake for several years.

CORA M. COOTE.

---

WOODRUFF (Reynolds), Wis., July 15.—At Camp Edgewater, Gresham Lake, the week's catch was: Fourteen muskallonge, smallest 7lbs., largest 26lbs.; 240 bass, 2 to 6lbs.; 310 pike, average 3lbs., largest 8½lbs. Prospects good. We put back in water muskallonge weighing less than 5lbs., pike 2lbs., and bass 1½lbs. Caught by W. A. Stiles, E. C. Smith, John Wardlaw and C. J. Child,

---

BARNEGAT, N. J., July 21.—Mr. C. G. Endicott, of Jersey City, just came in to the Clarence House, at 1:30, having fished one hour, and took 38 fine weakfish. He reports all boats catching them lively. Average over 2lbs. Bluefish are reported to be in the bay also. They had to stop fishing to catch the train for home.

JOS. L. HIGGINS.

---

LIBERTY FALLS, Stevensville, N. Y., July 21.—Mr. R. Cardona, E. M. Mundy and W. G. Davies, of Brooklyn, were out two and a half hours on Stevensville Lake, and caught a large string of pickerel, 3 of which weighed 5¼lbs., 5½lbs. and 5lbs.

---

### New Hampshire Trout Fishing.

CLAREMONT, N. H., July 14.—I saw the recent complaints of "Mascomy" and "Von W.," that they could not catch any brook trout. I have been thinking and wondering why. Now I am a regular crank for trout fishing (and the FOREST AND STREAM is to blame for it); and I have no trouble in getting all the trout my family can eat, and give away many a meal to my friends. For instance, I have been three half-days fishing in Little Sugar River, in the very town where "Von W." resides, with the following results: First half-day, 51 trout that filled my 10lb. basket. Second half-dey, 45 trout that filled a 10lb. basket; largest weight 1lb. 2oz., after arriving home. Third half-day, 33 trout, smallest 7in., largest 11in. I have been many times to small brooks in this vicinity, and my smallest catch was 16 trout, all above 6in. I have no use for a 5in. trout, even if the laws of New Hampshire do allow it. My trout have all been caught with a Rube-Wood, and brown-palmer and yellow-palmer fly. I use the yellow fly only in high roily water in heavy rains, with a No. 5 shot attached next to loop in sinew to sink the fly a very little on account of muddy water. I always use a fly even in thick brush and alders. Of course, I cannot make a cast, but let it float with current. Tell "Von W." and "Mascomy" not to give up. Try again.

I always have a good time, even if I don't catch many trout. I never went fishing yet without seeing something or learning something new to me in nature, and that paid me better a great deal than it would to catch two or three hundred little trout four or five inches long. I could write of many things I have seen and learned when on my hunting or fishing trips. I have hunted and fished for thirty years, and if I have my health I mean to for thirty years more—fish or no fish; game or no game. When they are all gone I can look around and see something to interest me.

But we can save some fish and game yet by applying proper means. No use to put law on trout for three or five years; that will not do it. One good drought destroys more trout in one season than all the fishermen in five. It is the destruction of our forests that is killing out the trout; the mills and the refuse also.

I once saw a trout stream that had become dry, all but one large hole, and that was alive with trout, which had taken refuge there. A week later I visited it, the hole had dried up, and I should judge that there were 500 trout all dead.

If you catch a trout under 6in., take him carefully from the hook, put him back into the brook, catch him again some other day, when 10oz. he will weigh.

I vote for stopping the sale of game every time. These are a few remedies. I might mention many more; but enough for this time. COLUMBIA.

---

### Trout Tickling.

YOU may remember that not so very long ago I called for the evidence *in re* trout tickling, expressing myself as a doubting Thomas of much time and size. Please allow me to say in closing that the evidence is in. Plenty of it. It is entirely satisfactory, or convincing, rather. It comes flat-footed and in a sort of catapultian way from Denver and South Carolina and Chicago and New York and several other places, and then "Kelpie" and Mr. Mather jump on top and pack the whole thing down, and — well, what can a doubter do but unconditionally surrender and say he's sorry and won't do so any more? When a man of Mr. Mather's piscicultural completeness says a thing is so, it can't be any so-er. Debate is closed and we've got to sit down. I admit with him that I was about as ignorant on this subject as I well could be (and now I'm glad I was), yet where have I been since I was knee high to a duck and caught my first trout among the hills of the Green Mountain State that I shouldn't have heard a word or read one (not even in FOREST AND STREAM until comparatively recently, where you get pretty nearly everything worth reading on fish) about this surreptitious, reprehensible, indefensible and wholly indecent way of inveigling trout? Trout, mind you, *Salvelinus fontinalis*, which I have firmly and innocently believed since the "days that are no more" were the shyest, wariest, liveliest, wildest, suspiciousest fish that ever flipped a fin. You may call it tickling, or seducing, or fingerlooting, or belly-soothing, or guddling, or ginniling, or any other abominable and outlandish name you choose, you can't get anything too low down. And now to be convinced by incontrovertible evidence that this fish (for description see Starbuck in FOREST AND STREAM Vols. 7-10) will willingly allow a great lout of a man (nothing personal) to sneak up on it and with itching fingers tickle its stomach until it is completely lost to all sense of safety or anything else, is mortifying in the extreme. Bah! I am ashamed, and sorry for the trout, and sorry I have become wiser—where ignorance is bliss, etc. Anybody want to go bobbing for eels or mud turkles? O. O. S.

OZARKS, MO.

### Delaware Bass.

DINGMAN'S FERRY, Pa.—M. Hale Jones and Francis Childs, Jr., have been very successful in taking bass in the Delaware, every day bringing in a good number of very nice-sized bass—¾, 1 and 2lbs. P. F. FULMER.

---

DINGMAN'S FERRY, Pa., July 17.—I give you the catch of bass made by Messrs. B. F. Blair and John Blair, of New York city, on July 16. In one day they caught 20 fine bass. R. VAN GORDEN.

---

LACKAWAXEN, Pike county, Pa.—I think it is owing to the natural diffidence characterizing the fisherman on the upper Delaware that you have not before had a report from this region. At the Delaware House are some noted bass and trout fishermen who have laid their catches on the grass of the lawn and seemed amply repaid by the remarks of admiration from the ladies without desiring to have their fame go beyond the confines of the hotel.

There have been more small-mouth bass caught this summer than ever before known in this region. Trout fishing is fairly good back in the mountains. The best part of the upper Delaware for bi.; bass is between Marrowsburg, N. Y., and Shohola Glen, Pa., a distance of 15 miles. This stretch of the river can be easily fished in two days with an experienced guide, returning to the hotel each night. Best bait, catfish, helgramites and lamper eels; best hook No. 2 sproat.

Recent catches are as follows: Mr. Frank S. Gray of New York (with Fred. Holbert, guide), caught 149 trout in Shohola Brook July 1; on July 6, bass fishing from Grassy Swamp to Delaware House, on four miles of river, he brought in 84 bass, four of the bass weighing over 2lbs. each. On July 8 he caught a string of 50 bass, the five largest bass weighing 17½lbs. The smallest of the large bass weighed 2¾lbs. and the largest 4lbs.

Mr. James C. Byrnes of New York on July 12 landed a 4lbs. bass in Donovan's Eddy.

But the record fish this season goes to Mr. Cecil Hodgman of New York, who on July 14 landed a magnificent small-mouth weighing 5lbs. 8oz. This fish was caught below the Delaware & Hudson dam at Lackawaxen. The big fish was hooked in about 2ft. of swift water, and ran out 300ft. of line to an eddy below the rift. Mr. Hodgman followed in his boat and netted the fish after a long struggle, but not before the big fellow had jumped five times out of the water. Mr. Hodgman, as soon as he recovered from the effects of landing the big one, cast again and captured a 2½lbs. bass. One other large fish was caught by one of the natives in the same place, which weighed 5lbs. 2oz. A large number of 2 and 3lbs. fish have been caught, and the river is full of smaller fish. The best fishing comes in August and September.

JAMES DALY.

---

### Cobb's Island Fish and Game.

COBB'S ISLAND, Va., July 20.—Cobb's Island, which is situated about ten miles from the mainland, off the coast of Virginia, is yielding good sport this season. Rev. Thomas Dixon, Jr., in company with Mr. Ashby Jones, on July 5 caught 25 red drum aggregating in weight 750lbs., while at the same outing they also captured 125 immense bluefish within three hours. For sea trout fishing I think this place cannot be excelled, for I myself, in company with several other gentlemen, made an extremely large catch. One party went out to-day and brought in 120 large trout, while the several boats, five, I think, returned with a total of 680. The names of the different parties and their individual catch are as follows: C. O. B. Cowardin 200, Geo. Rinehart 128, B. F. Franklin 79, Steven Beveridge 99, Mrs. E. M. Thompson 174.

Shark fishing is also very much indulged in. I went out yesterday and the boatman hooked a tolerably large one, while in another boat a gentleman caught one 10ft. in length. The shooting is very fine, there being any quantity of jack curlew, grayback, yellow-shanks, calico-back and snipe in general. The gunners have been remarkably successful for this season of the year. Next week when the tides make very high, there will be found here the finest shooting on the Atlantic coast. This is the only place I have ever visited where the sport is so magnificent, surpassing my expectations in every regard. The sportsmen, many of whom are here at present, find very pleasant and agreeable accommodations. H. B. RASCH.

---

### Fishing in Stores.

HERE is an interesting note which has evidently been delayed by floods and strikes: LaCamas, Wash., June 14.—A few days ago many of the Portland wholesale houses on the river front were obliged to vacate on account of the encroachment of the flood, and every one old and young followed in the footsteps of good Father Walton and went fishing. In all of the stores where the water was not too deep might be seen men and boys in pursuit of the fish. One house put up fishing notices and excluded the public, thus making a fine haul of some thirty fine trout averaging 1½lbs. in weight. Another had the good fortune to capture a large salmon by dextrous use of oars.

The Columbia and Willamette rivers are higher than ever before—so far as known. This brings it 5ft. above the highest water of 1876. Both rivers registered 35ft. and a fraction. E. W. R.

---

### Moosehead Lake.

KINEO, Me., Mount Kineo House, July 17.—We send part of the catches of trout here for the past two days. There were several parties who brought in strings of two or three whose names we did not get:

July 16, 31 trout caught by Messrs. G. A. Worth and S. H. Watts, New York city.

July 16, 23 trout caught by S. I. Abbott, Waterville, Me.

July 16, 9 trout caught by J. H. Lewis, Bangor, Me.

July 17, 32 trout caught by Charles L. Edey, New York city.

The fish weighed from ½ to 2lbs. each. The fishing here has been excellent this spring and summer. There is every prospect of a big season. O. A. DENNEN.

---

### Narragansett Pier Striped Bass.

NARRAGANSETT PIER, R. I., July 17.—The largest striped bass taken so far this season was captured Tuesday night, 10th inst., by Ernest Knowles, a local fisherman, and weighed 31lbs. about two hours after being taken from the water.

### St. Augustine Big Fish.

ST. AUGUSTINE, Fla., July 16.—The big fish in the waters adjacent to this town have been making themselves talked about recently. One day while one of our business men was standing in the surf on Anastasia Island he was attacked by a shark, which seized him by the calf of his right leg. The swimmer threw himself on his back, kicked vigorously and made for shore. He has spent a week in bed and is now out on crutches.

---

A whale is not a fish, but here is a whale item: A young sperm 21ft. in length, came into the harbor the other day, lost its bearings among the oyster bars and mud banks between here and Matanzas and went aground. It was discovered by Capt. Ed. Allen, who towed it to town, where it excited much interest. It was taken over to the North Beach, where our amateur whalers set about trying out the oil, but the sharks made such inroads upon the prize that the enterprise was not much of a success. Two of the sharks caught were in the 14ft. class. COQUINA.

---

A soldier of St. Francis Barracks, St. Augustine, met with a very painful accident yesterday morning while out fishing. He had just landed a large catfish, when it struck his foot with one of its fins. The fin penetrated the sole of his shoe and went deep into his foot. It fastened the shoe tight to the foot so that it could not be removed. The soldier was taken to the barracks hospital for treatment.—*Florida Mirror.*

### Shenandoah Bass.

BEAR LITHIA, Va., July 18.—I will tell you a little of the last fishing trip on the Shenandoah River, which is now in excellent condition. Three of us set out on 11th inst. at 8 A. M. The river is only a few minutes' walk from Rose Cottage, where we are stopping. Not a bass was caught until 11 A. M.; and a little one at that. We had 48 bass by 6 P. M., in size from 4lbs. a piece down.

The second day we caught 53 bass and the third day 10 bass, one, the biggest weighing 3½lbs. and the balance about a pound a piece. The bait used were mud toms and helgramites. Fishing is a little better in this river now as it has been for several years past. The law is on bass in the Shenandoah River from April 1 to July 1.

Saturday evening we had a beautiful fox chase. A fine specimen of a gray fox was made a prisoner and let go at 9 P. M., 11 hounds and 25 men following. The fox was caught in 2 hours 35 minutes. It was the most beautiful chase I ever witnessed, the dogs being close all the time. CHAS. REUSCH.

---

### Ouananiche and a Stranger.

LAKE ST. JOHN, Quebec.—My score for two and one-half days of fishing in the Grande Discharge, with flies (silver-doctor and Jock-Scott), and near the Island House with small spoon, comprised sixty-six ouananiche, pike and a stranger. Largest fish 6½lbs.; total weight 105¾lbs. The fish I call stranger was the shape of a pike but with bright red and yellow spots like a trout and very red fins. I have caught more than 1,000 trout, and this was the handsomest marked fish I ever saw. None of the guides ever saw a fish like it. It was very gamy, nearly half the time in the air, acted much like salmon I have caught in the Penobscot at Bangor, Me. W. C. M.

---

### The Brown Trout.

*Editor Forest and Stream:*

In behalf of a number of interested fishermen, who are planning to stock our home waters with the European brown trout, I ask an expression from some one who has had experience with this fish, as to how it compares with the native brook trout as a sportsman's fish. SALMO.

---

### Weakfish at Forked River.

FORKED RIVER, N. J., July 23.—On July 20 Mr. H. C. Klemm made a fine catch of weakfish with rod while stopping at the Lafayette House. Mr. H. Koehler and wife enjoyed the same sport, as also a number of other guests. After this northeast storm sportsmen think the weakfishing will be good. A few woodcock have been killed here. L.

## *Fishculture and Fish Protection.*

### A Menace to the Youghiogheny River Bass.

SOMERSET, Pa., July 18.—*Editor Forest and Stream:* Not knowing exactly how to bring the matter forming the subject of this article to the attention of the proper authorities, I have decided to send you the facts, for publication in your paper, with the hope that you will take such steps as may to you seem proper in the premises.

Confluence, Pa., is a borough of several hundred inhabitants, situate in Somerset county, at what in years past and gone was known by the old Indian name of Turkeyfoot. The borough is located on the banks of the Youghiogheny River, with which river the Cassellman River and a stream known as the North Fork unite at a point a few hundred yards below Confluence.

About eighteen years ago, I think it was in 1875 or '76, the Youghiogheny was stocked with black bass, and ever since that time that fish has been abundant and of goodly size. Last summer a great many bass were killed by "sledging" the rocks during a very low stage of the water in the Youghiogheny and the other rivers named above, and citizens inform me that they do not see so many large fish in those rivers as they have been in the habit of seeing at the same season in the past.

Recently a company has located at Confluence for the purpose of erecting a steam tannery, covering with its buildings six acres of ground, and said to be the third largest tannery in the United States. The waste water and all the filth of this tannery will be run into the North Fork, and will certainly contaminate the Youghiogheny for its entire course below Confluence, and of course will destroy all the fish in that stream's lower waters. The Cassellman River of course will not be contaminated by the waste from the tannery.

The attention of the proper authorities in Pennsylvania should be directed to the facts set forth above, and some action promptly taken in order to preserve the game fish in the Youghiogheny River, as a few months will be too late, and the effects of the eighteen years past in supplying those three rivers and their various influents with game fish will be entirely lost; not only to the people along the banks of those streams, but to sportsmen from Pittsburg, Johnstown, etc., visiting them for pleasure or recreation. AMATEUR.

# The Kennel.

### Death of Champion Graphic.

IN the ordinary course of events the death of champion Graphic was one that might have been expected at any time for a year or two past. He died a couple of weeks since at Mr. Charles Heath's place at Orange, N. J. He was allowed the run of the house and grounds, and one night he was noticed to be out of sorts and was found dead in the morning. The heat, at his advanced age, was probably too much for him. The news of his death will serve to recall many exciting events in the life of a champion dog, for Graphic was a champion if ever a dog was entitled to that honor. As a field dog he never distinguished himself, although thoroughly broken and used until quite recently in private shooting. He ran unplaced in the English Kennel Club All-Aged Pointer Stakes in 1883, and afterward at the Eastern Field Trials at High Point, N. C., in 1886, when he was withdrawn by his owners. He was a champion in England in 1883, winning in that class at the Crystal Palace show.

After making a brilliant record on the English show bench he was imported by Mr. James L. Anthony in the fall of 1885, and his first appearance was at the National Breeders' show, at Philadelphia, a few days after he landed. Mr. Anthony brought him down to the show one afternoon just to show the "boys" what a good pointer was like.

Then he entered upon an exciting show career on American benches, his first competition being at Pittsburgh show, March 16. 1886. The week after he was exhibited at the Newark, N. J., show. Old timers will remember Mr. Davidson's difficult and unenviable task in deciding, amid intense excitement, between Beaufort and Graphic at their first meeting. Beaufort won.

All pointer men are familiar with Graphic's career since then; how the Netherwood Kennels' became the joint property of Messrs. Anthony and Heath, the division of the kennel, Mr. Heath taking Graphic, Meally, Revel III., Bracket etc., which noted dogs were also imported about the time of Graphic's arrival.

As a sire Graphic stood well in front, leaving in England a large number of sons and daughters whose names were familiar in the prize lists on bench and field. Revel III., Bracket, Lad and Lass of Bow are perhaps the names that pointer men on this side will most readily recall as progeny of his. Champion Graphic was last seen at the Newark show in November, 1893, when he was entered and benched for an hour or two each day for exhibition only, and the old dog showed signs of decrepitude then. Strange to say, his first and last appearances in the East were at Newark shows. He was whelped April 15, 1881, and was by Leach's Bonus—Sancho out of Fursdon's Juno. His breeder was Mr. E. C Norrish of Devonshire, England. Graphic was the last of the famous quartette imported by the Netherwood Kennels, and we sympathize with Mr. Heath in the loss of his old friend.

## POINTS AND FLUSHES

*[By a Staff Correspondent.]*

### Clubs and Entries.

THE following is a letter, under date of July 15, written to me by Mr. T. T. Ashford, owner of the celebrated field trial performer Kent Elgin. He says:

"I have just read your article in FOREST AND STREAM of this date, and as it hits the nail so squarely on the head I must congratulate you for having the courage to speak in such forcible terms the honest truth.

"For several years I have tried hard to get up some field trial enthusiasm among the sportsmen of my section and those further south. They say there is a combine between the larger kennels and clubs, and the unknown man with one or two entries stands no show.

"I have succeeded this year in getting from this city about seven entries for the U. S trials. Another would have been made from Knoxville, Tenn., but distemper cancelled his earthly engagements.

"The way you touch up the Southern Club's action in asking a judge to withdraw because a favorite patron was afraid this judge would give his dogs justice was certainly a broadsider that was richly deserved. I attended that club's trials in 1893 and it did not take a close observer to see there was "monkeying behind the curtains." From what I saw myself and had heard of this club's management I resolved to let it severely alone and have had no occasion to revoke my decision.

"When I sent Jim Avent my dog Kent Elgin (in June, '93) I told him not to enter him in the Southern trials and repeated this later on. When the Southern All-Age entries were published my dog was not in the list of entries, consequently I thought Avent had observed my instructions. On his way to the Southern trials he wrote me, expressing regrets that Kent Elgin was not entered, as he would stand a good show to win in those large fields where birds were plentiful.

"A day or two later, on his arrival at New Albany, Miss, he wrote me that by making a little blow Mr. Brumby had allowed Kent Elgin to go in the race. This was only two days before the drawing of the All-Age Stake.

"I wired Avent not to run my dog in the Southern trials under any circumstances whatever. He went in just the same as you know. Mr. Avent is a warm personal friend of mine and we have been friends from boyhood.

"I am satisfied he smuggled Kent in with evident intentional kindness to the dog, and it is not he whom I censure for my dog's running in those trials this past winter, but it is the club who would so outrage their rules and do their patrons such a dirty trick by letting a dog run in their trials who was entered two days before the drawing. If they will do one dishonest thing will they not do another? I leave the answer with those who patronize the club.

"I have asked Mr. Brumby to refund Kent's entrance fee, but he declines, and with all the proof I have in black and white, has the gall to deny the charge I dare say Mr. Avent will not deny it. * * * After reading your article I felt like giving you the above facts. Field trials should be conducted honestly or not run at all."

### From Winnipeg.

In a pleasant letter under date of July 15 Mr. Thos. Johnson writes: "I had a letter from Mr. Lonsdale in which he said he would be pleased to give the cups to the Northwestern trials in 1895. (I presume Mr. Johnson refers to the cups given for this year's trials.)

"I have a peculiar colored puppy from my 'blacks.' They have often shown a brown tint at birth, but I have one a beautiful seal brown, not a white hair, and the 'king pup' of the litter.

"I expect Capt. McMurdo up shortly. Mr. Dexter also promises to be my guest a little later on."

Mr. Johnson mentioned several other gentlemen sportsmen who might possibly be his guests. In this connection I wish to acknowledge a most cordial invitation from Mr. Johnson to visit him and recuperate from my recent severe illness. My appreciation of his generous invitation is but feebly expressed by returning my sincere thanks.

He mentioned also that Rev. Mr. Spence had had a long, weary illness, but added the pleasing information that health had returned to him.

Mr. Johnson, in respect to the Manitoba trials, remarked: "From the number and quality of the entries in the Manitoba trials, they promise to be very successful this year." He then expressed his delight at such excellent prospect for good trials. Such has the ring of true sportsmanship.

It was rumored that the dog show in the Midway, last summer, had netted the owner, Mr. Adolf Thommen, a large sum of money. It will be remembered that Mr. Thommen had taken his St. Bernards from Switzerland to this country to exhibit in the World's Fair dog show of unfortunate memory. From a statement of the profits of the Midway, the Exposition Company's percentage (25 per cent.) on the gross receipts of the dog show was $551. Therefore, Mr. Thommen's gross receipts were $2,204.

The present dull times in canine matters are very discouraging to breeders, but they should not become wholly discouraged. There are undoubtedly better times ahead in the near future. No doubt the interest in field shooting is quite as keen as it ever was, but the hard times in a measure suppress it. In the meantime, dogs are aging or becoming incapacitated for work, and their places will be filled so soon as the finances of their owners will warrant it. New sportsmen are coming into the fraternity, too, who will be buyers, so that when the better times come they will make up for the months of scarcity.

B. WATERS.

909 SECURITY BUILDING, Chicago.

## DOG CHAT.

The cash premiums to be given by the Des Moines Kennel Club at their show, to be held Sept. 4 to 7, in connection with the Iowa State fair, will amount to a little over $1,300. In addition to this there will be numerous special prizes. They have already received word from a number of breeders signifying their intention to exhibit. Mr. M. Bruce, the secretary, tells us that on an average 150,000 people attend this fair, and they are substantial, well-to-do people people, and that there is a good market for all kinds of dogs. Those who desire premium lists should write to Mr. Bruce, Des Moines, Ia. It is rather too far for our Eastern exhibitors to send their dogs, but our Chicago and Western friends will no doubt give the new club a good support, they can do this and still get back in time for the Toronto show on Sept. 10, or if Omaha holds its intended show, the two shows will make a nice trip into new country

The *Breeder and Sportsman* in commenting on the Martin—Bell mix up, says: "We have always been friendly to the A. K. C. and wish to continue to be so, but it is time this Star Chamber business was stopped. The meetings of the advisory committee should be more public. Mr. Martin to this day has not been officially notified of the action taken, and knows practically nothing about the action of the advisory committee in the matter. A fancier in San Francisco should have exactly the same rights as the fancier in New York, and, until such is the case, the cry of 'clique' and 'partiality will be heard everywhere." This was written June 23, and it would seem as if some one had been derelict in their duty in this, at all points, most extraordinary case. This mystery and bandying of opinions would all have been avoided if more publicity were given to the transactions of the Advisory Committee.

Mr H. H. Hunnewell, Jr., in sending in his kennel catalogue, which, by the way, is excellently arranged, with capital clear half-tones of Oakleigh Bruiser, the wire-hair, and Poobah, Diamond, Vivette and Bellone, his noted brown poodles, also incloses a stirring picture of Mr. Smith's Cribbage and Oakleigh Bruiser, the bounds of canine courtesy being only restricted by the length of their chains. Mr. Hunnewell is delighted with his new importation, Bushey Bramble, the noted wire-hair, which he purchased from Mr. C. W. Wharton. She is by Venio ex Bramble. She is in good condition and will make her début at Providence in September. As a taste of her quality we may say that her winnings include firsts at Leicester and Darlington in open, puppy and novice classes; third open at Crystal Palace; second open Southdown and first Barnet 1891. In '92 she was first open at Barking; second Birmingham and third and special at Oxford and Cruft's shows. Last year her principal wins were at Kew, Enfield and Uxbridge, and seconds at such shows as the Fox-Terrier Club's, Crystal Palace in winners' and open classes, and third at Leicester. With such a record behind her, won in good company, she is a distinct acquisition to this country. The Hillhurst Kennels have a number of well-bred youngsters for sale at reasonable prices, particulars of which may be had on application.

In our hurried notice last week of the Rhode Island show's premium list we omitted mention of kennel prizes of $15 that will be given for mastiffs, St. Bernards (mixed), beagles, pointers, Irish and Gordon setters, cocker spaniels, collies and fox-terriers. The show will be held in the building erected for that purpose last year and which is 180×90ft. The classes in which the sexes compete together will be divided if five of either sex are entered. Dogs winning a money prize may have a medal instead. Premiums will be paid on the last day of the fair. The United States Express Company will return dogs free provided they have not changed owners during the fair.

The Danbury show, which is always looked upon as a sort of picnic or outing by many of the New York, Boston and Philadelphia exhibitors, will this year be held Oct. 2 to 5. Now that Danbury "counts," to use the vernacular of the "rounder," the society should make an effort to provide a decent building for the dogs, which experience has proved are next to the trotting in the race for popularity among the yokels who attend this fair in such large numbers. There has always been a good class of dogs exhibited at this show, and if the entry fee was raised to $1.50 and decent prizes given, the society might be still more proud of its dog department and the interest it creates.

At the regular monthly meeting of the Pacific Coast Fox-Terrier Club, with President H. W. Fores in the chair, the members were notified that the second division of the Produce Stakes close Aug. 14. A Stud Dog Stakes was discussed and rules to govern this will be formulated. Messrs. Jos. McLatchie, J. B. Martin, Ed. Cawston, H. H. Carlton, A. Gonzales and A. Russell Crowell were present. A pleasant feature of such meetings is the presence of several members' terriers. Raby Rasper, Golden Toy, Blemton Reefer and a dog from Australia imported by Mr. Gonzales were among those on hand to furnish subjects for dog chat.

The Pacific Kennel Club is thinking of giving a show this fall in San Francisco.

### The "Title" of Challenge.

The Canadian *Kennel Gazette* takes issue with us in regard to our remarks on the misuse of the word "challenge." While our contemporary makes a very plausible plea for the recognition of such a title as "challenge so and so," it ignores the fact that the A. K. C. does not recognize such a title. According to A. K. C. rules the only title that a dog can aspire to is that of champion, and to allow two titles would only lead to the confusion which the present use of the word "challenge" often brings about in the mind of the novice and the general public. A dog is either a champion or he is not, there should be no intermediate title of honor. There is no class for champions, as such, once the title is earned they have reached the pinnacle of titulary honors so far as dog shows are concerned. The challenge dog is merely on probation, as it were, for this distinction. Admitting for argument's sake the *Gazette's* contention that the title of challenge would convey the fact that the dog was eligible to the challenge class, which "gives him an increased value not at all 'fictitious,' but in real good coin," the dog that was eligible but had never won or never could win in the challenge class, we know of several, unless the others were dead, would be just as valuable according to its title as the dog who had won two challenge prizes and was next door so a champion. If anything, we ought to make the title of champion more difficult of attainment still, rather than weaken its significance by the misuse of stepping-stone titles.

A letter from Arthur Trickett, who holds the helm in the Argyle Kennels out at Little Rock, Ark., sets at rest the idea that St. Bernards, when properly cared for, cannot do well in that warm section of the country. Many will be pleased to hear that "the dogs are all well and the old dog is fine as silk." The old dog is Sir Bedivere, a picture of whom, recently taken, which Mr. Trickett sends us, would seem to justify his assertion. Another photo shows two seven-months-old pups that seem both tall and heavy, large and deep in head and possessed of ample bone; and to quote Mr. Treckett, "will do to keep our hand in." Argyle Alpha also seems to be growing still. They have had no puppies since the shows. The rough-coated dog Prince George, first at New Orleans, and third at Chicago last December, has been sold to Mr. C. T. Wentworth, Denver, Col. Mr. E. E. Woodcock, of Hot Springs, Ark., bred his bitch Geraldine to Sir Bedivere, and their own Countess was also mated to the champion on the 17th inst.

Mr. S. H. Roberts, who has the management of the Rhode Island show, has arranged a good list of judges, and if the Association agrees to their terms at a meeting to be held this week, their names will be announced at once. It is expected also that $300 more will be voted to provide classes for several breeds that are not properly catered, for such as black cockers, poodles, etc. The specialty clubs are inclined to be generous, and as several specialty judges are included in the list, it is expected that both cash and cups will be among the extras.

Mr. A. W. Smith, of Buffalo, the whilom black and tan terrier breeder, is spending a few weeks at Long Branch, and ran in last week to see his fellow "cynologists." A visit to Dr. Foote's kennels at New Rochelle was paid, where several promising wire-hairs and the black and tans were looked over. Broomfield Sultan is looking very fit just now, much improved on his spring form; but Maiden is losing her dainty outlines as the years creep on, having developed a matronly *embonpoint*.

Mr. A. C. Schallenberger of Alma, Neb., has sold the St. Bernard Fernwood Queen to Mr. W. W. Thompson. Queen was third at Chicago in March last.

The New England Field Trials Club will hold a Members' Stake commencing Oct. 22 on their grounds at Assonet, Mass. Mr. N. Wallace, than whom no better judge for this kind of country and work could be selected, will judge the stake alone. In addition to a number of birds that have been put down at Assonet, the birds already there wintered well and are raising good bevies. Nominations will be $10 and $5 additional to fill. The stake will be on the sweepstake order.

Dr. Lougest, who seems to dabble in many fancies, has purchased the well known foxhound Commodore from Mr. R. Williams, of Lexington, Ky. Is the Doctor going to settle that foxhound-bloodhound controversy on his own grounds and with his own stock?

Mr. Pabst, of Milwaukee beer fame, through his *fidus achates*, Mr. Sidler, has purchased the great Dane Melac from Mr. Searight, president of the late Cumberland Kennel Club. Melac will now be more in his native element.

Although this is always more or less a "close season" in kennel affairs, those who advertise discreetly know where the best results are to be obtained. Among the new ones this week we notice C. Teall offers pointer pups for sale; C. Hopton, well bred bull bitch and St. Bernard; Rockland Beagle Kennels, beagles; J. McAleer, English setter pups; Standard Kennels, trained beagles; A. E. Seidel, trained pointers; Box 204, cocker bitch. We draw attention to the Toronto show announcement, entries to which close Aug. 29.

Mr. T. A. Howard has, as we expected he would do, taken his troubles to another journal. In this he has repeated our remarks in FOREST AND STREAM of June 16, but further than saying that our statements are untrue, statements of which we gave the proof, he does not see fit to take advantage of even this opportunity to right himself before the public, but simply repeats his statement regarding Mr. Lawrence and Mr. Elliott's expenses, and this part of his unpublished letter to FOREST AND STREAM was given due attention in our issue of July 7. Naturally, Mr. Howard drifts away from the original charge—the intent to bribe Mr. Elliott. If Mr. Howard can prove to the satisfaction of the A. K. C. that the action of the Louisville Kennel Club in depriving him of the handler's prize at their show was wrong, we shall only be too pleased to give prominence to the fact. The bribing case is the most important part of this disagreeable affair, and a part that Mr. Howard should devote himself to disprove, but it cannot be disproved by besmirching the character of others.

### Let Dogs Alone.

There are persons with the bad habit of meddling with what does not concern them, and there are children who are taught no better than to touch, if they can, whatever takes their fancy. These are the people bitten by dogs. Not once in 10,000 times does a dog molest a person who minds his own business, no matter how crabbed the dog may be.—*Ashmont in the Reflector.*

When half a dozen Dandies get together in a fight an old-time Donnybrook fair shindy must lose by comparison. Mr. James Morley, of Dumfries, Scotland, has just had such an experience in his kennels. Half a dozen dogs and bitches altogether have succumbed to what must have been a terrible encounter, according to *Scottish Fancier*. As Bob III. and other equally well-known dogs were among the lot killed the loss may be better imagined than described. This must not be construed into a supposition that Dandie Dinmonts are vicious or quarrelsome dogs, but a quarrel among such a number of any kind of rough terriers is apt to be a serious matter and owners of large kennels cannot be too careful in avoiding all such risks. Half a dozen terriers may run together for a month and agree perfectly, when a chance look, or the possession of a stray bone, may start such an all-round rumpus as the kennelman may find impossible to settle without loss on one side or the other. It is always best to be on the safe side. We have in mind a kennel of Great Danes that were shown some years ago. It was their owner's custom to turn these dogs loose in the big ring at New York; happily no harm ever came of it, but a chance knock in their sky-larking might have led to disastrous consequences. Too much of this indiscriminate exercising is done at our shows and the rule instituted by the

W. K. C. at their last show, that all big dogs shall be exercised on chain, is a good one and should be followed by all show committees.

At the last moment the Des Moines premium list comes to hand. The classification is ample, 95 classes being provided. The prizes range from $10 in challenge classes, with $10 and $5 in open, to $8 and $5 challenge prizes and $8 and $5, and $5 and $3 in open classes. Kennel prizes of $10 are given in most of the breeds. Handlers' prizes of $60 to the one with greatest number of dogs, $40 to second are offered. Entries close with Mr. M. Bruce, Des Moines, Ia., Aug. 25. A. K. C. rules will govern.

Mr. James Mortimer has purchased the Irish terrier Miss Eva from Mrs. Butcher, and has won a couple of prizes since the purchase. The bulldogs he purchased are probably for the Woodlawn Park Kennels.

### Flaps from the Beaver's Tail.

TORONTO, Canada.—A special executive meeting of the C. K. C. will be held here on Tuesday, Aug. 7, at 3 P. M. Nominations for the election of officers for the year beginning Sept. 1 will be received and afterward ballots sent out, according to the new constitution. By this method every member, no matter how far distant, a resident in British Columbia, Nova Scotia or other Provinces far from the "hub," will have an opportunity of casting a vote for his chosen candidate.

Mr. Mighton, one of the partners in the Maple Leaf Kennel of collies, died a few days ago of fever. The kennels, which contain Finsbury Hero, Finsbury Dude, etc., will be continued by the other partner, Mr. J. H. Saunders, of Harriston, Ont.

I hear that the dogs bought by Mr. Klein, of Black Lake, Quebec, which I mentioned a few weeks ago, are now on their way over, under Spratt's guidance.

[Dr. Drummond] of Montreal, the owner of the lost Irish terrier Shargar, writes me that the W. K. C. have never notified him of the loss of his dog, and that letters addressed to Mr. Mortimer remain unanswered. Why?

Mr. Harry Wright of Victoria, B. C., has lost his imported Italian greyhound dog Dante by a rather peculiar misfortune. It appears this dog was several times taken with severe pains in the stomach, and later on, in defiance of all treatment, gastritis set in, with great emaciation and ultimate death. The *post mortem* revealed the fact that a wire nail 1½in. in length was lying across the pyloric orifice, and it had made several perforations in the mucous membrane. The nail had evidently been in the stomach for some time, as it was much corroded. H. B. DONOVAN.

### ANSWERS TO CORRESPONDENTS.

J. W. Akron, N. Y.—The English setter is supposed to be the better for field work.

J. S. S., Oakland, Md.—Yes; the pedigree as given shows good blood.

G. K. S., Maple Springs, N. Y.—She probably would work better if left as she is.

H. S. D., Brooklyn, N. Y.—Yes, it is better to remove the dew claws from your fox-terrier puppies, they are unsightly and of no benefit. Cut them off when you dock their tails.

P. S., Oswego, N. Y.—There is nothing the matter with your puppy, the nose will turn black as is grows older. No, a small speck would not disqualify.

R. T., Elmira, N. Y.—My hunting dog's feet are continually cracked. What shall I do for it? Ans. First soak the feet for ten minutes in solution of creolin (a teaspoonful to half a pint of water), and afterwards apply following ointment:

℞ Bal. peru..... ʒ ii.
Zinci. ox. ..... ʒ i.
Mix together. Apply to foot twice a day.

J. W. B., Danvers, Mass.—What causes my pointer dog, 2½yrs. old, to eat so much horse manure on the street? I can't break him of it. Is there any medicine I can give him to take its place? Ans. Treat for worms and afterwards give following: Pot. bi. carb. soda, bi. carb. mag. sulph., of each two scruples. Mix and make 12 powders. Give one twice a day mixed with the food.

G. J., New York City.—If the kennel can be made reasonably air tight, the best way to rid it of fleas is to take out the bedding and burn it. Then after closing up every crevice in the kennel, in a pan of water place a dish containing a couple of hands full of powdered sulphur, pour a little alcohol over the sulphur and set on fire, then see that the kennel door is tightly closed. After a couple of hours open the kennel windows and door, and give the building a thorough airing before returning the dogs. This treatment will thoroughly rid the building of fleas and any infection. After you have done this whitewash the inside of the kennel every two months during dry weather. Change the bedding often and before putting down dust the benches with Persian insect powder. Be sure before returning the dogs to their clean quarters to dust them well with the insect powder and brush or comb out with a tooth comb the dead fleas or the pests will be as bad as ever in a week. Washing dogs to rid them of fleas is not a reliable remedy. Groom the dogs every day. Straw is better than hay, especially salt meadow hay, to use for bedding.

## Hunting and Coursing.

### Show Beagles as Practical Field Dogs.

*Editor Forest and Stream:*

I was much interested in the letter signed V. H. Ellis in your issue of the 7th inst. headed "A Novice's Experience Rabbit Hunting." While I am unable to hear of any beagle man who has sold a beagle to any one of that name and cannot find the name in the Boston directory, I feel it wouldn't be amiss to try if this gentleman is really in earnest in his criticism of the beagle or if the letter is simply "a bait."

I may remark at starting that I am scarcely a novice in the amateur rank of dogdom, having owned my first dog over thirty years ago, yet my fancy for beagles is of more recent date. I am personally acquainted with some of the beagle men in the vicinity of the "Bean City," and have seen several of their hounds both on the bench and afield, and should be very sorry to find that the remarks of Mr. E. applied to them all or any, except a few.

If your correspondent is a rabbit hunter who goes out with the intention of killing as many rabbits as he can in as short a time as possible, he certainly did not exhibit very great dog knowledge in selecting a beagle of pure blood as his companion, for many a country boy or youth could tell him that a mixture of hound and collie would be liable to drive more rabbits to him at a faster rate than any pure-bred beagle, in fact the above mixture may be considered the most successful "cur" for that purpose known. It only needs a little quicker sight down the gun barrel as the rabbit runs faster, and the necessity of a ferret for those that are run to earth, which they almost invariably do when hunted with a fast driving dog in the daylight. But the question arises, What does your correspondent want a dog for at all if he hunts in the soft snow? Either the rabbits are laid up and can be obtained alive with purse net and ferret, or they can be tracked if out, the tracks being as plain as the nose on a man's face. Certainly a 12in. beagle is not much good in a foot of soft snow as a rule, because both man and dog may hunt all day and not find a track if the snow is fresh; should, however, a rabbit be jumped if the beagle is a hunter he will manage to get along quite as fast as is necessary to drive a rabbit to the gun. In hunting white hares it is a different matter, I am now referring to the hunting of the cotton-tail.

There is something else I am thinking about with regard to your correspondent's beagle not hunting, and that is when he obtained her she may not have been a mature hunting bitch, as many hounds do not mature until two or three years old, many not finding the use of their noses until that age, or at least until well along in their second year, and it is often that they will only trail the stronger-scented animals until the following season. I do not attempt to account for this; many hounds are discarded for hunting for that very reason; greyhound men will tell us that it is their old dogs that run cunning, not the young ones.

For my own part I do not care to catch and kill the few rabbits we have in our immediate vicinity; they are scarce enough already. When my neighbor and I go out with the beagles we get fun enough seeing the little fellows work their ground and start their game, generally holding the trail until the rabbit goes "to ground," in the day time; but most of our hunts occur in the evening, sometimes by moonlight, and often by the aid of a lighted lantern after our day's work is over, in the cool evenings when the mosquitoes grow less troublesome than now and the hounds grow keen for a run. We either walk or drive to a likely spot and drop what dogs we take with us, and if necessary light the lantern and betake ourselves to some little prominence where bunny is likely to come to listen for the hounds, making comments on the probabilities of a good run or discussing the chances of such dogs on the bench or in the field, until one or other of the dogs gives tongue and the others join in chorus until the game is lost or run to ground, or we hear a distant clock warn us that it is time to move homeward, unless we are in for an all-night hunt.

Oh, no, Mr. E., your high-toned, fine-bred beagles do not always come to heel after a couple of hours' run. I could show you dogs (not mine) that can stand it just as often as you can, quite as many hours in the day and more days in the season of days that are fit for a dog to run, and hunt better in April than they did in October. Of course no humane man would run a dog in weather such as we now have, and there are some days in winter when it doesn't take long to make a heavy dog's feet sore; further than that, during the summer most of the bitches that are valuable are bred from, and this alone ought to debar them from running, to say nothing of the close time for poor bunny.

If one has ever so good a hound, it must not be expected that he will hunt with truth and reliability after being kept in idleness a whole summer. There may be those that think that because they own a well-bred dog he should be ready to furnish them with good hunting without a bit of preparation, or without ever seeing a rabbit or having a day's work of any kind. It would be just as reasonable to expect a horse to trot a mile in 2:20 without ever having been near a track or hitched to a sulky; further, every well-bred horse is not a heat winner in good company with all the money spent on his training. Should we expect more from the dog?

The only valuable stock I can recall are imported Bannerman and Twintwo, and while I do not known if Valentine is a hunter there are a number of descendants of his sire that can do considerable work afield. Perhaps, had Mr. E.'s bitch been given as good a show at rabbits as old Snyder, Ranger, or the other dog he has, she could probably have shown as good field work as either of them; perhaps not as fast as the hound-collie cur, yet a driver that would be a thing of beauty with a voice of music that would far surpass his coarse cur.

As to the gun-shyness Are there not many dogs larger than the standard laid down for the beagle that are gun-shy? Let the breeders of pointers and setters answer, or perhaps some of the fox-terrier breeders will say that they seldom breed a gun-shy dog; yes, I knew one dog whose owner peppered his hide with small shot three times for running wild and then he was not gun-shy. How few dogs there are that ever get over this timidity. Whose fault is it that a dog has that failing. Can we expect a dog which has never heard a gun fired at home to take no notice of the report of it in the field? Surely not. The same rule applies here as in hunting; let your beagle have a show and then if he is gun-shy why you know what to do.

I am glad FOREST AND STREAM takes the right view of the matter, "Why should we give up breeding high class beagles and harriers, bec ause a 'lurcher' can catch a hare?" Referring to Mr. Ellis's description of a field trial for beagles I am inclined to agree with him that taking a dog by the neck and putting him on the track of a rabbit that somebody has picked out, is not testing a dog's hunting powers, and the sooner the beagle trial judges take that into consideration, the better for the breed. Why cannot "hunting sense" count as much in beagle trials as "bird sense" in pointer and setter trials? Is it not of as much or more value to the rabbit hunter? If the different beagle clubs do not recognize such sense, would it not be wise on their part to do so in their coming trials?

I will not now further encroach on your valuable space, but hope such men as "Debonair" and Friend Perry will write from their experience "Clyde" has voice enough to say something; "Gypsey A." might report on the white hares of Maine, even though June Rose is fat and Millard put in the stud. COMEDY.

MALDEN, Mass., July 18.

• • • •

*Editor Forest and Stream:*

I note several discussions in your esteemed journal relative to the thoroughbred beagle and the mongrel for rabbit hunting. If any of the mongrel fanciers have anything that they think so much of and wish to run against a thoroughbred, let them mention it in your columns. I can furnish the beagle and $500 to back him against any mongrel in the country. I don't say he is the best beagle in the country, but he is a thoroughbred and I think him a good dog, in fact, sufficiently good to show some of these mongrel fanciers that they never saw a good dog or they would not speak in such loose style of good stock. If they have courage to try this let them come forward. I will run him for expenses and a small stake or for the amount I mention above. I believe it would convince a number to try a thoroughbred. The great trouble is with most of the so-called hunters, they may have good bred dogs, but all they do eleven and one-half months in a year is to lie around the house and yard and get no running and experience. This may be the sort of dogs our mongrel fanciers had their mongrels run with. It makes no difference how fine beagles are bred if they don't get work and experience they cannot make a good showing. If our beagle friends would send their dogs to a country where they have a chance to practice, instead of lying round the house, there would not be so much talk of mongrels being better than thoroughbreds. ROCKAFORT.

PHILADELPHIA, Pa, July 18.

### HUNTING AND COURSING NOTES.

It is quite probable that an effort will be made to have the trials of the National Beagle Club, to be held this fall, run on grounds near Hempstead, L. I. The committee on grounds will investigate the matter this week. Hares are reported plentiful and there is no lack of good open running ground. We are told that several thousand acres are available, and as first class accommodation can be secured at Hempstead, one of the most "sporty" towns near New York, this venue would seem to be a good one, especially as a number of beagles are owned by gentlemen in the vicinity. Mr. Phoebus has taken a farm near there and still has some beagles that can trail a bit. A. D. Lewis, James L. Kernochan, Hempstead Farm and others have packs that are hunting bred. A lively meeting would be sure to result in such a choice locality.

• • • •

The American Coursing Club will hold its meeting at Huron, S. D., the first week in October. The *venue* is a good one, and the townspeople are enthusiasts in respect of coursing. Mr. Mulcaster will judge.

## Yachting.

THUS far Vigilant has sailed twelve races on the Clyde or in Irish waters, of which she has lost ten and won but two from her single adversary, Britannia. Much has been said about the peculiar weather conditions, but the record of past Cup races, which we publish this week, shows the curious fact that the average speed of the races in which this American yacht has been beaten is somewhat greater than in the former races for the Cup in which other American yachts have invariably won. Furthermore, the highest rates of speed in the Vigilant-Britannia races have been attained in those events in which the American boat was the loser. The indications from the last races are that Vigilant has been improved in trim or balance, and is really sailing faster than in the earlier ones, in which case still further improvement in moderate weather may be looked for, without waiting for the gale and sea which is to land her far in the van. There is hardly a race of the twelve yet sailed which can be called a fair and satisfactory test of speed in good sailing weather; but, as has been most clearly and conclusively demonstrated by the American press and American yachtsmen in the case of various Cup races, American yachts are built to win in the average summer weather, in which most races are sailed, and not in the howling gale, which is an exception, and in which few care to race for pleasure. From what Vigilant has done at times of late there is good reason to believe that on suitable courses and in topsail breezes, with nothing worse than a newspaper sea she will show her last year's speed; but if it does come to housed topmasts and a real sea, the result is likely to put an end to the cry for open courses and hard weather.

MR JOHN B. HERRESHOFF has a reason for Vigilant's disappointing performance which is plausible enough so far as her designers are concerned, but which will hardly be accepted by yachtsmen abroad. He says, and very truly, that Vigilant was built for a specific purpose, the defense of the America's Cup in New York waters; and, that having succeeded in this, she is not to be condemned because she fails in other waters and under different conditions. This plea, however will not avail in the face of the somewhat bombastic titles bestowed on all the Cup defenders, of "Queen of the Seas," "Peerless," "Champion of the World," and other familiar phrases. If these successful craft had been dubbed "Queen of New York" or "Champion of the Bay," Mr. Herreshoff's plea would be justifiable; but while their triumphs have been solely in home waters, they have been lauded as champions of the whole world. Creditable as the defense of the Cup has been, there is a vast difference between meeting a challenge in home waters, and in boldly and voluntarily meeting a foreign fleet in its waters, as did the first winner of the America's Cup, and as the little Dakotah is now doing. It is little to the credit of American yachtsmen that the present bold venture of Vigilant was undertaken by a new man, not of recognized prominence in yachting; and the reception which this attempt is meeting with is still less to the national credit.

THERE are few of our contemporaries with whom we have been more frequently or more seriously at loggerheads than the Boston *Herald*, but we can heartily indorse the editorial from that paper which we quote elsewhere, and only regret that it has been left to a Boston paper to say what the New York papers, at best, left unsaid, some of them going even further in the opposite direction. One paper, which has been particularly severe in its abuse of Mr. George Gould, came out last week with a most absurd and impossible story, on the alleged authority of some anonymous members of the New York Y. C., to the effect that Mr. Gould asked permission of the officers of the club to fly the flag in his cruise abroad, and that this permission was granted only on the express promise of Vigilant's owner that he would enter the yacht in no races over inside courses, which promise he had violated. Of course, every sensible yachtsman knows that as a member of the club Mr. Gould needs no one's permission to fly the flag over his yachts at any and all times, regardless of such races as he may enter; but the story was evidently written by a landsman and for landsmen.

THE attitude of the New York press toward Vigilant and her owner is by no means complimentary to the good sense or fair play of these American journals toward an American enterprise; apart from the abuse of Mr. Gould, many of them are using the races as the foundation for all sorts of sensations. One has industriously circulated a report which is false *in toto*, that Mr. Gould has ordered a new yacht from Herreshoffs, of Tobin bronze, with aluminum spars, etc. Another has found a chance for cheap advertising in a silly telegram to the Prince of Wales, asking whether he will race Britannia in this country, following it up with short telegraphic interviews with various yachtsmen. The shallow nature of this piece of fake enterprise is evident when one stops to consider the absurdity of bringing Britannia to America next year, with the inevitable result of two or three newer and consequently faster yachts to oppose her. The racing life of all modern boats is limited to their first season unless, as in the case of the large cutters this year and the Wasp last year, there is so little interest in the class that no new yachts are built to it. The chances are now that the next 87-footer built on either side will leave the present boats far astern.

THE course of the New York *Herald* in steadily sailing backward from its former position as an authority in yachting and naval matters has been a matter of criticism for a long time; but even after the many blunders it has fallen into of late, its editorial of last week on Vigilant and Britannia came as a surprise. There are still a few of the old-time yachtsmen (the *Herald* has unearthed one in Paris to support its views) who have always ignored size in racing and proclaimed the largest yacht as the fastest, regardless of time allowance; no intelligent yachtsman, however, would think of making any comparison between an 87ft. cutter and a schooner of 120ft.; much less of rating the old schooners, under any fair system of allowance, as really the equal of the modern cutters in speed. The statement of the *Herald*, that the old Sappho would have beaten Vigilant and Britannia in the race of July 17 is absurd and meaningless; but it is outdone by the following paragraphs, in which Britannia is described as an improved Vigilant, the latter yacht in turn being characterized as a "Steers-Burgess-Herreshoff sloop which sails on its model, depending on its beam for stability." There are boys of fifteen about New York and Boston who could tell the *Herald* that Britannia was nearly completed before Vigilant was designed, and who could further surprise and enlighten it with the information that the work of such designers as Steers, Burgess, Herreshoff and Watson is marked by a distinct individuality as marked as that of Dickens and Howells in literature.

The object of the *Herald's* ridiculous nonsense, as appeared on th

following day, was to give an excuse for interviews for publication with various yachtsmen. The result can hardly be considered as satisfactory, the *bona fide* yachtsmen who were thus annoyed condemned the *Herald's* propositions; and some of the replies, from alleged yachtsmen, recalled that paper's blunder of last fall, when it published a most absurd letter from an unfortunate gentlemen who, at the time of writing it was on the threshold of a lunatic asylum.

---

ONE good result is already apparent from Vigilant's defeats, in a general overhauling of ideas on this side of the water on many points of yachting, such as inside courses, drilling of crews, quickness of maneuvering, and other vere important points. The magnificent work of the little Herreshoff ten-rater Dacotah is likely to teach a very valuable lesson as to size versus quality, and to knock the bottom out of some ancient and deep-rooted ideas, in which speed and size were sadly confused. The argument in the past has been that it would be absurd to allow a seventy-footer to defend the America's Cup when a faster (i. e. a larger) yacht, like Volunteer, was at the time in commission. Unless the total of Vigilant's foreign races shows a far larger proportion of wins than now seems possible, Americans by the end of the season are likely to seek comfort in the fact that the work done two years ago by Wenonah and Wee Win, last year by Meneen and Morwena, and this year by Dacotah, is of a far higher value than any achievements on either side in the Cup racing class.

In the matter of Cup defense, America has had everything on her side, all the conditions have favored the home boat, the defenders have been able to out-canvas the challengers, with no limit on sail, and the task has been a comparatively easy one. In the case of the five little exiles above mentioned, that have been sent out from the Bristol shops to uphold the credit of America in foreign waters, the odds have been of the heaviest against them; they have, one and all, gone into live racing classes, to meet not one boat, but perhaps a dozen new craft by the best British designers; each has had to comply to the smallest detail of measurement with a rule unfamiliar to her designer; and they have gone into various hands, more or less expert, but none have had such careful tooling and coddling as falls to the lot of a Cup defender. Set adrift in foreign waters to shift for themselves, every one has made a mark in her class against other new craft specially built to beat her; and has scored a success for her designer. It is only from the fact that these boats are of 15 to 25ft. instead of 85 that their wonderful achievements have attracted comparatively little attention on this side; but as matters now go, American yachtsmen are likely not only to seek in Dakotah's triumphs a balm for Vigilant's defeats, but in time to awaken to the important fact that the best sport and keenest and most decisive racing is not of necessity in the largest class, with two or three boats on each side, of varying measurement power, to sail a few races, but in those classes in which the most yachts are built each year, in which races by the dozen are sailed, and in which the limits of size are most rigidly drawn.

---

## Plain Common Sense.

FROM the great mass of idle talk which is finding its way into the papers over the Vigilant races, we clip a couple of interviews with experienced yachtsmen, both of them believers in Vigilant, which are in accord with the views we expressed last week. Mr. Robert Center is quoted as follows by the New York *Herald;*

"The defeats of Vigilant are attributable to more than one cause. The paltry winds have been much talked of; let them rest. Everything was strange to the visiting Americans, and it had its effect. The waters, the peculiar character of the course and a hundred other things acted injuriously. Britannia, under the conditions of the Clyde races, did well, and fairly beat the Yankee. Our boat did not seem to be got going in her old way until near the end of the races, when it was too late. On Tuesday she did better, and showed some of her old time speed. That was encouraging.

"The lonely feeling which Vigilant's crew had when first beginning to race has now worn off. That is a great deal: and if there are lapses in handling the boat, there must be an improvement in that respect in the future. The feeling 'we are strangers in a strange land' has also been felt by English yachtsmen when over here, and had its injurious effect as well. It was felt by Skipper Cranfield and his men last year, and will always be experienced by yachting strangers visiting us intent on capturing the America's Cup.

"In open waters, when Vigilant meets Britannia, I believe the latter will be defeated. I do not indorse the opinion that the British cutter has shown herself to be the better all-around boat."

Mr. H. Maitland Kersey speaks as follows through the Boston *Herald:*

"I have always insisted that it is unfair to expect any craft to change a racing rig for a jury rig, make a trip of 3,000 miles across the ocean, shift her rig again and then win races. Why, with half her internal fixtures torn out before and after a series of contests, it is only to be expected that a boat will suffer somewhat from the changes.

"Some boats suffer more than others. The journey across racks them more than people imagine. A boat like Vigilant is a comparatively small sea-going craft, and she is sure to be strained by the seas on the journey over, and when it comes to replacing her in racing rig it is found impossible sometimes to get her in as fine shape as she may originally have been. She never gets back to the old trim, being either down by the head or too deep aft. We couldn't trim Valkyrie while here.

"It is true that Britannia has defeated Vigilant right along, but still I believe the American sloop to be the better boat. I do not think Vigilant is sailing at her best yet, and she is probably suffering from the effects of her ocean trip and the rapid change to racing rigging and spars from jury rig.

"Valkyrie suffered the same way as a result of her journey to this country and lightning change in rig, so that she did not do nearly as well on this side as she did while in home waters.

"I knew what Valkyrie could do and had done in England, and when she came here I did not expect her to win the Cup, but I felt sure that she would capture two out of the five races. I made up my mind that a fifth race would be necessary to decide the question. I was very much disappointed over the result.

"Lord Dunraven felt satisfied that the craft had sailed slower and done worse over here than in her trial of speed on the other side. He attributed this sudden change in speed to the passage across, the quick changing of spars and standing and running rigging, and the inability to trim the boat properly.

"So it is with Vigilant. I know what Britannia can do as well as I know what the Gould craft can do, and I say that under ordinary circumstances the American boat should win every time. She is unquestionably well handled with such talent as Diaper, Morris, Haff, Jeffrey and Herreshoff, and no excuse may be made for her ill success on that score. Vigilant has not done even as well as Navahoe did in her trials against Britannia."

The Minneapolis *Journal* comments on the question of ballast and measuring trim as follows:

"How was Vigilant so easily beaten in English waters by an English boat, when she proved so easily victorious over the Valkyrie, supposedly the fastest craft afloat in English waters at the time! The question has occurred a thousand times to every amateur sailor in the country since Mr. Gould's boat has been showing up so poorly against Britannia on the other side, and the press reports have offered no solution of the problem.

"There is very little doubt that the whole explanation will be found in the very strict rules of the English yachting code with regard to the measurement of waterline length, and it is only necessary to think the matter over a little to find a very plausible reason for the Vigilant's poor showing.

* * * * * * * * * *

"It is an axiom in yacht racing that length gives speed, and the boats of the present day, with their long overhanging bows and sterns, have their chief advantage over the old boats in the fact that they are considerably longer when the extra ballast or crew goes aboard. In the smaller classes, the 21-foot boats assume a waterline length of 23 to 24ft. and sometimes even 26 or 27ft. when heavily loaded with crew and ballast in order to carry full sail in a strong wind. It seems that the rules of the English Yacht Racing Association are thoroughly fair whatever the size of the boat may be. They effectually prevent the classification of a boat as a 21-footer, for instance, and then putting ballast enough aboard her to raise her waterline length over 3ft. without any provision for a tax on the extra length. The new Larchmont Y. C. rules are a step in the right direction, as they not only limit the length of the boat, but admit of no extra ballast or any inside ballast at all, while the crew is limited to three men."

## Shelter Island Y. C.

The 2d special race was sailed on July 21 in Gardner's Bay, weather clear, wind S. W. by S. Following are the timers:

CLASS B—SLOOP, 19 MILES.

| | | | |
|---|---|---|---|
| Tigress, Jas. Weir, Jr. | 41.08 | 3 12 19 | 3 12 19 |
| Eidolm, H. F. Crosby | 41.05 | 3 12 19 | 3 12 55 |

The winner: Class B, Tigress.

Eodolm ran aground while leading and lost 3 to 4 minutes.

CLASS C—SLOOPS, FIN KEELS 12 MILES.

| | Length. | Elapsed. | Corrected. |
|---|---|---|---|
| Dilemma, E. Froh | 28.02 | 2 33 32 | 2 30 33 |
| Lynx, R. B. Lynch | 30.04 | 2 42 01 | 2 42 01 |
| Consternation, J. N. Stearns, Jr. | 28.05 | 2 53 18 | 2 50 44 |
| Wild Cat, C. Olmsted | 29.01 | | |

CLASS D—SLOOPS, 12 MILES.

| | | | |
|---|---|---|---|
| Hermes, C. H. Otis | | 3 15 06 | |
| Marguerite, J. D. Cutler | 27.04 | 2 50 38 | 2 50 38 |
| Narona, C. P. Brigham, W. C. Brigham | 27.05 | 2 49 50 | 2 49 13 |

CLASS 2—CATS, 12 MILES.

| | | | |
|---|---|---|---|
| Aeolus, W. H. Beckroul | 27.02 | 2 42 34 | 2 42 34 |
| Vinata, T. M. Towl | 25.02 | 2 55 16 | 2 52 02 |
| Curlew, J. E. Nitcher | 25.09 | 2 50 48 | 2 48 45 |
| Natalie, H. N. Whitney | 24.05 | 2 58 53 | 2 54 26 |

The winners are: Class C, Dilemma; Class D, Narona; Class 2, Aeolus.

Regatta Committee, Latham A. Fish, Chas. H. Otis, Chas. Olmsted.

CLASS 3—CATS.

| | | | |
|---|---|---|---|
| Nip and Tuck, W. A. Brown | 21.08 | 2 51 03 | 2 51 03 |
| Rattler, T. A. Howell | 20.09 | 2 54 01 | 2 52 03 |
| Minna C., F. Belden | 21.03 | 3 05 38 | 3 04 33 |
| Alert, H. B. Henderson | 21.00 | 3 13 13 | 3 11 28 |
| Eudora, H. Howell | 20.06 | 3 04 30 | 3 01 51 |

The winners: Class 3, 1st prize, Nip and Tuck; 2d prize, Rattler.

---

## Chesapeake Bay Y. C. Special Race.

EASTON, MD.

*Saturday, July 14.*

COURSE, start at Deep Water Point, thence to Long Point Buoy, thence to Wyetown Buoy, and back to Deep Water Point, distance 13 miles; weather clear, except at termination, when squalls came from N.W.; wind fluky, general direction S.W., tide ebb:

FIRST CLASS.

| | Length. | Start. | Finish. |
|---|---|---|---|
| Island Bride, C. B. Y. C., E. L. Woodside | 35.02 | 12 53 00 | 3 39 00 |
| Albatross, C. B. Y. C., Samuel Harris | 36.00 | 12 53 00 | 3 45 15 |

SECOND CLASS.

| | | | |
|---|---|---|---|
| Ida B., Columbus Butler | 29.00 | 12 45 00 | 3 42 15 |
| Island Beauty, Neptune Y. C., Baltimore | 29.00 | 12 15 00 | 3 42 00 |

Winners: Class 1, Island Bride; Class 2, Ida B.

The annual open race of the club did not fill, owing to the fear the owners of all the other boats but the Albatross had for the Island Bride, and the special race was gotten up in consequence.

Regatta committee: J G. Morris, Zenas Burns, Hedge Thompson. Judges: J. G. Morris, Zenas Burns, Hedge Thompson.

The finish was made in a heavy squall, and was very fine between the two second class boats. The Ida B. crossed the starting line 30 seconds behind the Beauty, and came in 15 seconds behind, winning by 15 seconds, the start being a flying one, with 2 minutes to cross the line. Both boats were nearly lifted out of the water by the squall, the Beauty settling her jib, while the Ida B. held on to all three sails, and shot by her competitor an instant after they crossed the line. The Albatross upset in the squall a moment after she crossed the line.

J. G. MORRIS, Sec'y C. B. Y. C.

---

## Jamaica Bay Races.

On July 19 a sweepstakes race for open and cabin catboats was sailed on Jamaica Bay in a good breeze. There was a good fleet of starters and some exciting sailing, the times being:

FIRST CLASS—CABIN CATBOATS.

| | Start. | Finish. | Elapsed. | Corrected. |
|---|---|---|---|---|
| Bully Boy | 2 04 00 | 4 59 54 | 2 57 53 | 2 56 43 |
| Hiawatha | 2 07 01 | 4 59 58 | 2 58 31 | 2 58 49 |
| Mary S. | 2 03 01 | 5 17 20 | 3 04 20 | 3 11 19 |
| Oriole | 2 03 00 | 4 59 57 | 2 59 51 | 2 59 51 |
| Gertie | 2 03 06 | 5 32 13 | 3 31 47 | 3 49 58 |
| Nellie | 2 04 01 | 5 32 14 | 3 41 26 | 3 57 43 |
| Regent | 2 03 00 | 5 32 29 | 3 40 28 | 3 59 26 |
| O. I. C. | 2 03 01 | 5 49 32 | 3 56 21 | 3 59 32 |
| Gleam | 2 07 00 | 5 50 26 | 3 57 29 | 3 59 38 |
| Arrow | 2 04 00 | 5 49 51 | 3 58 21 | 3 59 41 |
| Tom and Jerry | 2 06 01 | 5 51 38 | 3 57 20 | 3 59 53 |

Bully Boy won first money, Hiawatha second, and Oriole third.

SECOND CLASS—OPEN CATBOATS.

| | | | | |
|---|---|---|---|---|
| Sweet Marie | 3 00 01 | 5 41 28 | 3 26 05 | 3 26 05 |
| Catharine | 3 11 02 | 5 46 32 | 3 48 51 | 3 25 13 |
| Kittie | 3 10 09 | 5 53 01 | 3 51 23 | 3 24 31 |
| Kate G. | 3 00 07 | 5 49 22 | 4 29 11 | 3 36 41 |
| Red, White and Blue | 3 01 04 | 5 51 37 | 4 16 23 | 3 57 58 |
| Lillian | 3 00 00 | 5 47 53 | 4 28 51 | 4 11 02 |
| Foam | 3 00 02 | 5 58 58 | 4 57 49 | 4 10 07 |

Sweet Marie won first money, Kittie was second and Lillian third.

---

## Racing Dates on the Sound.

*Editor Forest and Stream:*

The unnecessary confusion that now ensues whenever we get a holiday or a Saturday on the Sound owing to complication of racing dates calls for some concerted action.

I make bold to propose through the columns of your paper that a meeting of the chairmen of the regatta committees of the Seawanhaka Corinthian, Larchmont, Knickerbocker, Douglaston, Seacliff, Hempstead Harbor, New Rochelle, Corinthian Mosquito Fleet, Horseshoe, Indian Harbor, American, Riverside, Stamford, New Haven and Pequot yacht clubs be held to organize a Long Island Sound Racing Association.

This association to have full control of all racing dates, and to lay out a circuit each season.

If we had a racing circuit it would overcome one of the greatest difficulties that now attends the racing of a yacht on the Sound, and would forever put an end to the mass of correspondence, and growing element of dissatisfaction now so prevalent. CHAS. M. CONNOLLY.

---

## YACHT NEWS NOTES.

Although this is the season of the year when, as a rule, very little new work is being done among the yacht builders, the yards of Clay & Torbensen are kept exceptionally busy. They have recently received an order for four launches for the use of the United States Coast and Geodetic Survey, for whom they last year built a steam launch, now working on the Pacific Coast. This launch was a new departure in the experience of the officers of the survey, as the power was placed in the extreme stern, leaving the entire cockpit free for the crew. These boats are working launches, used for taking soundings up and down the coast, and the launch in question has proven so satisfactory, that this year they ordered four more built. An interesting feature in connection with these new launches is the fuel, which will be oil of 150° test. Heretofore nothing but coal would answer for this purpose on launches for Government use; but the head of the Coast Survey, Lieutenant Commander J. F. Moser, is progressive, and having made a careful study of the subject, he saw that for small working launches nothing could equal the simplicity, neatness, cleanliness and general superiority of the system of using oil for fuel, as practiced by the above firm. They have also recently built a 30ft. launch with 8 H. P. oil burning machinery for Mr. R. J. Rankin, Jr., of Philadelphia, besides numerous small plants for parties all over the country, two going to the Detroit Boat Works, one for Mr. Haberkorn, of Detroit, Mich., one for Mr. Vanderpoel, of Washington, and another for Mr. Koller, of Reading, Pa. Among other work going on at the yard is the overhauling and repairing of Col. G. G. Green's yacht Altadena, and Bobolink, belonging to Mr. John E. DuBois, of DuBois City, Pa. The yacht Alcyon, built this season for Mr. L. E Simon, of Guantanamo, Cuba, was launched a few days ago, and is now getting in her stores, preparatory to her trip south of nearly 2,000 miles.

On July 19, at about 9:30 P. M., the steam yacht Lorna, W. L. Stow, was in collision with the menhaden boat Nat Strong, of Sand's Point; the yacht being cut down, so that she sunk in a few minutes. The owner and his guests, with the crew, were saved in the yacht's boat. Lorna is better known as Permelia, the Herreshoff yacht, built in 1883 for the late Mark Hopkins. The yacht was raised on July 20, and will be rebuilt.

The fleet of the Indian Harbor Y. C. will rendezvous at the anchorage off the club station, Finch's Island, Greenwich, Conn., on Thursday evening, July 26, to participate in a three days' cruise. Captains will report to the fleet captain, on the Nirvana, at half past nine Friday morning, July 27, when a meeting will be held to decide the destination of the first day's run. All owners of yachts enrolled in the club are earnestly requested to join in the cruise.

## Vigilant's Races.

AT the time of going to press last week the news of Vigilant's first victory over Britannia had just reached New York, but the accounts of the latter's breakdown and withdrawal were very vague. Later reports show that Britannia was fairly beaten before the accident occurred, the trouble being with the steel jaws of her gaff, one of which broke, the yacht at once giving up and returning to her anchorage. While forward examining the damage after the yacht was anchored, Captain Carter was struck on the head by a shackle or a piece of the broken jaws, which fell from aloft. The extent of his injury was not reported, but he has apparently been sailing the yacht in the following races. The comments of the British press over Vigilant's victory have been remarkably fair and liberal, it being freely conceded that she won on her merits, independent of the accident to her rival.

The race was sailed partly under jibheaders, but Vigilant housed her topmast on the final leg, after Britannia had given up. The amount of sea is not mentioned in any of the reports; and though there was more than in any of the Clyde races, it was kicked up by an offshore wind, and was probably no worse than in the last Cup race with Valkyrie. Vigilant covered the 50-mile course in 4.49.28, or over 10 knots. Dakotah scored her usual victory.

---

The next meeting of the pair was in the regatta of the Royal St. George Y. C., at Kingstown, on July 20, the course being on Dublin Bay, four-sided and similar in shape to that at Bangor Lough. From the starting line a leg of 3½ miles carries the yachts to the Rosebeg Buoy, off Howth Point; then comes a leg of 5 miles about E.S.E. out to sea, to the Kish Lightship, then 5½ miles W.S.W., to the Muglins, off Dalkey Island, and a short leg of 2½ miles N.W., to the line. This course, of 16½ miles, was sailed three times.

There was a light S.W. wind blowing when the two, with clubtopsails aloft, ran out from their anchorage before the start, Mr. Herreshoff steering Vigilant and Mr. Jameson Britannia. The gun was fired at 10:30:00, but Britannia did not cross until 10:32:10, Vigilant being 45s. astern. It was a run to the Rosebeg, spinakers to port, and Britannia soon had hers drawing, Vigilant being a little slower. After a jibe and shifting of spinakers came a sharp luffing match, Vigilant trying to go by to windward, but Britannia stopping her, though both went well off the course. At the Rosebeg they were timed: Britannia 11:11:40. Vigilant 11:12:18.

In the free reach out to the Kish Britannia still led, the times there being: Britannia 11:44:50, Vigilant 11:45:51.

Reaching across to the Muglins, with a very light breeze, Vigilant began to gain, and when, after turning, spinakers were set to port, she was able to blanket Britannia, though never able to force a passage. The round closed with the two about even: Britannia 1:08:06, Vigilant 1:08:26.

On the second round the rain fell heavily and there was little wind; later the breeze came in light and unsteady. Britannia gained throughout the final rounds, the finish being timed: Britannia 4:40:30, Vigilant 4:42:37. Vigilant's allowance to Britannia would make the latter win by something under 4m. corrected time.

---

In the race of Saturday the course and conditions were the same, save that the wind was light N.W. Britannia led over the line by 24s. Vigilant was apparently in better trim than in any previous race, and in the light air passed Britannia on the first leg, gaining steadily, although the wind was very light and paltry, having a lead of 4.22 at the end of the first round. The wind freshened in the second round and Britannia began to gain; then both were hung up by a calm. When the breeze finally came in it was quite fresh and ahead, Vigilant getting the better berth and running away from Britannia, carrying a lead of 1m. 11s. at the end of the second round.

On the first two legs of the third round, with more wind, Vigilant gained until she had a lead of 8m. 45s. at the Kish. The wind fell and left the pair drifting for a long while, Britannia finally catching a breeze inshore and gaining a good deal. With a light breeze, the race finished as follows: Vigilant 6:20:00, Britannia 6:22:39. Vigilant wins by about 1m. 30s. corrected time.

---

Monday, July 23, found the pair at Queenstown for the Royal Munster Y. C regatta, the course being three rounds of an almost equilateral triangle of five miles of the side, with a straight leg of five miles at the end, to finish off the club house at Queenstown. The start was made off Roche's Point, the first mark was a boat anchored off Poor Head, and the second was the Daunt Rock Lightship.

The start was made in a fresh N.W. wind, but it soon headed the two, Vigilant taking in her balloon jibtopsail. Britannia was over the line first but Vigilant ran through her lee, and at Poor Head the times were: Vigilant 11:30:02, Britannia 11:31:33.

On the free reach to Daunt Rock Vigilant gained for a time, but Britannia made up the loss before the turn, the times being much as before: Vigilant 11:55:04, Britannia 11:56:33.

On the windward leg to Roche's Point against the tide Britannia worked the shore, while Vigilant's Irish pilot took her off shore on longer tacks, the result being a handsome gain at the end of the first first round: Vigilant 12:36:06, Britannia 12:39:04.

With the wind now aft Vigilant set her big ballooner, but Britannia had only a large jibtopsail, the result being a further gain for the American; the times at Poor Head being Vigilant 1:00:02, Britannia 1:05:03.

On the run to Daunt Rock Britannia picked up a little, the times being: Vigilant 1:29:30, Britannia 1:32:20.

Again Vigilant gained on the windward leg, the finish of the second round being timed: Vigilant 2:10:55, Britannia 2:16:55.

Vigilant's balloon jibtopsail was again set, but as the wind headed it came in and a smaller one was set, Britannia carrying the same sail over all of this leg, a large jibtopsail. The times at Poor Head were: Vigilant 2:36:11, Britannia 2:43:20.

Both spinakers as jibtopsails were set for the run to Daunt Rock, but the wind fell and the kites were taken in. Vigilant lost the breeze and Britannia came up and passed her at 3.19:00, and had the lead at Daunt Rock: Britannia 3:26:30, Vigilant 3:27:51.

On the beat to Roche's Point, Vigilant made a small gain, the times being: Britannia 3:52:00, Vigilant 3:52:30.

There now followed nearly five miles of windward work to the finish, Britannia still gaining a little. The final times were: Britannia 4:12:55, Vigilant 4:13:40.

Britannia wins by 45s. elapsed and about 2m. corrected time. The race was sailed at an average speed of just under 10 knots.

---

The race of the Royal Cork Y. C. was sailed on Tuesday of the same course, the day being cloudy and rainy, with an N.E. wind, both yachts carrying clubtopsails. Britannia started a little ahead, but this time Vigilant had the weather berth, Vigilant held the lead, although Britannia tried to luff by her, and Poor Head mark was timed: Vigilant 10:53:40, Britannia 10:54:20.

With spinakers set for a light air they ran for Daunt Rock, being timed: Vigilant 11:25:55, Britannia 11:26:47.

With more wind they reached up to Roche's Point mark, Vigilant gaining by a favorable slant, the times at the end of the first round being: Vigilant, 12:02:30; Britannia, 12:04:57.

The reach out to Poor Head showed both boats to be about equal: Vigilant, 12:32:07; Britannia, 12:34.22.

That portion of the race to the next mark, under spinakers, was obscured by a fog, but the following times were taken at Daunt Rock: Vigilant, 1:07:05; Britannia, 1.09:32.

In the close reach which finished the second round, Vigilant began to gain, the times at Roche's Point being: Vigilant 1:36:50, Britannia 1:40:06.

With the wind forward of the port beam, the pair reached for Poor Head mark, where they were timed: Vigilant 2:05:03, Britannia 2:09:25.

Spinakers were once more set for the run to Daunt Rock, where the turn was made in a pour of rain, no times being taken.

Once more they reached for the Roche's Point mark, where they were timed: Vigilant 3:14:25, Britannia 3:18:15.

The final stretch in the harbor followed, the finish being timed: Vigilant 3:51:59, Britannia 3:56:31.

As we go to press a telegram from Glasgow states that Valkyrie will be repaired and ready to race within two weeks, a statement which, from former accounts, seems hardly probable.

Vigilant will race at Penzance on Saturday, at Falmouth on Monday and Plymouth on Wednesday of next week. Valkyrie has been docked, the damage being less than at first reported. Satanita has been repaired, and will meet Vigilant in the coming races at Cowes.

The match between Vigilant and Britannia will be sailed under the following agreement:

We, the undersigned, being respectively the owners of the yachts Britannia and Vigilant, do hereby agree to sail the said yachts over the Queen's course of the Royal Yacht Squadron, Cowes, on Aug. 4, 1894, the owner of the losing yacht to give to the owner of the winning yacht a cup of the value of £100 sterling And we do further agree that the said match shall be sailed under the rules and regulations as to rating, time allowance and all other matters of the Yacht Racing Association, and that both yachts shall be measured with their sailing crews on board, and we do hereby appoint ——— racing master and ——— referee under the said rules and regulations.

---

Elfrida, steel steam yacht owned by Dr. W. Seward Webb, went ashore on Colchester Reef, Lake Champlain, on the night of July 20, when on her way from Burlington, Vt., to Plattsburg, N. Y., with five friends of Mr. Webb. There was a very strong south wind and a heavy sea running, and the yacht struck heavily in 7ft. of water.

## Speed in International Races.

AN industrious statistician has prepared for the New York *Evening Post* the following table of the average speeds in some of the most important races of the Cup challengers and defenders. From the times given it will be seen that the rate of sailing in the recent Clyde races, which have been so completely repudiated by Americans, is not only higher than in the Cup races over the old inside course of the New York Y. C., but even higher than in the various races outside of Sandy Hook.

| Course. | | Time. | Average Speed of Winner. |
|---|---|---|---|
| | 1885. | | |
| 38 miles, inside | Puritan | 6 05 05 | 6.23 |
| | Genesta | 6 22 52 | |
| 40 miles, outside | Puritan | 5 03 14 | 7.92 |
| | Genesta | 5 05 22 | |
| | 1886. | | |
| 38 miles, inside | Mayflower | 5 26 41 | 7.00 |
| | Galatea | 5 39 21 | |
| 40 miles, outside | Mayflower | 6 49 00 | 5.85 |
| | Galatea | 7 18 47 | |
| | 1887. | | |
| 38 miles, inside | Volunteer | 4 53 18 | 7.75 |
| | Thistle | 5 12 47 | |
| 40 miles, outside | Volunteer | 5 42 56 | 7.02 |
| | Thistle | 5 54 51 | |
| | 1893. | | |
| 30 miles, outside | Vigilant | 4 05 47 | 7.32 |
| | Valkyrie | 4 13 23 | |
| 30 miles, outside | Vigilant | 3 25 01 | 8.80 |
| | Valkyrie | 3 27 24 | |
| 30 miles, outside | Vigilant | 3 24 39 | 8.82 |
| | Valkyrie | 3 26 52 | |
| | 1894. | | |
| 50 miles, inside | Britannia | 5 58 10 | 8.37 |
| | Vigilant | 5 58 45 | |
| 50 miles, inside | Britannia | 5 48 14 | 8.62 |
| | Vigilant | 5 49 19 | |
| 25 miles, inside | Britannia | 7 04 00 | 3.54 |
| | Vigilant | 7 13 30 | |
| 50 miles, inside | Britannia | 7 45 00 | 6.45 |
| | Vigilant | 7 50 52 | |
| 50 miles, inside | Britannia | 8 09 58 | 6.00 |
| | Vigilant | 8 31 19 | |
| 50 miles, inside | Britannia | 5 28 00 | 9.14 |
| | Vigilant | 5 30 10 | |
| 50 miles, inside | Britannia | 6 29 50 | 7.90 |
| | Vigilant | 6 31 15 | |
| 50 miles, inside | Vigilant | 6 20 00 | 7.91 |
| | Britannia | .. .. .. | |
| 50 miles, inside | Britannia | 6 12 38 | 8.06 |
| | Vigilant | 6 14 32 | |

## Hull Corinthian Y. C. Championship Race.

HULL, MASS.

*Saturday, July 14.*

THE course sailed was No. 6, across line to H. Y. C. buoy, off Harries rocks, leaving it on port, to H.Y.C. buoy, off Bumpkin Island, leaving it on port, to and across line and repeat; distance 6 miles. Wind very light from S.E., dead calm at 4, light S at 5:10; tide running in:

| | Length. | Start. | Turn. | Finish. | Elapsed. |
|---|---|---|---|---|---|
| FIRST CLASS. | | | | | |
| Eureka | 20.06 | 3 10 00 | 3 54 05 | 5 41 30 | 2 31 30 |
| THIRD CLASS. | | | | | |
| Hagedorn | 22.11 | 3 20 00 | 4 09 28 | 5 54 23 | 2 34 23 |
| Onaway | 22.11 | 2 20 00 | 4 12 58 | 6 04 40 | 2 44 40 |
| FOURTH CLASS. | | | | | |
| In It | | 3 25 00 | 4 15 13 | 6 22 36 | 2 57 36 |
| Mirage | | 3 25 00 | 4 17 21 | Did not finish. | |
| Gwendoline | | 3 35 00 | 4 30 58 | Did not finish. | |
| Ida | | 3 25 00 | 4 30 53 | Did not finish. | |
| Tenie | | 3 25 00 | 4 39 41 | Did not finish. | |
| FIFTH CLASS. | | | | | |
| Phyllis | | 3 30 00 | .. .. .. | 5 46 13 | 3 16 13 |
| D | | 3 30 00 | .. .. .. | Did not finish. | |
| Lark | | 3 30 00 | .. .. .. | Did not finish. | |

Eureka wins leg in championship; Hagedorn first in third class; In It first in fourth class; Phyllis first in fifth class.

There were second and third prizes in cash offered, but the wind was so light that only one boat in each class finished within time limit, except in third class, and as only two started there was no second prize.

Regatta committee: H. O. Stetson, H. P. Cook, R. W. Bird, W. A. Ruddick, R. McIntire. Judges: H. O. Stetson, H. P. Cook, E. R. Field.

## New York Y. C. Cruise.

FLEET CAPTAIN F. H. ROBINSON, by order of Vice-Com. E. M. Brown, has issued the following general order for the annual cruise of the New York Y. C.

FLAGSHIP SHEARWATER, N. Y. Y. C., July 17, 1894.

GENERAL ORDER NO. 3.

The squadron will rendezvous at Glen Cove Harbor on Monday, Aug. 6.

On the same day a race will be sailed for the Semi-Centennial Cups, start being made at 11:30 A. M.

The programme for the cruise, weather permitting, will be as follows:

Tuesday, Aug. 7, Glen Cove to Morris Cove.
Wednesday, Aug. 8, Morris Cove to New London.
Thursday, Aug. 9, New London to Newport.
Friday, Aug. 10, race at Newport for the Goelet cups.
Saturday, Aug. 11, Newport to Vineyard Haven.
Sunday, Aug. 12, the fleet will remain at anchor.
Monday, Aug. 13, Vineyard Haven to New Bedford.
Tuesday, Aug. 14, New Bedford to Newport.

During the cruise there will be the usual races for the owl and game cock colors, and a race for naphtha launches.

The regatta committee will furnish details for the runs from port to port and other racing events. By order of the vice-commodore.

F. T. ROBINSON, Fleet Captain.

At a meeting on July 19, the following new members were elected: T. L. Johnson, A. J. Moxham, Chas. F. Adee, Chas. T. Garland, Allison V. Armour, John A. Rodgers, Lieutenant U. S. N.; James Ross, Albert J. Myer, Henry C. Rouse, John Markie, R. R. Wallace, Captain U.S.N.; Francis J. Crilly, Frank S. Miller, Jefferson M. Levy, F. Marion Crawford, H. T. Noyes, John M. Sneden, Geo. S. Payson, Jarvis B. Edson, N. L. McCready, Chas. Mallory and A. J. Cassatt.

## Fair Play for an American Yachtsman.

*From the Boston Herald.*

A "STRAW" member of the New York Yacht Club is reported as saying that the Goulds are making monkeys of themselves in Great Britain, and that they are now very unpopular with the New York club members.

Now, what have the Goulds done? Simply bought the Vigilant from a syndicate whose members did not have sporting blood enough to give Lord Dunraven a race on this side, when they well knew that the Valkyrie was left over here with the express purpose in view of racing the Vigilant and all comers. Not only this, George Gould cabled Lord Dunraven that he would race him on this side, but the owner of the Valkyrie then had his crew over here for the purpose of taking his boat back.

The Goulds have gone to greater expense than any Americans ever went to in taking the Vigilant across. In the first place, there is her great crew, with $5 apiece for every race the boat loses and $10 when she wins. Capt. Haff gets a big salary, so does Herreshoff and Sailmaker Wilson. Added to this are the expenses of the Atalanta and crew, the hauling out, cost of new sails, rigging, etc., so that the Vigilant's owners will have to spend many, many thousands of dollars before the yacht gets home.

According to the *Herald's* Scottish correspondent, Mr. George Gould is the best liked American yachtsman that ever visited the Clyde, because of his simple tastes and cordial manner.

Surely no cup defender ever had a better combination than is now on the Vigilant. Mr. Gould has not beaten sailors nor otherwise made himself ridiculous, and the sooner the "straw men," non-yacht owners of the New York Y. C. cease talking the better it will be for the club.

Those who think George Gould will toady to any one do not know the young man. He is not built that way. He is an out and out American all the time. Not one word of complaint or excuse has come from his lips concerning the many defeats of his boat, and he is showing himself to be a level headed-sportsman. The Vigilant is in new hands, and Capt. Haff knows even now but little about her. The Navahoe when she went across was also untried, but her trip was an eye-opener, and it gave American yacht designers much data to work on.

The idea that Capt. Haff and Nat Herreshoff are not doing their best to win is simply ridiculous.

The head of the Bristol firm is out again in an interview that the Vigilant was not built to race in British waters. How about the Navahoe, the cruiser, which was oversparred and overpowered, even for a cruiser? So far as the Vigilant's races thus far are concerned, they take on more of American than they do of British Channel weather, and still she has not the record over the Britannia. A fast boat is fast generally in almost any water and it's a lame position to take any other view. About the Vigilant being the fastest boat afloat in her class in strong wind and sea, as claimed by Mr. Herreshoff, the facts show the contrary, for she has shown herself to be inferior to the Jubilee in just these conditions. Mr. Herreshoff and others had better wait until the racing is all through with, for possibly then it may be agreed on that she was just the boat to send across.

Backcapping a patriotic American, who is conducting himself with the greatest propriety, is hardly the thing for any member of the New York Club to do. No one of them has dared to do what Mr. Gould is doing and, besides, he has not seventy men for a crew on board. The American people want the Vigilant to win and the Goulds have their best wishes.

# Canoeing.

## FIXTURES.

JULY.

13-28. A. C. A. Meet, Croton Point.

AUGUST.

4-11. Owanux Meet, Woodmont, Ct

SEPTEMBER.

3. Holyoke, Ann., Holyoke, Mass.
3-5. Passaic River Meet.
5. Ianthe, An., Passaic River.
15. Red Dragon, Fall Regatta, Delaware River.

## WESTERN CANOE ASSOCIATION.

### Tenth Annual Meet.

PICNIC POINT, MADISON, WIS., JULY 7-21.

THERE is no prettier spot in the country than that selected by the W. C. A. for their camp this year. It seems as if nature had intended it for a canoe camp, having the needs of the Association in view. The point extends out for a half mile into Lake Mendota, the largest of the four lakes which have made Madison famed for its beauty. The point in shape is a great deal like a man's thumb. The outer portion, which is occupied by the camp, is from 75 to 100yds. wide. Along this on two sides of a broad avenue the tents extend. As usual, the Commodore and Chicago head the line, with the mess tent as a very substantial base.

From camp the city, a mile away, presents a beautiful picture at which one is never weary of gazing. All the camp arrangements are perfect. A steamer runs regularly between the city and camp, making it easy of access. Then it is an easy sail across the bay.

The '94 camp is one of the most successful ever held by the W. C. A. in every way. For the first time in many years the races have been for blood, and not won in an encounter by some canoe predestined from the beginning. In the B class of canoes there is a large and energetic "push." The Mahn-a-wauks, of Milwaukee, brought out five speedy boats headed by Milwaukee, which took the trophy at Ballast Island last year. Com. Quaw has a new boat, Imperia, which is something of a novelty in design and construction. Just what the boat will do has not been ascertained, as he has been unfortunate in break downs, something giving way each time he has been out. F. W. Dickens, in Anita, has a new canoe on winning lines, but failed to get a good place, owing to the fact that the canoe had not been tuned up to racing pitch in advance of the meet. F. B. Huntington has the old Dixie, remodelled, and with 195ft. of muslin up, but the canoe does not seem to have been improved by the changes. The Tay-cho-pe-rah C. C., of Madison, the infant organization of the Association, has two good canoes sailed by Stanley Hanks and Porter. Nance showed herself a speedy boat yet by taking the Gardner Cup. Besides these new boats there is Com. Woodruff's Wood, which has proved herself as good as the best; Nat Cook's Lotus, N. B. Cook's Carrier Pigeon, still, as in year's past, one of the handsomest and fleetest boats in camp, and Harry Cook's Class A canoe, which in Harry's hands has proved herself a dangerous foe to the bigger fellows.

The attendance in camp was somewhat affected by the strikes, which prevented canoeists from coming; but in spite of this drawback the camp is quite strong in numbers, as the two long rows of tents extending down Stevens avenue testify. This name has been given to the camp street in honor of Mr. Stevens, the owner of the point, who very kindly offered it for the use of the Association and has in many ways put the canoeists under obligations for his courtesies.

Around the camp-fire at night there are all the old familiar faces, with few exceptions, while there are many new ones. Madison and Milwaukee turned out strong in numbers. These two clubs, with Chicago, practically make up the camp. Cincinnati, of course, would not come, preferring to be lonesome at Ballast. At the last moment Detroit and Jackson, Mich., backed out, leaving the representation from east of Chicago to consist of Commodore Woodruff and Crawford, of Dayton, O.

But in spite of everything the camp is one of the best ever held by the W. C. A. The camp arrangements leave nothing to complain of, the mess is perfect, while the 151ft. of dock filled with canoes shows that those who are in camp are active and not passive canoeists.

The races, with the exception of the two heats for the Longworth cup, have been the finest seen anywhere. The sailing in the first heat of the Gardner and the first of the Trophy cup was such as to set the blood of any canoeist tingling down to the tips of his fingers. It was a sight of a lifetime. All the heats, in fact, of both cup races were for blood; there was no necessity for trying to come in second by anybody. On the contrary, it was a struggle by each one to see that he did not come in last.

In the Longworth cup race the heats were perfunctory affairs for obvious reasons. All the racing men are going into the B Class, as this is a racing machine pure and simple. Hence it was found hard to fill out the Longworth cup race, and it was well understood that, barring accidents, Nat Cook would take the cup, as he had done in the former years.

The races should have been started on Tuesday, but owing to the heavy winds blowing it was Wednesday afternoon before any event could be called, and then the first heat of the Longworth cup was sailed in half a gale. It was won by Nat Cook, whose superb seamanship was shown in carrying full sail in spite of the wind blowing.

On Thursday the wind blew a gale all day, but at sundown died away to a light sailing breeze, and in this the first heat of the Trophy was sailed. It was won by E. H. Holmes, in Milwaukee. Friday the first heat of the Gardner and the second heat of the Trophy were sailed in a rattling whole sail breeze which tested the fittings of the canoes and the seamanship of their captains to a high degree. There was a big field of entries in both races, and it was worth traveling many miles to witness either of these races. Putting both together, there was not a canoeist who did not say to himself that this spectacle alone was worth the trouble of getting here.

Holmes took the Trophy and Hanks, of Madison, the Gardner cup. The only races left to finish are the sail and paddle and hurry scurry. These will be gotten off Monday. The remainder of the meet will be given over to social pleasures. Tuesday and Wednesday there will be a water carnival, and later in the week will probably come a hop. Between will be social courtesies extended by Mr. Stevens and other citizens of Madison to the canoeists. GEO. P. MATHES.

### Story of the Races.

*Tuesday, July 10.*

The gun called out the boats for the first race of the meet, the passenger race, free for all, 3 miles. There were eight entries, as follows:

Milwaukee, E. H. Holmes Capt., Charles Rogers crew, Mahn-a-wauk C. C., Milwaukee.

Hoodoo, J. F. Turrill Capt., H. B. Cook crew, Kenwood C. C., Chicago.

Dorothy, Fred. Dickens Capt., A. W. Friese crew, Mahn-a-wauk C. C.

Lotus, Nat. H. Cook Capt., A. W. Kitchen crew, Kenwood C. C.

Imperia, W. H. Quaw Capt., Robert M. Lamp crew, Mahn-a-wauk C. C.

Em Ess, L. F. Porter Capt., Roy Main crew, Tay-cho-pe-rah C. C., Madison.

Nancy, S. C. Hanks Capt., C. B. Chapman crew, Tay-cho-pe-rah C. C.

Bon Ami, Harry H. Curtis Capt., Charles Mayers crew, Tay-cho-pe-rah C. C.

The boats finished in the order named above. Hoodoo was first to cross the line, but soon Milwaukee, whose reputation as a good one is firmly established, drew ahead and won with ease; time, 46m.

*Wednesday, July 11.*

The first heat of the Longworth cup race was started at 3:17 P. M. The starters were: Lotus, N. H. Cook, Kenwood C. C., Chicago; Hoodoo, J. F. Turrill, Kenwood C. C.; Dorothy, Charles Rogers, Mahn-a-wauk C. C., Milwaukee; Bon Ami, R. M. Lamp, Tay-cho-pe-rah C. C., Madison; Sun Mayde, W. H. Quaw, Mahn-a-wauk C. C.

There was a brisk, puffy wind from the west. Dorothy capsized at the first buoy and her skipper was unable to right his boat. He was picked up and towed to camp by a Madison yacht. Hoodoo lost her sliding seat and withdrew at the first buoy. Bon Ami withdrew at the third buoy. Lotus, Nat. Cook, was an easy winner, finishing in 49m., coming in 14m. ahead of Sun Mayde.

*Thursday, July 12.*

The lake had become nearly calm then after a rough sea all day, when the first heat of theT rophy cup race was started at 7:20 in a very light southwest beeeze. There were eleven starters:

Milwaukee, E. H. Holmes; Anita, F. W. Dickens; Dixie, F. B. Huntington; Glenwood, A. W. Friese; Imperia, W. H. Quaw; Psyche, H. B. Cook; Wood, O. A. Woodruff; Bon Ami, C. A. Mayers; Viking, R. M. Lamp; Nancy, S. C. Hanks; Em Ess, L. F. Porter.

Milwaukee won in 58m. and 50s.; Glenwood was second, 6m. and 40s. astern of Milwaukee; Nancy was third, 7m. and 40s. astern of the winner; Imperia was fourth after a poor start 4m. and 30s. behind the first boat. As the fifth boat, Psyche, rounded the last stake a squall struck the lake which brought the remaining canoes in at a tremendous pace, making a spectacular finish. The winning canoe, Milwaukee, carries 190sq. ft. of sail.

*Friday, July 13.*

The first heat of the Gardner cup race was begun at 10:30 A. M. in a strong breeze from the northwest. There were six entries:

Em Ess, L. F. Porter; Lotus, Nat H. Cook; Wood, O. H. Woodruff; Glenwood, A. W. Friese; Carolyn, H. B. Cook; Nancy, S. C. Hanks.

The heat was won by Lotus in 50m. 19s.; Nancy was second, 1m. and 19s. later, and Em Ess third.

The next race was the second heat of the Longworth cup race, the first heat of which was won easily Wednesday by Nat H. Cook, who has held the cup the past three years, and who won handily yesterday. This is the sixth year the cup has been sailed for; the person who wins it the largest number of times in ten years will hold it permanently. There were but two entries:

Lotus, Nat H. Cook; Sun Mayde, W. H. Quaw.

The breeze was more puffy than that which blew during the first race; Mr. Cook finished in 51m. and 25¼s.

The breeze had become almost ideal by the time the second heat of the Trophy cup race was called. The wind was steady and strong from the northwest. The heat was started at 2:17 P. M., there being six entries:

Imperia, W. H. Quaw; Wood, O. A. Woodruff; Anita, F. W. Dickens; Milwaukee, E. H. Holmes; Nancy, S. C. Hanks; Glenwood, A. W. Friese.

The race was won by Milwaukee, who won the first heat of the race Thursday evening. Mr. Holmes thus holds the Trophy cup for the ensuing year. His time yesterday over the course of nearly four miles was 41m. and 10s.; O. A. Woodruff, canoe Wood, was second, finishing in 42m. and 43s.; A. W. Friese, Glenwood, was third; S. C. Hanks, Nancy, fourth.

*Saturday, July 14.*

Stanley C. Hanks, of the Tay-cho-pe-rah Canoe Club, of Madison, covered himself with glory to-day. He won the class 3 paddling race, which was, by the way, as pretty a contest as one could wish to see, and also won the final heat of the Gardner cup race, and Nat Cook, winner of first heat, being ineligible, Hanks was decided to be the holder of the cup for the ensuing year.

Class 3 paddling race was started at 4:47:27. There were five starters, as follows: Nat H. Cook, W. H. Quaw, S. C. Hanks, H. M. Curtiss and H. B. Cook. Stanley C. Hanks won the race in 4m. 55s. over the half mile course, coming in but about 6in. ahead of Nat Cook. H. B. Cook finished a fractional length behind Nat Cook, his brother; Curtiss fourth, Quaw last.

Class 4, paddling race, was called at 5:30 o'clock. There were the following three starters: F. W. Dickens, A. W. Friese, L. F. Porter. A. W. Friese won; time 5m. 21s., Dickens second, Porter third. H. B. Cook paddled the race and came in several lengths ahead, but was ruled out on account of his boat not being of the proper dimensions. He was allowed the race by later action.

It was nearly sundown when the second and final heat of the Gardner cup race was begun. There were seven entries. The wind was very variable, blowing at a good rate at the start, but dying down till the lake was nearly calm at the finish. The first time round the course the canoes came in nicely bunched, much to the delight of the many spectators. E W. Holmes, canoe Milwaukee, finished first, Nat H. Cook in canoe Lotus second, and Stanley C. Hanks, canoe Nancy, third. Both Mr. Holmes and Mr. Cook, having won cups in other races, were ineligible, and Mr. Hanks was declared winner.

*Monday, July 16.*

Two races were run off to-day, the sailing and paddling race and the cruising canoe race. The first race was a contest of great interest. There were four starters, as follows: H. B. Cook, Carolyn; R. M. Lamp, Viking; A.W. Friese, Glenwood; Com. O. A. Woodruff, Wood. Com. Woodruff won the race in 32m 20s., Cook second, Friese third and Lamp last. The canoes were sailed over the first leg of the 1½-mile triangular course, paddled over the second and sailed over the last.

In the race for cruising canoes the starters were: C. M. Mayers, Bon Ami; R. M. Lamp, Viking; G. P. Mathes, Lotus; all of the Tay-cho-pe-rah Canoe Club of Madison. Mr. Mathes withdrew. Mayers won from Lamp.

W. P. Crawford of Dayton, O., was one of the late but popular arrivals in camp. Charles Rogers of Milwaukee left for home yesterday. F. B. Huntington left on business yesterday but promised to return Wednesday. A. W. Kitchen and wife of Chicago returned home Sunday.

### Soiree de Canoe.

Among those who arrived Friday night and Saturday were Charles Fogelberg, C. O. Shepherd, Adam Mayer, Guy Gregg and Charles Olney, of Milwaukee; W. L. Benham, of Bay City, Michigan; P. F. Munger and J. Herbert Ware and wife, of Chicago.

There were merry times at the camp this evening, the occasion being a reception to Mr. B. J. Stevens, who so gracefully allowed the association the use of the grounds. Mr. Stevens and his family and two steamer loads of Madison's best people were present, besides the canoeists, their wives, daughters and lady friends.

A huge camp fire burned throughout the night and about it the company gathered and listened to stories and music. The minstrels who have been operating a bag-pipe and an accordeon about Madison streets the past few days were there generous in their services. Several University students also discoursed charming music on mandolins and guitars. Refreshments were served in the dining hall. Red fire and the booming of the association cannon added features to the evening. Saturday night is distinctly association night in camp. At Squaw Point, the Chi Psi Lodge, where the wives and daughters of the canoeists are staying, there were also merry times after the crowd who had been guests at the reception had returned to the city.

### The Records.

Late in the third week the consolation and the hurry-scurry, both unimportant events, had not been run off, but the records of the meet stand as follows:

Race 1, paddling, ½ mile—Class 3.—Won by Stanley C. Hanks, Tay-cho-pe-rah Club, of Madison, time 4m. 53s.

Race 2, paddling, ½ mile—Class 4 (record event).—Won by H. B. Cook, canoe Carolyn, Kenwood C. C., time 5m. 21s.

Race 4, sailing and paddling, 1½ miles; sail first third, paddle second, finish under sail (record event).—Won by Com. O. A. Woodruff, canoe Wood, Ruckawa C. C., Dayton, O., time 32m. 28s.

Race 5, sailing for Gardner cup, free for all classes, best two heats in three, each heat to be two turns of the course, or 3 miles (record event for A and B).—Won by Stanley C. Hanks, canoe Nancy, Tay-cho-pe-rah C. C., Madison, Wis., time final and winning heat 1h. 06m. 45s.

Race 6, sailing for W. C. A. trophy—Classes A and B, best two heats in three, each heat to be two turns of the course, or 3 miles (record event).—Won by E H. Holmes, sailing H. B. Huntington's canoe Milwaukee, Nish-a-wauk C. C., Milwaukee, Wis., in two heats; time, first heat, 51m. 48s.; second heat 41m. 10s.

Race 7, sailing for Longworth cup—Class C, best two heats in three, each heat to be two turns of the course, or 3 miles.—Won by Nat Cook, canoe Lotus, time, first heat, 53m.; second heat, 51m. 25¼s.

Race 8, cruising canoes only, 1½ miles.—Won by C. M. Mayers, canoe Bon Ami, Tay-cho-pe-rah C. C., Madison, Wis., time 48m. 35s.

Race 9, sailing, passenger race, free tor all classes, 3 miles.—Won by E. H. Holmes, canoe Milwaukee, Chas. Rogers crew, time 46m.

The W. C. A. Record for points for 1894 is as follows: A. W. Friese, 4 events, 140; H. B. Cook, 3 events, 110; O. A. Woodruff, 3 events, 90; L. F. Porter, 3 events, 80; S. C. Hanks, 2 events, 70.

## The Business Meeting.

The Association did a graceful and judicious act when, at the executive session on the evening of July 18, it elected the venerable canoeist Mr. N. D. Cook its Commodore for the ensuing year. Mr. Cook is a member of Kenwood C. C., of Chicago, and has been a regular attendant of the W. C. A. meets from their inception and a winner of the most considerable sailing honors. A veteran in honors and experience as in years, Mr. Cook adds to that the respect and confidence of all who know him, so that his success in the office assures itself. Mr. Cook is 72 years of age, and the country has few if any active canoeists of greater age.

A useful and valuable adjutant for the new commodore is Vice-Com. L. F. Porter, of Tay-cho-pe-rah C. C., Madison, Wis. Mr. Porter is of virile and energetic type, and of the sort well to keep in mind in choosing leaders and executive men. Mr. H. D. Spencer, Rear-Commodore, is of Bloomington, Ill., a cheerful enthusiast of the right sort, and Mr. F. W. Dickens, of the Milwaukee Mahn-a-wauks, is already too well known in the Association to need further comment. The executive committee is distinctively Western, Mr. F. B. Huntington of Milwaukee, Mr. W. H. Yardley of St. Paul, and Mr. Robt. Lamp of Madison. These bring to their calling an earnestness and enthusiasm which should guarantee a successful meet for '95. It is practically a certainty that Madison will again be selected as the meeting place. It has many advantages, but the Association should no more wish to make Madison a permanent camping spot than Ballast Island, and the Madison boys should be the last to insist on their town for even another year. One does not sail a craft always on one course, nor can an association arrive at its best end by insistence on one policy, one set of men, one town, one anything. This is a great country, this West, and the Association needs every club now organized and needs to call into organization many more. A trip west of the Mississippi would not harm the W. C. A. A sagging and sinking and settling into house tents at Ballast, Madison or anywhere else, will kill this or any other association of the sort.

Chicago seems to be a central and desirable point for the midwinter meeting and banquet, and it is likely that this will be a practical fixture there, the same objections not obtaining in this matter as in that of the active meet. As it would entail injustice on the Chicago club to entertain the association every year, a wise motion prevailed to arrange the annual banquet on a per capita basis.

Another bit of meritorious courtesy was the rendering of a vote of thanks by the association to the retiring Commodore, O. A. Woodruff, of Rockwood C. C., Dayton, O. Mr. Woodruff is entirely the right sort for an executive officer, as the great smoothness and success of the present meet alone would testify. He has shown the greatest reserve and tact in a situation which certainly needed abundance of such qualities. The commodore in charge of a canoe camp can easily be too puritanical and stiff, and can as easily fall into the even worse extreme of a license which would destroy alike the peace and comfort of the camp and the dignity and gentlemanly reputation of the association. That Com. Woodruff had shown himself at once broad and firm was well evidenced by the unusual ratification so cheerfully offered him.

The compliments of the association were also paid to Mr. Breese J. Stevens, owner of the camp grounds, and to the Tay-cho-pe-rah local men, who have done all possible to aid in the success of the assembly here. Nothing further was done officially, but it is probable that a change of rules will be offered the executive committee, and uniting the standing rig on equal footing for the sailing races.

## Special Features.

The lawn fête of Tuesday evening, July 17, held by the ladies of St. James Guild, city of Madison, on the beautiful grounds of Mr. Raymer, near the University gymnasium and boat house, was attended by the canoeists in a body and the latter fairly took possession. The start was made from the camp after dark, and the fleet went in line of battle, flying handsome decorations of lighted Japanese lanterns and displaying copious red fire and Roman candles, to say nothing of the association cannon, which woke fine echoes on the wooded hills back of the bay.

The meet ball of Thursday evening, July 19, was by the courtesy of the University, held in Library Hall, and established itself as an event to be rated not second to any hunt ball in picturesque and striking features. Madison society returned the compliments of the canoe boys, and patronized their formal entertainment numerously and cordially.

Of course the sweet do-nothing of the camp was open to visitors at all proper seasons, and camp-fires and tent parties were in due course. The pretty capital city of Wisconsin was much in a flutter over the fetching ways of its first canoe camp, and the *entente cordiale* may be said to have been perfectly established. Madison liked the boys, and the boys liked Madison.

## Summing Up.

A fair review of the situation for the year current can only leave a conclusion highly flattering to the Western arm of the canoe cult. Com. Woodruff should feel that his earnest work has been well rewarded by the event now in chronicle, and the Association should also feel that the proper forces are in train for the steady and sure growth of a good body of active canoeists whose record is already an enviable one of progress and success. The W. C. A. is not large enough, but it bids fair to be larger, and to be as coherent as any body of the sort can be under the loose-knit limitations of its existence. Above all, it should look after new material, and not sag down into a group of ease-loving summer campers. Perhaps after a while we may have a meet without a board tent floor in the camp. I believe that would be the best move the Association could make. There would then be a comradeship of the woods under which dissensions and differences could not exist, and after a woods meet the Association, such as it would then be cut down to be, would come out a clean, strong body, virile and active and single-minded. So long as the Association hangs on the skirt of civilization it will be hampered and tied to a thousand apron strings of indecisiveness and shilly-shallying. A plunge into pine woods and mosquitoes, with a side camp for the wives and chaperones, will do this Association more good right now than any other one thing it can do.

Compared to Ballast Island, the site of this year has certainly nothing to fear, and it has many advantages over Ballast. To send the Association to Ballast would be to hang a millstone about its neck. It may be a similar mistake to bring it here again. It would be worse to send it to Oshkosh again. Compared to the meet of last year at Ballast, this year's meet is Hyperion to a satyr. It is also far and away superior to the Oshkosh meet. The Association may therefore confidently report progress. There can exist no reasonable doubt that it will report equal progress the coming year. It would be pleasing if one could then write the story of a meet at the great chain of lakes at Park Rapids, in upper Minnesota, or at the Detroit lakes of Minnesota, or at some of the wilder lakes, say of the Manitowish chain of Wisconsin. This is hardly likely, but none the less to be wished.

## Thank You.

FOREST AND STREAM should thank Mr. Geo. P. Mathes, an experienced and able handler of news and pencil, for able assistance offered in the absence of its staff representative during the earlier days of the meet. Mr. Mathes is a Mahn-a-wauk, of Milwaukee. In the past he was long on the city press of that burg, but when Geo. W. Peck was elected Governor of Wisconsin he chose Mr. Mathes as his private secretary, which position he has ably filled at Madison since then, making many friends in many circles. To Mr. Raymer, of the Madison *Democrat*, this paper is also indebted for courtesies and assistance. The FOREST AND STREAM representative could not get on the ground until the beginning of the third week of the meet.

## Missed Stays, Probably.

*Commodore Woodruff.*—While I am on the whole satisfied with the meet, I can not commend the weather. This is not my fault. No commodore should be held responsible for the weather.

*Commodore N. D. Cook.*—It blew some Thursday when squall was on, but I was not much uneasy over my son Harry when he went out after Huntington. I supposed Harry could get along all right.

*Harry Cook.*—If you want to go out in a cold rain don't get ready for it by falling overboard for fun. Rain is colder than water.

*Grandpa Huntington.*—There came mighty near being a vacant chair in canoe.

*Johnnie Turrill.*—I can recommend the *decollette* in certain uses, but I find that for an hour's run in a white squall a sleeveless garment is strictly no good.

*Bobbie Lamp.*—Did you see me out on the bay? I was right in it.

*H. D. Spencer.*—It is said that on the run under bare poles yesterday I took off my shoes to get ready to swim when she went over. I merely wanted something to bail with.

W. C. A. CAMP AT PICNIC POINT, LAKE MENDOTA, MADISON, WISCONSIN.

*George P. Mathes.*—The name of my boat is Sun Mayde. Some folk say I can't spell "maid" very well, but I notice Mr. Chaucer spelled it that way, and look at the reputation he has.

*Fred Mayers.*—I am pretty tall, but I give you my word I never touched bottom when I let my legs down, the time I was riding the bottom of my boat, out in the storm. Anybody who wants to find how deep it is had better take a fishline.

*D. H. Crane.*—The Picnic Point is the prettiest place in the world for a canoe meet, but its name is a sure hoodoo. It makes you think of stationary tables in a grove, and kegs of beer and a German band. There ought to be an act of Legislature to change that name to something decent.

*E. H. Holmes.*—Pongee sails at $55 a set come a little high when you get 'em soaked full of water, ink and green grass stain. That's the way mine got fixed in the storm.

*Frank, the Camp Man.*—My! my! but dot was an offul time. Dose young shentlemens seem to haf blenty of efferyding but clothes. In der morning dey gome all ofer dot Mitvay mit payjamuses und dot sort of untervear on, and joomp 'em all in der lake. Dere aint no fit to deir bants below der knees, und no buttons on deir shirts, und I believe me dere aind a bair of susbenders in der whole shooding madch.

*The W. C. A. Ladies.*—Next year we want the Chi Psi Club house to live in again, but we want it moved over across the bay to the Point There is no telling what our husbands do when we are away.

*The Ice Box.*—If you will notice me closely you will observe that under my lid I carry the answer to one of the gravest questions as to the success and unity of the Association. It is myself that pulls people out of bed and raises bedlam in the small hours. Some folks say that don't go, and some say everything goes. I've got it, in the lid. What'll you have—I mean, which will you take? Perhaps I may go easier from year to year now. There's no use in giving a poor ice box a hot hinge.

*The Weather.*—I wasn't half trying this year, but I trust you all can see what I could do if I wanted to.

*The Lake Perch.*—Go away now and give me a rest. I've been too cheerful with you fellows.

*The City of Madison.*—Come again, you sweet things!

909 SECURITY BUILDING, Chicago. E. HOUGH.

## Disastrous Storm—Narrow Escape of W. C. A. Men.

*Later, July 20.*—David H. Crane's staunch new boat, built on the FOREST AND STREAM Scarecrow lines, and the perfect seamanship of her temporary captain, Harry Cook, saved the lives of four W. C. A. men yesterday evening. The steamer Satirio, Capt. Bert Ainsworth, saved another man for the W. C. A. Yet another was saved only by his own skill and strength as a waterman, being picked up helpless at last. This morning the W. C. A. camp is in ruins. Every tent was wrecked and drenched. Hardly a dry thread can be found, and everything is in confusion. Yet there is much handshaking, and every man is saying to his neighbor that the W. C. A. is the luckiest lot of canoemen on the face of the earth this morning. Had fortune been a whit less favorable, there would be mourning in this camp to-day, and the W. C. A. would be at the end of its active history.

There had been two days of exceedingly hot, close weather, with not a breath of air, the thermometer at Madison going as high as 103° in the shade. The sudden and violent storm which broke the hot term is said to have been the hardest known here in thirty-five years. It is good fortune indeed that there is no loss of life to chronicle. The result shows, first, the unfitness of the racing machine for any but the safest airs, and next the value of the ready seamanship the racing shell teaches and brings out. Let one offset the other, but hereafter let us hope for a turtleback ship like Dave Crane's at every meet, to pick up the capsized skippers of the lesser craft.

IT WAS THE CONSOLATION RACE.

The committee had called out the boats for the consolation race, Mr. Fred. Dickens and Mr. F. W. Huntington (otherwise known as "Grandpa" Huntington, because he is the youngest married member of the W. C. A.), were the only entries for this, Mr. Robert Lamp of Madison sailing in with them for company. The boats were out waiting for the starting gun when George Mathes and the writer took a paddling canoe and went over to the city—on business. At that time the wind was very light, though in the southwest the clouds were black and threatening. Mathes and myself were caught by the storm in town, and though the rain and wind were violent there, breaking trees and flooding the streets, we had no idea of the actual violence of the storm on the lake. After the lull we paddled again across the bay, about a mile and a half. At that time there was not a sail to be seen, and we supposed the boys had all gone in before the squall broke. As we reached the dock we saw the camp was wrecked. Hardly a tent was up, and great oaks and elms were blown down across the seemly "Midway," as though a cyclone had passed through. We were informed that four men were still missing on the lake. A long and anxious wait followed before at length the steamer Satirio appeared, bearing the missing men, Messrs. Huntington, Harry Cook, Turrill and Spencer. As she rolled toward the dock there was cheering and waving of hands, and rejoicing in plenty when the castaways came ashore. The steamer again put out, and before dark again made port, towing Mr. Crane's boat and the waterlogged Dixie, Huntington's boat, which was not visible above the water when the steamer was under way.

HOW IT HATPENED.

The story of the mishaps, as gathered from the participants and spectators, runs as follows. All three of the boats above mentioned were sailing the course in the consolation race under a whole-sail breeze, when all at once the squall broke, driving them off from the point where the camp is laid. Bobbie Lamp was the first to go over, but drifted in close enough to be pulled out, pretty well exhausted. Dickens went over three times and three times righted her and went ahead on the race. He never quite finished the course, for a few fathoms short of the winning buoy he capsized a fourth time and could not get her up again.

Seeing Dickens in such bad shape, Mr. H. A. Viets, of Milwaukee, probably the best and most powerful oarsman in the camp, took a rowboat and managing to get a launch pulled out to get Dickens. Fred Mayers, of Madison, also put out in a rowboat, but passed Dickens and put out for Huntington, who had now gone over, and who was known to have a canoe which rode very poorly under capsize, the reconstructed Dixie, heavy as she is, appearing to be about all a canoe should not be. The sea was now very heavy and the wind at its worst. Meantime the steamer Satirio, which by great good fortune was over on that side of the lake, came running in for the shelter of the bay back of the point. Into this bay Dickens was now drifting, and the steamer picked him up. Viets had found himself powerless, his oars being fairly blown out of the boat. He signalled the Satirio for help, but was not noticed and had to fight out the squall alone in the sea. He was out over an hour, and when taken out of his water-logged boat was barely able to stand. He said he never expected to get out.

In course of this time Mayers also had gone over and he had, perhaps, the nearest thing of it of all of them. Hid by the white mist in the trough of the sea his signal for help was not seen by the Satirio as she headed off to pick up Dickens. Mayers was left clinging to his overturned boat all through the storm, and when picked up by the Satirio on her second trip out of the bay he was so exhausted he could barely move his hand.

When the Satirio came to back of the point she pounded so badly that two lady passengers she had aboard were frightened nearly out of their wits. She was within wading distance of the shore and Quaw, of Milwaukee, waded ashore twice, each time carrying a woman. The wind was so strong that Commodore Woodruff and Frank, the camp man, had all they could do to get the women up the bank and under shelter.

HUNTINGTON'S RESCUE.

During this time poor Huntington was far out in the open lake and drifting further. Every one on the Point gave him up for lost. He was lost to sight much of the time in the trough of the sea and in the white scuds of mist which crossed the lake. The rescue of Huntington was in some ways the most exciting of all the stirring incidents of the hour, and it was here the Scarecrow boat showed her usefulness.

During the progress of the race this boat was out enjoying the first breeze for three days, and aboard her were Harry Cook, John Turrill and H. D. Spencer, Harry Cook commanding. When the weather thickened this boat put about and ran for the dock, getting into safety just before the climax of the squall. She was almost at the dock when it was noticed that Huntington was capsized off the point. Without a moment's hesitation Cook went about and headed up for Huntington. The wind increased and it at once became evident that she could not carry her single sail, the big mainsail becoming more dangerous every second. Yet every man seems to have been cool at the command, "Ready, about!" and as she came up the boys pulled down the sail by the run and lashed it safe. There was plenty of headway on and Harry Cook brought her around close astern of Huntington's sunken craft as she fell away on the wind. Spencer stood by with a line, and by a lucky cast got it over Huntington, who caught it. Had this failed Huntington would never have been saved, for it would have been impossible to get back to him.

"Jump into your sail," Cook called to him, as Huntington took a

turn of the line about his hand. Huntington crawled over the hull and into the sail, which dragged between him and the rescuing boat. He was entirely submerged by a comber, but clung to the line and was hauled aboard, a very wet and limp grandpa. It was now impossible to get back to dock, and Capt. Cook found it impossible to show even a rag of sail. He ordered the throat of the sail lashed fast to the boom, and tried raising the peak about 18in. from the boom, the balance of the sail being lashed fast. Even this little triangle she could not stand, and Harry then ordered the whole sail stowed and lashed fast. Then he had the boom lashed fast to the cleats, and taking every care that nothing should break away, stood under bare poles for the three miles run across the lake with the squall astern and all around. Meantime the combers were coming aboard once in a while, and all the crew were bailing with their hats. The boat's dimensions are 16ft. over all, 50in. beam, but her capacity was well taxed with four aboard in such a gale. Yet every man was a sailor, and not one lost his head. The run across the lake was wet, but safe. Under Capt. Cook's orders each man stood by for a run up the beach when she was run ashore, and the good boat was actually landed with hardly a scratch on her. The men were brought back by the steamer later on. To-day they and their friends are standing about the "Turtle," as Mr. Crane's homely little ship is laughingly called, and saying good words about her and also about her plucky and skillful skipper, who had brought in the shipwrecked captain of the Dixie, and moreover kept safe the three other men, who with any other boat or captain would have stood an excellent chance of going down.

Mr. Crane's boat is on Scarecrow lines except that the overhang aft is cut off, the stern being quite square. This gives a homely look to the boat, but does not hinder her from being a sweet sailer. She is quite new and was never, I believe, used before this meet. Mr. Crane had not yet given her a name, and the day before the storm asked the FOREST AND STREAM representative to give her a name. The name of "La Paloma" (Spanish for "dove") was suggested, and to-day Mr. Crane says he will so christen her, for she certainly brought a message of peace after the storm.

This afternoon (Friday) found the sea still too rough for sailing, thus ending a week of extremes in weather in which sailing has been impossible. The main care of the members to-day has been the drying out of tents, bedding and baggage. After the awarding of the several prizes, in which Mr. H. D. Spencer gracefully officiated, the business of the meet was practically at an end. Saturday will see the tents down, and by the day after the members will all have left.

909 SECURITY BUILDING, Chicago. E. HOUGH.

## AMERICAN CANOE ASSOCIATION.

### Fifteenth Annual Meet.

CROTON POINT—HUDSON RIVER.

THE second meet within the limits of the Atlantic Division, the fifteenth annual meet of the A. C. A., is neither a "salt water meet," like that of 1890 at Jessup's Neck, nor altogether a fresh water meet, like the thirteen others on the St. Lawrence and the lakes. It is on tidewater, the average rise and fall being 3ft., and to canoeists from the North it seems like salt water, but it is really more fresh than salt. The Hudson River has been the main highway to most of the meets, and some delightful camps have been located on it, notably the informal ones of 1884-5 at Plum Point, but never before has it been chosen for an annual meet of the Association. So far as the indications go up to the middle of the meet, the river has quite justified its reputation, and should the present scheme, of a different site each year among the Divisions in rotation, be adhered to, there will be doubtless many more camps on the great river. The present location, Croton Point, is certainly quite above the average of A. C. A. sites, and the meet there promises to be a most pleasant and successful one.

Of the beauty of the river, above, below and abreast of the camp, it is hardly necessary to speak, certainly the St. Lawrence, Lake George and Lake Champlain have nothing better to offer to the eye.

The camp itself has proved even better than was first anticipated when it was selected with some misgivings, as the best available under the circumstances, though not in all respects satisfactory. The general location has proved an excellent one as regards the great feature of transportation; no previous camp has been reached so quickly, cheaply and certainly from the main distributing point as this camp is from Sing Sing; and at the same time there has been less intrusion from the outside sightseer than in many more distant and inconvenient places. The one serious drawback this year has been the intense heat, but as the entire section of country up and down the river has suffered to an equal extent, this can hardly be laid to the account of the site.

The ground itself has turned out to possess most of the requisites of a camp site, being near to a good landing, at which the little steamer plying across the river between Haverstraw and Sing Sing makes five or six trips a day, while in a case of necessity the railroad may be reached by a drive or a walk of moderate length. The beach is of clean sand, the best ever seen at an A. C. A. meet, giving a safe bed for the canoes and every facility for bathing and launching without skids or docks; though some wading is necessary, the water is warm and the sand is soft, unlike the rocky shores and cold waters of Lake Champlain. The ground rises easily at first for a short distance from the beach, and many tents are pitched close by the water, either under trees or in the open, but back of a narrow strip is a high and steep bluff, rather hard climbing on a hot day, but making a fine camp site when reached, with a noble outlook across the river.

On a projecting point of this bluff, are the headquarters tents, the flagstaffs and a large fieldpiece. Back of the headquarters are a number of tents, and to the south, in a pretty hollow, is the Ladies' Camp. The ground is so inclined as to dry quickly in case of rain, and while there is plenty of open space, there are numerous shade trees under which the tents are pitched. The brickyard at the dock, which has been looked on from the first as a possible drawback, has not proved so, while it by no means improves the beauty of the immediate locality, it is not in operation at present, and its owner, the genial Mr. Cockroft, has been of the greatest possible assistance in perfecting all the arrangements of the meet and camp.

The date of opening was July 13, but early in the week canoeists began to come in, and by Saturday the camp assumed the old familiar look, with the A. C. A. and club flags aloft and the white tents dotting the green shore, with a string of canoes on the beach. The first week passed very quietly in the ordinary routine of tent pitching, renewing old friendships and making new acquaintances. Up to Saturday night there were something over 200 men on the register. A great many of the older members are missing, as was the case last year, and it is evident that the *personnel* of the Association is undergoing a material change, new men filling the places of those who came into canoeing just after the A. C. A. was formed in 1880, and who have taken an active part in its management down to a very recent date. The coming to the Hudson Valley has brought back two familiar faces, Mr. Nate Smith and Mr. Van Dalfsen, both of Newburgh, once regular attendants at the meets, but absent for some years. Another old Grindstone man is Shedd, of Springfield, who has been absent in the West for some years, but is in camp now. Against these few and some others, like E. B. Edwards, Capt. Ruggles, there is a long list of men who are missed, some of whom may turn up for a day or so during the racing. The Sing Sing people have been very obliging and hospitable, the Sing Sing Yacht Club in particular, and on Saturday a race was held off the town for a silver cup presented by the club to canoeists, the following canoes starting:

| | | |
|---|---|---|
| Mab | C. E. Archbald | Point Claire B. C., Montreal. |
| Chiquita | T. S. Oxholm | Yonkers C. C. |
| Cricket | L. B. Palmer | Ianthe C. C., Newark, N. J. |
| Beta | Thos Hale, Jr | Yonkers C. C. |
| Zaidee | H. V. Backus | Rochester C. C. |
| Eel | W. J. Sparrow | Toronto C. C. |
| Bo-Peep | D. B. Goodsell | Yonkers C. C. |
| Claire | F. C Johnson | Point Claire B. C., Montreal. |
| Massawippa | W. A. Martin | Rochester C. C. |
| Finen | J. M. Hamilton | Red Dragon C. C., Phila. |
| Dolphin | Prengwell | Yonkers C. C. |

The course was four rounds of a triangle with half mile sides, sailed in a fresh northerly wind, diminishing in strength as the race progressed. Mab won in 1:16:46, with Chiquita 1:17:25, followed by Cricket, Beta, Zaidee, Eel and Bo-Peep in order.

On Saturday evening the annual meeting of the Atlantic Division was held, the following officers being elected: Vice-Com., H. L. Quick, Yonkers C. C.; Rear-Com., J. E. Murray, Red Dragon C. C.; Purser, Thos. Hale, Jr., Yonkers C. C.; Executive Committee, I. V. Dorland, H. H. Smythe and J. K. Hand.

The Yonkers C. C. has presented to the Association the Dolphin trophy, under the following conditions:

"Know all men by these presents made this 9th day of July, 1894, that the Yonkers Canoe Club and Corporation of Yonkers, N. Y., have and in consideration of the conditions and provisions herein expressed has given and granted, and does hereby give and grant to Irving V. Dorland, as the Commodore of the American Canoe Association, and his successors in office forever upon the trust and condition, notwithstanding that the same shall be designated as the "Dolphin Trophy" and offered as a perpetual trophy to be competed for in a canoe sail race at each annual meet of the said American Canoe Association, to be sailed under the following conditions and regulations, and the race not to be called until after the A. C. A. sailing trophy race, the winner of that event to be barred; the course to be not less than six miles with a time limit of 2½ hours for that distance; the cup to be held by the winner in the same manner as the A. C. A. sailing trophy is held.

"In witness whereof the said Yonkers Canoe Club has caused these presents to be subscribed by its Commodore, and its corporate seal to be hereunto affixed the day and year first above written."

[Signed] YONKERS CANOE CLUB.
By WM. R. HAVILAND as its Commodore.

Duly acknowledged before
LEWIS LEWINSOHN, Notary Public,
New York City, N. Y.

Contrary to expectations, an opportunity offered at the last moment to provide a general mess, and a building was erected for the purpose, but many of the clubs had already arranged their camp messes, and most of those in camp are cooking for themselves or eating at one of the club messes. These are run by hired cooks and accommodate a dozen or more generally with very satisfactory results.

The unlimited race was called on Monday morning with 12 starters, Mab, sailed by C. E. Archbald, winning in 1.37.25; Chiquita, T. S. Oxholm, was second, 1.41.15, and Beta, Thos. Hale, Jr., third, 1.41.46.

The record paddling was won by L. B. Palmer, Ianthe C. C. in 6m. 25s.

The record sailing was also won by Mr. Palmer in Cricket, time, 1.11.11, and the unclassified race by Mr. M. T. Bennett's La Gloria, which by the way is a centerboard and not a fin-keel boat.

The last race was the sailing upset, won by Archbald.

At a meeting of the Eastern Division on Monday evening the following officers were elected: Vice-Com., Raymond Appolonio, Shuh Shuh Gar C. C., Winchester, Mass.; Rear-Com., Robert Wakeman, Owanux C. A., Bridgeport, Conn.; Purser, Louis F. Cutter, Shuh-Shuh-Gar C. C., Winchester, Mass.; Executive Committee, the officers, *ex-officio*, and Dr. George R. Parmelee, Hartford C. C., and Howard Frost, Tatassit C. C., Worcester, Mass.; Member of Board of Governors of the American Canoe Association, Paul Butler, Vesper B. C., Lowell, Mass.

A. C. A. CAMP AT CROTON POINT.

### Mr. Howard's Races.

*From the Field.*

IF anything were wanting to finally stamp the international canoe sailing of 1894 as a farce, that something may truly be found in the final competition held last Saturday at the regatta at the Royal C. C. It was very generally understood at the close of the Bourne End week that thereat the canoe sailing racing ceased; that the canoes had only been brought out to defend the cup, and the future racing would be probably canoe-yawls and the paddling regatta. However, the unforeseen often turns up, and so an entry was published on the regatta card for the sailing race, including Mr. Howard, the American visitor, and of Mr. Keller. Mr. Keller did not sail, but two post entries came to the line, Vanessa, Mr. B. de Quincey and Meryl, Mr. Guy Ellington. The former sailed an old canoe, seven years old; and the latter a still older craft of the cruising persuasion. Why Mr. de Quincey preferred to sail his old canoe, instead of his new Dragon, when there was stars to be gazed at and stripes to be endured, for too much gazing at the stars, which in a 30in. canoe can only be done by a stern-chaser, passes ordinary comprehension.

It was a day for "bucket-wells," and bucket-wells only, *qua* wells. The wind was right abeam, savage in the puffs up, to half-gale strength, but light or moderate. There was always some wind, and without any doubt a bulb keel craft, such as Battledore, would have sailed straight through it and kept her course and won; whereas the canoes competing in order to try to save a capsize, were luffed head on to every puff, and thereby made a zigzag course. The buoys had, in order to keep within the wind and clear of the tree calms, been placed under the half mile apart, making each round about six-eights of a mile, thus making a total actual course of three miles, all reaching, and this distance was sailed by the winner, the Yankee, in 55m. 30s.—pretty slow work.

But the farcical point is to be found in the fact that all capsized in the second round. The cruiser at the time had a long lead, with Yankee and Vanessa close together. The two English boats had the ordinary long open wells and deck hatchways, whereas the American had the simple racing machine self-draining bucket-well, and on righting he had no bailing to do, nor was his boat waterlogged, as the other two were, so away he went. The remainder of the sail—it cannot be called a match—was that at different times all capsized again—the American while sailing, and the other two while making their way back waterlogged to the club camp ground.

It was a poor sight for old canoeists to see, and was quite a damper for any novice. The whole thing is discreditable to canoeing. Two of the craft became so waterlogged that, had not the bank been close at hand, they would have sunk in a short time; and, as to the Yankee, it was merely a question of smoothness of water as to the chances of getting and keeping her up.

Finally, a foul was committed by the Yankee in rounding the upper buoy against Vanessa, but no protest was lodged. Though really quite a trivial affair owing in some measure to the uncertainty of the wind, it was none the less a foul, but might admit of explanation; and thus we have most unfortunately to chronicle that the only prize won by the American canoe, in six races, was gained by a competition at swamping, or as of a diver in full dress competing against the ordinary unprotected lungs of the human frame.

The race is summarized as follows:

Sailing (yawls and canoes); four rounds. Entries: Yankee, Mr. W. W. Howard, New York C. C.; Vanessa, Mr. B. de L. Quincey, R. C. C.; Meryl, Mr. Guy Ellington, R. C. C.—Meryl was first over the line, closely followed by Vanessa and Yankee a few seconds after, the wind blowing in strong gusts across the river; Meryl carried full sail, but only a cruising suit; Vanessa started with one reef down, and Yankee with reefed mizzen. Meryl rounded the lower buoy first, followed by Vanessa and Yankee. Vanessa then shook out a reef, and shortly after commencing second round capsized in a strong puff, and Meryl followed suit a few minutes later. Both these canoes having open wells filled, and with some difficulty were righted, but were unable to continue race. In the meantime, Yankee, which had been extremely well handled by its active owner, was also laid flat on the water by a sudden puff, but, having a closed well and a long sliding seat, was cleverly righted, and, with one or two smaller mishaps and recoveries, eventually finished the race alone.

D. F. MACDONALD.

### Rifle at San Antonio.

THE regular weekly shoot of the San Antonio Rifle Association was well attended on July 15. The main features of the day were the good rest shooting of Veteran Dosch in the practice shoot, and the breaking of the off-hand record by "Texas Field."

| | | | | | | | | | | | |

Lieut. J. G. Ord, Eighteenth Infantry, was a visitor to the range. He brought a "long tom" army gun with him and acquitted himself creditably on the 200yds. range. Several of the hair-trigger riflemen tried the young cannon, but the piece and the load contained too many headaches for them. O. C. G.

### Bisley Revolver Scores.

BISLEY CAMP, July 9.—*Editor Forest and Stream:* An improvement has been suggested by Mr. Winans for the 50yds. revolver range, and has been adopted.

The way that marking has been done heretofore is as follows: When a shot strikes the target the marker puts a disk on the shot hole, but these disks were only of two colors, a white disk for a bullseye and black disks with their value in white letters on them for all the other counts. This made it difficult to instantly know the value of a hit, without using a glass.

Mr. Winans' idea is, as only the bullseye or next ring (the 6) is of any account for making winning scores, to have the bullseye pointing disk white as at present, the next or 6-ring disk, red with white number on it, and the remaining disks black as before. At the rifle targets, the inner or next ring to the bull is always marked with a red disk at the running deer and running man targets, so this makes a uniformity in marking. None of the good shots ever get beyond the ring next to this (the 5 ring) so now they can tell at a glance. White disk is bullseye, 7 points; red disk is inner, 6 points; black disk is magpie, 5 points.

*July 21* [*Cable special to Forest and Stream*].—In the revolver matches just concluded, America has carried off the honors again in the following programme, Mr. Walter Winans winning as follows: Divided any revolver, first series, 20yds. moving targets. Divided any revolver, second series, 20yds. disappearing target. First in any revolver, third series, 20yds. rapid firing. Second in any revolver, fourth series, 20yds. stationary target. First in any revolver, fifth series, 50yds stationary target. First in aggregate for any revolver. First in military revolvers, first series, 20yds. moving target. First in military revolvers, second series, 20yds. disappearing target. First in military revolvers, third series, 20yds. rapid firing. Second in military revolvers, fourth series, 20yds. stationary target. First in military revolvers, fifth series, 50yds. stationary target. First in military revolvers aggregate. First in grand aggregate.

## Cincinnati Rifle Shooting.

CINCINNATI, O., July 15.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores appended. Conditions 200yds., off-hand, at the standard target:

## Greenville Defeats Portchester.

THE second match in a series of two best out of three between teams from the Greenville Rifle Club, of Greenville, N. J., and the Portchester Rifle Club, of Portchester, N. Y., was shot off on the Greenville range on Saturday of last week. The representatives of the Portchester Club came down to New Jersey full of zeal and made a strong effort to down the farmers, but the fates were against the New Yorkers. A combination of circumstances which included hot weather, a strange range and Jersey hospitality was too much for the visiting team. After the close of the match the visitors were escorted to the dining-room of the Hotel Armburster, where a fine collation was in waiting for the hungry riflemen. After the inner man had received his dues, speeches and anecdote were in order. Messrs. Hess, Horn, McNeil and Rudd, of the visiting team, gave many interesting reminiscences of their past experiences with the rifle. The home team was well represented by Messrs. Robidoux, Collins, Boag, Scheeline, Chavant and Gotthardt, who in their efforts to entertain the visiting team left nothing undone that could add to the pleasure of the occasion. The scores are appended, 10 shots per man, German ring target, distance 200yds.:

## Excelsior Defeats Greenville.

THE Excelsior Rifle Club of Jersey City and the Greenville Rifle Club have had many series of matches in the past and the result has been in favor of the Greenville Club, but on Saturday of last week the Excelsior team, Messrs. Hansen and Boyce, caught the farmers off their ground and succeeded in giving the two representatives of the Greenville team, Messrs. Plaisted and Collins, a good drubbing. The conditions of the match called for 50 shots per man. The Excelsior team won by a margin of 37 points. Scores:

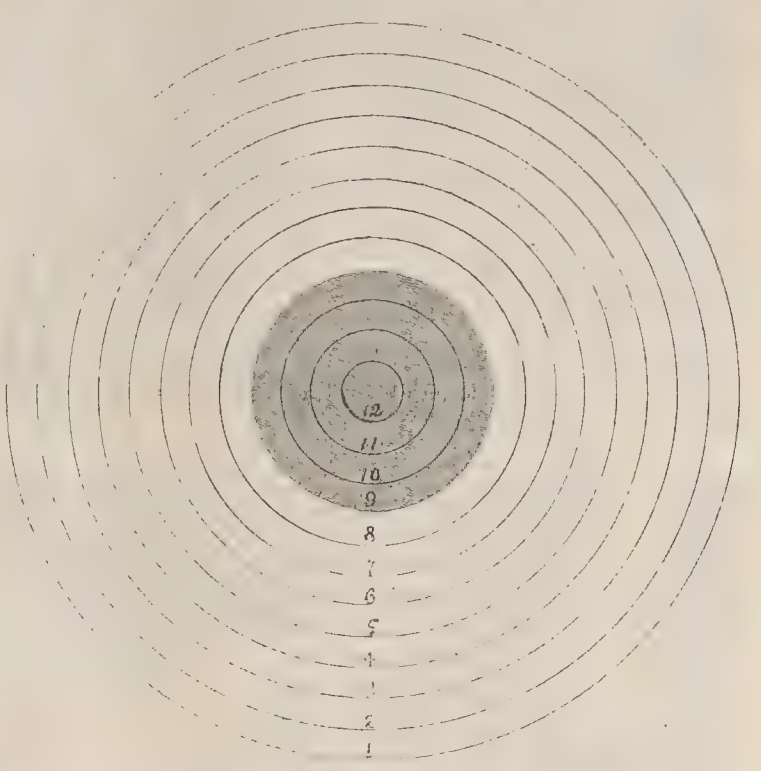
| A. Wild | | | | | | | | 39— 39 | |

HENRY D. MULLER.

## A Peculiar Incident

HAPPENED on Monday afternoon while Companies F and K, of the 6th Regiment, were engaged in rifle practice at the New Jersey State Camp at Sea Girt. Lieut. R. R. Albertson was trying to qualify for the 300yds. range. On his fifth shot three blackbirds flew across the range. The Lieutenant's rifle cracked and one of the birds fell. At the same moment the signal at the target indicated that the Lieutenant had sored four points, only one point from the center. An examination of the dead bird showed that the bullet in its flight for the target had passed through its breast.—*New York Sun.*



## The Lyman Time Limitation System.

*Editor Forest and Stream:*

My article "The Sport of Rifle Shooting," in the May 19, FOREST AND STREAM has created favorable comment and I have been requested by the editor to give tabulated rules for my Time Limitation System of Rifle Shooting.

I will give description of target with rules for shooting, but must say that I have not yet given enough experimenting to the matter to consider them above improvement.

For my system of rapid-firing I use a 12-ring target. For 100-yard practice; these rings are 1in. apart. Ring 12 is 2in. in diameter in the center of the bullseye, each succeeding ring has 2in. increase of diameter so that the outer ring which scores 1 is 24in. in diameter. The bullseye is 8in. in diameter and consequently contains the rings 9, 10, 11 and 12. This target has been used for 200-yard shooting to some extent When shooting at 50yds. the target should be half size, and at 25yds. quarter size. As compared with ordinary targets this one has a large bullseye, but in rapid-firing better scores can be made than if the bullseye is small. I may add that the same thing applies to the sight. It should not be small nor hard to

see. The eye of the shooter has enough to do in bringing the muzzle-sight and bullseye together without being strained to discover either. With this target I allow 20 seconds for 10 shots. Any shots fired after 20 seconds do not count For any shots fired within the time allowed that do not score on the target, the shooter forfeits 5 points.

The following table gives the time scoring:

| | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 10 shots in 20 seconds, time limit. | | | | | | | | 10 shots in 14 seconds, 20 points. | | | | | | |
| 10 | " | " | 19 | " | 2 | points. | | 10 | " | " | 13 | " | 25 | " |
| 10 | " | " | 18 | " | 4 | " | | 10 | " | " | 12 | " | 30 | " |
| 10 | " | " | 17 | " | 8 | " | | 10 | " | " | 11 | " | 35 | " |
| 10 | " | " | 16 | " | 12 | " | | 10 | " | " | 10 | " | 40 | " |
| 10 | " | " | 15 | " | 16 | " | | | | | | | | |

Thus it will be seen that if the 10 shots are fired in ten seconds or less, the time score is 40 points, which, added to the 120 points possible to make on the target, give 160 as the possible score to be made by this system of shooting.

The forfeit of 5 points for every shot (within the limit of 20 seconds) that does not count on the target, I consider a very important requirement, for it will counteract a tendency to careless holding and not allow anything to be made by the time scoring unless something is scored on the target.

Any repeating rifle allowed, sighted with any sights.

When ready the shooter should stand with the butt of the rifle below the elbow. He then communicates by means of an electric button with the target tender, who instantly throws the target into position for just 20 seconds. By using paper targets on a light frame with a canvas backing, one target can be quickly replaced by another. The targets should be numbered for each shooter, as the scores must be made up from them afterward. It will be readily seen that this system of shooting will allow a large number of shooters to use one stand and fire a great many shots in a short time.

WILLIAM LYMAN.

## Schlicht Rifle Club.

WEST NEW YORK, July 16.—The Schlicht Rifle Club held its weekly gallery ghoot at headquarters this evening; George Schlicht won the champion medal, Jacob Diehl the first class, J. Schlicht the second class and Capt. Dedrick the third class. Scores: Aug. Meyer 226, Geo. Lautenberger 225, Gus. Dorr 229. Geo. Schlicht 241, Wm. Schlicht 225, Mike Daus 224, Jacob Schlicht 227, Lue Dorr 224, Geo. Reichert 225, Fred Lambrix 220, Jacob Diehl 226, Conrad Schlicht 223, Capt. Dedrick 232, Chas. Meyer 229.

## Greenville Rifle Club.

THE Greenville Rifle Club held its weekly shoot for class prizes at headquarters, on July 20; the scores are as follows: J. Boag 240, Collins 240, C. Boag 235, Plaisted 228, Purkess 243, Agneau 228, Chavant 226, Gotthardt 221, Chase 214, Chorlock 226, Dodds 226, Graef 228, Daniels 215, E. Wuestner, Jr. 209, F. Wuestner 214.

## RIFLE NOTES.

Our issue of last week contained a challenge from the Columbia Pistol and Rifle Club of San Francisco, Cal., for an all-around match with the rifle (military) and revolver, open to any club in America. Much as we would like to witness a series of matches of this nature, we are forced to the belief that the "defi" of our California friends will remain unanswered. Outside of the Massachusetts Rifle Association we have in the East few societies of riflemen who are proficient in the use of both the rifle and revolver, and we hardly believe that the M. R. A. can bring together a team who would be willing to enter into an all-round contest with the California shooters. In New York our pistol and revolver shots are few, and outside of the militia we have no riflemen who make any pretense to shooting the military rifle. Our expert riflemen in and about New York are centered in the Zettler Club, and among these there are few who have had any experience with the revolver or pistol. So we can hardly expect a response to our California friends' challenge.

It has been suggested by some of our local riflemen that on the occasion of the international festival which is to be held in New York in 1895 a series of team and individual matches be arranged to demonstrate the best marksmen who may be represented at this festival. This suggestion is quite pertinent, and if the interest of those patrons of the sport who have the means to arrange for the necessary prizes (trophies) for such a competition will put their shoulders to the wheel we believe it would result in adding an interesting annex to the coming festival.

The latest cable reports from Europe credit Gus. Zimmerman with winning many trophies at the international shoot at Lyons, France, July 7-18. The "Harlem Joker," when informed of the immense outflow of gold from America to Europe of late, said: "Never mind, when our champion comes home with his winnings it will even up matters."

The Greenville Rifle Club, some of whose members are noted for their affinity for salt baths, has arranged for a fishing excursion to the Fishing Banks on the steamer John Lennox, on Aug. 19. All brother riflemen who may feel the need of a little salt air, and have the time to devote to such a trip, will be welcome.

W. E. Petty will soon become the possessor of the Winans trophy unless some aspiring shooter steps in and disputes his claim. What is the matter with our revolver experts?

It is reported that Michael Dorrler has taken his rifle off from the rack, where it has been rusting for some time, and is cleaning it up. For what?

We note that the Hartford Rifle Club has adopted the German ring target in its regular practice. This is a good idea; for it brings our Hartford shooters in touch with our New York experts. Pope's score of 234 in last week's practice shows expert form. Seymour with 226 was close up.

The Zettler Club will hold its bi-monthly shoot at Cypress Hills Park July 29.

# Trap-Shooting.

**All ties divided unless otherwise reported.**

**If you want your shoot to be announced here send in notice like the following:**

### FIXTURES.

July 24-26.—Lafayette (Ind.) Gun Club tournament.

July 25.—Central New York Trap-Shooters' League, fourth tournament, at Syracuse.

July 26.—New England Shooting Association championship tournament, under the auspices of the Willimantic Rod and Gun Club, at Willimantic, Conn.

Aug. 7.—ALBANY, N. Y.—Eastern New York League tournament, under the auspices of the West End Gun Club. Horace B. Derby, League Secretary.

Aug. 7-9.—Memphis (Tenn.) Gun Club tournament.

Aug. 8.—W. H. Kearfott's semi-annual bluerock target tournamen at Kearneysville, Jefferson county, W. Va.

Aug. 8-10.—Missouri State Amateur Association, at Richmond, Mo.; $300 added.

## DRIVERS AND TWISTERS.

*Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.*

No shoot ever held in the South, excepting perhaps the affairs of the Knoxville Gun Club, have ever attracted so much attention as the annual tournament of the Memphis (Tenn.) Gun Club, to be held on Aug. 7, 8 and 9. The club adds $600 to the purses, gives $60 for three-day averages and gives $35 (in five prizes) for average money on each day, so that there will be some big winnings for those who shoot straight. Each day there will be eight events at 20 targets each, $3 entry, with $25 added to each purse. On the second day there will be a special event, at 20 targets, $3 entry, the first prize to be an $80 Lefever gun, second 500 nitro powder loaded shells, third a press leather gun case and fourth a leather shell case. FOREST AND STREAM also offers one year's subscription and a set of its beautiful sporting pictures to the shooter having the longest run of breaks during the three days, unless the winner be a subscriber, in which case the prize shall go to the non-subscriber having the longest run. Average moneys each day will be $10, $8, $7, $6, $4. Tournament average prizes will be $15, $12, $10, $9, $8 and $6 respectively. There will be two classes—experts and amateurs—the experts to shoot from known traps, unknown angles, and the amateurs from known traps, known angles. All men known to be as strong as 85 per cent. will be kept in the expert class. First or second money winners, or those who score 18 or more in the amateur class, will have to shoot in succeeding events as experts until they fail to win a first or second money or score 18, when they will return to the amateur class. American Shooting Association rules will be used, except the rule as to distance for flight of targets. The targets will be thrown low and as swift as possible. Sommer and Roger Van Gilder, of the Knoxville Gun Club, will assist in the management. A number of other Knoxville experts, as well as contingents from Asheville, Bristol, Greensboro, Charlotte and other places, will be on hand. Two sets of traps will be used. The headquarters for shooters will be at the Peabody Hotel. The secretary of the club will meet all shooters at the hotel and provide them with badges, which will entitle them to special rates and privileges. The officers of the club are T. A. Divine, president; J. C. Neely, Jr., vice-president, and W. P. Halliday, Jr., secretary and treasurer.

The following piece of news is from an Indianapolis (Ind.) exchange of July 13, and we are assured that the trap-shooters of America will unite with us in congratulating Mr. Fulford upon his exoneration: "Elijah D. Fulford, late superintendent of construction for the American Long Distance Telephone and Telegraph Company, was again acquitted of a criminal charge in the Criminal Court this morning. A week ago last Monday he was placed on trial for forgery, and the prosecution attempted to establish a vast amount of forgeries upon vouchers, amounting in the aggregate to thousands of dollars. The evidence for the defense was brief and three days were spent in argument. Yesterday afternoon the case went to the jury, which has been in confinement since it was accepted in the case. From 3 o'clock yesterday until 11:30 to-day the jury was locked in its room deliberating. The prosecution believed that the delay was occasioned by the balloting on punishment, and was consequently greatly surprised when the jury returned a verdict of acquittal. Fulford, who was present with his wife, wept when it was returned. Fulford is the champion wing shot of the world, having a record of 100 straight birds. On account of the charges against him he withdrew his forfeit for a match with Dr. Carver. There are four other cases pending against Fulford, and Prosecutor Holtzman says that he will set one of them down for trial in August. Fulford's attorney, J. B. Kealing, says that the prosecution has become a persecution; that the other cases involve exactly the same facts and theories and that it is useless to put Fulford to the trouble of defending himself when it is hopeless to make a conviction."

Some time ago we suggested to Wm Tell Mitchell, of Lynch's, Va., that it would be good policy for him to pay a visit to Lynchburg on one of the Lynchburg Gun Club days, as that club desired to test the mettle of six of their members at 100 targets each, unknown angles, with Mr. Mitchell as their opponent. On July 17 Mr. Mitchell took his gun and fixings and rode up to Lynchburg to test the above question. He was, as a matter of course, received with open arms by the club members, served with an elaborate dinner and otherwise conditioned for the fray. In the afternoon he accompanied to the grounds Messrs. Terry, Empie, Nelson, Cleland and Moorman, six "cracker-jacks" at the sport, and soon began the task of showing those gentlemen how to smash targets. The party shot at 125 targets each, 5 traps, unknown angles, and thrown hard and low. At the end of the first 100 it was found that Mitchell was top man, having broken 91, his nearest opponent being Empie with 84. Terry scored 82, Nelson 81, Dornin 74, Cleland 74, and Moorman 62. Of the 125 Mitchell broke 112, Terry 105, Empie 105, Nelson 103, Dornin 92, Cleland 94, and Moorman 74. Mr. Mitchell was royally entertained during his stay and warmly congratulated upon his good work. When he was finally obliged to start on his return to "Pocket Farm" he was compelled to leave behind a promise to repeat his visit and his feat of vanquishing the club boys.

The following programme is published for the second annual tournament of the Pier Gun Club of Atlantic, N. J., to be held on Aug. 7 and 8: Event No. 1, 10 singles, known angles, $1 entry; No. 2, 15 singles, unknown angles, $1.50; No. 3, 15 singles, expert rules, $1.50; No. 4, 20 singles, known angles, $2 50; No. 5, 15 singles, unknown angles, $1.50; No. 6, 50 singles, 25 known and 25 unknown angles, $5; No. 7, four-men team shoot, 25 singles each, unknown angles, $6 entry per team; No. 6, 15 singles, expert rules, $1.50; No. 9, 25 singles, unknown angles, $3; No. 10, 10 singles, known angles, $1. Average prizes each day $4, $3, $2 and $1. No. 7 will not count in computation for averages. In the team race there will be one money for every three entries. The second day's programme will differ from the above only as concerns No. 7 event, which will be at 10 singles, unknown angles, $1 entry. The management of the affair will be in the able hands of E. D. Miller, Harry Thurman, H. Landis, David and William Garvin.

"Hurry along that consolidation of the State Sportsmen's Association and the New Jersey Trap-Shooters' League," said one of Jersey's most prominent exponents of game and fish protection a few days ago, "and get it down to the lines suggested by FOREST AND STREAM, then we will be able to do something definite in the way of protecting and also promote the interests of the trap-shooters." Now, President Heritage, consult with the president of the Trap-Shooters' League and arrange for a joint meeting of the two organizations. Let it be held anywhere you choose, but hold it soon, so as to get the new organization formed in time to arrange for a shooting meeting this fall. And by the way, the office of FOREST AND STREAM is at your disposal for the holding of said meeting.

The Pennsylvania State Sportsmen's Association has been extremely fortunate in securing the services of Elmer E. Shaner as general manager for their State shoot on Aug 21 to 24 inclusive. "Elmer" is not only one of the most popular men in the sporting ranks, but is conceded to be one of the best managers of tournaments. It was popularity and fair dealing that were responsible for the last two seasons' success of the Interstate Association. He is possessed of the patience of Job and has never been known to get rattled no matter what the provocation. Even the "boss kicker" of the Jersey team at the '93 Charlotte shoot was unable to ruffle him.

QUINCY, Mass., July 17.—Inclosed find scores of team shoot between teams selected by Messrs. Brainerd and Morse from among those present at the shoot of the Wollaston Trap Club: Morse's team—J. C. Morse 19, H. M. Federhen, Jr., 21, D. B. Lincoln 15, H. W. Maasden 3, H. B. Sanborn 6, E. Walker 14, G. Thompson 10, P. Kelly 7; total, 93. Brainerd's team—G. H. Brainerd 18, F. Cowee 19, H. T. Whitman 14, G. Elcock 18, F. N. Bates 6, C. V. Starret 14, A. G. Olney 7, W. Mitchell 8; Total, 104.

MORGANTOWN, W. Va.—The following is the result of the gun club contest between the Fairmont and Morgantown teams at this place;

the result being a decided victory for the home team: Fairmont Team—Dr. Jamison 24, J. Bebout 13, Dr. Dowden 18, W. Fleming 21, J. Gall 20, T Sharpe 20, C. H. Donnally 34; total, 150. Morgantown Team—E. Hayes 20, H. H. Hayes 27, "Nessmuk" 42, I. Hickman 30, W. M. Farrow 24, H. A. Christy 26, J. A. Barthlow 26; total 195.

The second annual tournament of the Eaton (O.) Gun Club is billed for Aug. 1 and 2, the programme comprising on the first day three 10-target events, three 15-target events, one at 20 and one at 25. Second day, four events at 10 targets each, four at 15 each and one at 25. Extra event No 1 on the second day will be for a two-year-old buck. Hotel Bonner is the club's headquarters.

The projectors of the Atlantic City tournament, to be held on Aug. 7 and 8, anticipate a successful affair and a big attendance. The shoot will be held on the extreme end of the pier. As the above dates represent the height of the season, those who go down should take their wives along.

In a live bird match at Green Valley, N. J., on July 11, between Frank Berry and Wm. Ellis, 10 birds per man, for $25 each, Berry killed 9 to Ellis's 6. A 25-bird match resulted as follows: F. Berry 22, W. Berry 22, W. Ellis 20.

The Freehold Shooting Club and the Dayton Gun Club will have a shooting contest to-day, the conditions being twelve men to a team, 30 singles per man, five traps, unknown angles. The shoot takes place at Freehold.

In a recent issue we inadvertently referred to Mr. H. W. Brown as being secretary of the Binghamton (N. Y.) Gun Club, whereas the secretary of that club is Mr. H. S. Vance, and an efficient secretary he is.

Don't let the grass grow under your feet, Messrs. Presidents of the New Jersey Sportsmen's Association and State Trap Shooters' League, but hold a joint meeting at once and consolidate.

J. L. Brewer is now ready to wager from $250 to $1,000 that at 21yds. rise, using one barrel only, he can kill 90 out of 100 selected birds.

The Paterson Gun Club will hold its semi-monthly shoot next Tuesday.

C. H. TOWNSEND.

## Lynchburg's Weekly Shoot.

LYNCHBURG, Va., July 18.—The Gun Club held their regular weekly shoot yesterday. W. Tell Mitchell came up from Lynches, and shot a race with the boys. Mitchell was in good form, and passed an agreeable afternoon. The following scores were shot:

No. 1, 25 targets, unknown traps and angles, American Association rules:

Nelson ..... 1111111011110010111110111—20
Terry ..... 1111011110010111111101100—18

## Frank Class Wins a Gun.

A SHOOT for a high-grade 12-bore shotgun took place on Frank Class's shooting grounds at Morristown, on July 17, the conditions being 10 live birds, $7.50 entry, birds included. At the close there were seven tied on clean scores each, and they at once shot off at 15 targets, the result being a victory for Class, as follows:

| | | | |
|---|---|---|---|
| Martin | 1211212111—10 | Pirson | 10w |
| George | 1212111121—10 | Morgan | 1110w |
| Class | 1111121121—10 | Brewer | 1212121222—10 |
| Morfey | 1212221121—10 | G W Sherman | 1210w |
| Hibler | 1221211221—10 | Boyle | 0w |
| Timmons | 110w | Sherman | 1212112112—10 |

Shoot-off of tie:

| | | | |
|---|---|---|---|
| Martin | 1111111111100111—13 | Brewer | 1110111111011111—13 |
| Morfey | 0111111110001101—10 | Class | 1111110111111111—14 |
| Hibler | 1111111111110000—11 | Sherman | 10110100w |

Sweepstakes, 7 birds, $5 entry, two moneys:

| | | |
|---|---|---|
| Morfey | 0011011—4 | 1111111—7 |
| Morgan | 0110111—5 | 1101111—6 |
| George | 1101111—6 | 1110011—5 |
| Timmons | 1111111—7 | 1101101—5 |
| Class | 1111110—6 | 1111111—7 |

## Van Brackle and Brewer Tie.

JAMES A. VAN BRACKLE, one of the leading members of the Midway Gun Club, of Matawan, N. J., caught a killing pace on July 19 in his match with J. L. Brewer. The match took place on the Midway grounds, each man shooting at 100 birds for $100 a side, Brewer using a 12-bore at 30yds. and Van Brackle a 10-bore at 26yds., boundary 50yds. The most of the birds were fairly good. Van Brackle surprised his opponent by the clean manner in which he grassed his birds and Brewer of the other hand was rather chagrined at not doing better on his first quarter, when his score showed only 20 kills. Van Brackle's 97th bird fell dead just over the boundary, this losing him the race. The scores:

| | | |
|---|---|---|
| Brewer | 2200222202220022222222222—20 | |
| | 2212222222222222212022202 0—22 | |

| Walling | 01011 | 11101—8 | 1111101100—7 |

## THE INTERSTATE AT LOUISVILLE.

LOUISVILLE, Ky.—*Editor Forest and Stream:* The seventh tournament of the Interstate Manufacturers' and Dealers' Association was given at Louisville, Ky., July 18 and 19, under the auspices of the Kentucky Gun Club, of Louisville, and once more old Kentucky demonstrated that she belongs to Class A in the trap-shooting world.

Tobacco and whisky have made her famous in State history, but when it comes down to a shooting tournament her sons present a clean bill of all-wool and-a-yard-wide, with not a moth in the whole bundle. Never since the palmy days of Col. Barbour has so much enthusiasm been evinced as at this tournament, and to the Kentucky Gun Club, of Louisville, with its efficient set of officers, belongs all the credit for reviving interest in an almost forgotten sport in this section of the country.

A few years ago Louisville was one of the foremost trap-shooting cities in America, and many a noted match was shot in this city; but of late years trap-shooting has been on the decline, and it remained in a state of innocuous desuetude until Mr. Harry J. Lyons, along about March 1, suggested the organization of a gun club.

Very few enthusiasts believed he would be able to accomplish much; his efforts, however, were crowned with success, and the Kentucky Gun Club became a reality, Mr. W. L. Lyons being elected president; Mr. Allen P. Houston Vice-President, Mr. Harry L. Means Secretary, and Harry L. Smyser Treasurer. Grounds were secured at Fifth and L streets and inclosed by a tight board fence, a commodious club house was erected and other improvements made which necessitated an outlay of $2,000. Arrangements were perfected with the Interstate Manufacturers' and Dealers' Association for the giving of the tournament just ended, and it can truthfully be said the Kentucky Gun Club is on the road to success.

The present tournament, as are all of the Interstate tournaments, was under the management of Elmer E. Shaner of Pittsburgh, Pa., and all details were carefully looked after. All the tents carried by the Association were erected, and added to the appearance of the grounds. This was the first time the tents have been in position since the disastrous storm at Chicago, which played such sad havoc with them, and compelled their being sent home for repairs.

The weather during the two days was threatening, with frequent showers, which put a stop to the shooting for quite a while the second day.

The attendance was good, sportsmen being present from several States, and some first class shooting was done, as the scores will show. Quite a crowd of spectators were present both days and enjoyed the sport.

*The First Day's Scores.*

No. 1, 15 targets, entrance $1.50, $5 added, 4 moneys:

## Pennsylvania State Tournament.

THE Altoona Gun Club, under whose auspices will be held the 1894 tournament of the Pennsylvania State Sportsmen's Association, have at Altoona published an exceedingly neat programme of 32 pages, illustrated with several half-tone cuts. A detailed notice of the programme will be made by us in our next issue. In the mean time address Edward Banks, Sec'y, Altoona, Pa.

## Big Shooting at Baltimore.

THE Standard Gun Club held their sixth annual tournament at their shooting grounds, Acton's Park, July 16, 17 and 18. The weather was everything that could be wished for, only one day being extremely warm. The first day's turnout was quite large, and would have been better had not some unfortunate accident kept some of the visiting shooters away, and which kept the 6-men teams from New York, New Jersey and Pennsylvania from filling up. The grounds of the Standard Gun Club were admirably fitted up for the occasion, with plenty of shade and room, and the traps and targets worked to perfection. The feature of the tournament were the team races. The first day in the 6-men team race, 50 birds per man, the Standard boys carried off the honors with a splendid score of 278 breaks out of 300, a 92⅔ per cent. gait, or an average of 90 per cent. and better for each man. On the second day in the 4-man team race, 25 birds per man, the Pennsylvania team shot out a great victory for themselves, breaking 95 out of a possible 100, defeating the crack Baltimore Gun Club team by only 1 bird, in view of the fact that the Baltimore team had already shot with a winning score of 94 out of 100, a score calculated to win at any stage. Among the prominent visiting shooters were: Mr. Harvey McMurchy, breaking targets right and left with an ease and grace seldom seen at the trap; Capt. B. A. Bartlett, showing the boys and spectators some of his tricks and fine shooting, never getting tired and ever willing to give any information asked; "Billie" Fieles, M. F. Lindsley; Mr. Swiveller, making quite a reputation for himself; Harry Thurman, of Pennsylvania; Van Dyke, of New Jersey; Treadway, of Pennsyvania; G. W. Haddock from Virginia, Landis from Pennsylvania, and Wagner, Hunter, Gulick, Steele, Happer, Jr., Osborne, Mattingly, Rothwell, Happer, Sr., Pruitt, Fristoe, Carroll, Barker and McLeod, of Washington, D. C., and, last of all I shall not forget our friend, Major Taylor, and the genial "Uncle Jake" Pentz. The following are the scores in detail:

*First Day, July 16.*

No. 1, 10 singles, entrance $1:

| | | | | | |
|---|---|---|---|---|---|
| Bond | 10 | Rothwell | 7 | Gloster | 6 |

H. E. LUPUS, Sec'y.

## Tournament of the Granville Gun Club.

IN a pleasant valley that lies in about the same parallel of latitude as the southern shore of Lake George, but close to the boundary line that divides New York and Vermont, and within the borders of the Empire State, may be found the pretty and thriving village of Granville. The mountains that wall in the valley are of the veritable towering type, clothed with forest growth, with here and there stony ledges showing grimly through the heavy masses of woods or bits of mountain pasture. Granville is a bustling little place, the business interests of its citizens being largely centered in stone and slate quarries, though there is a nice hotel or two, scores of attractive residences, ranging in quality and style from the pretty cottage to the stately mansion, and lots of dainty maidens of the charming summer-girl type. Not the least of the attractions of the place is the Granville Gun Club, an ambitious organization, well supported by its namesake's solid citizens, and a stalwart, sober-looking set of fellows they are. All this the Albany correspondent of FOREST AND STREAM found out on a visit to Granville in company with nearly a score of the Eastern New York League shooters on the occasion of the late tournament of the Granville Gun Club, which was held on the 19th of the present month of July. I journeyed thither in company with half a dozen of my boys of the West End Gun Club, there being in the party Charlie Stone, the sagacious; Lou Leon, known as the burly Briton; John S. Taylor, the man of lurid comparisons; Tom Greer, the grand stand favorite, and Harry Swinton, our most promising young sharpshooter, who is bound to be a bright star in the near future in the glittering galaxy of American marksmen.

At a station *en route* we were joined by another Westerner, young Johnny Sanders, who is summering on a splendid parental estate in Saratoga county. At Troy, where we boarded the northbound train on the Fitchburg road, we were joined by a trio of Trojans consisting of "Uncle Sammy" Goggin, John T. Betts and Charlie Stockwell. When Johnsonville was reached a trio of Saratogians burst in upon us—three members of the once famous "Big Four," of the Saratoga Gun Club. There is the jolly giant Nelson Ramsdill, still wearing his prized goatee, an ornament familiarly alluded to by his brother shooters as Ramsdill's "paint brush;" Harry M. Levengston, Jr., whose renown as a flying-target smasher is not bounded by the State, and the third man is the nifty nabob who at shooting events modestly conceals his identity under the "nom de shoot" of "Peters." At Eagle Bridge there was a change to a train of short-bodied cars that sped along a branch of the great L. & H., and edging over the border of New York into Vermont we stop at a station called Rupert. The tall form of a sportsman, gun case in hand, was discovered on the platform by the "gang" and a joyous howl of recognition went up that brought a responsive smile to the bronzed face of Myron F. Roberts, of Rupert, Vt., whose popularity is attested by honorary membership in both of the gun clubs of Albany, nearly all of the league clubs and in his recent election to the presidency of the Granville Gun Club. The hearty greetings extended to brother Roberts had hardly subsided when our boxy little train slipped back again into New York State and we were at Granville. On the depot platform we were cordially greeted by Mr. J. E. Seeley, a local legal luminary, and were conducted to a commodious carryall bound for the shooting ground. As the visiting shooters proved to be more than a double load for the vehicle, and the assurance was given that the objective field was only half a mile away, many of the boys threw their guns and cartridge boxes in under the seats and walked out to the grounds.

The club possessions were found to lie on a level plain on the western border of the village. The firing points faced the region of the setting sun where a dark and verdant background in the form of a huge wall of a mountain made more than one keen gunner anxious about his prospective average when he mentally pictured the clay pigeons flying against this somber barrier. This, however proved to be only a bugbear, for the sun's rays reflected upon the shining surface of each bluerock, made the "bird" appear like a glowing disc of burnished metal, and not one of the shooters was, I think, at all handicapped by the presence of this giant guardian of the valley. The equipment of the club showed a shooting lodge, behind which a purveyor's stand was erected; a row of firing points covered by an awning; a trapper's pit guarded by a wooden screen, banked up by the earth of the excavation, and a set of five expert bluerock traps. Among the crowd gathered about the lodge when we entered the grounds the fine presence of Dr. Mosher was instantly noted, and by the genial physician we were introduced to his tournament aids, George MacDonald and Parker J. Staples. Then there were N. S. Marshall and A. Kilbourne of Rutland, W. E. Ayer of Poultney, P. E. Howard of Townsend and a lot of others whose names I failed to indite in my notebook in the hurry-scurry of opening the shoot, but whose records will appear in the scorces below.

The programme displayed ten events, but the limited time intervening between the arrival of the visitors and the hour of their departure, which was set for 4:30 in the afternoon, did not permit the shooting out of but eight. Before giving the scores I must mention the weather. It was something terrible. Fancy a blazing sun in a cloudless sky pouring its beams with a tropical fierceness upon the unsheltered plain that fairly shimmered in the torrid heat, the heavy air unmitigated by even so much as a breath of a breeze, and you may form some idea of the stifling conditions that fairly made existence a horror. But where is there a class of pleasure-seekers on earth who brave the discomforts of heat or cold, or the pelting of a storm with a more unflinching show of pluck and stamina than gunners. Brave boys, all! I have followed you through the shooting events of many years, but have never known the elements to cause you to fall out when once lined up for duty.

"All is ready," was announced in the quiet tones of Dr. Mosher, and the three Saratogians, our own "Kid," Sanders and the Trojans, and "Perkins" line up at the firing points as the first squad in the first event. The appended scores show how well the shooters performed in the torturing heat of one of the worst of the typical days of July within my recollection.

In the 10 bird sweeps the purses were divided 50, 30 and 20 per cent.; in the 15 bird sweeps 40, 30, 20 and 10 per cent.; in the 20 bird sweeps 30, 25, 20, 15 and 10 per cent.

The next event of interest to the eastern New York shooters will be the league tournament to be held under the auspices of the West End Gun Club of Albany, N. Y., Aug. 7.

HORACE B. DERBY.

## Carver Defeats Elliott.

KANSAS CITY, July 14.—Trap-shooting in the West received a great impetus this week through the series of three matches between Dr. W. F. Carver and J. A. R. Elliott, which were shot at Exposition Ball Park during the past three days, and the series will go down into gun club history as one of the best and most closely contested ever seen in America. The first race was won by Elliott by a single bird on the good score of 96 to 95, the best made in the series. The second was won by Carver, 94 to 92, and the last by Carver, 95 to 94, making a grand total of 284 for Carver and 282 for Elliott. The matches were all three most stubbornly contested, and the first and last were in doubt until the last rounds were fired. The second was equally hard fought, but Elliott fell down in the last fifteen and Carver beat him out by two birds and lost his last bird apparently intentionally.

Elliott and Carver have been nagging at each other for a match for two or three years, but they could not be got to the sticking point until last week, when some Kansas City friends of Carver threw down the gauntlet and a series of three matches was arranged for $100 a match and $100 additional on the odd, Hurlingham rules to govern and the gate receipts to be divided after expenses were paid out. Elliott probably did not lose much money, but his pride was hurt; and while he made a gallant fight he feels his defeat keenly and will seek to get on another series of matches under the same conditions for next September. Andy E. Thomas refereed the matches, W. V. Rieger judged for Elliott and E. F. Swinney for Carver and James Whitfield scored.

Elliott was fortunate in the first race and got two birds that were saved to him only by the fence, but in the last two, the fickle goddess of fortune smiled on the "Evil Spirit of the Plains," and he won out the last two matches. Elliott shot a grand race to-day. He fell behind in the early part of the game, but shot gamely and finished strong, and while defeafed the victor had to acknowledge that he had met the hardest task of his life before the traps, and conceded that his winning of to-day's match was largely due to his luck in getting birds that were only slightly winged.

Carver used a 7lbs. 9oz. Cashmore gun, and his loads were 3½drs. of wood powder with 1¼oz. of 7½ chilled shot in Winchester leader shells. Elliott also used the Winchester leader shell loaded with 3½ drs. American E. C. powder, 1¼oz. of chilled 7's and wadded with the new Winchester system of nitro wadding, and he thinks that his loads were more penetrating than were those used by Carver.

There were quite a number of visiting sportsmen in town during the series, among whom were John Cook, of Mound City; M. F. Myers, of St. Joseph; Dr. F. P. Hatfield, of Grenola, Kas.; W. W. Dale, of Cedarvalle, Kas.; and the florid complexion of W. H. Skinner loomed up in the stand on the second day.

*Thursday's Shoot.*

The opening shoot was shot under favorable circumstances, and while the weather was hot there was a good breeze blowing. The birds were fairly quick to wing and as a rule were strong flyers and many pretty kills were made in the first fifteen rounds. Dr. Carver was the first to miss, losing his 16th bird. He slobbered it with the first barrel and missed with the second. The bird was hard hit but managed to rise over the fence. Elliott continued to kill his birds in good style and killed 27 straight. The 28th bird, a right-quarterer, he hit with both barrels apparently, but it was a big strong bird and managed to get over the fence into the right bleachers where it fell dead. Carver fell back again on his 32d, a hard straight-away bird which got away from both barrels and was last seen going over the fence to the races. He also missed the 47th pigeon, an easy right-quarterer. Elliott in the meantime was shooting in grand style, but after a run of 26 straight he lost another which fell dead in the stand, and his 64th bird, a right-quarterer, which looked as big as a turkey, got away unhurt, Elliott shooting under him with both barrels. This left the score a tie again, but Carver lost his 73d, a swift-flying black bird, that made tracks for the exposition building as soon as the trap was sprung. Elliott led until the 82d round, when he fell down on another big cinnamon-colored bird which rose above the two loads and left for Independence. Both shooters were steady, and it looked as if they would finish straight, but Carver lost his 96th bird and the race on a bird that went straightaway toward center field. The bird was hit hard, however, and fell dead at the stone wall. Elliott finished out straight, although he had a narrow escape on his 99th bird. It was a weak bird that hopped up in the air and sat right down again, and Elliott overshot it when he fired at it on the ground. The boy who did the retrieving, and, by the way, he was as clever at it as any veteran, lost him at the first attempt, and the bird flew to the home players' bench in the shadow of the grand stand, where the lad gathered him safely. Referee Thomas called for the bird, and as it showed a shot mark in the wing, declared it a dead bird. Elliott was also fortunate in getting his 77th bird, a white one, which wheeled out of the second charge and alighted in the field. The boy failed to gather him at the first attempt, but it flew toward the club house and was gathered on the door sill. A cheer went up for the local shooter when the referee announced the score.

Referee Thomas was deliberate but positive in his decisions, and his judgment was never questioned by the judges. Dr. Carver accepted his defeat gracefully, but appeared confident that he would still win a majority of the series. Elliott's steady work, however, has impressed his friends with the idea that he will win at least one if not both of the other matches. The score:

*Friday's Shoot.*

The second match resulted in a decisive victory for Carver over the local crack, by a score of 94 to 92, and it was the opinion of a majority of the spectators that Carver could have tied his score of Thursday and made it 95, had he desired to do so. He apparently shot behind his last bird intentionally. The match was witnessed by a larger crowd than on Thursday, and until Elliott fell down in the stretch the shoot was fully as interesting and exciting as the opening one. The birds were a much gamer lot of flyers than on Thursday, as the weather was not so oppressively warm, and they were also a hardier lot, a number of them carrying a heavy load of shot out of the boundaries. The same officials that acted in the opening shoot performed the same duties, and their work was beyond criticism.

Carver started the match by grassing an incomer, although he was forced to use his second barrel and Elliott killed his 1st clean with his first barrel, but used the second as a precautionary measure. Both men did some close shooting in the first 10, but Elliott lost his 11th bird, which was slow to wing and he misjudged it as it hugged the grass on its way out to centerfield. He also lost his 15th, a slow flying right-quartering driver, which, while hit, scaled the fence. At the 19th round Carver scored a lost one, shooting behing an easy right-quartering bird with both barrels, and at the 30th shot he slobbered a fast outgoing bird. He hit it with the first barrel and it dropped as he let go the second. The boy who does the retrieving failed to gather the bird, which rose to flight as he approached it and went to the races. This left the score a tie and it remained so until the 36th round. Elliott was unfortunate on his bird, the puller failing to pull the trap on his first call, which rather disconcerted him, and at the second attempt a fast flying bird wriggled off in a right-quartering direction. Elliott got feathers with the first barrel, but the bird wheeled suddenly and, escaping the second load, journeyed on southward. From this on Elliott settled down and did some remarkably clever work, killing 36 straight, by far the best run of the match. In the meantime Carver lost his 42d bird, a big cinnamon and white pigeon, which was hard hit, but managed to get over the north fence, falling dead at the stone wall. He also lost his 54th, and for the first time during the match was one bird behind. It was a right-quartering bird, and, although hit by both barrels, the loads struck too far back and the bird fell dead on the right bleachers. Elliott came near losing his 61st, a similar bird, but it could not quite scale the south fence. He dropped his 73d, however, breaking his run. The bird was a right-quarterer and fell dead on the bleachers. At the 75th round two birds were trapped at once and Elliott killed both in good shape, but his judgment in shooting the second one was criticised by the experts, and characterized as a grand stand play that was dangerous. While the first bird was killed clean, many birds hit apparently as hard have raised after striking the ground and winged their flight back to the lofts. Should this have occurred yesterday Elliott would have been in a nice predicament without any load in his gun. Carver fell back again on his 81st, a low flying right-quarterer that he did not lead far enough, but Elliott lost his 82d, a twisting driver that escaped both barrels, and the score was again at a tie and remained so until the 87th, when Elliott slobbered another right-quarterer. The bird was shot badly, and when it flew against the wire in the grand stand it looked as though luck was still with Elliott, but it recovered and flew out over the right bleachers. Elliott shot in poor form from that on and lost his 92d and 95th birds, both of which he touched slightly. This left him three behind, and Carver had the match won at the 98th round. He killed his 99th for good measure, but let his century bird get away without much apparent effort to stop its flight. The score:

*The Saturday Shoot.*

Dr. Carver won the last shoot of the series in another exciting finish in what was one of the hardest fought pigeon shooting matches on record, by a score of 95 to 94. The match was styled a world's championship contest. It was entitled to the distinction, and those who witnessed the series can truthfully say that they have seen the greatest trap-shooting event that has ever fallen to the lot of the most ardent patron of the trap and trigger. Elliott won the first match by a score of 96 to 95 and Carver the last two by scores of 94 to 92 and 95 to 94. Each of the three matches was fought from start to finish, and the result was in doubt in the first and third matches until the last round was fired. While Elliott was beaten he made a gallant fight that stamps him a wing shot of the first class, and the world renowned rifle and wing shot, known on both sides of the Atlantic as the greatest wing shot that ever put a shotgun to his shoulder, was fortunate indeed to carry off the honors, as he certainly had luck in his favor in the final and deciding race of yesterday, two birds being scored to his credit which, it seemed, would certainly wing their flight out of the inclosure.

The race was a repetition of the first one, and it was anybody's up to the last round. Carver won the toss and elected to open the game. He grassed his first, a good straightaway bird, with the first barrel, and Elliott did the same. The birds were hardly as fast as those of Friday and they were interfered with somewhat by a drizzling rain, which also bothered the shooters. Elliott's work generally was superior to Carver's as he killed his birds cleaner and killed 52 birds with the use of a single barrel.

Elliott was the first to lose a bird, his 12th getting away with the loss of a few feathers. His 14th and 17th also escaped in like manner, on account of his failure to lead his birds sufficiently. This left him three behind, and his most enthusiastic admirers thought it was all over, but he surprised them by shooting a great uphill game. Carver lost his 19th bird, a right-quarterer, which was hit but reached the score board and perched and afterward flew out of the inclosure. He lost his 20th and 25th, while Elliott was killing in good shape, and the race was a tie until the 36th, when Elliott lost another right-quarterer that showed evidence of being hit. He also lost his 48th, which put him two behind again. Carver in the meantime was shooting a grand race, and made the longest run of the series, losing his 71st bird after scoring 45 straight. The lost bird fell over the fence at the stone wall. He lost his 83d, a corkscrew right-quartering bird, and the score was again a tie, and remained so until the 92d round, when Elliott overshot a low-flying outgoer that managed to reach the high fence in center field. Carver finished straight and won the match and the series by a score of 95 to 94. The score:

RAVELRIGG.

## New York German Gun Club.

WHEN the New York German Gun Club held its July shoot at Dexter Park the weather was extremely hot and the attendance not as heavy as was expected. The medal shoot at eight birds each, handicap rises, attracted ten competitors and necessitated a shoot—the results being here shown:

Club shoot, 8 birds: Dr Hudson 8, F. Sauter 6, J. Wellbrook 8, H. Thornford 5, J. Dannefelser 5, J. Stuernagel 4, P. G. Garms, Sr. 9, M. Bonden 3.

Ties for second medal, miss and out: J. Wellbrook 6, F. Sauter 5, C. Busch 4, G. Smith 2.

Five birds: C Busch 5, J. Dannefelser 5, F. Sauter 4, Dr. Little 4, G. Smith 4, J. Stuernagel 3.

Three birds: G. Smith 3, Dr. Hudsoa 3, C. Busch 3, F. Sauter 2, J. Dannefelser 2, J. Stuernagel 0.

Ten birds: Dr. Hudson 10, G. Smith 9, F. Sauter 8, M. Borden 7.

## Wilmerding Gun Club's Tournament.

ON Friday, July 13, the Wilmerding (Pa.) Gun Club had a most successful little tournament. For a one-day's shoot the number of entries was unusually large, but Pittsburgh is a very hotbed of trap-shooters, consequently all shoots in that neighborhood are well attended. Among those present were "Old Hoss," Elmer E. Shaner, W. M. C. Jones, J. O'H. Denny, J. E. England ("Bessemer"), W. J. Vance, John Gelm, Mr. Anderson of Braddock, Laughrey from Ligonier, Cochran, Zumer and a number of others. The most notable absentee was "Jim Crow." It appears that Jim has been suspended by the Pittsburgh Gun Club, the reason for his suspension being that he has not attended a shoot for a long time; the understanding is that "Jim Crow" will be reinstated just as soon as he shows up at a shoot. Jim's plea is that just now he believes that he can shoot like Rolla Heikes and doesn't wish to undeceive himself.

To return to the shoot of the 13th, the grounds of the Wilmerding Club are situated in a narrow valley along the line of the Pennsylvania Railroad. On the day of the shoot the wind came down the valley during the morning with such force that it drove the targets in all directions, making straights, even in such company, extremely rare. The club had fixed everything with a view to making their guests comfortable, and succeeded in making things run smoothly from the start.

## Traps at Narragansett Pier.

NARRAGANSETT PIER, R. I.—A few of the shooters of this place, who have taken up trap-shooting within the past six months, met on Saturday P. M. last at the grounds near Sherry's for a few hours' sport with the clay birds. They had with them Mr. S. A. Tucker, of the Parker Bros., a native of this town, who is visiting his brother at Wakefield, and his presence seemed to inspire the boys into doing some pretty good shooting for amateurs and some very creditable scores were rolled up. The first event, not down on the programme, was the appearance of a minature cyclone coming from the West, which was evidently sent in honor of Mr. Tucker's visit, as most of his time is spent in traveling through the Western States. After the departure of the storm, which dampened everything but the ardor of the enthusiastic sportsmen, a 25-bird race was shot, and although the atmosphere was very heavy, causing the smoke from the guns to hover over the traps like a cloud, sometimes entirely obscuring the birds from view, some very good shooting was done—as follows:

No. 1, 25 bluerock targets, unknown traps and angles:

| | |
|---|---|
| C H Tucker | 0101011110111111111010000—16 |
| S A Tucker | 1111111111101111111111110—23 |
| R Gavitt | 1111101110001010111011011—17 |
| George T Briggs | 1111111011111110111011100—21 |
| P S P Randolph | 1111111111111011111110111—23 |
| H C Rodman | 1111111111010111111111101—22 |
| A Tucker | 0101101010001110110001011—13 |

The rain fell at frequent intervals during the shooting, and as another shower seemed to be approaching at the close of the match it was proposed to postpone the remaining events till the following Tuesday.

Tuesday, the 17th, was all that could be asked for as regarded weather conditions, being bright and sunshiny, not too hot, and a gentle breeze from the southwest, which, as the traps are set facing the northeast, only served to impart a little impetus to the speed of the swift-flying targets. After a little preliminary shooting to warm up, the following races were run off, all being at unknown traps and angles, rapid-fire system:

| | No. 1. | No. 2. |
|---|---|---|
| S A Tucker | 1011111111—9 | 1111010111—8 |
| Briggs | 1110111111—9 | 0111011011—7 |
| Rodman | 1011101001—6 | 1100000110—4 |
| J C Tucker, Jr | 1111011111—9 | 0001001101—4 |
| B W Palmer | 0111110101—7 | 1011101111—8 |
| Gavitt | 0011011011—6 | 0100101111—6 |
| C H Tucker | | 0110001011—5 |

No. 3: S. A. Tucker 9, Briggs 8, Rodman 7, J. C. Tucker, Jr., 8, Palmer 6, Gavitt 7, C. H. Tucker 6.

| | No. 4. | No. 5. |
|---|---|---|
| S A Tucker | 1111010101—8 | 1111010111—8 |
| Randolph | 0011101111—7 | 1111111011—9 |
| Gavitt | 0110011010—5 | 0100011110—5 |
| Briggs | 1001111110—7 | ..... |
| C H Tucker | 0100110001—4 | 0011111011—7 |
| J T Caswell | 0100111110—6 | 0010000011—3 |
| Rodman | 1111110110—8 | 1111011111—9 |
| J C Tucker, Jr | 0110001111—6 | 1110111011—8 |
| Palmer | | 0110001011—5 |

No. 6 was a 25-bird race between S. A. Tucker and R. S. P. Randolph and resulted in a victory for the Parker gun representative by the following score:

| | |
|---|---|
| Tucker | 1111011111111110110011111—21 |
| Randolph | 1101111111011110011100110—18 |

As a final event the four leading men participated in a 10-bird contest for highest honors with the following result:

| | | | |
|---|---|---|---|
| Tucker | 1111111111—10 | Rodman | 1111100111— 8 |
| Briggs | 1111111111—10 | Randolph | 1111100101— 6 |

Trap-shooting is a new departure at Narragansett Pier, none of the above men with the exception of Messrs. Tucker and Randolph ever having seen a clay pigeon until last February; but it is believed that there is material for a pretty strong team, as nearly all the scores are better than 60%. No club has yet been organized but the results of the above shoot may tend to awaken a little enthusiasm among the local sportsmen. It should be taken into consideration that this is the first time the men have ever shot under the rapid fire system, all the practice shooting having been done at one score. R.

## Likes the "Reckoner."

WILMINGTON, Del., July 10.—*Forest and Stream Publishing Co:* Having used your "Trap-Shooters' Ready Reckoner" during our tournament and on several other occasions, I must say that it is a great time and labor saver. Any club giving a tournament or an all-day shoot cannot afford to be without one. CHAS. FEHRENBACH,
Secretary Wilmington Rod and Gun Club.

## "Trap-Shooter's Ready Reckoner."

THERE has just come from the FOREST AND STREAM press an extremely useful pocket reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs, and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

## Hartford Gun Club Tournament.

HARTFORD, Conn., July 20.—The Hartford Gun Club's all day tournament, held at Union Grove yesterday was well attended. There were only twenty-five shooters present, but they represent the best and strongest in Connecticut. The outside shooters were Mills, of Bristol; Savage, of New Haven; Treat, of Manchester; Edgerton, of Willimantic; Selbey, of Bridgeport. Besides these there were C. R. Dickey, W. W. Bennett and F. E Bennett, of Boston; Fred Risley, of East Hartford, of the Colt Gun Club, made 124 birds straight, best State record.

No. 1, 10 singles: Jones 10, Dickey 9, Sterry 9, Savage 8, Clark 8, Manross 8, Tucker 7, Smith 7, Edgerton 7.

No. 2, 10 targets: Viberts 10, Jones 10, Treat 10, Mead 10, Mills 9, Edgerton 9, Savage 9, Bailey 9, Dickey 8, Smith 8, Sterry 8, Wood 7, Tucker 7.

No. 3, 10 targets: Tucker 10, Smith 10, Dickey 10, Savage 10, Treat 10, Edgerton 10, Sterry 10, Jones 9, Risley 9, Mills 9, Mead 8, Wood 7, Manross 7.

No. 4, 20 targets: Risley 20, Jones 20, Burbridge 20, Smith 19, Edgerton 19, Dickey 18, Wood 18, Sterry 18, Savage 17, Mills 17.

No. 5, 10 targets: Jones 10, Burbridge 10, Edgerton 10, Risley 10 Sterry 10, Dickey 9, Pitkin 9, Tucker 9, Manross 9, Wood 9, Mills 8, Smith 8, Treat 8, Seeley 7.

No. 6, 10 targets: Pitkin 10, Jones 10, Smith 10, Burbridge 10, Edgerton 10, Risley 10, Dickey 9, Sterry 9, Wood 9, Melrose 8, Savage 8, Tucker 8, Mills 7, Treat 7, Manross 7, Mead 7, Clark 7.

No. 7, prize, Burgess Repeating Shotgun:

No. 9. 10 targets: Jones 10, Burbridge 10, Bishop 10, Savage 10, Wood 10, Risley 10, Manross 9, Smith 9, Pitkin 9, Sterry 9, Dickey 8, Treat 8, Edgerton 8, Tucker 8, Clark 8, Mills 8, Mead 7, Capron 7, Viberts 7

No. 10, 10 targets: Pitkin 10, Jones 10, Bishop 10, Edgerton 10, Sterry 10, Capron 10, Risley 10, Savage 9, Clark 9, Mills 9, Wood 9, Smith 8, Burbridge 8, Treat 8, Tucker 8, Dickey 7.

DANIEL S. WADSWORTH, Sec'y.

## Col. Courtney Wins Again.

SYRACUSE, July 20—The regular 50-target shoot by the members of the Onondaga County Sportsmen's Club took place yesterday, this being the contest for the three class medals. The shooting was from known traps at unknown angles. The portly Colonel A. G. Courtney again proved himself to be possessed of the stuff of which champions are made by defeating the field and scoring another win of the magnificent A class diamond medal. The Colonel did not have a walkover, however, as Charles Arno tied him on the fine score of 46 breaks, Col. Courtney winning the 10 target shoot off by 9 breaks to Arno's 8. One more victory for "Court" will make him the owner of the above medal, which has been won as follows: A. G. Courtney, four times; Charles Arno and Charles Wagner, three times each; C. H. Mowry, Harvey McMurchy and Geo. H. Mann, twice each: W. E. Hookway, A. C. Ginty, D. M. Lefever and Charles Dugar once each.

Although genial George Mosher has parted company with his long-flowing, blonde moustache, and is frequently taken for a schoolboy he is still able to smash targets, and yesterday he gave an exhibition of his ability by winning B class medal on 46 breaks. Below are the scores in detail:

Class A.

| | |
|---|---|
| C Arno | 1111111111101111111111011111111111011111111111011111—46 |

| Holloway.....21 | | |

Out of the first 70 targets only 2 missed.

FALSTAFF.

## Brewer Loses Both Wagers.

QUITE a fair-sized audience assembled in Willard's Park, Paterson, to see J. L. Brewer make an effort on a wager of $250 to kill 95 out of 100 birds in a 50yds. boundary, and an additional wager that he could kill 97 out of 100 in the fence boundary. The day was extremely hot and the birds slow to start, although some of them were good enough once they were on the wing. As the below score will show he lost both wagers. The scores in the below table decided both wagers, his scores being 91 in 50yds. and 94 inside the fence, three birds falling dead out of bounds. He used a 12 bore Winchester and American E. C. powder:

*Trap score type—Copyright 1894, by Forest and Stream Publishing Co.*

## Standard Keystone's Seventh Annual.

NEW LONDON, Conn., July 20—The Standard Keystone Company's seventh annual trophy and championship tournament will be held on the Thames Gun Club grounds, this city, on Sept. 4, 5, 6 and 7, 1894. Programmes will be ready Aug. 1. New and interesting features will be introduced to attract trap-shooters from far and near.

STANDARD KEYSTONE COMPANY,
J. W. CLINTON, Secretary.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where WE get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS

**Sand Worms 12 and 15c. per doz. White or Blood Worms, 25c. per doz.**

**I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.**

One lot of Split Bamboo Fly and Bass Rods will be sold at $1.19 until all are sold. These rods are all nickel mounted, solid reel seats, silk wound, extra tip, complete in wood form and will give satisfaction.

Length and weight of the Fly Rods are: 9ft., 6oz.; 9½ft. 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand.

Length and weight of the bass rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz., 10½ft., 14oz. Reel seats above hand.

No. H—A special lot of Hard Rubber and Nickel, Raised Pillar, Multiplying Reels with Balance Handle and Side Spring Click, 40yds., 63 cts.; 60yds., 78 cts.; 80yds., 88 cts.; 100yds., 98 cts. Any of the above reels sent by mail for price and 10 cts. extra for postage.

No. E—Special lot Hard Rubber and Nickel Raised Pillar Click Reels, 40yds., 38cts., 60yds., 48cts. Sent by mail 5cts. extra for postage.

No. C—Nickel-Plated, Raised Pillar Multiplying Reels, with click and drag and screen oil cup, 40yds., 58c.; 60yds., 68c.; 80yds., 78c.; 100yds., 83c.; 150yds., 98c. 10c. extra for postage.

Single Gut Leaders, mist color, 1yd., 20c. per doz.; 2yds., 40c. per doz.; 3yds, 60c. doz. Double Gut Leaders, mist color, 2yds., 75c. doz. Hand Twisted Gut Leaders, 10c. each, 90c. doz.

A special lot of Trout Flies at 25 cents per dozen assorted, sent by mail 1 cent per dozen extra for postage.

A special lot of Bass and Pickerel Spoons at 5 cents each sent by mail, 1 cent extra for postage.

All kinds of Hollow Point best quality Hooks snelled to single gut 10 cts. doz.; double gut, 15cts. doz.; treble, 20 cts. doz.; four ply, 25 cts. doz. 1 cent extra per dozen for postage.

300ft. Braided Linen Reel Line on Block, 41 cts.; 300ft. of Hand-Made Linen Reel Lines on Block, 9 thread, 38 cts., sent by mail 3 cts. extra for postage.

Brass Box Swivels, all sizes No. 1 to No. 12., 15 cts. per dozen, sent by mail 1 cent per dozen extra for postage.

Special lot of best quality 100ft. Linen Reel Lines, 8 cts., 200ft., 15 cts.; 300ft., 22 cts.; 3 cts. extra for postage.

**Send 2-cent stamp for Illustrated Catalogue and Special List No. 3.**

**Open Evenings until 8 o'clock.**
**Saturday Evenings 11 o'clock.**

# Forest and Stream's Outdoor Scenes.

FROM ORIGINALS IN WATER COLOR AND OIL, PAINTED EXPRESSLY FOR THE FOREST AND STREAM.

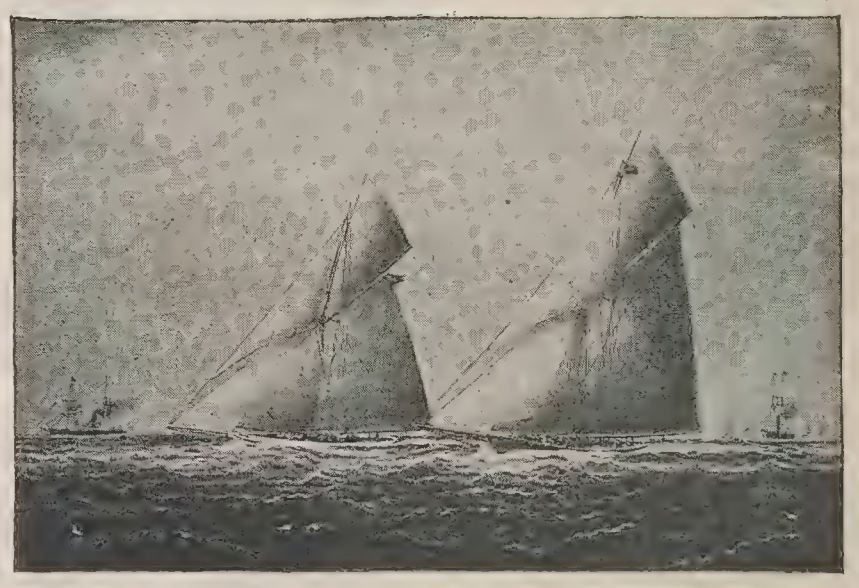
HE'S GOT THEM.

JACKSNIPE COMING IN.

## AS PREMIUMS.

We have prepared as premiums a set of four beautiful and artistic reproductions of original paintings of realistic outdoor scenes. The art work is the best obtainable in New York; the pictures are rich in effect and are intended for framing. They are done in 12 colors. The yacht race is from an oil painting; the others from water colors. The scenes are shown in the small cuts herewith. The plates are 14¾ x 19in. The pictures are sent both to **new** subscribers and to **old** subscribers upon renewal, on the following terms:

**Forest and Stream** *one year and the four pictures*, **$5.**
**Forest and Stream** 6 *months and any two pictures*, **$3.**



If subscribing for 6 mos. designate by title the two pictures desired. Single pictures will be sold separately, price $1.50 each, or the set, $5. Remit by express or postal money order, payable to Forest and Stream Publishing Co., 318 Broadway, New York.

The pictures are sent by mail, postpaid, wrapped in tube.

Copies of them may be seen at this office, and inspection is invited.

BASS FISHING AT BLOCK ISLAND.

VIGILANT AND VALKYRIE.

## Mr. Grinnell's Indian Books.

## BLACKFOOT AND PAWNEE.

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author, and show Indian life from the Indian point of view.

**BLACKFOOT LODGE TALES;**

**By GEO. BIRD GRINNELL.**
pp. 360. Cloth. Price, $1.75.

**Pawnee Hero Stories and Folk Tales,**
WITH NOTES ON THE ORIGIN, CUSTOMS AND CHARACTER OF THE PAWNEE PEOPLE.
**By GEO. BIRD GRINNELL.**
Illustrated, pp. 446. Cloth. Price, $1.75.

**FOREST AND STREAM PUBLISHING CO., 318 Broadway, N. Y.**

# The Complete Sportsman.

**BY HOWLAND GASPER.**

**Cloth, Royal Octavo, 277 pages, 17 Illustrations. Price $2.00.**

A manual of scientific and practical knowledge, designed for the instruction and information of all votaries of the gun. "The author has had in view only one object—so to familiarize the sportsman with the habits of the game he pursues, and the methods of hunting it, that his success in the fields and marshes may be practically assured."—*Introduction*

FOREST AND STREAM PUBLISHING CO.,

# American Big Game Hunting

The Book of the Boone and Crockett Club.

EDITORS: THEODORE ROOSEVELT, GEORGE BIRD GRINNELL.

Entertaining sketches of hunting and exploration by members of the Club. The handsome volume comes from the DeVinne Press; a large octavo of 345 pages, with 16 full page Illustrations by leading artists. Price $2.50, postpaid.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

# FISHERMEN, ATTENTION!

# $225 in Gold Given Away!

## THE NATCHAUG SILK CO.

**will give nine big cash prizes for the following catches of fish taken during the season 1894, viz.: From the 1st day of April to the 1st day of November inclusive, with the NATCHAUG SILK FISHING LINE:**

FIRST PRIZE— $25 in Gold for the heaviest Muskallonge.
SECOND PRIZE— $25 in Gold for the heaviest small-mouth Bass.
THIRD PRIZE— $25 in Gold for the heaviest large-mouth Bass.
FOURTH PRIZE— $25 in Gold for the heaviest Lake Trout.
FIFTH PRIZE— $25 in Gold for the heaviest Brook or Mountain Trout caught in other waters than in the State of Maine.
SIXTH PRIZE— $25 in Gold for the greatest variety and largest number of fresh water fish caught in one day by one person.
SEVENTH PRIZE—$25 in Gold for the greatest weight of any kind of fresh water fish caught in one day by one person.
EIGHTH PRIZE— $25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.
NINTH PRIZE— $25 in Gold for the heaviest Brook Trout caught (SPECIAL) in the State of Maine.

As the Trout caught in the lakes of Maine are acknowledged to be genuine Brook Trout, on account of the size of these fish we bar them from our Fifth Prize, and offer this as a special prize for these waters.

A sample card of our Lines sent free on application.

## CONDITIONS:

All these fish must be caught with the Natchaug Silk Fishing Line in fresh water (except Prize 8) and by fair angling.

Competitors must forward to us their full name, P. O. address, together with the description and weight of fish caught, and name of dealer from whom line was purchased, together with the name of one reputable witness affixed. On November 7th, 1894, the award will be made, and the list of successful competitors announced in the FOREST AND STREAM and the *American Field*.

All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

THE NATCHAUG SILK CO., Willimantic, Conn.,
Or 213--215 Fifth Avenue, Chicago.

## Forest and Stream Water Colors

We have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for the FOREST AND STREAM. The subjects are outdoor scenes:

**Jacksnipe Coming In. "He's Got Them" (Quail Shooting). Vigilant and Valkyrie. Bass Fishing at Block Island.**

SEE REDUCED HALF-TONES IN OUR ADVT. COLUMNS.

The plates are for frames 14x19 in. They are done in twelve colors, and are rich in effect. They are furnished to old or new subscribers on the following terms:

**Forest and Stream** *one year and the set of four pictures*, **$5.**
**Forest and Stream** *6 months and any two of the pictures*, **$3.**
**Price of the pictures alone, $1.50 each; $5 for the set.**

Remit by express money order or postal money order Make orders payable to

**FOREST AND STREAM PUB. CO., New York.**

### *SHEEP HERDERS AND NATIONAL PARKS.*

THE story told on another page of the destruction of the forests in the national parks and forest reservations of the Pacific Slope is a melancholy one. Residents of the sheep raising districts of California and adjacent States and Territories regard these tracts of mountain forest as the natural summer pasturage for their sheep, and, as they belong to the Government, every man who owns a band of sheep feels that he is entitled to a certain tract of mountain country for his "summer range." This "right" he is prepared to maintain by force of arms, and many a man has been killed by those who were infringing on, or defending such "rights."

It is a fact well known to those who have given the subject of forestry any attention that except fire, nothing is so destructive to a forest as to turn sheep into it. They eat every green thing, gnawing down grass, weeds and shrubs alike to the very surface of the ground. Young saplings, too large to be eaten, are denuded of their bark and so destroyed. Nothing is spared, save the great trees on whose tough bark the teeth of the ever hungry sheep can make no impression. Besides this, the trees which for ages have been dying, falling and decaying are in the sheep herder's way, and he wishes to clear them out; therefore, he sets fire to these dry trees and very likely burns over square miles of forest, or if not, at least calcines the soil so that it remains unproductive for years. The harm done to a forest by these agents, sheep and fire, is well set forth in that charming little book by M. Rousset, entitled "The Forest Waters the Farm."

We have often urged the enactment by Congress of a general law which should provide adequate protection for those forest reservations and national parks. After years of effort such a law has been passed for the Yellowstone National Park, but the forest reservations of the Pacific Slope and of the Rocky Mountains, which, while not so spectacular in their attractions as the Yellowstone, are scarcely less important from an economic point of view, still remain without protection. It is satisfactory to see that the Secretary of the Interior appreciates the importance of guarding the forest reservations, and is doing all in his power to preserve them for the uses for which they were set aside. Until Congress shall provide Secretary Smith with what may be termed the machinery for protecting the reservations, he can do but little, and until proper laws are passed Government timber will be stolen, Government game killed, and Government forests destroyed.

It might be imagined that the Senators and Representatives from the districts in which such reservations lie would be especially interested in their preservation and would initiate the necessary legislation. The very reverse of this is true. The constituents of such members of Congress are the ones who violate the law and who do more than any other class of people to destroy the forests, and these constituents care nothing for the future. So long as their sheep have summer pasturage this season they do not care what happens the next.

It is inevitable that the destruction of the forests, not only in the Sierra Nevadas, but in the Rocky Mountains as well, should before long make itself felt by all those who cultivate the soil in the arid regions of the West. When the water on which such farmers depend for irrigation shall have failed them for two or three years in succession, we shall hear a tremendous outcry, but fair warning of what may be expected has been given, though this warning remains year after year unheeded, and when disaster comes to the farmer and fruit grower of the Southwest, he will have only himself to blame.

### *THE CANADIAN FISHING TAX.*

THE Dominion authorities have been studying anew the art of squeezing a lemon, and as a result we have a set of fishery regulations, published in our angling columns, fixing a tax of five dollars upon non-resident anglers. Any other than a British subject, visiting the Dominion for angling, must stand and deliver, before he may wet his line. This new rule has excited much resentment among those Americans who have been accustomed to go to Canada for their vacation fishing. Indignation meetings have been held at Alexandria Bay; and a joint committee of Americans and Canadians has been chosen to visit the authorities and endeavor to have the obnoxious law revoked.

The regulations exempt from payment of the tax such foreigners as may be temporarily domiciled in the Dominion and employ Canadian boats and boatmen. This possibly affords an insight into the motives and the source of the discrimination, which appears to be directed against the anglers of Lake Erie and other international waters, who visit Canadian territory in American boats, and are therefore neither temporarily domiciled in Canadian hotels nor putting money into hire of Canadian boatmen. This gives the regulations the look of a device hit upon by people who have been at their wits' end to bleed the Yankees. If the authorities have been prompted by any such narrow motives, they might well take a more liberal view of the situation. Making no account of boundary waters, the Provinces reap a rich revenue from American anglers. Not a year passes that fishermen from the States do not leave there many thousands of dollars for steamboat, railroad, stage and boat, guide, hotel and camp keeper. This American money is often the only money some of these people in the backwoods ever see from one year's end to another. In view of this immense annual expenditure by foreign fishermen in Canada, the Dominion Government shows itself to be extraordinarily over-reaching and grasping.

As a lemon-squeezing expedient this non-resident license regulation is not likely to prove much of a success. It will provoke indignation, and will deter from visiting Canada a host of fishermen outnumbering those willing to submit to the extortion. More than that, it should prompt American anglers to a consideration of why it is that they are now obliged to go from the United States into Canada for their bass. On Lake Erie, for example, if the fish were properly protected in the American portion of the lake, would the supply not suffice and be so bountiful as to make the Ohio fishermen independent of Canadian fishery officers?

Mr. J. M. Rose, of Little Rock, Ark., tells us that the Arkansas law requiring a license fee of $10 from non-resident hunters and trappers was never put into effect except once; and on that occasion it was declared to be unconstitutional. There is no question that other non-resident shooting and fishing discriminations made by one State against the citizens of others, or of one county against all others, would meet the same fate if put to the test. These laws are altogether wrong in principle. It may be defensible, even though unneighborly, for Canada to make Americans buy a license before they may hunt or fish, but there can be no good defense of such action by some citizens of the United States against other citizens of the same common country.

### *SNAP SHOTS.*

OUR ever entertaining contributor "Ransacker" makes an excellent plea for the poetry of field sports, and for a more adequate expression of that poetry in verse. He is right; the domain of the forest and of the stream is full of poetry; and there is abundant evidence every week going to show that the writers for our columns have poetic insight to recognize it. But they express it in prose. That is the natural, the less artificial form; and for most people, too, it is the form most acceptable. We have always held that if one is capable of writing good prose, he should adhere to it, and not lapse into verse, which may be good but is more likely to be commonplace. For the practical purposes of sportsmen's journalism an ounce of prose is worth a pound of poetry. We have given "Ransacker" his hearing with some trepidation, lest it should precipitate upon us an avalanche of verse; and we improve the occasion to remark that we have already in hand more poetry than we can make room for this summer.

LADIES AND GENTLEMEN: It affords us undisguised satisfaction, on this occasion, to depart somewhat from the wonted groove of our field chronicles, to record a bit of news pertaining to the United States Navy, and in particular to one whom you have so well known for these twenty years and more by his familiar pen-name "Piseco." Commodore L. A. Beardslee has just taken an upward and outward step—upward into a higher rank in the service, and outward into a field of wider opportunities and broader responsibilities, having been ordered to the command of the Pacific Station. Upon his arrival there, he will hoist his flag as Rear-Admiral Beardslee. The flagship will for the present be stationed at San Francisco, and to "Podgers" (who thinks San Francisco the only fitting place to live, and so lives there) we shall intrust the pleasant duty of going aboard to convey to "Piseco" the felicitations of his FOREST AND STREAM friends.

Trap-shooting and game protection are two forces which will pull well together if given opportunity. But each must have its own time and place and activity unobstructed by the other. The problem of securing these has been solved in New York by devising an association of sportsmen which has a dual purpose, and makes provision for two separate and distinct gatherings of its members for putting these purposes into effect. A summer tournament and a winter convention constitute the plan of organization, which has given satisfaction; and which would prove equally advantageous elsewhere. We have urged the adoption of the New York Association's form of organization by Illinois and Pennsylvania. Now they are talking of it in New Jersey; the material is there, the need is pressing, there should be a New Jersey State union of forces on New York lines.

The steamship Miranda, which sailed from New York on June 7, with Dr. Cook's excursion party for the North, collided with an iceberg last week, and had to put back to St. Johns, N. F. No serious damage was done, but the accident appears to have dampened the ardor of the excursionists; and before leaving St. Johns, last Saturday, there was prolonged discussion as to whether the expedition should adhere to the original route. There is an unusual amount of ice this season, and the dispatches report that the Miranda's voyage will probably be shortened.

The prolonged and widespread drought has put field and cover into the condition of inflammable tinder, which requires only a burning gun wad or a heedlessly thrown match to kindle destruction. Under such circumstances every man who goes afield or into camp is bound to observe stringent precautions against fire.

# The Sportsman Tourist.

## THE PRESCRIPTION.

(*Concluded from Page 69.*)

THE next morning found us up betimes. It was a lovely morning and every bird in the forest and every loon upon the lake seemed to do his best in the way of song. We found our trout all right this time. Brand had put them at the side of the shanty on a piece of bark and covered them over with one of our empty boxes.

On our way to the alders, two ducks flew past us, and a lazy crane winged his slow flight down the lake, and a hen-hawk circled far above our heads and kept up a screeching that was out of harmony, it seemed to me, with the song and bird life around us. Then we saw several fish jump, and a belated muskrat dove in under the alders near the mouth of the brook, just as Brand swung the boat round to give me a cast.

We had good luck again. I caught five almost as fast as I could cast and draw my line in. And then Brand took four. One of his would weigh a pound.

By 8 o'clock we were home again and nothing would do but we must have another breakfast. I felt like it, too. We had just finished when we heard a shout some distance down the lake, and there was the guide coming. We did not expect him before noon, but he had left home very early in the morning. He said he had felt anxious about us during the rain of the day before, and had hurried away so soon as he could see well.

But there were letters from home, and anxious ones they were, too. How pleasant it was to be able to return the comforting assurance that we were doing well. While the guide was increasing our woodpile I added this much and more too, to my yesterday's letter.

The guide brought us two loaves of bread this time and seven fresh eggs. This replenished our larder. We had 12 o'clock dinner. It seemed to me I could eat every two hours now. After dinner the guide left and again we were alone. "Now," said Brand, "Pap, let us have a good sleep and then go for another fish."

It was half-past three before either of us awoke. Meanwhile the "drummer," I suppose, had been inspecting our shanty, or perhaps picking up scraps that lay around it. For scarcely had I risen to my feet and started to go from under the roof when up he went, close to my side, making me start for the moment, and fanning the ashes that lay scattered about our home. A few minutes after we heard him drumming in a new direction, and for several days he forsook his old haunt. But very often after this we would start him near the shanty, and several times we had a fine view of this noble bird. Sometimes we thought he regarded our home as his own. The afternoon that we left, as we were carrying the last load to the boat, he flew up only a few feet away from where the axe was sticking in a stump.

We were not very successful this afternoon. We only caught three trout, none of them large. But we had a nice time, and I did half the rowing. Then we saw so much. I counted two pairs of loons. Each pair seemed to have a point or a cove to themselves. Several ducks were seen, and sandpipers by the dozen. Then there were bluejays and hawks and kingfishers, with smaller birds in large numbers. I was almost sorry when the time came to return to camp, although I felt hungry before half the afternoon had passed.

The evening was spent in the usual way. The only new thing was that after the birds got through with their singing and the night hawks with their booming, and we had retired to the shanty to play cribbage, an owl came and hooted from a dead tree in the rear of our home.

Next day was Sunday. It was spent in reading, writing and watching the birds, and in the evening there was a concert composed of a bass and a tenor, voices that seemed to draw all the loons in the neighborhood to the vicinity of our island.

Monday found us early at the fishing place again. Only four rewarded our efforts, none of them large, and as the day promised to be fine, we determined to devote it to exploring. Brand complained that he wanted more fish. Said he, "Pap, let us follow along the shore and see where the stream comes in and try there." This was our plan, and after the second breakfast was eaten we set out. There was plenty of lunch stowed away in the bow of the boat, so that we need not return before nightfall.

For several hours we skirted the shore of the lake—in and out of its coves and bends—trying here and there as we passed along. Only once did we have a rise until we came to the place where the stream came in that connected this lake with another not many miles away. But meanwhile there was plenty to engage us. Fine views and beautiful laurels and plenty of birds. Then the alarm that we seemed to create among the birds as we glided quietly into some little cove and saw the red squirrel skurrying away to chipper at us in derision. Once we surprised a muskrat that must have been sitting under the bushes on the shore. We heard him dash into the water and directly he came up the other side of the boat. At another time we heard something running off through the woods. It might have been a deer, but the noise was more like the shambling of a bear.

When we reached the inlet of our lake our poor luck changed. I was rowing at the time, and as we drew near the place I swung the boat around so that Brand could cast pretty well out in the ripple. He had hardly done so before I saw he had a fish on, and a very nice one, too. The fish ran first as if to go up stream, when turned he made for some bushes on the margin, then for the lake. I simply allowed the boat to drift now, while Brand refused to give the fish any more line. He had not towed us many yards before I saw he was tiring. He came to the surface, made a swirl and then down. Then in less than a minute to the surface again, then a still shorter period below. But now Brand is reeling him in, and I must be ready with the net. He comes. He is in the boat, a fish 14in. long and weighing a pound or more.

Brand was delighted with his success and must try again. This time a smaller one, and again and again one of the same size, 10in. fish, good pan size.

It was now past noon, and as there was a good place to land here we determined to go ashore and have dinner. But wait. It seemed as though all the black flies in creation had gathered there to meet us. In a moment we were enveloped in them. Nor did smoke or fire drive them away. We had to give it up and take to the boat again, reaching home before the middle of the afternoon with appetites that could hardly wait for our fish to cook.

This afternoon was spent in sleeping, cleaning up around the shanty and making things convenient. The fact of it was I felt tired and only too glad to find an excuse that would keep me home. Then I must write, for by agreement the guide would be with us on the morrow, and there were fish enough to last till that time.

This evening the full moon came streaming into our home just as the sun had done in the morning. Only everything appeared more somber in the rays and the shadows deeper as we looked off toward the lake. There was a wildness and solitude connected with the moonlight, and a lack of bird life that made the day so blissful. The owl came back to his old stand, he was calling there when we went to sleep.

Brand was awake early the next morning. For once in his life I did not have to call him. We were just finishing our breakfast as the sun came over the distant hills, and it was not 7 o'clock when we reached the inlet fishing grounds. This place was still in the shade. Later in the season this might have been an advantage. It was no advantage now. We only caught six fish, and none of them over 10in. long.

Brand wanted me to land and "go up stream with him a little way," to see if we could not find more fish. We walked up for nearly half a mile, but the alders were so close, and the underbrush so thick, and the fish we did catch so small, and the black flies so intolerable, that we were obliged to give the whole thing up as a bad job. Neither oil nor ointment would keep off these flies; and it was with a sigh of relief that we pushed the boat from the shore and wiped the grease from our smarting necks and faces.

"That is enough of that kind of thing for me," said Brand. "I am satisfied to get fewer fish and have less misery. We will keep to the lake after this."

I told him what my experience had been, that I could always do about as well in the lake as in any place. Where you catch one fish you can generally look for more. Go every day to the same place and take what you can get. Some days you will catch more, some days less.

We had not explored all our ground yet and I proposed we should return to the shanty and make a fresh start in the afternoon.

This, however, had to be postponed until the next day. The guide brought me a letter that required an immediate answer and it was 3 o'clock before he left us. Soon after he was gone we rowed up to the alders and secured enough fish to make us a breakfast the next morning. I did the rowing this time. Indeed I felt almost equal to anything. Repeatedly my son would say: "Take care; don't overdo." But it was no use. I was gaining. I felt ready for work again. I do not know, had my wife not charged me particularly, "*if you improve do not come home for two weeks*," that I would have shortened my visit by several days. Saturday afternoon was the day appointed for our return to civilization, and in one week I expected to be home. I was getting rather tired of a fish diet, and began to want roast beef and steaks. Several times I had enjoyed a piece of fried pork and the fresh eggs that the guide brought us were always good.

Wednesday morning came with its sunshine and shade. It was not what I considered a promising morning for fish. It was too cloudy and there was a chill upon the air that did not forebode warmth. However, we started off, taking our way toward the outlet on the other side, and explored carefully until we reached a cave, where a little brook ran into the lake through half an acre of flags and rushes. At the very mouth of this brook, as we rounded the point, I thought I saw something. It seemed to waddle off a pile of dead grass and dove as it reached the water. Judge my surprise when a few minutes after a loon came up not two rods from the boat. The mystery was solved. I had found a loon's nest.

"Now," said I to Brand, "I have found something for you. I have found the nest of that bird."

But just at this moment I had a rise, and at my next cast a fish was hooked. I could only say, "Take care of the boat, I will show you directly," and then my game required all my attention. He was a lively fellow, though not large, and was followed by seven more before our luck ceased. Then there was a rest, and I said, "Now, row up to that hummock over there, and see what we can find." He did so; and there sure enough was a rude nest about three feet from the water, and in it two large greenish eggs with light brown spots on them.

"O, that is the best luck yet," said Brand. "They are worth $3 apiece. But I want them for our collection."

Maybe Brand saw me look distressed (as the bird in the distance sat motionless upon the water, eyeing us all the time), when he added, "She will make another nest, father. But now let us return home," continued he. "We will come here to-morrow and go to the alders this afternoon. I must blow these. I am afraid they are hard set."

He had come prepared to blow any egg he might find. These were, as he suspected, hard set, but not so hard as to injure them as specimens; and before dinner they were laid away most carefully. While he was blowing them I chopped a tree down, the first one, and cut it up for firewood.

Our plans for the afternoon were interrupted. We had hardly reached home before the loons commenced calling, and the sky began to thicken up; and half an hour before the time we had named to start the quiet lake was dotted with tiny wavelets that portended the coming storm.

It rained all night, and it was not until 9 o'clock the next day that we saw the face of the sun again. And then it did not come out as though it meant to stay, but struggled along with cloud and mist until nearly 2, when we thought we would venture out.

This time we went to the inlet again, and very good fun we had, too. Brand caught five fish and I three. Two of them were nice ones over 12in. long.

This evening was spent within the shanty, I considered it too damp for me outside. We talked, played cribbage and listened to the owls as they hooted or chattered as the case might be. We sometimes thought it strange how many different noises they made, or else there were several different kinds of owls.

Friday was given to exploring again. Brand wanted to search every marsh around the lake to see if he could not find another loon's nest. We did look along the edges of two of them, but found nothing but old muskrat houses and three dead trout, one a large one. Then Brand tramped the island over to see if he could not find the partridge's nest. He got me to help him for an hour, and every time the old cock flushed I thought for sure I had found the nest. We did not discover it, however, and before Brand gave over the search I had another tree down and cut up for the fire.

This was our last night on the island, and we made the best of it after the moon came up. The air was drier than it had been for several evenings, so we sat on our old seat by the shore making plans until nearly 9 o'clock. Brand wanted to take some fish home. "We must take some," said he, "mother likes them, and we have had such a good time. I will tell you what we will do. You are well now. Let us get up at daybreak and have a bite with some hot coffee and then go fishing. Let us go to the loon place first, then cross over to the inlet, and if we do not get enough, come home and go up to the alders. Now, what do you say? I will take a box and put some moss in it and we will keep it covered. Then when we get back here we will clean our trout—if we get any—and pack them in your basket with fresh moss and powdered charcoal, and when we get to the guide's in the evening we can put them in his ice house and pack them in ice when we leave on Monday. Let us try it. If we get home Tuesday morning, I guess they will be all right."

As the first rays of light appeared in the east I called him, and it was not long before we were eating the last of our eggs with some ship bread and coffee. We were at the loon place just before the sun came above the horizon, when the birds were in full chorus and the winter wren was putting in his best notes.

I had been rowing and Brand casting from side, for practice, as he said, as we passed along. As I brought the boat around the point, and there rested on my oars, I saw he had a rise, and the next moment had hooked a fish, and one I could see of no mean dimensions. His first run was in toward the mouth of the little stream, but he stopped about half-way in and turned toward the lake. Meanwhile I just allowed the boat to drift, while I told Brand not to hurry, but let the fish take his time. Before he got so far as the point, he came to the surface, then went down, then ran toward the shore, then came to the surface again, and seemed anxious to shake the hook from his mouth. But this only weakened him, and Brand was prepared for his tricks. He simply said to me, "I want him for mother." Soon he was reeling in and I could see there was not much more fight left in his victim. As he came swimming along by the side of the boat I just reached out the net; he almost swam into it, and the fish was ours. He was a fine one, the largest we had taken, 17in. long.

I now backed in toward the mouth of the little stream again and soon another was in the boat, of 13in. This was followed by five or six half-pound fish and then our fun ceased. Brand proposed that we should cross over and try the inlet. He would take the oars and I should do the fishing. My first cast was a double; one a half-pounder and the other smaller. Then three single ones, one of ¾lbs. weight. Then I thought I would let my son try again, and two more of quite good size were landed in the boat. He was delighted with his success, and now that the inlet was exhausted he proposed to go up to the alders. He said he could row there in less than an hour, and away we went.

The morning itself was delightful; the air was pure and warm; just the morning for trout. I knew this, and I knew that as the warm weather increased so did our chances of taking more fish. But with all the excitement of our excursion we had not been unobservant of what was going on around us. We saw an otter on the shore of the inlet as he plunged into the water and swam up stream, and a deer's tail as it dashed into the woods. Then there were loons diving for their breakfast as we crossed the lake; and two blue herons, or cranes as my son called them, stalking along the edge of the marsh, with kingfishers and sandpipers flying along the shore. From time to time hawks circled over our heads or screamed their harsh notes as they looked down upon the woods that bordered the lake, while bluejays and other birds were continually crossing and recrossing from side to side of the inlet. Indeed, everything was alive, and the thrush and the white-throat and the wren melody was complete. Several ducks flew past us and three swallows, though we could not tell where they came from, circled around our boat.

But now we are approaching the alders. I move forward and take the oars, and almost at the same moment away go Brand's flies. They hardly touch the water before he has a double, and this is followed by another of the same kind, the fish about ½lb. each. Twelve fish are secured at this place, when I tell Brand that I am sure we have enough for breakfast and to take home, too. How many we could have caught it is hard to tell. It was a good morning; the air was warm, and there was more insect life than usual on the surface of the lake.

Another breakfast when we got home, and then the packing commenced. Before we were through this the guides came. They were in time for dinner, and most careful when it was over to preserve anything that might be turned to account in the way of empty cans or provisions. However, I had calculated pretty closely. I almost regretted there was not more of tea, coffee and sugar to leave them. At one o'clock we said good-bye to the shanty. There was a kind of sad feeling as I left it, I had enjoyed myself so much there and gained so much strength under that bark roof.

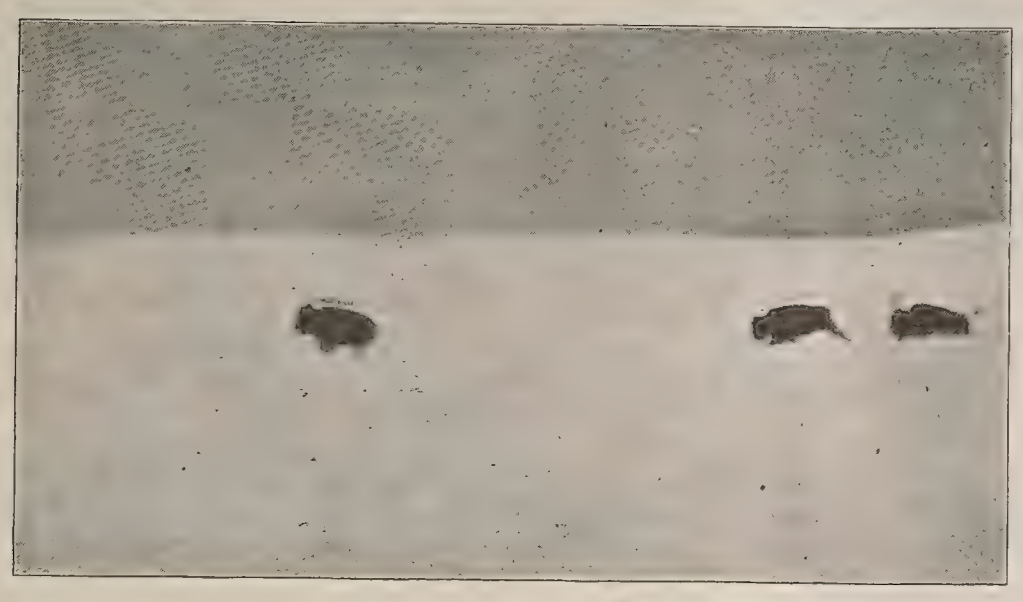
Six o'clock found us at the house of one of the guides, where we were to remain until Monday morning. The breath of the wilderness was just as fragrant here as it had been at the camp, and I do not know but that I enjoyed Sunday as much as I would have on the island. If anything, there were more birds singing, and it was pleasant to hear a cow bell tinkling in the woods.

The trout were packed as Brand suggested. They were carried in a box, though, instead of my basket, in the baggage car. There was no ice on them when we got home, but they were still fresh, and although not quite so good as those we had had on the island, yet mother pronounced them very good. We had some for our friends and two messes for ourselves.

The doctor called the day after my return. He did not find me home. I was at the store, and I have been there ever since.

Brand says to me from time to time, "Pap, don't get sick, but let us go to the island again."

But mother looks up and says, "No, no, not without me."



We will take her some day. S.

### A Night March on the Skis.

On the morning of Tuesday, March 27, we began our journey from the Fountain Basin to the Mammoth Hot Springs. We had found the snow too sticky during the last few days to warrant trying a long march in the day-

"ON THE HUMP."

Photo by Folsom.

time, so we resolved to make the forty miles in two journeys of twenty miles each, making the half-way stop at Norris station, and traveling both stages as much as possible during the night time, when the shoeing would be easier.

We had little sleep the night before we left the comfortable quarters of the Fountain Hotel, for we arranged to have John Schmidt call us at midnight. I hardly believe any of us needed much awakening, for John Schmidt's dog had kept us all awake in his nightly pastime of barking at the wolves and foxes. I was sorry to leave John Schmidt who had shown himself cheerful and expert in making us comfortable, but I was glad to be separated from John Schmidt's dog and his reverberant and redundant voice. Anyhow, Schmidt and his dog got us out of bed at 12 o'clock midnight of the blackest sort of night that ever fell on the mountains. We ate breakfast at 12:15 A.M., and having our packs already pretty well arranged we had our *skis* in order and were outside the kitchen at 1 A.M., in an air quite keen and shivery. An obscuring sort of white, misty darkness seemed to prevail in the midst of the black darkness. This was caused by the reflection from the snow. It was a black night in a white country. We said good-bye to Schmidt, and his dog eloquently bade us farewell as we turned our toes to the northward. Then each gave a push with his pole, and on the instant disappeared down the great icy drift which sloped from the hotel down to the level of the valley. As we slipped ahead the dark ring of the pines which encircled the hotel became plainer, and in a moment we had slid through and were out in the little open plain which lies between the hotel and the patrol station, out of which one or two hot springs bubble up. All around us was a baffling, puzzling, impenetrable veil of gray, through which we could see only a short distance about us. The short night was at its very darkest, and for a time the outlines of the peaks and forests about us and ahead of us were indistinguishable.

### Saw a Bear in the Night.

The Fountain Hotel is always a great place for bears in the summer time, numbers of those animals being attracted by the offal pits. Our trail lay not very far from one of the stamping grounds of these familiar and impudent beasts, though we had no thought of any bear being out so early at that season of the year. One old fellow, however, it seems, was making an early spring reconnoissance that morning. Larsen first called my attention to him, just as we got to the foot of the little hotel hill and out into the open near the hot spring. Billy was off to the left, trying to pick out a trail through the trees, and did not see the bear, but Larsen must have been within 30 or 40yds. of him. In the gray fog of the night the creature seemed to loom up about as big as a court house. We left him holding down the Geyser Valley, as none of us wanted him. Larsen had his six-shooter, but Billy and I would have had a hard time getting a bear if we had been hungry, for we had only a butcher knife apiece. Besides, this bear was illegal.

### A New Lesson in Ski Work.

The snow was crusted over hard and firm, so that we did not break through, and I found that I had still another lesson on the *skis* ahead of me. The *skis* slipped ahead all right, but they also slipped sidewise with equal cheerfulness, and when I took a step forward with one shoe, the other would be going backward just as busily. It took me a few moments to get the hang of this, and to learn that crusted snow takes an altogether different *ski* theory from soft snow. In the ordinary *ski* step the pole is held with both hands, the outer end touching the snow at quite a distance from the feet. No great force is gained then, and the pole is used practically only for steadying the *ski*-goer in his stride—and a wonderful help it is, too. On crust matters are quite different, and the inexperienced one finds himself straining and laboring where all ought to be easy sliding. If the inexperienced one will grasp his *ski* pole in one hand, and setting the end in the snow close in by his feet, push forward with it in the line of travel at every step, he will find a vast improvement in his progress. One can take a staff and push himself forward on skates upon the ice, and the principle is the same with the *skis* on crusted snow. Given a smooth, hard crust, with no "ash snow" blown across it, and the *ski* traveler should make his best time, because the shove from his arm on the staff gives him an impetus which lengthens each step a number of inches, and it is the added slide of the *ski* beyond the natural step which makes time in traveling. His step thus becomes much more like a skating step, and he moves on with an easy roll of his weight from one leg to the other, with less friction under his feet and with the added propelling power gained from the muscles of the arm. Crust going is the easiest of all for an expert and perhaps the hardest for a beginner. Until he learns the hang of it, the latter will rack and strain himself trying to keep up telegraphic communication with his feet, which take to themselves the most surprising absences from their post of duty.

### What Makes a Good Walker.

If one will take the trouble to observe the persons he sees walking on the streets, he may notice that the great majority walk with an up and down, straight back and forward motion. They do not advance the body alternately side and side, as Aunt Susan does when she carries in the basket of washing from the laundry house. In other words, the majority of people will walk with a knee

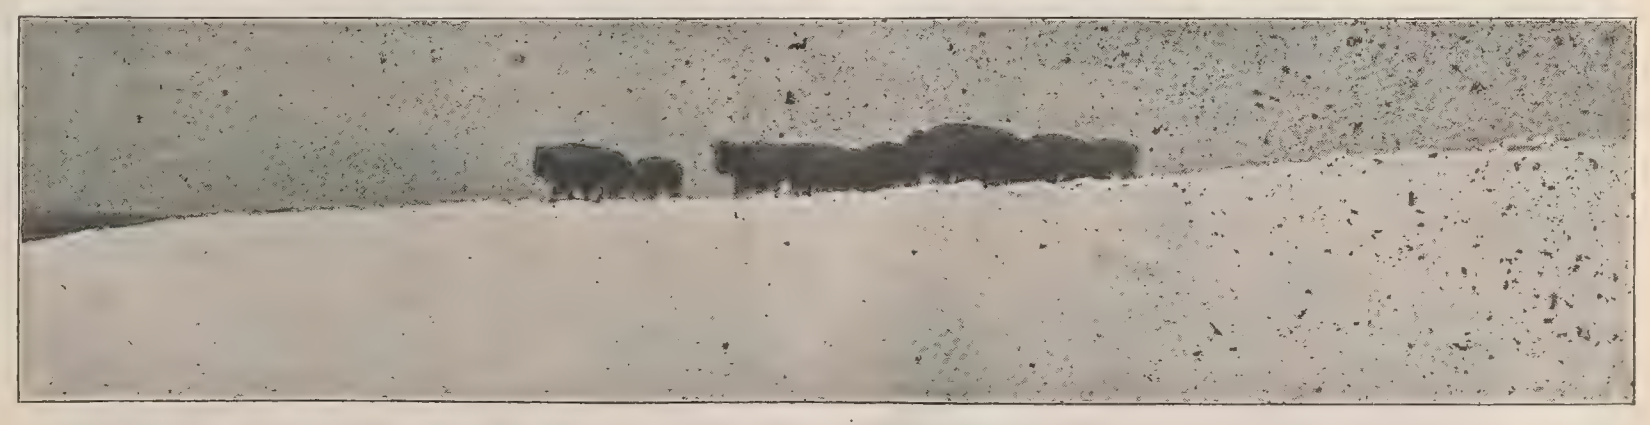
A STAMPEDE IN THE SNOW.

Photo by Folsom.

action instead of with a hip action. Yet no great walker can ever be found who walks with a knee action, and this any long distance pedestrian will tell you. Some horses are born with a pacing action, apparently, and some men have naturally that looseness of the hips which makes possible the easy rolling gait, the rapid long stride without effort or "over-stepping" which are present in the natural walker. If you will try this, rolling the body sidewise at each step, you will see that you can step further than when you face square to the front and stick your foot out square to the front. If you can do this hip step easily and keep it up, you will seem to be "walking all over," but you will be making time. If you can keep it up, you can beat any up and down, knee action walker, for your step will be longer than his and just as rapid. An acquaintance of mine, an ex-professional pedestrian who has done 110 miles in twenty-four hours, steps 36in. in his stride with perfect ease, and can keep it up. It is simply impossible for a knee walker to keep near him. Some wise men of science say that a rolling walk betokens a weakness of the muscles of the sides, but the wise men often make mistakes. The ungainly contortionist walk of the professional has its reasons for being.

If then no man can succeed on the sawdust if he has a bound-up hip conformation, I should think the same would be true as to his success on the *skis*, where the rolling of the weight from side to side is even more essential to get that coveted little gain slide at the end of each step. Your good *ski*-goer does not quicken his step when he wants more speed. He keeps his easy, steady swing, but increases his sliding stride, getting his added momentum out of the transfer of his weight and the push of his rearward foot, plus the push from his staff, whatever that may amount to. I often watched the loose-jointed, shambling, rolling, hip action of Larsen and Holte on the march, which was so noticeable that it sometimes looked like lameness. Yet both these boys were fine shoers, and their shambling gait was taking them easily forward, each step a little further than a straight ahead step would.

### A Toboggan-Slide in Curl Papers.



I had plenty of time, or at least plenty of cause, to figure on some of the foregoing things as our night journey went on. Billy and Larsen, who just reveled in crust running, hit an awful gait, and I surely thought they would kill me before even we got across the Firehole River. At the end of the first mile I was in a reek of perspiration, though the temperature must have been near zero. About that time I hit on my theory, and thenceforward I walked about as much with one arm as I did with both legs, and rejoiced exceedingly. I could not see the others more than 40yds. ahead of me out in the open, but when we got into the dense forest even this distance was cut down. Mile after mile, in that black, mysterious, unpromising mountain night, I swung on rhythmically, trying to keep the toe of my *ski* just at the rear edge of the slim, phosphorescent streak of light which came back from under Billy's shoes. This faint glow of the snow was quite pronounced, and could be seen at a distance of several yards, while the figure of the man ahead was only the dimmest of outlines. The effect of it is very weird and odd, and one of the main features of the night march, for we could for a long time see only the blackness of the shadowy forest about us, and the faint white reflection that hung close down along the surface of the snow. I give it up how Billy kept the trail, but I supposed he was a plenty good guide, and did not venture any advice as to which way any place or anything was, because I didn't know. There might be hills, forests, mountains, streams, in that country, but I couldn't see any of them and had to take it all for granted. I was sure I was walking in a wild, unreal dream. The forest was absolutely silent, and from on the trail ahead there came no sound (*ski* travelers do not talk, needing all their breath). Only the soft *s-zit*, *s-zit* of the whispering *skis* could be heard, and only could be seen that uncanny fire that came out of the icy snow. Surely that must be a dream.

Trusting to chance, it seemed to me, Billy turned aside from the trail and took a short cut across country, heading for some place that he knows more about than I do. We caught an awful climb in course of this cut off, and I presume we were half an hour getting up that one hill. I suppose I fell about fifty times getting up there, but I had plenty of company. Then we went ahead some more over some open, rough hills, and at last pulled up at the top of what appeared to me to be the bottomless pit. It was simply a black hole, down below us in the universe, and how deep or how big it was we certainly could not see from where we were.

"This is the big 'S' hill. You'd better ride your pole here, old man," said Billy, soothingly, in that gentle, offhand, try-to-be-unconscious tone of voice he always used when he knew a fellow was standing on the edge of an air-tight cinch for breaking his neck. Whereat, being on to Billy by this time, I groaned, and got my straps ready.

"There's two or three pretty sharp turns in this hill," said Billy, deprecatingly, as if he had made the hill and wasn't quite suited with it, "but they might be worse, and you can ride your pole hard at the turns." So saying, Billy turned, stepped forward, and disappeared in the dark below like Mephistopheles, leaving a train of fire behind him for a brief instant as he flew.

Turns in that hill! I should say there were, several of them. The only thing I can liken that hill to is a half mile of toboggan slide done up in curl papers. I don't see how they got all the turns in, and for my part am confident I skipped some of them. Not knowing the trail in the least, all I could do was to get my *skis* in the tracks ahead and let go. Of course I could not tell when there was a bend ahead, but as I usually went end over end at the turns, I suppose I found a good many of them. I don't know why such falls don't kill a fellow, but they didn't seem to jar very much, and at last I rolled the last stretch of the spiral chute and emerged not much the worse for wear. I didn't consider it etiquette to ask the other fellows how many times they had fallen, and they didn't ask me. I couldn't have told them accurately if they had.

BUFFALO IN HAYDEN VALLEY.

Photo by Haynes.

### The Night Run Down Canyon Creek Hill.

We plodded along in the night, making pretty good time over a country which did not seem to be so very difficult for *ski*-work, though once in a while we struck slopes up which it was sore labor to climb. After the first four or five miles our crust left us, and toward morning the snow began to have a creepy feel, which made us fear sticky work when the sun should come out. We made very good time till we got to the top of that long two miles of grade known as Cañon Creek hill. (Billy took the old trail and did not go by the new trail, past the

Gibbon Falls). Here the light had grown perceptibly stronger, though we could not see with perfect distinctness at any very great distance. Here again Billy intimated carelessly that on the whole I might as well ride my pole, when we got to the last sharp, where the hill spills itself into the valley of the river. Down to this point on the hill we had come by a succession of easy grades, whose pleasant slides had made us think that snowshoeing wasn't such hard work after all. At the last pitch Larsen went ahead, dropping out of sight like a bird in flight. As he turned into the forest around the first bend we heard him give a great shout, and supposed at once he had met something in the trail. This turned out later to have been a red fox, which for an instant tried to keep ahead of the *skis*, but gave it up and disappeared in the forest a very much scared fox as the yelling Scandinavian swept close up to it. When Larsen yelled Billy started off after him, and giving Billy time to get clear, I dropped off in turn, having by this time a clean-cut trail to travel in. I rode my pole, as per Billy's late advice, or tried to do so, though the hind end of the staff insisted on jumping up out of the snow and giving the *skis* a better run for their money, evidently thinking it a shame to spoil a good hill. The last short hitch of that hill was like the roof of a house, and moreover, it had a compound curve in it which must have applied a severe torsional strain to the backbone of the mountain. Lastly, there was a drift about 15ft. deep at the bottom of the hill. This latter I could not see, for in that dim light the surface of the snow seemed to have no inequalities at all. I found the drift, however. Coming down the chute of the last grade, the first thing I knew I was entirely buried in the drift, my shoes going into it before I was aware of any difference in the level. Billy was standing beyond me, in the woods away off from the trail. Larsen also was off the trail, and was pulled up by the river, above the bridge. The last run of the Cañon Creek hill is a screamer, and it is said that no shoer of the Park except John Folsom has ever run it and made the bridge across the river without flying out of the trail. Snowshoe Pete has twice run into the river here, and I am inclined to think he would not have done that purposely.

It was still too dim to see well the full glories of the Gibbon as we passed up it, but enough of its snow-clad steeps could be made to prove of interest. The Gibbon hereabout is an ideal stream for the angler, but there are no native trout above the falls, I believe, though plantings have been made which are yet to be heard from.

At daybreak we built a fire on the bank of the river, made coffee and ate our little breakfast with keen relish. At this point there was a beautiful series of rapids, and altogether it was a fine place for a breakfast in the snow. Snow began to fall as we sat at breakfast and the morning broke gray.

After breakfast I started out up the cañon ahead, but I found to my surprise that in the short time of our halt some mysterious change had taken place in the quality of the snow. That which we dreaded had happened. The snow had begun to stick! I turned back and found the others already waxing up their *skis*. In turn they now set out and left me alone at the fire waxing my shoes. I gave them a good going over, taking a quarter of an hour to it perhaps, and set out after the others, hot foot. By the trail I passed one of those great wonders which are so common in the Park that they seem almost unable to attract notice—the Beryl Spring, a great caldron spring of bubbling, beautiful, gem-colored, boiling hot water, which pours a brook into the Gibbon, over which a culvert is a necessity. I paused here alone for quite a time, until I felt obliged to hurry up the trail. The shoes were sticking frightfully.

### A Narrow Escape.

Of course the Gibbon does not freeze at any time of the year. It is here a rapid, rushing mountain river, as I remember it, about 20yds. wide and perhaps 3 to 5ft. deep, though it is no doubt deeper than it looks. The foot trail for Norris crosses the Gibbon hereabout by means of a foot bridge, the latter being constructed of two logs. On top of these two narrow logs, which had no hand rail to them, the snow lay in a long white ridge, about 2 or 3ft. deep. Along the top of this ridge of snow I could see the *ski* trail of Billy and Larsen, who had incontinently walked right on out on to it, in child-like confidence that everything was all right until proved otherwise. I noticed that the snow bridge had sagged and cracked beneath their weight, but what was I going to do about it? There was that river, and I had to get across. Therefore I stepped out boldly in the tracks of my predecessors. I had gone out to near midstream, when crash! down went a whole section of the snow ridge under me, and down I came to bed rock on the logs, fortunately astride the logs, but with my pack hanging down to one side, down stream, my *skis* just hanging to my feet and just barely clearing the rushing water, and my whole center of gravity entirely lost in the confusion. I presume that was the nearest I came to a serious accident while in the Park. Had I gone into the river I could hardly have hoped to get out. Had one of my *skis* slipped off, as I feared each moment it would, it was on the instant gone beyond all chance of recovery. Thanks, then, to muscles well toughened. Slowly, it seemed to me an age, I gripped with knee and hand until inch by inch I got back over the logs, with that ton's weight pack above me, and not dragging me down. Then, lying face down along the log, I twisted my feet under and got my left *ski* off with my right hand and the right one off with the left hand, being careful to keep my toes turned up stiff, so the *skis* would not get caught by the water. Then I put them on the broken snow ridge ahead of me, and every moment expecting onother break and tumble, crawled the rest of the way on my hands and knees, with my hands in the toe straps. I was perspiring some and plenty scared when I got over. Some folk never get scared. I do. I don't want any more midwinter carnival of athletics of just that sort.

Not far beyond the Gibbon I found Billy and Larsen sitting by the wayside, on some hot ground about a miniature set of geysers which kept up a great fretting and fuming. They had built a fire and we all now waxed up our shoes, remaining here for quite a while, as the snow was now in horrible shape, though it was still early in the day. After a time we got into our packs again and plodded on to Norris Station across the beautiful Gibbon meadows and in over the Geyser Basin. We saw no game whatever either on the Gibbon meadows or in the Elk Park. We thought the haying operations might possibly have driven the elk out. We each took his own gait, as we knew we were well in. Toward the last the snow became very soft and wet, and in this condition it did not stick to the shoes, this showing another phase of the infinite variety of *ski* travel. We reached Norris at 11 A.M., having been on the way ten hours, though not traveling all the time. At noon a heavy snowstorm was in swing at Norris Station. Here we stopped and spent the afternoon and the night till midnight. At 1 A.M. of Wednesday, March 28, we were again on the *skis* and off for another night journey, the last between us and the Post.

### Night Stage from Norris In.

I will not weary readers with a minute story of our journey in, as all that can be wished is a presentation of features enough to show the character of the trip, and not a story of personal exploits or experiences except as the latter are incidental and so useful. We made this last night stage of twenty miles in good shape, and it was more of a pleasure than that of the night before, much by reason of the greater strength of the light, it not being cloudy, but clear and very cold. It grew colder as the night advanced, and for almost the only time except on Hayden Valley we tied up our ears and faces. The thermometer was no doubt well below zero. Our clothing was covered with a white rime of frost.

The night continued bright and pleasant and we ventured an occasional jest as we pushed along. Every fellow was now hard and fit, and the fatigue of this journey in was very different from that felt on the same ground coming out.

At the Crystal Springs we thought we might see one of the mountain lions which are known to lurk in the rough country thereabout. We did not see our lion, but we saw his tracks along the trail ahead of us, as if he had been following along a *ski* track, in curiosity to learn what made it.

At the Swan Lake Flats we had a great privilege—that of seeing perfect winter sunrise in the mountains. The sun broke glorious over the mountains making the eastern rim of this level glittering plain, and slowly, one by one, we could see the tips of the peaks on the west of the flats grow pink, purple, white, under the advancing rays. Electric Peak, Trilobite Point, Antler Peak, Mt. Holmes—all these look well in summer, so they tell me. One can vouch that in the winter and at sunrise they are simply glorious. We stopped and looked at the lovely panorama for many moments. As usual, the coyotes were saluting the morning sun with a series of ragged, thin-edged howls. It sounded as though there were a hundred of them.

### The Last Risky Run.

On Swan Lake Flats we found the snow crusted, and on the great descent of the Golden Gate hill we found it still more crusted. Here the snow had thawed and frozen, and presented a surface which we knew would make it risky running the great hill on which we had counted so much for an exciting but pleasant run. Each fellow got down after his own fashion, but there was no fellow who kept on the trail, or who got off without fall and risk of limb. Larsen had his shoe get away and go down into a cañon, but fortunately the crust bore him up so that he could get down after it. After that he seems to have turned everything loose and gone down the rest of the grades helter-skelter and haphazard. He missed the trail in many places. I often caught Billy riding slopes sitting down on his *skis*—an act which we were now almost ready to call unprofessional conduct. I was close behind Billy, getting down the slowest I knew how, when finally I saw him stop at the top of a long, sharp slope, and peer curiously over. Evidently Billy was thinking, and I slid over to ask him what he thought. Just before I got to him he swung astride his pole, slid off, and was out of sight. The next moment, as I happened to look off to tne right of the trail, when I got to the place where Billy had started, there was Billy three-quarters of a mile below, away off to the right of the trail and headed for the Post meadows. He wasn't longer than a lead pencil, and was whizzing like a bullet, doing his best to come to anchor. For my part, I wished I was down where he was. That was an awful run. I could not keep the pole down in the snow for a break, do all I could. I lost control of the shoes entirely, flew from the trail, and went at terrible velocity down the mountain side. The hard, glassy crust gave no bite on the snow at all for the shoes. What should have been a pleasure ride became a wild and risky flight on a pair of runaway *skis*. My education as a *ski* man was to be rounded out, and a trifle of my conceit removed. This the runaway *skis* seemed to say to me as they clocked together, going sideways and every other way, utterly beyond my control. We jumped all sorts of things, the *skis* and I, and I kept my feet, leaning back on the pole heavily. At length, a group of trees appeared, directly in the course and they got bigger and blacker every half second, and the more unwelcome as I realized that I could not avoid them. I saw that one tree was square in my line, and felt that to strike it meant bad disaster at least. Unable to do better I threw myself on my side and went rolling on down instead of sliding. The force of the bullet-like flight sent me bounding up into the air, pack and all. When I stopped at length the heels of my *skis* were just where the toes ought to be, and my feet were doubled under me. Saved by the FOREST AND STREAM luck once more, I got out of an awful fall with nothing worse than a game ankle, which was nearly well before I left the Park. That tree is still standing. If I had ever hit it it wouldn't be, and I have no doubt Capt. Anderson would have had me arrested for defacing natural objects of interest in the Park.

It was Capt. Anderson himself who at 8 o'clock that morning was welcoming us back, and asking me what I thought of America, and how I liked snowshoeing in general. I was glad enough to surrender without conditions, and though at first a little timid about soap and water, not being used to them, I gradually got around to where a private soldier would look at me without pulling a gun. The main trip through the Park was over.

### Yancey's to Follow.

I have already spoken of our trip to Yancey's, twenty miles northeast of the Post, after the elk. Of this rather interesting part of our game explorations I shall wish to speak a bit more fully in the concluding article of this series. On this, the last journey of them all, we saw more game in two days than we had seen in the whole Park up to that time.

909 SECURITY BUILDING, Chicago

## POETRY, VERSE AND RHYMES.

*Editor Forest and Stream:*

It has been observed by more writers than one, and truly enough, that poetry has not received and does not receive in America the appreciation, encouragement and consideration which is its due. Poetry, if not the most important and useful branch of literature, is still its most beautiful and inspired essence; and in my judgment it has done more to impress upon the English-speaking races their most sterling and commendable traits than all other influences. Other nations are more musical and poetical in their every-day affairs than either English or Americans, but to measure the influence poetry has had upon the destinies of either race would require that very generous acknowledgment of its importance and significance be made.

Poetry in its true nature pervades everything in nature, and art as well. Take the spirit of poetry from music and you hush melody completely; take the poetry from the most divine conception of the artist and you rob it of its soul; take the lines suggestive of poetry and fancy from the architect and his creations would be crude indeed. Poetry cannot be entirely separated from many words in any language, and it can no more be obliterated from a group of sentences than from any part of nature. You may cause a desert, but in the desert itself the sentimental essence survives.

FOREST AND SRREAM, as its name suggests, should be full of poetry. Much of the language in its columns comes directly from the source of all poetry, Nature herself. No record of incidents in its field of research and devotion can be made that does not contain the spirit and imagery of poesy. The very advertisements which inclose its soul cannot be scanned without filling the mind with thoughts of woods and streams, although they comprise good words for Smith's tobacco, Brown's dog cakes, Robinson's flea powder and Yucatan chewing gum. Even the "head" of the fine old journal (which has been criticised) with the poor old moose's head and Roman nose, the unfortunate deer with unornamental and useless horns, the dude with his rigid spinal column and unyielding apparel—even this has poetry in it. The notice of a new brand of powder or make of cartridge does not fail to suggest thoughts of pleasant scenes, happy hours or days and sentimental moods.

In the columns of your journal there is no dearth of information, and I would not presume to criticise any line it contains, nor even intimate that it lacks sentiment or poetry in its contents; but I will venture to say that it does not, in my opinion, contain enough of what is commonly recognized as poetry, as distinguished from mere prose.

Is it because there are so few in the fraternity of sportsmen who are "sentimental" enough to attempt verse, do they really lack the necessary inspiration to rhyme—or is the poetry editor of the FOREST AND STREAM cold and cruel? I do not think the fault can lie with the editorial autocrat, for I have seen his department teem with poetry that only needed to be cut into equal lines to deserve a place with beautiful and true thoughts anywhere, with things immortal.

I rhyme myself, I cannot help it, and would not if I could. Sometimes I destroy my own productions as soon as they get cold. At other times I have paid to get them printed, and then have wished I had adopted the former course. I have contributed them to publications which have really printed them—at no expense to me—but I always felt, after they appeared in print, that there must have been a great lack of "copy" in the poetry department of those publications, and began from that moment to question their taste, for which I had hitherto felt admiration and awe. However, I still have a weakness for poetry, and I think if my ancestors had been less practical and matter-o'-fact I would have inherited genius in this particular quality. I have been unsuccessful enough in other qualities to be a mighty good poet.

Certainly these columns have not been void of measured and rhymed poetry, but the quantity of verse contributed (or at least that has been printed), has, it seems to me, been small as compared with the quantity of good reading matter supplied. Many prose stories, full of poetry and poetical incidents, appear from time to time, but few of your readers seem to attempt versification. I like to read poetry, even when it may not deserve to rank high in mere literary value, as judged by its correctness of construction, meter, rhyme or other qualification. Many noble thoughts and sentiments have been expressed in halting and imperfect lines, and I think those who attempt poetry profit by their experiments in more ways than one. I fancy the true poet is inclined to close observation, and is constantly trying to see the good in everything and the beautiful everywhere; and no class of persons have better opportunities for observation and for the cultivation of poetic taste than sportsmen.

Take, as a single instance of the power of poetry, Walter Scott's opening lines in the "Lady of the Lake," where he describes the chase of the stag. The stag escapes and evades his pursuers, but what a picture the great poet has put into words!

Reduced to prose the ordinary observer and writer would have said, "They chased the stag several miles, but lost him in the Trosachs." He could not possibly have said in prose—

> "The antlered monarch of the waste
> Sprung from his heathery couch in haste,
> But, ere his fleet career he took,
> The dewdrops from his flanks he shook;
> Like crested leader, proud and high,
> Toss'd his beamed frontlet to the sky;
> A moment gazed a-down the dale,
> A moment snuffed the tainted gale,
> A moment listened to the cry
> That thicken'd as the chase drew nigh;
> Then, as the headmost foes appear'd,
> With one brave bound the copse he clear'd,
> And, stretching forward free and far
> Sought the wild heaths of Uam-Var," etc.

The poet began his picture with an incident that only a poet would have thought worthy of words, but what a picture the few words make!

> "The stag at eve had drank his fill,
> Where danced the moon on Monan's rill,
> And deep his midnight lair had made
> In lone Glenartney's hazel shade."

Of course there are few Walter Scotts—if a century

produced but one with his ability it would still be a rich era in poesy; and yet, many a "mute inglorious Milton" or Scott may live or die, lacking encouragement or opportunity, and the world is a loser.

Perhaps in the past the FOREST AND STREAM has had a "poet's corner" and found it burdensome, and that nowadays it winnows out all chaff too closely, but if it encouraged rhymesters I should think the crop of verses would be prolific, at the least. I have been watching its columns, and when some very unpretentious poets begin the trouble, look out for my papers. This country lacks poets; it should have lots of them. Money-getters and millionaires die and go, we know not where, and your practical, "chained to business," matter-of-fact, everyday, rich nondescript, will pass with his years; the poet never dies. I could give you a longer and wider category of reasons in support of poetry, but this will do for my preamble. I will cease now. That is, for the present.

RANSACKER.

P. S.—I only resume to add a few words. Of course you know your business, but I do not think it would be wise or encouraging to charge poets your regular advertising rates for the publication of their contributions.

## SIERRA NEVADA FOOTHILL BIRDS.

AUBURN, Cal., June 28.—One lovely day in the early part of June, while driving through the woods and orchards of our hills, listening to the merry voices of the birds and noting their engaging ways, I said to myself, "I will share this pleasure with my friends of the FOREST AND STREAM." In accordance with that resolution I will write up my notes of that day, as it was one of exceptional richness in observation, and will show a glimpse of bird life in our foothills.

The day was an ideal one, even for this ideal climate, and every feathered creature was full of joyous animation. I was soon struck with this fact, and after my professional visit was made, I began taking notes, on my return journey, and here is the result. The more common birds were noted first, and the list will be headed by the omnipresent

CALIFORNIA JAY (*Aphelacoma californica*).—This bold but sly thief and robber is one of our commonest birds, and is a permanent resident. His shrill, rasping cry of *ska-a-a! ska-a-a!* can be heard in our fields and roads at all seasons. Under the fiercest rays of the pitiless August sun he can be seen pursuing the nimble grasshopper, and in the drenching winter storms he seems equally happy, overturning bits of bark, or investigating out-of-the-way nooks for lurking insects, acorns, worms and other "small deer" that go toward making up a hungry bird's dinner. At this time of year he is very busy rearing his young, and levies tribute on all around him. The eggs and tender young of other species are favorite food, and this failing makes him a detested pariah among other birds. He is a coward, and depends upon his cunning to attain his ends. He will sit around and watch some nest he has discovered until the owners are absent; then he will stealthily and silently pounce upon the contents and be off in a moment, as quietly as he came, but he will leave a rifled home and shattered hopes behind. If discovered he is easily kept at bay, even by as small a bird as the Arkansas goldfinch, but is persistent in his efforts to despoil a nest of its treasures, once he has discovered it. He levies tribute on nearly all kinds of fruit and nuts, carrying off nuts by the bushel. A few jays will soon strip an almond tree of its crop, and will often carry them off and drop them through a knot hole in some hollow tree, whence they can never be recovered. This is a bit of foolishness that I cannot understand. It appears to be a kind of forethought in the bird, a laying up of food for future use, but it is not wisely done, as our friend *el carpintero* does it with his acorns. On this particular day the jay is busy carrying off cherries, and nearly every one of the birds I noted was either going to or returning from the cherry trees. In the former case with many raucous cries, and in the latter, silently, with a cherry or two held by the stems. Yes, they are thieves and robbers, and worse, but they fill a part in nature, and destroy much that would prove destructive to the interests of the horticulturist. Let them live.

BROWN FINCH, OR CALIFORNIA TOWHEE BUNTING (*Pipilo fuscus crissalis*).—This bird is known locally as the catbird, for it has some semblance in size and color to that species. It is probably the commonest bird of the foothills and can be seen everywhere where chaparral flourishes. It haunts the brushy thickets, where it makes its nest—a large, loosely constructed affair—but it is yet a comparatively social bird, having but little fear of man. It has a flirting, uneven flight, and is a very silent bird. In the mating and nesting season the male has a kind of irritating cry, which he no doubt considers good music. It consists of a shrill, staccato note, which is rapidly repeate . The following is a pretty fair immitation of the song—if it can so be called. Strike the piano-forte key C in alt and you will pretty nearly have it: *Tit! tit! tit-tit-tit-tit! tit!* The bird is a ground-feeder, living chiefly upon the seeds of the chaparral.

WESTERN MEADOW LARK (*Sturnella magna neglecta*).—This pleasing songster is abroad in force to-day, singing his "What do you think of me?" from every fence post that stands above its fellows. This meadow lark, so beneficial to the husbandman, is greatly persecuted in the interior valleys of California. It is persistently hunted for the market, where it sells under various names, sometimes even passing as quail. It is an easy prey to the gunner, its flight being straightaway.

CALIFORNIA HELMET QUAIL (*Callipepla californica*).—At this season the quail almost ceases to utter his characteristic call of *po-ta-to, po-taa-to, po-taaa-to*, but the male can be heard on all sides giving utterance to a single cry of *quwa-a-k* as he stands on some eminence near the home of his lady love, keeping watch and guard against the marauding enemies of his household. At other times he will jump upon some low limb or boulder and with an odd up-and-down movement squeeze out a kind of wheezing call. I never could make out exactly what he meant by this. It does not seem to be a note of warning, of assurance to his mate, nor of challenge to his enemies. From his actions when uttering it, I have fancied it a note of derision, as I never have heard it unless the bird could see me plainly and I had no gun in my hands.

MOURNING DOVE (*Zenaidura macroura*).—On every hand the mournful notes of the wild dove could be heard, and so tame were they that I could almost touch some of them with my whip. It always seemed a sacrilege to me to see one of them killed. In these hills they are entirely harmless, although in the valleys they destroy a great deal of seed wheat—so the farmers say.

ARKANSAS GOLDFINCH (*Spinus psaltria*).—This bright and cheery little bird is very plentiful in these foothills the whole year round. No pleasanter sound can be heard on a warm February day than the concert given by a flock of the dainty songsters when congregated on the sunny side of a live oak tree. Their song is not a sustained one individually, but a flock can produce an interesting and most pleasing effect. I have heard captives of this species that could sing almost as well as a canary. Their vocal powers seem to be improved by caging. They are locally known as the California canary.

HOUSE FINCH (*Carpodacus frontalis*).—Also called burion, crimson-fronted finch and linnet. This is one of the commonest birds of California. It is a cheerful, alert little fellow, with a pleasing warble which seems to be without beginning, middle or end. Its song just begins where it left off, and ends where it began. It loves the vicinity of man, and will nest and raise its young in the vines covering our porches, within reach of the outstretched arm, as we sit in our chairs. It is especially hated by the cherry grower. It always manages to have its brood hatched when the cherries come in, and raises them almost entirely upon the fruit. Its habits are exasperating, for it goes from cherry to cherry, taking one or two pecks at each, and never satisfied to fill its crop with one. It will never go back to an injured cherry, but will invariably attack the sound ones. As the cherry is a delicate fruit and unfit to pack or ship after its skin is broken, one can readily see what a nuisance to the fruit grower the bird is. With cherries at high prices in the markets, the lives of finches are not at a premium in this locality. Nevertheless they continue to increase and multiply, and to maintain their confidence in human friendship. They prefer the mulberry to the cherry, and as these fruits ripen simultaneously, the horticulturist could protect his cherries by a fringe of mulberry trees around them, and thus all could live.

BULLOCK'S ORIOLE (*Icterus bullocki*).—This feathered dandy is also a very common bird with us, and like the preceding, is hated by the cherry grower. It is so like the Baltimore oriole that no description is needed. In song, character and habits he closely resembles his Eastern cousin.

HOODED ORIOLE (*Icterus cucullatus*).—On this particular day I saw another variety of the oriole sometimes seen in this portion of the State. This bird is not described by the authorities as resident in California north of the Tehachipi Mountains, but I have never failed to see it here during each season. It is, however, a rare variety; but it undoubtedly breeds here, for I have observed them all through the breeding season. They are among the handsomest of our feathered friends, and their flight through the green foliage is like the flash of a flame in the night.

CALIFORNIA WOODPECKER (*Melanerpes formicivorus bairdi*).—Called by our Spanish friends *el carpintero*. I have given this bird's description and habits in a past issue of FOREST AND STREAM, and will pass him lightly. It is very common, and resident with us. It will also steal cherries, but, like the jay, it carries them off bodily, and leaves no injured ones behind. It also attacks apples, but I believe that it takes only the wormy ones. In hunting for the worms, it may have developed a taste for the fruit itself. At any rate, it does far more good than harm to the orchardist, and should be rigidly protected.

NUTTALL WOODPECKER (*Dryobates nuttalli*).—In the drooping limb of a white oak by the roadside is a little round hole, and out of that hole protrudes a black head, spotted with white, which I recognize as belonging to a female of this species. This bird is fairly common and quite sociable with man. In the winter season it is common in our yards and gardens, pecking away for an honest living amid the noise of town or city with the utmost unconcern.

RED-SHAFTED FLICKER OR MEXICAN FLICKER (*Colaptes cafer*).—This is a common variety of the woodpecker in the foothills, if woodpecker it may be called. In all respects, excepting coloration, it is a counterpart of the Eastern flicker, living here, as there, chiefly upon ants. Its coloration is far richer, the under surface of the wings being very beautiful. The outer web of the wing primaries makes a very killing trout fly, which I have used with marked success on our Sierra streams, and which I have ventured to name after the bird—the flicker-hackle.

AREFAR.

[TO BE CONCLUDED NEXT WEEK]

### Flying Squirrels as Pets.

I DISCOVERED an old flying squirrel in a dead stump; I caught her by stopping up the hole through which she entered her nest, and sawing off the top of the stump, I brought it home and tied it to the wall in a small room, which I used at one time for an aviary. I carefully cut out a square piece from the back of the stump, and held this piece in place by wire, so that I could easily look into the nest. I was surprised on the second day to find five young squirrels in the nest, and was still more surprised to find that the mother, wild and frightened as she was, continued to raise her young ones in captivity. She was very cross, and I had to wear heavy gloves to push her from the nest when I wished to see her young ones. She rarely came out to feed until evening. The squirrels did not open their eyes for nearly three weeks. Soon after that they began to scramble around outside. I had great difficulty in feeding them; for I could find nothing they liked, except hickory and hazel nuts. I let the mother go, for she did not seem to enjoy captivity, but the young ones became tame and thrived well. I would like to hear if any one knows anything about the food of the flying squirrel.

MAC.

### Green-Winged Teal Hatched in Confinement.

COLD SPRING HARBOR, N. Y., July 26.—I have just hatched the first green-winged teal ever hatched in confinement.

FRED MATHER.

## NESTING OF THE WILD PIGEON.

IN the first article on pigeon netting by "F. E. S.," he speaks of the species as laying two eggs in a nest as the regulation number. While his articles contain much information, and have proved good reading, he evidently failed to take careful observations on many habits.

It is a fact that many ornithological writers have spoken of the passenger pigeon as depositing two eggs at a setting; but these men were evidently not accurate observers, or quite probably took their records at second-hand. Unfortunately a few of our earlier naturalists recorded some of the nesting habits incorrectly, and these notes have been copied to our detriment for many years.

There is no doubt that two eggs are sometimes found in one nest, and occasionally these eggs are both fresh or are equally advanced in incubation. But these instances, I feel sure, are evidence alone that two females have deposited in the same nest, a condition which not rarely obtains with those species which nest in colonies.

I cannot dispute, and can say that I do not doubt, that the wild pigeon may rear two or three young during the season. An old trapper and observer, an acquaintance of mine, who claims that the pigeon lays but one egg at a clutch, offered this explanation. He said that when the first egg is about ready to hatch, or has hatched, the old bird of the nest lays a second egg, and that the squab assists in incubating the second egg. Later a third egg is laid. This habit may have existed, and I have made observations which confirm it; however, at the present day no one can dispute the assertion, as there is no way to disprove it.

Out of the many nests I have carefully examined, and watched for days, I have never found two eggs in one nest. Only once did I find an egg occupying a nest with a half-grown young one. A friend, an observing hunter and painstaking egg collector, examined over one hundred nests in Cheboygan county, Michigan, and never found more than one egg in a nest. As the nests are so shiftlessly built that one can look through them from below, there is no doubt of his note. He took over fifty eggs for preservation, and though many of them were well advanced in incubation, yet two eggs were not found together.

Besides my experience in the field in several parts of this State, the privilege of watching some captive birds were also given me. These birds were educated stool-pigeons, which were kept from year to year by their owner, who was a netter. They were very tame and bred in security in the little buildings, but never set on more than one egg.

The mourning dove, often mistaken for the pigeon, lays two eggs habitually. The ground dove and white-fronted dove also lay eggs in pairs, and others of the American pigeons, as well as the common tame dove introduced from the Eastern Continent, lay two eggs. But our now nearly extinct passenger pigeon lays a single egg, and there is no accurate observation to the contrary.

There are many notes on this species which would interest many of your readers, but space does not permit. I will close by saying that the last rookery of any size, where the pigeons nested in numbers, was visited on May 9, 1880, and occupied cedar trees, while the last nest that met my notice was placed at 40ft. from the ground in a tamarack in the woods in the southern part of the State. The date was June 1, '84.

MORRIS GIBBS, M.D.

KALAMAZOO, Mich.

[Captain Bendire, in his splendid work on North American birds' eggs, the first volume of which, recently published, includes the pigeons, gives the eggs of this species as one or two. The only nest seen by us for many years contained two eggs.]

## WOODCOCK AT HOME AND ABROAD.

*Editor Forest and Stream:*

Some years ago much was said concerning the woodcock in FOREST AND STREAM. I am not a crack shot, neither have I bagged many of these birds, but I love ornithology and delight to watch the frolics of birds in the summer time. I would, to-day, introduce game birds into our State were the laws more stringent. I have often heard the woodcock whistle.

I once let loose some quail in the woods about Hampden, Me., and during my guarding over the birds I happened to come across a nest containing two woodcock's eggs. I marked the spot with a stake with a little phosphorus so as to illuminate the upper end of the stake, in order that I might find the nest at night and capture bird or birds, and I did capture both the birds that night, and kept them for a while.

After a week's captivity they grew melancholy, and a few days later they presented a drooping appearance. One day I opened the cage door and took good hold of the larger bird's bill between my thumb and forefinger and gently drew it forward, whereupon it commenced to whistle. I took the bird outside of the cage and tried the same method. I soon learned the noise or whistling was produced through the nostrils of the bird. I have never heard a woodcock whistle when flushed by a dog; the bird only whistles when it leaves cover unmolested.

DR. T. P. MOREY.

BANGOR, Me.

*Editor Forest and Stream:*

The inclosed extract from an old book (*Fairholme*—"Observations on Woodcock and Fieldfares Breeding in Scotland," *Magazine of Natural History*, edited by Edward Charlesworth, Vol. I. (N. S.) 1837, pp. 337-338, Refers to the English Woodcock, *Philohela rustica.*) may interest some of your readers in connection with the question of the spring "song" versus the "whistle" of our woodcock (*Philohela minor*):

"I spent the greater part of 1835 in Aberdeenshire, where occasional instances have long been known of woodcocks in summer, but not in such numbers as may now be seen. In the woods of Moneymusk and Castle Forbes nests have from time to time been found. It was at the latter place and during a late evening walk in an extensive oak wood, with hazel and other brushwood, that my attention was first particularly called to this subject. It was quite in the dusk when I heard at intervals a low croaking so much like that of frogs, that, attributing it to that cause, I took no further notice of it; but on a subsequent evening I found that instead of on the ground this croaking was overhead, and proceeded from a bird on the wing. The flight was so heavy and slow that I at first imagined it was an owl or a goatsucker, the

former being commonly and the latter occasionally seen in that wood. I afterward found, however, on seeing several of these birds at an earlier hour in the evening that they were woodcocks, and four or five couples of them circled the wood every evening, being on the wing for an hour or two at a time with a varied flight; sometimes rapid and pursuing each other, uttering a sharp but not very loud whistling note, and sometimes slow and flapping, when an incessant low croaking was kept up by each individual, often not unlike the purring of a cat or the noise of a spinning wheel. From this time, throughout the summer, I could on every evening between five and nine o'clock, see several cocks rise, generally from the lower and moister parts of the large wooded hill of which a high peak in the center overlooks the whole. The notes gradually ceased as the season advanced; and I rather imagine that these circular flights also gradually ceased, though, in the course of our walks, cocks were often flushed, until the more usual season arrived, when they no longer excited so much attention. I have often seen these woodcocks approaching me in the low covered walks, and so little alarmed as almost to brush my hat with their wings as they quietly passed over my head. This seemed to me to be the hour of feeding on the wing, at least their flight so much resembled that of night birds which feed on moths, &c., that the probability of this occurred to me, although I am aware that their usual food is found upon the ground amongst damp leaves and moist grass. It is by the knowledge of this low flight of the woodcock in the covered alleys and walks of the forest that the foreign poacher takes such numbers of them in nets set for the purpose; and I often could have caught them in a common hoop-net, as they passed me.

"I have long been acquainted, as a sportsman, with the usual peaceful habits of the woodcock, during its winter residence in our climate; but I never at that season heard any sound but that of its wings on being flushed. I imagine, therefore, that the low croaking and the occasional whistle are peculiar to the period of incubation, like that singular noise made by the snipe in spring, as it descends rapidly in the air, during its circuitous flight over its native morass."

The slow flight above referred to is probably not true of the American woodcock (*P. minor*), which in the evening flight moves its wings with great speed, from the moment it rises, until it comes "tumbling" back to the earth, after having finished its "song." In every motion there is the quickness and energy of a bat or chimney swift (*Chætura*), and in the fading sunset afterglow it might easily be taken for either of them, as was suggested by some of your correspondents. I have used the word "song," because I am convinced that the sound, heard just before the bird descends, is *vocal* in origin, or, at any rate, that this is the case in Massachusetts, where all my observations have been made. ARTHUR P. CHADBOURNE.

BOSTON, Mass.

# Game Bag and Gun.

## PARKS AND FOREST PRESERVES.

*Editor Forest and Stream:*

The utter disregard of the average American for laws which for any reason are not, or cannot be, enforced is well known, and is sometimes very amusing. In the case of the depredations committed on our national reservations, however, this disregard of the law is not at all amusing. These forest reservations, which have been set aside by Presidential proclamation under the act of March 3, 1891. have come to be regarded by persons dwelling near them as a sort of free range, or common, where they can carry on any pursuits that seem to them desirable. Thus, in forest reservations in Montana, prospecting is going on somewhat generally, and it is suspected that the prospectors are paid to sink their holes by persons who are interested in getting the reservation cut down at the next session of Congress and thrown open to a railway. On a reservation in Montana sawmills and shingle mills are being set up and all timber of any value is being stripped from the mountain sides. Not satisfied with this, the timber thieves fire the branches and fallen logs and burn over vast areas of which a part nas been stripped of standing timber, while other parts still support splendid growing forest trees. Down in California the Sequoia and Gen. Grant National Parks have long been summer ranges for the sheep men, whose shepherds follow the snow toward the mountain in spring, and whose flocks devour every green thing that shows its head above the soil.

The case of these forest reservations is not unlike that of the Yellowstone National Park for twenty years. They have been set aside from the public domain and have been handed over to Secretary of the Interior, but no laws have been enacted for their care or protection, no money is provided which the Secretary of the Interior can use to pay the expenses of such protection, no penalties have been established for infringment of regulations. If a man has been cutting timber on a scale sufficiently large to make it worth while to prosecute him for the theft, the Government may enter suit against him, and in the course of five or ten years the suit may come to trial and a verdict be reached. Meantime everybody else in the neighborhood—and very likely the person who is being sued—continues to take the Government timber and use it in whatever way will put most money into their pockets.

It is an old story, and one that is hardly worth repeating, for it has been told a thousand times, and no one ever pays the least attention to it.

However, the following dispatch in a recent number of the *Evening Post* has again brought the matter to my mind, and it seems to me that there is something very encouraging in the attitude which is credited to Secretary Smith. But however much he may desire to mend matters, he alone can do but little, and until the force of public opinion shall be brought to bear on Congress we must expect to see our forest reservations become less and less in value. The dispatch referred to I give below in the hope that you may think it worth printing:

WASHINGTON, July 27.—Secretary Hoke Smith is taking especial pains to guard the national parks and forest reservations from unlawful intrusion and injury. Last spring he caused a large number of notices to be printed on conspicuous cloth sheets and posted on the trees in the reservations in such places that no person entering the reservations could fail to see them, warning the public "that these lands are set apart and reserved as a forest reservation by proclamation of the President of the United States, under authority of the act of Congress of March 3, 1891." The notice continues:

"This reservation is made for the benefit of the adjoining communities, being created to maintain a permanent supply of water for irrigation and for wood for local use by a national protection of the timber thereon.

"All persons are hereby warned not to settle upon, occupy, or use any of these lands for agricultural, prospective, mining or other business purposes, nor to cut, remove, or use any of the timber, grass, or other natural product thereof, except under such regulations as may be hereafter prescribed.

"No person shall start or kindle, or allow to be started or kindled, any fire in the timber, grass or undergrowth on these lands, or commit any other waste thereon; and the driving, feeding, grazing, pasturing or herding of cattle, sheep, or other live stock within this reservation is strictly prohibited.

"*Bona fide* settlers having properly initiated their claims prior to the withdrawal of the land for said reservation, and actual owners of land within the reserve, may pass to or from their claims or property, but will not be allowed to occupy or use lands within the reservation outside of their claims, nor to use, damage or destroy any timber or other natural product of such lands.

"Any person violating these regulations will be prosecuted for trespass, and will be held responsible pecuniarily for any waste or damage, whether done intentionally or caused by neglect. All law-abiding citizens are requested to report any cases of trespass upon said forest reserve that many come to their knowledge, and to assist in the prosecution of said trespassers."

Not long ago Capt. James Parker, of the Fourth Cavalry, who is in charge as acting superintendent of the Sequoia and General Grant National Parks, volunteered to make a tour of the parks and reservations in California with a few of his men and see how the law was being carried out. He found that not less than 500 000 sheep were pastured on this national property, and that they had done damage which threatened to be irreparable. The big pine trees were the only things which had escaped their ravages. They had eaten all the herbage, and even girdled the smaller deciduous trees of their bark. They would have eaten the pine bark also, but that it was too tough for them to nibble. So completely had they stripped the parks and reserves of everything which could be used for fodder that it was often difficult, when out of reach of farms and ranches where feed was stored, for the troopers to get enough for their horses to subsist upon.

The disposition of the people who have committed this outrage is shown by the fact that they have torn down Secretary Smith's printed notices. The tacks with which they were fastened to the trees are often still in the bark, with evidences that the cloth was deliberately torn down.

Information of these performances, with such particulars as could be collected, has been sent to the Department of Justice, and district attorneys and marshals in the States where the parks and reservations are situated will be notified to prosecute all offenders to the full extent of the law. Secretary Smith is bound to break up at any cost this form of defiance of Government authority.

Think of it you who are interested in forestry.

A. B. C.

## CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

### Santa Claus.

CHICAGO, Ill., July 21.—Mr. Wm. C. Held, of Saginaw, E. S., Mich., writes about a mysterious heron:

"On the morning of May 25 a friend of mine who lives in the heart of the city found in his yard a young blue heron, which must have come there during the night. The bird was about half feathered and could scarcely walk, and was certainly too young to fly. How do you suppose it got there?"

If the babies didn't bring it, it must have been Santa Claus.

### Erect Posture.

Mr. John G. Smith, of Algona, Ia., writes on July 23: "The first shooting of the season took place about eighteen miles northwest of here last week. An old man and his son went out into a harvest field to set up some grain. They started up a large flock of prairie chickens, and the old man sent the boy back to the house to get the gun to shoot some of the chickens. The boy got the gun and returned to the field, but the gun by some means or other went off in the boy's hands. Since then the old man has not been able to sit down with any comfort. The chickens all escaped, and the law was not violated."

### The N. G. B. and F. P. A. and the I. S. S. A.

By the above fascinating headline I wish to call attention to the fact that the National Game Bird and Fish Protective Association and also the older body, the Illinois State Sportsmen's Association, are doing thoughtful and energetic work in the matter of game protection. President Bortree, of the N. G. B. and F. P. A., called at this office to mention one feature of the work of that organization, consisting of a generous printing and distribution of the game laws of North and South Dakota. He thinks this will call attention to the laws in localities where they are little respected and possibly little known, and so do good in the slow work of building up a good protective sentiment. President Shepard of the Illinois State Association, issues a general letter to the clubs of the Association, reminding of the $10 club assessment laid at the last convention for protective purposes and to defray expenses of Warden Blow, and asking prompt remittance of that and such additional moneys as each club can see its way to send. Warden Blow's excellent work deserves prompt acknowledgment and a long continuance.

### Dr. Thomas's Vacation.

At this writing, Dr. Thomas, of Chicago, is thought to be in Wisconsin on his summer vacation. Dr. Thomas delivered his parting sermon the text of the "Peaceful heart." Are we to infer by this that Dr. Thomas has paid his fine for illegal deer killing, or that he intends to do so while up in Wisconsin?

### Killed by Mills.

The daily dispatches from Muncie, Ind., lately said: "Since the Eaton Paper Mills, on the Mississinewa River have been in operation after several weeks of idleness, wagon loads of fish are being killed daily below the town by the poisonous refuse from the mills." I understand that Mr. A. H. Harryman, once a well known angler in Chicago, is now editing a morning paper in Muncie. Will Mr. Harryman kindly shake 'em up a little?

### The Big Horn Basin.

Mr. Jas. Fullerton, now located on the Wood River, writes of the Big Horn Basin enthusiastically, saying that "from the Ten Sleep to the head of the Divide is the finest country, climate, water and sporting that ever lay out of doors." But he also adds, "The elk can not remain if the Shoshone Indians continue to kill 8,000 to 10,000 per annum for their hides." He incloses a photograph of a pile of elk bones rivalling the size of the ghastly heaps common along the railroads in the buffalo bones days.

### Kankakee.

The season just now is dull for fishing, the weather being very hot. About the best reports are coming from the Kankakee. At Mak-saw-ba Club numbers of wall-eyed pike have been taken, besides bass. At Momence the bass will not take the fly just now, the fishers tell me, but are taking minnows pretty well below town. These are small-mouths.

### Woodcock.

The best of the woodcock season is already past in Indiana, so far as the size of the bags is concerned, though the birds are not at their best so early. Henry Ehlers got 15 one day and 8 another, and Dick Turtle 5 one day, all near Walter Valley, on the Kankakee.

### Wisconsin Forests Burning.

The extremely hot weather has a result in the forest fires now raging in upper Wisconsin, no doubt the most general and the most destructive known for years. The result on the deer hunting next fall is hard to tell, but probably the fires will drive them unusually far to the south.

### Bad for Chicken Shooting.

Iowa, Kansas, Nebraska and the Dakotas have been fairly burned up in the awful drouth of the past few weeks. Chicken shooters will do well to head for a country where they know the water supply to be permanent. The ordinary sloughs and small water courses are all dried up now. It will be a hard season for the dogs to work on chickens. The birds are unusually abundant all over the West, however. E. HOUGH.

909 SECURITY BUILDING, Chicago.

### Massachusetts Summer Woodcock Shooting.

BOSTON, Mass., July 24.—*Editor Forest and Stream:* I walked through Quincy market to-day and saw pinnated grouse in one stall. I picked up a *Globe* a short time ago and saw in the price list of market supplies, "Snipe, $2.50 @3 per doz ; snow birds (buntings), 40@50c. per doz." Invited to lunch by a friend an evening or two ago, I was informed that we could have woodcock or chicken grouse. This in a whisper, however. Upon asking how this could be in close season I was told, with a knowing wink, "Oh, came out of cold storage, you know."

Add to that Plank a $5 penalty for every bird protected by the game laws found in possession in close season; cold storage companies, common carriers or any one else being held responsible if found on their premises or in their charge.

The sharp crack of guns have been heard in every likely woodcock ground in the middle and eastern part of the State for two weeks past, and the signs and wads found about the spring holes and brooksides tell the story that the poacher has been getting in his work. The long dry spell of weather has forced the birds into close quarters and the slaughter has by no means been light. Added to this has been large accessions to the ranks of market-gunners by reason of dull times in business and the large numbers of unemployed. There are not a few who sneak out ostensibly "to give a young dog a little exercise," whose gunning coats if inspected would disclose an unhitched gun tucked away. I ran across one of these fellows a few mornings ago, and remarked to him that I never thought that working a pup on birds without using a gun was of any consequence. He gravely asked me what I took him for; and out of one game pocket brought forth the breech and from the other the barrels of his gun. Of course I innocently asked if he had shot anything and he replied no; but I knew better, for it had been his shooting that had taken me three-quarters of a mile from the road. down through a ravine, to ascertain what the racket meant; and before overtaking him (in the open) I had marked gun wads and dog tracks along the boggy bottom. There was not the slightest doubt in my mind that that coat held three to six woodcock as well as the gun.

A little money judiciously expended at this season by the Game Commissioners in hunting down these gilt-edged poachers and bringing them to justice would do more for the game than all that has been going on for years past could accomplish in a thousand years. Don't put the enforcement of the law into the hands of the 63-cent town constable or officer, generally too lazy to work for a living and dependent upon his 63-cent arrest for his livelihood; but employ a few good practical men, who know where to look for birds and when, and they will find the fellows who also know where to find the market supplies.

But keep hammering on that Plank. Keep it before your readers; and your readers who are true sportsmen ought to stand by and encourage you in the efforts you are making. W. W. C.

### Arrest of Indian Hide Hunters.

IN the latter part of June last, seven Indians, four men and three women, were arrested in the New Fork county by citizens of Fremont county, Wyoming, taken to Lander and lodged in jail there. The party that brought them in consisted of Ira Dodge and wife, J. M. Vandervort, Wm. Todd, W. Alexander and Fred. Boyce.

These Indians had been in the country about the New Fork of Green River, for some time, killing game for the hides. The local paper states that citizens had waited on them to leave the country, but they refused. They were then, after some difficulty, arrested by a party of a dozen citizens, their property were packed up and they were brought to Lander. An examination of their packs showed not only a large number of hides of elk, antelope and deer, but four fresh calf hides as well, which made it clear that they had been killing range cattle as well as wild game. The county authorities at Lander communicated with Capt. Ray, the agent of these Indians, advising him that they were in jail, and he came over to Lander to look after the matter. An arrangement was finally made by which the Indians were turned over to Capt. Ray, he agreeing hereafter to keep the Indians out of the particular country where the offenses were committed and to punish them for their violations of the law. The arrest of these Indians is likely to be productive of much good, and if they can be kept on their agencies much friction with settlers will be avoided. Mr. Dodge tells us that not an Indian has been seen since the arrest, and the antelope are coming back to the vicinity in their usual numbers.

### Buffalo, Wild Pigeons and Plume Birds.

St. Augustine, Fla., July 22.—*Editor Forest and Stream:* On account of the devilish doings of that soulless fiend of Yellowstone Park, Howells, my blood for weeks was like the boiling springs of that beautiful place, and I regret that he could not have been served up for a coyote feast. I have just been reading "Netting Wild Pigeons," by "F. E. S.," of Wisconsin, and "Wisconsin Ducks and Deer," by "Spike Horn," and now the question is being inwardly debated as to whether it would not be better for my peace of mind to stop reading altogether.

I am one of those who many years ago have seen the air about Cleveland almost darkened with wild pigeons, and now they seem about to be classed with the dodo and great auk, because "the fools are not all dead."

Why it is that legislators have less brains than other men I leave for other fellows to find out, but it certainly seems to be the case. Only a few years ago one of the great attractions of Florida was the myriads of beautiful plumaged birds throughout the State, and now, on account of legislative stupidity, they are on the ragged edge of extermination, and half the charm of Florida is gone. Semi-barbarism still reigns here, and the natives still shoot deer in midsummer and quail in season and out, and not an arrest is ever made.

Can any man who owns a soul get through this pigeon netting article and not feel like showering maledictions on the heads of legislators who have it in their power to stop this business and yet permit it to go on? The narrator admits that the work is done while the birds are searching for food to keep their young alive, and of course the little brood is starved to death; and all this brutality because a few lazy vagabonds dislike the idea of earning a living by honest work.

I have heard of this pigeon butchery from other parties, and hope very soon to hear the last of it. This atrocious work has been going on for more than fifty years.

Keep on with your good work of trying to put an end to market-shooting.

As regards the open season for deer in Wisconsin, any schoolboy ought to know that if only one month is open it should be November. Didymus.

### South Dakota Prairie Chickens.

Mitchell, S. D., July 24.—*Editor Forest and Stream:* The sportsmen of this city say "Keep off the grass" until the law says "Shoot prairie chicken and quail."

At the point of revolvers last night Mike La Gregor and Ed. Gardiner were forced to carry two young prairie chickens to the office of a justice of the peace. There they were fined $10 each and costs for killing the two chickens. Not having the $10 they go to jail and the county pays the cash.

As there was a doubt by some people last fall as to the time when prairie chickens could be lawfully killed, the Attorney-General has given his opinion that the law of 1890 was not affected, and is still in full force, and that the open season for killing these birds will commence on Aug. 15.

It having been reported that parties from Mitchell have been shooting prairie chickens and quail in Mitchell and adjoining counties, the following as well as previous statement will explain themselves.

In order to encourage the protection of game, sixty business men of this place signed a petition urgently requesting any person knowing of the shooting or killing of any prairie chickens or quail before Aug. 15 to report the same to any of the sixty, and upon sufficient information to convict under the law, they will pay to the person giving such information the sum of $25. Nominator.

[We would like further information about the decision of the Attorney-General that the prairie chicken season will open August 15, as determined by the law of 1890. Sec. 2366 of the Code of 1887 made the close season for prairie chickens Jan. 1-Sept. 1. Chap. 94, Laws of 1890, amended this and made the season Jan. 1-Aug. 15. But Chap. 94, Laws of 1893, again amended Sec. 2366 and made the season Jan. 1-Sept. 1. It is so given in the published Session Laws, and in an official copy sent us for the *Game Laws in Brief*. On what grounds does the Attorney-General base his opinion that this law is not in effect?]

### Yellowstone Park Commissioner.

Gen. J. W. Meldrum, who was appointed Commissioner of the United States Circuit Court, of Wyoming, with jurisdiction in the Yellowstone National Park by Judge Riner, has gone to the Park and by this time no doubt has entered on his duties. This appointment was made under the authority of "An Act to protect the birds and animals in the Yellowstone Park, and to punish crimes in said Park and for other purposes," which was approved May 7, 1894, at which time the full text of the law was printed in Forest and Stream. Under this act, Commissioner Meldrum has jurisdiction to hear and act upon all complaints made of violations of the law or of the rules and regulations established for the government of the Park. He has power to issue process for the arrest of persons charged with the commission of misdemeanors, to try such persons, and if they are found guilty to impose punishment. Appeals from his decisions may be made to the United States District Court of the District of Wyoming.

The salary of the Commissioner is $1,000 per year, together with fees which may aggregate as much more. His office will be in a building to be erected and used for a jail, for which the sum of $5,000 is appropriated in the same act.

We have had the National Park Protective Act printed and are prepared to furnish copies free on application provided stamps for postage are inclosed with the request.

### Might Not Happen Again in a Thousand Years.

Geneseo, N. Y., July 18.—*Editor Forest and Stream:* One day a few weeks ago the men engaged in the construction of the Lake Temiscamangue Colonization Railway exploded a heavy charge of dynamite, and a large chunk of rock was hurled some distance into the bush, landing squarely on the shoulders of a deer which was standing there, and killing it of course. The men did not know of the singular occurrence until some days later, when they noticed the odor, and on investigation found the decaying carcass. This happened a little above La Cave, on the Quebec side of the Ottawa. La Caribou.

# Sea and River Fishing.

## A TALE OF WOE.

Little Rock, Arkansas.—We all like to write up our successful trips, but in reading Forest and Stream I seldom see an account of one where everything goes wrong; the devil seems to be on top, and there is no convenient whale loafing around to give Jonah inside passage free. I am going to break the rule and tell of just such a trip.

West of Little Rock in the mountains, is a beautiful stream called Maumelle, which ripples over the pebbles or sleeps in long, deep pools and was my favorite fishing place in younger days. We had often talked of going there, that is, the Parson, the Doctor and myself. So one fine day the Parson said he was ready; and after tying up some tangled ends I found I could go if they would get things ready and leave me the morning to wind up business. And here let me introduce the party. The Parson dispenses with the Gospel at one of the leading churches, is the coming man in the Western division of the Southern Presbyterian Church, fishes for men on Sunday and for fish on week days when he can get off, and is a genuine all-round sportsman. And here I may remark that your readers will have no conception of ministerial dignity until they see a leading preacher chasing the illusive minnow in his shirt-tail, I mean the preacher's shirt-tail, not the minnow's. The Doctor is industriously engaged in keeping up the average death rate in the West End. As for myself, the habitual modesty characteristic of all lawyers forbids that I should say more than that my transcendent abilities are recognized by all parties and that my eloquence has moved thousands to tears. The party was reinforced by the agent of the transfer company, and two ordinary kids, one the Doctor's and the other my own special property.

So at 2 P. M. they came for me in a light pre-Adamite wagon, engineered by a Senegambian and two mustangs equipped with all the cussedness and hardiness of the breed. In a few minutes the agent came along in a road cart drawn by a slow mule. And so we started in high good humor, but alas, for human hopes of happiness; the mountain road was rough and soon a tire broke on one wheel. We repaired that by lashing it with hay wires, and proceeded up one rocky hill and down the other side. Nearing our destination, the Parson and I walked ahead, selected a camping place and started a fire. Soon the wagon came in with another wheel knocked out of shape, till it described a picturesque hyperbolic curve as it revolved.

But a good supper smoothed all tempers, and early next morning we started to fish. The water was beautifully clear, too clear in fact, and we could see very tempting fish, but they were very untemptable. However, by patient work we got fish for breakfast. After breakfast the Senegambian and I took the wagon over to a shop for repairs. I found the blacksmith to be a Scandinavian of complete independence. He said he was going fishing and would not fix anybody's wagon that day. I gently remarked to him that the Parson's flock would be pastureless at prayer meeting, that some of the Doctor's patients might get well if his absence was prolonged, and that there was lots of legal ability going to waste in the woods; but these arguments did not move him. He said there were too many preachers and lawyers anyway, and doctors were all humbugs; and if we did not want to wait there was a shop at Perryville, thirty miles up the road. We waited.

After dinner the kids wanted to climb the Pinnacle Mountain and I agreed to go with them. This mountain rises a perfect crown out of the river valley, about 800ft. high, and is a curious geological formation. It seems to have been squeezed up by enormous pressure and the rocks are shattered and twisted in every shape. We got to the top after a hard scramble, and had a fine view of the Arkansas Valley at sunset. The mountain is inhabited by buzzards; and large flocks of them would fly down the sides to the levels of the trees in the valley and then come right up the side of the mountain over the top without a flap of the wings. Can any one tell how that is done? Being purely mechanical it must have an explanation.

The next day we got our wagon and started merrily home. Going down a long hill, one wheel suddenly rolled off. The Lawyer made a few emphatic remarks, the Doctor being a full grown sheep of the Parson's flock, merely swore in a weak Presbyterian way, "Dem the luck," while the Parson remarked that he had learned not to say all he thought. So the bulk of the conversation fell on me, and after sundry remarks about Senegambians in general and that one who owned that wagon in particular, we proceeded to investigate the accident. We found the threads worn out in the nut and to save the expense of a new nut the coon had driven a lagging pin into the end of the axle and it had worked out. We repaired the damage and started again, but over and over again that pin came out. The last time was after dark, and pitch dark it was too, within a mile of home. Then we had to look for that nut and pin by the light of matches and repair the damage more by touch than sight.

But we finally got home safely, and to the Parson's credit be it said he never once fractured the Third Commandment by using a big big D, or a little one either.

J. M. Rose.

### International Anglers' Association.

The International Anglers' Association will meet in its first annual convention at the Queen's Royal Hotel, Niagara, Ont., on Friday and Saturday, Sept. 7 and 8. This will be an important occasion for anglers, as it will see the inauguration of an association with well defined and serious objects, and one which cannot fail to do great things for fair angling. The gathering will be a representative one, and expert anglers from all parts of the States, as well as Canada, are expected to compete in the fly-casting and bait-casting competitions, for which valuable prizes will be given. At the meeting papers on angling topics will be read and discussions will be held. A fish banquet will also add to the pleasure of the occasion. His Excellency the Governor-General has accepted the office of an honorary president, and President Cleveland has also been invited to act in a similar capacity.

## BOSTON RODS.

Boston, July 28.—Reports are not very full from the salmon fishermen. Walter M. Brackett, the salmon artist, is at his river the St. Marguerite, where he has been for many seasons. His success is not reported to be remarkable thus far. The fishing is reported to be good on the St. Johns River. A happy Boston party is there, including Mr. John Fottler, Jr., Mr. George Blake, Mr. Phillip Nevins. In the party are also several ladies, including Miss Sweet and Miss Dalton. They are having rare sport with the trout, as well as salmon. Mr. Fottler, with Mr. I. W. Adams, has fished this river for many seasons.

Senator W. P. Frye is back to Washington again, after a brief visit to his camps at Cupsuptic Lake in Maine. It is reported that the Senator did but little fishing on this trip, a short one made to obtain a little much needed rest from his arduous labors on the tariff matter in Congress. He is expected to return to camp later in the season for a longer stay. When one does not find Senator Frye, of Maine, in Washington, during the session of Congress, they may look for him at his camp, though his arrivals and departures are not always heralded in the papers.

The Gillam boys are newspaper men from the start, and each one of them is a sportsmen. Ernest M., the commercial editor of the Boston *Advertiser*, loves his gun and dogs next to his home and family. His oldest brother, M. M. Gillam, is the author of the advertisements that have made Wanamaker, of Philadelphia, famous in the clothing trade. His brother Charles is connected with the Philadelphia *Record*. M. M. has been employed with that house as advertising agent for many years. He knows how to get the most out of a vacation, and he enjoys it with his wife and children. In fact he has fished a great deal with his oldest daughter, a bright young woman now about 20 years old. Mr. Gillam has found a spot in the mountains of Pennsylvania. He goes some twenty miles beyond Mauch Chunk to Mud Run. Now, this Mud Run is badly named, for Mr. Gillam describes it to his brother as one of the clearest of mountain trout streams. Mr. Gillam has found a deserted farmhouse up there, and by the aid of his ingenious wife and daughters it has been transformed into a beautiful summer camp. There they go for a number of weeks every summer. All hands fish, and all hands take turns at camp work. The two boys with a companion caught the other day 135 trout, and the day following 88. They fish for all they need in camp. The camera goes with them, and Mr. Gillam has become expert in producing pictures of camp and sporting life. Some of his pictures have embellished the Philadelphia papers this season. At last accounts the Gillams were enjoying life as life can only be enjoyed in the woods.

Mr. N. G. Manson, Jr., is owner of Camp Leatherstocking on Cherrytree Point, Richardson Lake, Me. He has put in a steam launch of his own this summer. On the Fourth of July week he went down to camp and at the same time superintended the shipment of the launch from Andover into the South Arm. The operation was a successful one and the launch stood the rough road well, and now floats on Richardson Lake as proudly as she did on the waters of Boston Harbor. Mr. Manson was absent but a few days, and did little or no fishing. He is saving his vacation for one grand outing in August and September. He takes a few of his best friends with him.

The sportsman who goes to Maine this fall, with any sort of tact and skill ought to be rewarded with a deer or two. The accounts of deer seen by fishing parties are something remarkable. A year ago it was considered that accounts of deer seen in the summer months were in a measure exaggerations, but this summer they are even geater. Said a Boston gentleman to me the other day, "Here is a letter from a man who has guided me at King and Bartlet. He mentions seeing 27 deer in one day, with a party of fishermen." Other accounts are as startling. There is not the least doubt but what the deer in Maine have greatly increased within a year. Up to the present time there are few accounts of summer shooting, and it is earnestly to be hoped that little of it will be done.

Special.

### A Rotten Abomination on the Jersey Coast.

Asbury Park, N. J., July 28.—*Editor Forest and Stream:* Thursday, 26th inst., Senator James A. Bradley served a protest enjoining Larrabee & Co., the great pound owners, from emptying their refuse fish in the sea. So great has this nuisance become here that the thousands of bathers have been driven from this great pleasure. Tons of decaying, stenchful fish line the shore at every high tide, making it impossible at times to stay on the beach. That this kind-hearted, well-meaning man was deluded into inactivity during the fight in our Legislature last winter by the plausible tales of the pound owners, is of common knowledge. On Tuesday, the 17th of the present month, I was a passenger on the steamboat Pleasure Bay between Seabright and Sandy Hook, N. J., and for a distance of at least three miles the steamer plowed its way through a veritable island of floating dead fish which had been emptied from the pounds and was being carried on the incoming tide to be deposited along the course of the beautiful Shrewsbury, there to rot and menace the health of the residents. When will the proper authorities take the course necessary to abate this abomination to our entire State? is the question asked by the conservative and enthusiastic almost alike of our entire State. Leonard Hulit.

### Cayuga Lake.

Ithaca, N. Y.—July 20 I stopped a short while at Union Springs, and while there saw some handsome creels of bass, pickerel and perch. Dave DeBell, of Ithaca, in two days' fishing, July 19 and 20, caught a good 40lbs., one of his bass tipping the scales at 5lbs. Fred Smith was at Canoga, just across from Union Springs, the 20th, and took a basket of pickerel in two hours trolling that would average 2lbs. each. Dr. Arthur White and Alderman Chas. Green, of Ithaca, in charge of Tom Holland, of Union Springs, were catching big pickerel the 19th, 20th and 21st. Twenty-five to thirty pickerel is considered a good day's work at that point, and a very much bigger day's work at any other point on Cayuga Lake. Black bass are being caught along the east shore all the way Ithacaward from Union Springs. M. Chill.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(*Concluded from Page 75.*)

The morning revealed a threatened storm, the clouds being in dark, vaporous form, and the wind tossing the seas in no gentle mood. A departure was not thought of with such gloomy indications, and we therefore possessed our souls with as much patience as we possibly could, and sat down to our breakfast with anything but smiling countenances. We were not disheartened by any means, but as the home fever had struck the entire camp we were not as well pleased as was Mistress Mary with her garden

"Of cockle shells and silver bells,
And cow-slips all arow."

About an hour after breakfast the boys, who had been down to the point watching the course of the wind, came back and stated that with a little tacking they thought they could make Gros Cap Island, so we gave the word to immediately load and depart. The dismantling of camp and loading was quickly accomplished, for the bright vision of home was ever before our boatmen now that we were advancing that way, and it was the incentive that spurred them on to greater activity and greater risks.

"All aboard," rang out cheerily from the intrepid Peter as the last load was snugged away and aboard we hurriedly got, and then the sails were unfurled and thrown to the stiff breeze, and off the boat darted, tossing the thick foam in savage glee from her dipping bow.

When we were well out of the bay and around the point where the wind and seas had a clean sweep at us, I was satisfied we would not reach Gros Cap Island that day. The weather had a very hard and severe look; the sky was o'ercast with low, dingy and swift-flying clouds; the racing waves, with a wild and jubilant song violently battered the fretted crags, while the boat, with her lee gunwale but a trifle above the surging waters, creaked from bow to stern as she stood out for her first tack. After half an hour's earnest battling with the snow-capped waves the wind, which had been in the east when we started, had changed to the south, making it a head wind to strive against. Ned stated that it would now be impossible to reach our destination before night, and that we had better take a "long leg" with the boat and make for Goulais Bay. Here was disappointment indeed, for after entering this bay we might be cooped up there for days, for it is a very unfavorable location from which to put to sea. A party of anglers were detained here last season for five days waiting for a favoring breeze in which to sail out of the bay. As it seemed the best thing to do just then, Peter ran the boat over pitiless seas with the feathery foam flying from her cut-water as if she were breasting roaring rapids. Ned silently and solemnly sat in the stern, bundled up in his great overcoat, for the chilly air necessitated such a course, while I was braced with my back against the center mast and my feet on the gunwale, having on my mackintosh as a protection against the rising spray. Kenosh, with a "devil may care" air, had spread himself lengthwise on the windward side on top of some boxes and bundles, while Peter was at the rudder with a disappointed air, thinking doubtless of his approaching wedding and his far away betrothed at the "Soo."

There was no music whatever in our party, the gloomy weather having doubtless disheartened us all. In a fierce tempest, as per the immortal bard, Ferdinand and Miranda fall deeply in love, plight their troth, bill and coo, and gamble at chess, but we were like pouting school boys kicking against a little elemental disturbance, acting really as if we were in full accord with the surging sea and the sullen clouds in the shuddering sky. I tried hard to arouse Ned to a melodious strain, and after his warbling a little nursery song of

"There she goes, as sweet as a rose,
All dressed up in her Sunday clothes,"

relapsed again into solemn silence. I even tried to coax a romance from Peter, but it was a flat failure, and as for Kenosh he was always dumb except when an opportune time permitted him to bring out his old chestnut, "No fliee on him." I finally abandoned all my efforts of arousing them to a social temperament and so joined forces with the sea king and applauded the wild melody of the wailing winds and tossing seas, watched the drifting clouds and the white-winged gulls as they flew over the crested waves, and thus drew solace while the others were silently absorbed.

After we had gone about two miles toward forming that "long leg," the question was put to Peter as to its culmination. "One mile more," said he, "and we can make the bay like a flash." The mile was soon completed and then to our great surprise he informed us that it would be utterly impossible to make a landing in the bay with the high seas that were then so grandly rolling in.

"What's to be done then?" we inquired.

"Look ahead, there's Parisian Island but six miles out; why not make that and stop there till we have a favorable breeze."

It seemed to be the best and only thing to do under the circumstances, for Gros Cap Island could not be made in daylight, and if the wind kept on increasing as it had since we left we would soon have a respectable gale that would be anything but pleasant to buffet and tack in.

"Take her to Paris, then," said Ned, after we had consulted over the situation.

And so to the Parisian Island the boat was headed, and as the wind for that place was on our beam, we went fairly flying over the crested billows with a fulvous mass of spume streaming out from the bow that grandly rose and gracefully fell into the rolling seas so close in companionship.

At last we reached the desired island after an hour or more of very uncomfortable and very wet sailing. It was a charming camping place and an exceedingly lovely island that rose from the sea like a realm of fairyland, so beautiful did it appear in its forests of living green. It was about three miles long and one or more wide, with its north shore in graceful crescent form displaying a low, sandy beach, while the south side revealed the exact reverse, having a bold and rocky coast line of grand and solemn beauty.

Some thirty years ago the place was the abode of an eccentric Frenchman, who, from some eventful cause, preferred the life of a recluse, his nativity resulting in the island obtaining the name it now bears. Captains of vessels passing by it always referred to it as the "Frenchman's Island," until finally it received its more euphonious name. The house in which he lived was a very crude log cabin, and years ago had been razed, only a few logs remaining, showing where the man of solitude, and perhaps of sorrow, abided. The woods are dense and the groves peopled with a few varieties of birds, of which a number are very beautifully plumaged. They appeared in high glee when we landed, filling the air with their delicious notes of melody and anon darting through the whispering branches and into the darkling woods beyond.

The waters fairly swarm with lake trout and whitefish of large proportions, and were the principal source of revenue to the Selkirk of this isolated realm. Caribou were also said to abound here in years agone, Peter telling us of his having taken part in killing one, to all of which recital we gave unmeasured latitude.

Concluding to do a little exploring now that we had ample time, we aimlessly wandered around, and the more we saw of this beautiful island the more we were delighted with it.

"If the brook trout were only here," said Ned, "it would be an ideal place for anglers."

But they were not here, and the charms of the island were, therefore, not at a heavy premium with us.

We were called from our rambles by the tawny-hued Kenosh, who had sought us and who gravely stated that a smoking hot dinner awaited us at the beach. It was welcome news, for our long walk had given our appetite an edge that foreboded disaster to the smoking viands.

After dinner there was a decided manifestation of the wind letting down, and then a rift in the clouds gave us some golden shafts, and soon the blue increased, until finally the heavens were in a fervent glow and all nature rejoicing.

About 2 o'clock the wind had died out and then the lake became placid, save the rolling swell from the blow of the morning. The boatmen, at this favorable condition of the weather, took it upon themselves to load the boat without any conference with us, and then shouted, "All aboard!" We, however, were in accord with the boys, but a good ten or twelve-mile row was before them, and under a blazing sun that was fiercely pouring down. The home influence was again apparent, for after starting they industriously worked at the blades, with the perspiration dropping from their flushed faces at every stroke, and as if their very lives depended on their exertions. I really believe they rowed fully five miles with only a single halt, and that for a cup of water. They were both in good humor and chatted and laughed as they plied the oars, while Ned was in his favorite *rôle* of troubadour with little cessation. I helped the merriment along with what I thought an amusing narrative or two, and Ned, who was a wonderful dialect mimic, also fell into the same line. Peter received many a good-natured joke about his approaching wedding, and also many timely bits of advice in matrimonial duties, until the wily Kenosh remarked:

"This his third wife."

"What you giving it away for?" said Peter, somewhat angrily.

"What it matter? It so."

Ned and I drew off as if a bomb had exploded in our immediate vicinity, feeling satisfied that the matrimonial Peter had been too much married to need further counsel from us.

After we had retired from the field the two half-breeds went at it, shovel and tongs, in French and Chippewa, to settle the little development that had so inadvertently been made. It was a long time before the quarrelsome jargon ceased, as both of them clung tenaciously to the subject. I was positive it had left a deep sting with Peter, and that the firm would be dissolved on reaching the Soo. I much preferred Kenosh to Peter, for he was sincerity itself, and never tried to feed our fancy with fairy tales.

We were nearing the shore and would soon be passing over what used to be considered excellent trouting grounds. Ned, concluding to make a few casts as we went by it, commenced putting his rod together, but I simply played the *rôle* of "a mere looker-on in Venice," being satisfied from the smoothness of the lake and the terrible gill-netting the place had received from the semi-barbarians of the coast, that it would be a rarity indeed if a trout rose under such conditions.

Ned was ready when the rocks were reached, and letting his flies fall where a sunbeam was peeping into a chasm, commenced his first flutter, but had to lift his lures from the windless lake without a response. Again and again they fell and arose with the some result, and then the boatmen slipped easily along to another tempting spot. It was by an overhanging rock that threw a deep shade upon the water, and here his flies were worked with the same persistency, and once more he was without a victim. Not a bit discouraged, the veteran rodster, with the bright sun silvering his snowy locks, hopefully advances in the domain of the scarlet Hebes. This time he halts by some huge rocks at random thrown, which look up to savage crags that are flushed with the radiant sun, and again endeavors to coax some sunset beauty from his lurking place; but as well coax a mermaid from her crimson shell mirror as to here induce any golden fin to ripple the gleaming surface.

"It's too bad," said the disappointed angler, "but I'll try again," and once more the boat glides serenely along, passing some impressive types of gray and jagged-teethed rocks which the grinding ice and battling waves have been sculpturing for ages. At last he thinks he has found their trysting place by a crag that boldly runs into the lake, disclosing protecting ledges where the violet-splashed and jewel-dotted dandies could easily dart out for unsuspecting prey. With a gleam of hope he sends the feathered lures to the ragged edges, but no speckled monster, or even infant beauty, is there to investigate the disturbance above. With a howl of disappointment he repeats and repeats the lesson of the lure, but it is to the glowing rocks, to the murmuring waters only. "Reel up, my old *compadre*, there are no scarlet Romans of the rocky chasms or the shelving retreats for you. They have gone from the deadly gill net to the greedy hands of the market purveyors, and many a Lucullus has ere this sounded their gastronomic praises in poetic laudations. Reel up, I say; fret not your soul in disappointment, nor expend your untiring energies upon the empty air or the breathing waters. The trouting days are over here and will only live in pleasant history and the memory of those who have sported along these shores when the race of the tinted innocents were a stranger to the cruel trap work of a murderous gill net."

"Reel up it is; and now a last farewell to the North Shore, for by the great 'Horn Spoon!' I solemnly swear to never again enter the territory where a Fish Commissioner is only a man of title and of straw, and where a fish dealer tramples on the law with the impunity of a remorseless brigand. Shame, I say, on a government that will stand idly by and see this picturesque lake daily decimated of such beautiful, gamy and toothsome fish!"

At last we reach Gros Cap Island, and after mounting one of its bold bluffs overlooking the spreading landscape, are greeted by the rays of a descending sun that fell softly upon the sleeping waters. They gave the peaks and ridges a generous shimmer of delicious tints that paled with the approaching twilight into a lovely purple haze; they painted the distant isles into masses of flaming scarlet; they deepened the shadows on the western shores where the mountain ranges began to tower; they pierced with threads of gold the savage ravine and wooded expanse; they mellowed the grays of the massive bulwarks that frowned down upon our little island; they beautified a bit of cliff that had tumbled into the water near by with a saffrony surface between the blue of the bold headland and the sapphire of the lake; they flooded land and lake alike in cloaks of azure and caps of gold; they enhanced all they touched with a wealth of color that was made superlatively magnificent with the blending of purples, emeralds, russets and grays far more rich and beautiful than a Leonardo or a Raphael could dream into canvas, vividly recalling Watts's "Summer Evening:"

"How fine the day has been, how brightly was the sun,
How lovely and joyous the course that he run,
Though he rose in a mist when his race he begun;
And there followed some droppings of rain!
But now the fair traveler's come to the west,
His rays are all gold, and his beauties are best;
He paints the skies gay as he sinks to rest,
And foretells a bright rising again."

We are fascinated with the charming picture before us, but the early morn may present another, while not so grand in mountain wall with its chasms and ridges in sombre pines and solemn evergreens, equally as bright and rich in lovely colors, equally as beautiful in clouds of gold and seas of silver.

The shadows spread apace, and when the mild sun "his paling lustre shrouds in gorgeous draperies of golden clouds," we are reminded of things mundane by a call to a royal feast our men of bronze had prepared for us. After this the camp-fire is rekindled, "the stars come forth to listen to the music of the sea," a cool breeze rustles the branches overhead, and, save a mere murmur from the water, the silence of the place is like a sleep, so full of rest it seems. Ah me! the end of our halcyon days on the grand old lake has come at last. We have seen it in the fullness of its glory; have seen it in storm and calm; have stretched our wearied frame under the gloomy mists of its towering mountains; have drunk of its fresh and limpid streams; have eaten the luscious strawberries of its open stretches and the delicious trout from its icy pools; have felt the velvet kisses of its fragrant breezes, and to say adieu at dawn will be like parting from an old, old friend.

Aweary, we at last seek the refreshing bed of balsam, and with a prayer for balmy breezes in the morning that will give us a delightful sail to the "Soo," are soon in "the mystery of folded sleep," and ambitiously dream that we have the great key to golden palaces.

Morning came pure, bright and radiant, with a sky darkly, deeply, beautifully blue, and a sea in wondrous flame-like glories, rippling in cadences soft and sweet.

The last meal in nature's leafy realms being liberally served, the stanch old boat that had weathered many a gale, duly loaded, and then with a sad farewell to the deserted and lovely homes of the brooklet's pearls of tinted beauty, we alertly step aboard, and with the white canvas spread wing and wing, are off for the city of the wild roaring rapids of wondrous fame.

Fragrant zephyrs, with the intoxication of new wine, flutter o'er the stern, while before us range the fretted cliffs, chiseled by the warring hands of time into ragged and rugged forms of fantastic architecture, and pleasingly surmounted by the soft azure of the receding hills that tower in the distance as if

"Piled by the hands of giants,
For god like kings of old."

Soon we reach the aspiring pillars of Hercules, standing like grim and stalwart sentinels over the colossal gateway of the Great Lake. Passing these with deep and merited reverence, we feel that we have departed from a region of picturesque grandeur, a region generous in mountain majesty, impressive in shores of rocky savagery, rife in streams of foaming cascades and pellucid pools, and charmingly dimpled with islands "the heir of sunset and herald of morn."

I sigh as I finally part from the absolute grandeur of this soul-enrapturing scenery, and though we will realize some charming views in frames of gold and green along the pure and sparkling stream, they will not command the eloquent admiration of that which our vision has so rapturously dwelt upon the past month. One is nature in bold magnificence and royal splendor, deeply impressive with its sublime immensity and awesome wildness; the other, upon which we have just entered, is akin to the witchery of a poetic romance which steals upon and captivates you by its subtle spell. It is like coming from the great hills of cloudland, with their iron-bound bases of beetling cliffs and ragged crags, into peaceful plains of soft velvet meadows, of fruits and flowers, of streamlets with their silvery windings, of woodland warblers with their arias from golden throats.

We are again delightfully content, and as we glide along, in panoramic review come banks of verdure richly enhanced with many a quiet and pleasing picture. Waving grasses and clambering weeds, that fringe the low shores, are fanned by the summer breezes and bathed with the swell of soughing waves; sylvan haunts, like an elysian dream in luxury of color and shade, are here and there; rude huts, from which gaze bronzed and stolid faces, stand bodily outlined against clustered cedars; the lighthouse, dominant like a marble pillar, radiantly flashes; the crystalline waters glitter in shafts of silver, while trembling shadows from "loafing clouds" of exquisite hues slightly darken the sunny reaches with

"The thin-winged swallow skating on the air,"

The atmosphere comes from waves of golden light, and vistas of another world seem to arise as if by enchantment between he masses of dark foliage and the advancing sun. The hazy hills and lovely dales are in sweet repose; the prey-hunting gulls sweep lazily and carelessly along, while the white-winged boats in the distance linger as if sleeping on a mirrored surface. Everything animate is evidently yielding to the flashing lances of the fair Phœbus. Even the tawny-hued boatmen, as if in tropic clime, indolently loll and laze, and at last the gentle anglers in languor succumb to the golden glow, and dreamily luxuriate in far away lotus-land, while the ripples sing in delicious lullaby as if they wooed to the shimmering surface the lovely mermaids from "the branching jaspers under the sea." The faint and dreamful carol of birds that comes from the somber pines and tangled thickets of radiant shoreland, manifestly develops that they too have submitted to the gentle influence of a glowing morn, "so full of gladness, so full of tender blue, of wistful skies and winds that softly sigh."

The evidence of civilization, and the untiring energy of a progressive nation that no summer mood permits to waver, are upon us as we gracefully sweep into the crescent curve of the broad and flowing river, while the toil of "the hard-handed men" that are forcing new channels for increasing commerce, are impressively apparent by the blaze of blasts, the puff of steamers, the rattle of machinery. No idleness here, no pastime; nothing but steady, steady toil. We are now amid this great and gigantic work, the new locks, the roar of which is like muttering thunder, and as we indifferently step ashore the lamp of Aladdin is lost, the days of pure delight in the pursuit of the spangled and carmined beauties are of the past, and linger only as an ideal outing on the northern shores of *Kitchi-Gami*. ALEX. STARBUCK.

## ANGLING NOTES.

### Rainbow and Steelhead.

NOT long after the rainbow trout (*Salmo irideus*) was brought from the Pacific coast and introduced into Atlantic coast waters, it was discovered that the fish was a wanderer, and except in occasional instances disappeared from the streams in which it was planted in its second year. Then Mather, or it may have been Bean, expressed the opinion that the rainbow trout was the young of the steelhead salmon, as *S. gairdneri* was then called. Perhaps Mather was the first to express this belief and that Bean confirmed him; anyway, a file of FOREST AND STREAM will tell who is entitled to the credit for the belief, and I will hunt the thing up if necessary to settle the claim of priority; but no one at that time appeared to be willing to say, flat-footed, that the rainbow was the young steelhead. Then the steelhead was declared to be a trout, not a salmon, and the rainbow issue slumbered.

Lately the matter broke out afresh on the Pacific coast, one faction claiming the steelhead as a salmon, another as a trout, and Dr. Jordan was called in as umpire, and incidentally he settles (for the present at least) the status of the rainbow trout. My brother sends me a copy of Dr. Jordan's letter written to a Western angler, and I take this extract from it:

"The so-called steelhead is a well-known fish along the coast. It ascends the river to spawn, and then runs out to sea again. It is not a salmon and should not be called by that name. It is a trout. It was my opinion until within about two years that the steelhead and the so-called rainbow trout, as represented in the streams of the Coast range and the upper Sacramento, were different species. I have now become convinced they are the same fish, and that the fish which run down to the sea grow to be much larger in size and are plainer in color than those remaining in the mountain streams. My present opinion is, therefore, that the steelhead and rainbow trout are one and the same, or at any rate that they all belong to the same species, and that the large size and other peculiarities of the steelhead are simply associated with its life off the river mouths and in the sea. The expression 'steelhead salmon' should not be used."

The steelhead is also called salmon trout, and Jordan once told me it was the only trout we have that is entitled to have the prefix salmon in its name. This was because our lake trout (*namaycush*) is often called salmon trout. One may infer from Jordan's letter that all steelheads do not go to sea, and this explains why some few rainbow trout in the East remain in the streams where planted.

### Hudson River Salmon.

Mr. H. S. Bull, of Albany, sent me a clipping from the *Evening Journal*, containing an interview with State Game Protector Matthew Kennedy, of Hudson, in which he offers the opinion that the salmon in the Hudson are decreasing, and, as the heading says, "It is believed that the fish will not thrive."

As I was away on a fishing trip myself I thought I would defer writing a criticism of Mr. Kennedy's views until my return home, but this afternoon FOREST AND STREAM has arrived—the issue of July 21—containing the article reprinted from the *Journal*, and I am forced to reply to it sooner than I otherwise should, for I believe that Mr. Kennedy's views are not sound. For a better understanding of Mr. Kennedy's opinion as expressed in the article referred to, it must be understood that he fills the dual role of state game protector and professional net fisherman, conducting a fishery in the Hudson at Hudson, and so far as I know he fills both positions acceptably and well, for he has an excellent record as game protector and I know that the shad that he takes in his nets are the best that I get on my table. Therefore, in reading the article one is impressed with the idea that, so to speak, the game protector Dr. Jekyll is making an earnest fight against the net fisherman Mr. Hyde, and in one paragraph Dr. Jekyll is on top, and in the next Mr. Hyde downs Dr. Jekyll. There is nothing strange about this, for it is human nature, the same human nature that is found all over the globe.

Who can tell but what it was a part of the scheme of the great plan of the creation that self-interest should have a slight bulge on philanthropy, when one was arrayed against the other in a go-as-you-please tug of war?

I did not see the newspaper articles that Mr. Kennedy mentions, but without seeing them I will agree with him that the salmon are decreasing in the Hudson, but not because of the reasons he gives. Mr. Kennedy, either as game protector or net fisherman, should be better informed than he appears to be when he conveys the impression that the salmon are forced to remain in the warm water of the Hudson below the Troy dam in June, July and August because there is no fishway in the dam by which they can get above it. True, as he says, there is no fishway now, and when there was one it was of no benefit whatever to the fish, for it was constructed one fall and was destroyed the next spring. All the salmon that have been seen above the Troy dam got there by going over the dam during high water or through the sloop lock in the dam at low water; except last year when there was a break in the dam. Before the break it was estimated that there were 150 salmon in one pool at Mechanicville. One piece of evidence that salmon had returned to the river after the first planting of fry, was finding five salmon in the sloop lock, and doubtless the weaker fish have used the lock ever since, while the stronger ones have scaled the dam. Mr. John A. Manning of Troy, whose office windows overlook the dam, tells me that salmon begin to jump the dam as early as February.

As to the plan for successfully propagating salmon by planting the fry that the net fishermen may net the adult fish, I do not know whether this is meant for humor or whether it is Mr. Hyde at his best; but if I should know positively that a farmer was successful in propagating chickens by turning them out among the foxes at the frailer stage of their existence I would think more about it.

As suggestions are in order, I will offer an amendment to Mr. Kennedy's plan, and it is one that will beat his to death, for it reaches, as I believe, the very heart of the cause for the decrease of the salmon in the Hudson. My plan is this: Pass a law with a penalty of $100 for taking or having in possession a salmon taken from the Hudson with a net.

The law now provides that salmon taken in nets shall be returned to the water, but it is a dead letter, for North River salmon are advertised and sold in New York city, and they do not all come from the New Jersey shore either. I believe that with a possession clause added to the salmon law the decrease of the fish would be suddenly checked in the Hudson, and there would be no real necessity for breeding salmon for the netters to exhibit in the local markets, that the people might be informed that there were salmon in the Hudson. In fact, there is a large and influential body of men who already know that there are salmon in the river, and they have enrolled themselves in the Mohican Rod and Gun Club chiefly for the purpose of providing a way for salmon to get out of the warm waters in the lower river without going into the nets to accomplish it. The growth of this club upon this issue has been most astonishing to its originators and I feel sure that its influence will be felt next winter in a way to provide what is now lacking to make the Hudson a salmon stream, as that term is ordinarily understood, and net-fishermen should be content to wait until the river is self-supporting (aided by artificial propagation), when without doubt a certain amount of netting will be permitted by law. There has absolutely nothing developed since the first salmon fry were planted in the Hudson to lead those familiar with the subject to believe that there is any insurmountable obstacle in the way of making the river the home of the salmon.

Almost the only obstacles in the way at present are the lack of fishways to let the fish up to natural spawning grounds where the fry have been planted, and the fact that the netters in the Hudson below Troy are rapidly destroying the breeding fish in direct violation of law.

On this subject of illegal netting I will quote from a letter written to me by Mr. Howard N. Fuller, of Albany, under date of July 16.

### Another View of the Matter.

Mr. Fuller says: "I have read with deep interest your paper in relation to the propagation of salmon in the Hudson. In my opinion, which is founded upon personal observation, the true reason for the unsatisfactory result of the efforts to stock the waters of the Hudson with that desirable fish has not been touched upon.

"Your contention for more and better fishways is assuredly the proper one, so far as it concerns the overcoming of the obstacles to the passage of the salmon between tide water and the headwater spawning grounds of the Hudson; but no provision by law has yet been deemed necessary to give the fish unimpeded course from the sea to the Troy dam. If 1,000 salmon attempted to swim from New York bay to Troy, how many, in your opinion, would succeed? I can tell you, probably not one out of the thousand. The two great and seemingly inseparable obstacles to salmon reaching the spawning beds in the upper river are fykes and gill-nets, but fykes are the great devourers of salmon.

"In the early spring the gill-net and seines used for catching striped bass in the vicinity of Yonkers, Sing Sing, Newburgh, and in fact, everywhere in this vicinity of the mouth of the river, annually take out tons upon tons of salmon, and the fykes which stretch in an unbroken line from the Troy dam south on both sides of the river daily during every month of the year, except three, snare all the rest. It is absolutely impossible for a salmon to get up the river no matter how wary he may be.

"I took up several fykes near Stuyvesant to satisfy myself about the matter, and every fyke had from two to five salmon in it, and three fykes set nearest the channel had the most. When you consider that at least a thousand fykes are in operation at once, you can readily determine what they are doing to neutralize the efforts to stock the Hudson with salmon.

"For several years I fought alone for the enactment of a bill to entirely prohibit fyke-net fishing in the Hudson, and shameful to say not one of the many disciples of old Izaak came to my help or support. At last, two years ago, I succeeded in having an amendment to the game law passed, which prohibited fyke fishing for three months, viz: June, July and August, which law is in force to-day. That was all I could get, but even that has proven to be a good deal, for hand line and rod fishing is twenty per cent. better in the Hudson than it has been for fifteen years past.

"Commissions, and individuals and clubs, may expend all the effort and money they feel disposed to to replenish the fish supply of the Hudson, but it will amount to nothing so long as the fyke pirates are permitted to continue their nefarious and wanton destruction and depletion of fish.

"The chief cause, or I am incompetent to judge, of the ill success of the many efforts to afford anglers the divine sport of salmon catching in the Hudson is the rapacious and relentless fyke, and unless it is completely eradicated by law you may try to find a salmon with hook and line until doomsday and not find him.

"There are other and important fishing interests affected by the fykes which I have not time to touch upon at present.

"What makes me furious as I think about it, is the fact that the Hudson, the only arm of the sea in the State which affords means of ingress for sea fish to fresh water spawning grounds, and by natural and artificial water ways having communication with our large internal and border lakes, should not be protected by prohibitive legislation. I am not well up in this matter, but I believe no other State allows fyke fishing in its sea arms."

Mr. Fuller states the case so plain that I have no comments to make upon his letter; but I will say that the law of 1887 for the protection of salmon from netting in the Hudson was more severe than the one in the code of game laws now in force. Even with the law of 1887, in which there was a penalty of $100 for taking salmon in a net, over 300 salmon were traced directly to the nets in one season, and I believe a possession clause is required to stop the practice.

### Salmon Fishing in Canada.

Mr. John Mowat writes me from New Brunswick under date of July 15, as follows:

"I want to tell you this has been a year of big scores on the Restigouche. Many have retired and still others come to fill the vacancies, and as the river keeps in fine order, fair sport may be had until the close of the season, Aug. 15, as the salmon are both large and plentiful, and still running in from the sea. Of course the June fish that have stayed over in the pools have gone off their feed, bu the fresh ones coming in do fairly well.

"So far as I can hear, most of the salmon streams are away behind the Restigouche, some of the Cascapedia anglers coming here to finish off.

"Our salmon rise best to the fly from thirty to seventy miles above tide water; the upper pool on the river has 107 fish to its credit now, and will yet have another 100 before the season closes. When it does close I will send you details. We expect the Governor-General next week, and I go up the river with him, and an account of the trip will be sent to you."

This letter from the veteran salmon fisherman again refutes the statement that salmon do not rise to the fly beyond a few miles above tide water; and seventy miles above Troy, the head of tide water, is all of the Hudson that should be fished by the angler, as portions of the headwaters must be reserved for the spawning fish. One by one the objections to the Hudson as a salmon stream are refuted by those in a position to know what they are talking about and tell the plain truth, based upon personal experience and observation. A. N. CHENEY.

## NOTES FROM THE ANGLING WATERS.

PORTLAND, Ont.—Mr. W. I. Follett of New York, who has been staying at Hart's Hotel, Rideau Lake, caught on July 17 40 small-mouth black bass in the Lower Rideau. There is not a pike, a perch nor a sunfish to bother the bass fisherman in these waters. T. J. HART.

FORKED RIVER, N. J., July 24.—The weakfish have arrived in Barnegat Bay. Boats caught plenty yesterday, and to-day some have come in with boxes full, and they say that the parties were pulling fish as fast as they could bait hooks. B. E. ENO.

SCHROON LAKE, N. Y., July 23.—Mrs. E. Ruppertz, who is one of our guests, caught last Wednesday 68 large perch in one and one-half hours, and on the following day caught 38 perch and a black bass which weighed 4½lbs. It was a question for a while who was the most frightened, the bass or the catcher. So overjoyed was she by her success in capturing this beauty, she immediately pulled up her anchor and rowed for shore to show her prize. Mrs. Ruppertz had never before wet a line.
O'CONNOR BROS.

BARNEGAT, N. Y., July 27.—There is plenty of good fishing and gunning. Two men killed sixty-five yellow-leg snipe, and one man thirty-five. All boats caught fish; one man in small boat caught 100 lbs.
JOS. L. HIGGINS.

STILLWATER, Mont., July 24.—The open season on trout in Montana is from July 1 to April 30, but owing to extreme high water the fishing has been very slow until the last few days. I was out about four hours last Saturday, the 21st, and caught forty-eight trout, when dressed and ready for the skillet they weighed a few ounces over 42lbs.

Pat McInnally (who claims to have learned to fish in France) was out fishing to-day in the Stillwater about four miles from town and caught 97 trout and 6 grayling, having two trout that weighed 7¾lbs. when dressed. We will have lots of grouse this fall, the open season being from Aug. 15 to Nov. 15. Our best fishing here will be from the middle of August until Nov. 1 unless you call fishing through the ice sport. But it seems too much like murder to catch trout then, as they have very little show for their lives and are very logy, but can be caught in large numbers.

I am going out for a week shortly and will report what luck we have on our return. H. A. NOYES.

### Bass at St. Clair Flats.

DETROIT, Mich., July 24.—The prize catch of the present season at the Flats was made yesterday by M. P. Gray, of Frankfort, Ky., a guest of the Star Island House, who landed a black bass weighing 6lbs. and measuring 21½in. He also caught three other large ones, averaging nearly 3lbs., and pulled them all out with a small steel rod. Mr. Gray was the lion of the day when he came into port with his big string.

### Louisiana Fishing.

MORGAN CITY, La., July 25.—Salt-water fishing here is now at its best. With tide and wind right one can load a skiff in a few hours with trout, redfish, drum, croakers, sheepshead, pompano, etc. Our waters teem with *grand caille* or tarpon, but so far I have been unable to get them to take a bait. While out sailing a few days since one of them leaped clear across my boat (9ft. beam), and came near knocking me overboard. R. S. W.

### New Hampshire Trout Waters.

LEBANON, N. H., July 27.—In my last FOREST AND STREAM "Columbia," of Claremont, says: "Tell 'Von W.' and 'Mascony' to not give up, but try again." His advice came a little too late, as I had tried again. On June 21 I drove down into his county (Sullivan). I walked two miles and caught 55; could have got more only for a thunder shower coming up. The next day I drove about six miles over the mountain, intending to try a brook where formerly I had had good luck. But before I got there I saw a gentleman, who told me that he was there the week before and did not get a bite. That looked just a bit bad; so I turned my team and drove on to a brook "over there." Well, I was surprised. I caught 98, and would have caught just a few more only I saw a big one go down over some rapids as though Debs had sent for him to come to Chicago to sign his bail bond. I vowed to myself that if I could catch him I would wind up and go home. I thought he stopped in some thick bushes where an ash tree overhung the bank. After a good deal of bother I got my rod through the bresh (as the "Kingfishers" say). He was at home and ready for callers. I had no chance to snap up on him, so I started and ran right back into the field with him. As I claim to be a man of my word, I took my rod apart and left rather unwillingly. Now, if "Columbia" will write me (Lock Box 627), I would be pleased to come to Claremont and try Sugar River with him, or better still, would like to have him join me for a trip to Portage Lake, Quebec, the last of August and first of September, and decide which is the best man. I can go him one better, as I have fished for 50 years and hunted for 47. MASCONY.

### Sunapee Bass.

CLAREMONT, N. H., July 25.—W. E. Jerrett, Edgar Noyes and Geo. Tenney, of Claremont, made a flying visit (Monday, July 23), to Sunapee Lake, and caught a fine string of bass, weighing nearly 25lbs. They ranged from 1lb. to 3¼lbs., with several 3-pounders in the lot. The fishermen caught them in about 30ft. of water, and considering the short time they had to fish, made a very fine string. Mr. W. E. Jerrett is a very successful fisherman. He made a short trip this summer up to the Connecticut Lakes and brought back a fine string of trout.

COLUMBIA.

### The Visitor and the Brooks.

TOLEDO, O., July 25.—The American steam yachts, Visitor and Leroy Brooks, captured by the Canadians off Pelee Island, May 8, for alleged violation of the Canadian fishing laws, have had their day in court and been fined the nominal sum of $40 each. They were released on bonds some weeks since, and will be formally discharged as soon as necessary papers can be made out, which will probably be within five or six days. JAY BEEBE.

### Canadian Angling Permits.

THE following regulations respecting angler's permits in the inland waters of Canada were adopted June 30, 1894:

1. No person, other than a British subject, shall angle for fish or take any bass, maskinongé, pike-perch (pickerel) or trout, in Canadian waters, without first having obtained therefor an angler's permit, issued by the local fishery officer in each district, under the authority of the Minister of Marine and Fisheries.
2. Each person, not a British subject, shall pay for such angler's permit a fee of $5 for a period of three months, or a fee of $10 for a period of six months.
3. One angler's permit only shall be issued to each applicant. Such permit shall not be transferable, and can be legally used only by the person whose name appears thereon. Each holder of an angler's permit shall be required to produce and exhibit his permit when called upon to do so by any fishery officer.
4. No person shall use, under an angler's permit, more than one fishing line, provided with not more than three hooks.
5. No person shall, under an angler's permit, take, catch or kill in one day more that 12 bass or pike-perch (pickerel), 20 trout or 4 maskinongé.
6. No bass or pike-perch (pickerel) shall be retained or kept out of the water which shall measure less than 10in. in length, and no trout shall be retained or kept out of the water under 6in. in length, but every person who takes or catches any of the fish mentioned, of a less size than the minimum measurement named, shall immediately return such undersized fish to the water from which they were taken, and shall, if possible, liberate such fish alive.
7. No person holding an angler's permit shall export, sell, or offer for sale any fish caught with hook and line.
8. Any person or persons violating any of the above regulations shall be liable to the fines and penalties provided by the Fisheries Act, cap. 95, of the Revised Statutes of Canada.
9. Nothing in these regulations shall affect the rights of any person or persons holding leases of fishing rights from either the Federal or Provincial authorities.
10. Foreigners, when temporarily domiciled in Canada, and employing Canadian boats and boatmen, shall be exempt from the regulations requiring permits.

It is reported that by the intervention of the Grand Trunk Railway the Minister of Marine and Fisheries has declared that anglers between Trenton and Cornwall, Ontario and Rideau waters, and in the Muskoka district, will hereafter be exempted from the provisions of these regulations.

### A Query for "El Comancho."

MONTREAL, July 25.—In your issue of 21st is an article entitled "A Day with the Channel Cat." It is an excellent article, and its words are like those of ancient Pistol "prave vords," but when the writer toward the end says, "I have tossed a fly to trout from the Rockies to the Pacific, fought bass among the lily pads and heard the spoon jingle in the savage headshake of the salmon," I want a little more information. I have killed salmon for nearly fifty years, and for the first time hear of the jingling of a spoon in the headshake of the salmon. Will "El Comancho" enlighten, not only my ignorance, but that of other salmon fishers by saying what sort of spoon he heard jingling—was it table, dessert or tea?—and whether it was used with or without a fly, and oblige

AN EX-SECRETARY OF THE PROVINCE OF QUEBEC FISH AND GAME PROTECTION CLUB.

## PUBLISHER'S DEPARTMENT.

Several New York gentlemen have secured an option on an 1,120 acre farm near Dawson, North Dakota, and propose to form a stock company to be known as the "Empire Farm Association" to take it up. The farm had long been successfully run as a grain and stock farm, and is in a good goose and chicken country, and convenient to large game.

### Our Outdoor Scenes.

NEW ORLEANS, La., July 19.—*Forest and Stream Pub. Co.:* Have received your premiums; they already adorn the walls of my room. I find them true to nature, especially the "Jacksnipe Coming In." It makes me feel like getting out my hammerless and letting them have right and left in quick succession. Think I could tumble three out of five. What say you? S. W. SCHUMACHER.

### F. and S., R. and G. and B. P. O. E.

I HAVE been chasing round the country and have been without the old family paper since April 28. Please send the back numbers commencing then. It's no use; can't get along without the best paper on earth. DIAMOND WALT.

## *Fishculture and Fish Protection.*

### Protection in Ohio.

DAYTON, Ohio.—*Editor Forest and Stream:* As I receive so many communications from parties in all parts of the State I ask space in your columns to answer those seeking information on the subject, so the public generally may know the law as it is. The General Assembly at the last session did not amend any of the laws regulating the shooting of game or game birds, or the fishing in this State. The law then remains the same as last year. A new law, however, was enacted which will give some of the market-hunters and game dealers trouble if they insist on selling or shipping quail hereafter. I might add in connection that it is the intention of the Commission to enforce the provisions of this act to the very letter. Game dealers and pot-hunters will please take notice. The following is a copy of the law as certified to at the Secretary of State's office, at Columbus:

HOUSE BILL No. 12.—An act to prohibit the shipping of quail from the State:

SEC. 1. Be it enacted by the General Assembly of the State of Ohio that no person shall at any time kill any quail for the purpose of conveying the same beyond the limits of this State, nor for the purpose of sale in the markets of this State, or shall transport, or have in possession with the intent to procure the transportation beyond said limits, any of such birds killed within this State. The reception by any person within this State of any such birds for shipment to a point without the State, shall be *prima facie* evidence that said birds were killed within the State for the purpose of carrying the same beyond its limits.

SEC. 2. Any person violating any of the provisions of the preceding section shall be fined not less than twenty-five dollars nor more than fifty dollars for each and every offense.

SEC. 3. This act shall take effect and be in force from and after its passage.

ALEXANDER BOXWELL,
Speaker of the House of Representatives.
ANDREW L. HARRIS,
President of the Senate.

*Passed May 9, 1894.*

This law, in my judgment, is a good one, and is now in force in the State of New Jersey. Under the provisions of this act the express companies will be liable if they receive quail for the purpose of shipping to other States. Also, if grocers or game dealers have the birds in possession, the party who killed the birds will also be liable. I publish this new law so that parties may not violate its provisions; and it might be a good thing for hunters to paste this section in their hats.

There are a few counties in the State where the fish and game laws are violated almost every day. This is due to the fact that the people do not understand what the Fish and Game Commission is doing.

This week the writer of this article convicted eight at New Philadelphia. Three of these parties are now in the county jail and one is a fugitive, having gotten away after arrest, the others having settled. Not a few persons in that vicinity have expressed sympathy for those convicted, and it is on this account that violations there are so frequent. New Philadelphia is in Tuscarawas county, and in this county are found some of the finest fishing waters of the State. Yet it is almost useless to go to any of the creeks or rivers with a rod and line, as the work of the dynamiters and seiners has completed the destruction of the fish in these waters.

The creeks and rivers in that vicinity, if properly protected, would produce quite enough fish to supply the entire population; and it is a burning shame that the general public takes such little interest in the protection and propagation of fish. But it is because they do not understand the condition of such matters. They argue that if they are allowed to seine it will destroy the carp, suckers, mullet, redhorse and gars, all of which eat the spawn of the bass and other game fish.

I will offer just one argument, that, if investigated, will be found to be true, and will show that it is a mistake. In the first place the bass protects her spawn and will even drive away snakes and turtles from her nest. Not only that, but she protects her young until several weeks old. The bass invariably spawns at night time, and as soon as the eggs touch the bottom of the nest they adhere; and if other fish, even if they could succeed in driving them from their nests, would undertake to eat the spawn, they would be compelled to swallow all the pebbles in the bottom of the nest. Then, think of a gar with his long snout, standing on his head trying to eat spawn. It is too silly to write about, and yet fishermen who have lived all their lives along the river insist that the reason we have no fish is because seining is prohibited.

The gar does harm in the way of eating other fish, but as in many other cases it seems that even the gar was created for a purpose, when we look at the matter in the proper light. The game fish prey upon the minnows. When the game fish become scarce the supply of minnows is greater, and it is these little fish that do more harm than any other by eating the spawn of other fish. This is the true cause of the disappearance of the pike and salmon or pike perch from our waters. The pike is an elegant fish, and outside of the pleasure afforded the angler who succeeds in luring him to take a hook, and on account of his size, he furnishes a good supply of the fish food in places where he abounds. He builds no nest, neither does he guard the spawn or his young. A pair of these fish when they are spawning are always followed by a myriad of minnows that eat the spawn before it even touches the bottom of the stream.

What we need is more game fish to keep down the supply of minnows and a willing public to protect our streams and lakes, and in a few years there will be no inducement to either seine or use dynamite, as plenty of fish may be taken with hook and line.

The Ohio Commission had in June confined in hatching ponds at Chagrin Falls and Waverly 2,000 marble catfish, 300 or 400 bass and about the same number of croppie. There were at that time at least 300,000 or 400,000 of the catfish hatched and at the end of the hatching season it is fair to presume that the Commission have several million fish to plant in Ohio waters. It is not policy to plant fish in streams where the law is not upheld by public sentiment, and the sooner this lawlessness is stopped the better it will be. If persons are seen violating the law they should be reported. If reported the Commission will do all in its power to prosecute. Send your information to me and I will not only prosecute but will pay a suitable reward, and will guarantee that your name will never be found out. If you send information do not be in a hurry, as it may be weeks before I can come, but it will be attended to.

L. K. BUNTAIN, Chief Warden.

### Oakfield Association.

THE organization of the Oakfield and Alabama Fish and Bird Protective Association, took place in Oakland, Monday evening, Dr. C. S. Pugsley being chosen chairman and E. F. Hickey, secretary. The chairman then introdnced Frank J. Amsden, of Rochester, secretary of the Genesee Valley Fish and Bird Protective and Propagating Association, who explained the nature and benefit of his organization, after which an organization was organized with a membership of sixty-eight. The following officers were appointed to serve until the annual meeting which takes place the second Monday in August: President, D. C. S. Pugsley; Vice-Presidents, Thomas O'Reily, Seward A. Ingalsbe, George H. Craft; Secretary and Treasurer, Eugene F. Hickey. Executive Committee, Dr. C. S. Pugsley, Thomas O'Reily, Warner H. Smith, Arthur J. Norton and Charles H. Griffin. The towns of Oakland and Alabama have some of the finest fishing grounds in the western part of the State, if it can be protected from the net fiends who are drawing the nets nearly every night. In Oak-Orchard Creek, just north of Oakfield, some parties made the brag that on Saturday night, July 14, they caught eight-six pickerel in two hauls. Fish and Game Protector George M. Schwartz, of Rochester, succeeded in catching six violators in the act of drawing the seine last summer.—*Rochester Democrat and Chronicle.*

### The Bell—Martin Case.

TORONTO, July 24.—*Editor Forest and Stream:* Much on the Bell—Martin case has appeared in the leading sporting journals of America. From one end of the country to the other, I have been criticised and blamed for my conduct and held up to public contumely and contempt. Unfortunately for me the case had been brought before the American Kennel Club, and its advisory committee suspended me for one year. This decision seemed conclusive to some that I was to blame; that Mr. Martin was right; that I had intentionally deceived him and he had been victimized by me. Unfortunately also for me when leaving the matter to the decision of the A.K.C., Mr. Martin threatened me with legal proceedings, and my solicitors, Messrs. Macrae and Rykert of Toronto, would not allow me to reply in any way to the newspaper criticisms and attacks until the litigation was ended, explaining that the public could form a more correct conclusion upon the whole case when it was proven in the courts who was legally right.

The case has now been settled and I am at liberty to explain my conduct, and I ask the public to give my statement a thoughtful perusal, when I am convinced my character will be fully vindicated. This is the only letter I intend to write on the Martin case; I shall not reply to any answers which may be made, but should any person desire verification of what is hereinafter stated I refer them to my solicitors who will corroborate every detail of my story to the letter.

To begin at the beginning. I purchased Blemton Consequence and Rejoice from Mr. Granger. I did not know and had never seen either of them before I bought them, and had to take the names Mr. Granger gave them. "Uncle Dick" Fellows was present at the purchase and will support me in this statement. I had received an order from Mr. Martin, and agreed to ship Blemton Consequence and guaranteed that she was in whelp, and agreed to take her back if she were not so. I made and carried out this bargain honestly and in good faith, as I have proved, and am still able to prove if called upon to do so. I sold Blemton Consequence as I thought, I believed her to be in whelp and I had her examined, and I shipped her in the usual way. I knew that she was in whelp from the examination of Mr. C. J. Purroy and of Mr. H. P. Thomson, secretary of the Fox-Terrier Club here, and from my own knowledge and experience. I understood then, having done this and the dog being shipped at Mr. Martin's risk, that I had fulfilled my part of the contract and that I was entitled to the purchase money.

The other dog was sent by me to Mr. Smyth's, in Toronto, where she has always been known and is now known by the family as Rejoice. I also exhibited Rejoice as Consequence at Indianapolis, March 28 to 30, and at Boston, April 4 to 7. I only mention this, as straws show the way the wind blows.

After the sale I was notified by Mr. Martin that the dog was not and had not been in whelp. Some people might say I should have accepted his statement, received the dog back and returned the money, but I did not know Mr. Martin and knew no reason why, a *bona fide* sale having been made, it should not be strictly carried out. I had had the dog examined, knew her to be in the required condition, and had proved that she was so. All this made me believe that whatever was wrong was not at my end, and I determined to insist upon the sale being carried out, whereupon after much threatening and abuse from Mr. Martin he laid the matter before the A. K. C., the charge being that I had sold him a dog guaranteeing her to be in whelp when she was not so. The A. K. C. decided that the charge was not sustained and it was dismissed and I was then held to be justified in the course I had taken.

Now we come to the part of the story where I am chiefly attacked and where it is most difficult for me to reply, and I ask again that the readers of this letter will follow my facts closely. After the making of the first charge against me it came to my knowledge for the first time that I had sold Martin Rejoice instead of Consequence. My first impulse was to write at once to Mr. Martin telling him of the mistake that had been made and offering to exchange the dogs forthwith, but my solicitors, whose advice I followed throughout, urged me not to take any decided position with regard to the identity of the dogs until after the decision of the advisory committee, which was expected to be favorable because they stated that my explanation and apology to Mr. Martin would come with much greater force after I had been acquitted on the charge of fraud than if made while the investigation was still pending.

This was the position of affairs at the time referred to. My solicitors, although denying me the right to address Mr. Martin or the public press, allowed that it would be quite proper to communicate privately to Mr. Martin, through some outside person, the fact of the mistake in the dogs, and I accordingly told Mr. Mortimer to notify Mr. Martin and to offer to make an exchange, which I have no dobut that gentleman did. The A. K. C. made matters worse at this time by entertaining a new charge against me of having sold the wrong dog to Mr. Martin. This was unfair to me because I had had no notice of any such charge, and therefore was not able to do myself justice with regard to it. Had this charge been preferred at the first, my solicitors would have advised me, so they state, to explain the facts fully to the board, to admit the mistake and make proper restitution forthwith, in which case I think the committee would not have disqualified me, and all this trouble would have been avoided, but let it be borne in mind that at this time I was in my solicitors' hands, acting under their advice, which was to make no offer to Mr. Martin until after the committee had disposed of my case. My solicitors of course had no notice any more than I had that this second charge had been preferred.

Now, I am free to admit that from the time it came to my knowledge that Mr. Martin had got the wrong dog, he had a right to complain, and he had the right either to sue for the money he had paid me or to demand an exchange of the dogs. My solicitors told me that he had a right to sue for the money and that he would demand it, which he afterward did by letter, threatening action. I was in hopes that he would content himself with asking for the delivery of Consequence, but when he made his claim for the money and I was told I would be obliged to pay it, I advertised both Consequence and Rejoice for sale, supposing that Rejoice would be returned to me and I would have both dogs on my hands. I am much blamed for having done this. It has been urged that I did it fraudulently and to obtain an unfair advantage and to deceive the public. I ask the readers of this letter to remember that I had been told I had to repay Martin $100 which he had paid me; that I would be out the $100 and have the two dogs on my hands, and I naturally was most anxious to dispose of them. Is there fraud in that? I think not. I fail to see the sting in the charge.

Now, many will say at this point of my statement, "Why did you not at once offer to exchange the dogs, to give to Mr. Martin the dog that he had bought, and to take back the dog that he had not bought, and to pay to him the expenses which he had incurred or would incur in the exchange?" It has been publicly stated that I refused to do this; that I would not do justice to Mr. Martin; that I intended to maintain the wrong position that I was in. It has been said that had I offered to place Mr. Martin in his original position, to exchange the dogs and pay the expenses, then I would have been free from blame; that then my story about the innocent mistake in connection with the dogs would have been believed; that nobody would have censured me, but all would have admitted that I had done my best to make matters right. Well, that is exactly the course that I pursued; and a letter was written by my solicitors on my behalf and under my directions, offering to forward Consequence and to receive back Rejoice, and to pay all expenses in connection with the exchange. If it is desired, my solicitors will send to any persons asking for it a copy of that letter.

I am writing facts now, all of which can be verified and all of which are absolutely true. The position taken by Mr. Martin was one calculated to prevent any amicable settlement of the matter, because after he had received my offer, after I had admitted my mistake, after I had allowed that he had been misled through my mistake, and after he had demanded his money back, he advertised in the *American Field* that the dog Consequence was his and that I had no right to advertise it for sale. Remember this advertisement appeared after he had written making a legal demand for $100 paid me by mistake for the dog Consequence. Now, if he had a claim for the money, then I had the ownership of the dog. If I had paid him $100, I had the right to sell the dog. He was blowing hot and cold, claiming the money and the dog both, and at the same time fuming and blustering in the papers and among his friends in such a way that one would have thought he had never had a dog at all from me and had paid $100 for nothing, whereas, in fact, an honest mistake had been made, he had in his posession all the time a dog equally valuable, and had been breeding from her and making money out of her from the beginning to the end. Why even at the last he offered to keep Rejoice and let me keep Consequence, if I would pay him the small sum of $25 difference.

After my offer of exchange and to pay the expenses was made, several letters passed to and fro between Martin and my solicitors, also telegrams, each one containing some different proposition on Mr. Martin's part. The result, however, has been what it should have been upon the receipt of my solicitors' first letter, namely, I have shipped Consequence to him at my expense, he hands Rejoice over to my agent in San Francisco, retaining her progeny which is no doubt of value. Consequence has no pups and I have realized nothing from her.

It is easy to theorize upon mistakes of this kind. I have suggested that the dog I sent to Mr. Martin possibly never reached him, but was changed on the way; these things have occurred before. In transportation the dog went through three hands, there may have been an accident on the way. This, of course, would be denied by the officials and no one has ever followed it up.

That the mistake was made by me in the identity of the dogs there is no doubt. After I discovered it I did everything in my power under my solicitors' directions to remedy the mistake and to do justice to the wronged party. I have refrained from justifying my conduct in the public prints and have allowed the strictures of Martin and his friends to pass unnoticed for the reasons given, that I was advised to delay my reply to the charges made until after the legal dispute between the parties had been settled.

Mr. Martin has traded upon the fact that a mistake was made and that I admitted the mistake; and he has deliberately accused me of fraud, although he had and could have no proof. It is enough for me to state the true facts as they occurred, which I have done as shortly and succinctly as possible. I leave the case in the hands of the public and ask that in their judgment I be relieved from the charges of fraud and dishonesty, which have been cast upon me. I also trust that outside of the general public my explanation will be read with some interest by the members of the Advisory Committee of the A. K. C.

GEO. BELL.

### Pointer Club Meeting.

*Editor Forest and Stream:*

The meeeing of the Pointer Club of America, held at the office of the American Kennel Club, July 23, was convened by the board of governors pursuant to Article 4 of the new Constitution. President Wise in the chair and with the usual quorum present.

A resolution was offered by Mr. Webster, seconded and carried, that hereafter no prizes offered by the Pointer Club of America shall be considered accepted unless due acknowledgment shall have been received by the secretary of the Pointer Club from the secretary of such club to which the prizes have been offered; further, nor will any such prizes be paid by the Pointer Club unless a written certificate of the names of the winning dog or dogs shall have been furnished by the secretary of such club to the secretary of the Pointer Club, by the owner.

The object of this resolution is to facilitate the payment of all prizes, and that the club may have official certificates on file as a record of the club's efforts to encourage the breeding of the pointer.

It was also resolved that owing to the adoption of the new constitution and by-laws, which extends the time of payment of the annual dues of the members to Feb. 1, 1895, which necessarily cuts off the income of the club for several months, and also on account of the recent heavy payment of prizes, amounting to $150, the club will be unable to donate any prizes to the Rhode Island State Fair Association, as requested, or any other club during the fall circuit. The club then adjourned.

The club has a very flattering membership, and the efforts the club will make in the future to hold together its members and encourage them in breeding the pointer will be such as to merit, and it is believed will receive, the support of all pointer men.

F. S. WEBSTER, Sec'y.

NEW YORK, July 24.

Mr. J. C. Mahler of Avalon, Pa., has bred his noted bull-terrier bitch Lady Dinah to champion Streatham Monarch, and in another month this Pittsburgh fancier should be proud of the litter. He has sold his brood bitch Ruby Parker to Mr. L. Fabor, Allegheny, Pa.

## POINTS AND FLUSHES.

*[By a Staff Correspondent.]*

From Capt. C. E McMurdo I received the following interesting and instructive letter on the working qualities of dogs afield and in competition. It is sound writing, as are all of Capt. McMurdo's writings. His great experience and keen observation of details make them specially valuable. He writes:

"When I came to see in print the little story I sent you some time ago, about the working out of a stubble field by a high and a low class dog, I found that I had omitted a very important part of it, viz: that when the former came within some thirty yards of the spot where the latter was still pottering he wheeled round in a semi-circle and established a splendid point. However, it is too late now to correct my error.

"Talking of high class dogs, why do not you give us a definition of one? It is just as necessary that there should be an established standard for the guidance of field trial as for bench show judges. Every intelligent breeder of field-trial dogs must have a standard; and if, after breeding puppies that pretty well come up to it, he goes to the expense of having them trained and run in field trials only to find that the opinion of the judges does not correspond with his own, what satisfaction are field trials to him? I am perfectly convinced, from remarks I have heard made and from decisions given, that some of the men who are supposed to know all about dogs can't spot a low-class dog when they see him. They know that speed, range and a good nose are characteristics of high-class dogs, but that is about all that they do know. They can not judge bird work correctly, but evidently think more of the number of points made than of the way they are made, and don't cut dirty work.

"These are the men who help to spread the erreneous idea that the best field trialers are the best shooting dogs.

"Who wants to shoot over dogs that range all over the country, and don't find half the game they ought to do?

"What every sportsman does want are dogs that he can shoot over with comfort, ones that can range properly, and when they strike the scent of distant game (for instance) can locate it quickly and accurately, without pottering or false pointing—this is the sort of work that especially marks the difference between a high and a low class dog.

"Pedigrees don't make high class dogs. We only breed one now and again. We get lots that have some high class qualities, but are weak in one or two respects, and consequently have to be condemned as field trialers. Those that are only weak as regards ranging make excellent shooting dogs for hunting in a close country. Wide ranging is the only quality that is not absolutely necessary in a shooting dog. Some men do not want wide ranging dogs.

"There is another thing that has sometimes occurred that may have helped to account for the poor opinion some have of field trialers. Sometimes partially trained dogs have won at field trials on account of their great natural qualities, their want of thorough training being overlooked. Whether this was right or wrong is a matter of opinion. No club rules that I remember direct the judges to insist upon thorough training.

"Depend upon it, the best field trialer will always make the best shooting dog, but of course he must be thoroughly trained.

"As regards retrieving, that is a very small matter. Every such dog can be taught to retrieve in a short time, but some men don't know how to do it."

In respect to what constitute a good working dog afield, no one is better qualified in every way to describe it than is Capt. McMurdo. I have another letter from him which will be given later on and which also contains sound suggestions for field trial supporters.
